Raytheon Company of Portsmouth, R.I., is responsible for electronic and communication systems.

Sanders Nuclear Corporation of Nashua, N.H., is responsible for power sources and consideration of a nuclear power system.

Ling-Temco-Vought Aerospace Corporation of Dallas, Texas, is responsible for systems reliability integration and operations and maintenance analysis.

General Precision Systems is responsible for development of a systems simulation concept.

Gulf Universities Research Corporation, a consortium of universities along the Gulf of Mexico, is responsible for providing support for experiment integration. This effort is concerned with identifying uses which will be made by governmental agencies, industry, and universities of Atlantis as a test and evaluation facility.

STATUS AND SUMMARY OF THE ATLANTIS PROGRAM

As of June 1969, the University-Industry Atlantis team has completed and published Volume IV of their program proposal—"Mission and Experiment Plan," which supplements the basic proposal and contains the mission and experiment plan for the first two-year operational deployment of the Atlantis undersea laboratory. It presents details of each experiment project, the utilization of laboratory systems, and outlines the administrative plan for managing the Atlantis experiment program.

The recommendation by Admiral Arnold has been submitted to the Vice President as Chairman of the Marine Council, by the Secretary of the Navy.

Widespread congressional support of the Atlantis Program has been indicated by numerous letters from Senators and Congressmen to the President's Science and Technology advisor and the Director of Defense, Research, and Engineering.

The Atlantis Program effort is intended to include more than the Navy requirement for national security systems development. It is intended to integrate total requirements for a national continental shelf test and evaluation facility which will be operated in the national interest.

A group of universities, industries, and the political and business leaders of a region have combined their resources and talents in the work accomplished to date.

Federal support for the Atlantis Program now is in the national interest, to maintain the momentum of the University-Industry team effort which has been demonstrated during the past eighteen months.

THE VOICE OF THE PEOPLE IS HEARD THROUGHOUT THE LAND

(Mr. RARICK asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. RARICK. Mr. Speaker, the announcement in Detroit that ultraliberal Mayor Jerome P. Cavanagh, who ap-

parently reads the newspapers, will not run for another term can but reflect the grassroots command from decent, hard-working, taxpaying Americans to have done with the foolishness from the left.

In the 1968 elections, the heir apparent of the administration was soundly repudiated at the polls. His platform could satisfy less than 40 percent of the voters, despite the free flow of tax money to the cities. In 1969 the voters of Los Angeles, Minneapolis, New York, and other cities have plainly spoken at the polls.

Since January, we have seen Abe Fortas, who was intended to become Chief Justice of the United States, resign from the bench in disgrace. We have seen Earl Warren retire, ending the sorry era of the "Warren Court" with the bitter whine that the low esteem in which the Court is held is due to the misconduct of Abe Fortas and William O. Douglas. And we now see William O. Douglas on the run, looking for a place to hide, fearing the further disclosures which will lead to his impeachment.

Mr. Speaker, last November the people elected a President who had compaigned on promises to change the direction of the preceding administration. The people were fed up with higher and higher taxes—coupled with no-tax privileges for such favored left-wing operations as the Ford Foundation. They were fed up with a program of mollycoddling criminals to the point where it is unsafe to be on the streets—even unsafe to remain in your own home at night. They were totally fed up with a no-win war, where our men die daily because their Government will not support them in combat—but continues to encourage trade with their enemy and those who supply their enemy with the munitions and implements of war.

The American people still await any significant action by the present administration to redeem the promises made in that campaign. They have seen no reduction in Federal spending which was supposed to be a condition of the 10-percent Johnson surtax. Now the Johnson surtax is about to become the Nixon surtax.

The anti-inflation theory behind this tax on a tax is patently assinine, and the people know it. You simply cannot tell people that if they spend the dollar which they have earned, it will lead to inflation, but if the Government takes it away from them and spends it, some alchemy takes place so that the spending does not become inflationary.

Mr. Nixon must learn from Mr. Lincoln, who had something to say about fooling all of the people all of the time.

Mr. Speaker, there are not enough votes in this House to pass an extension of the surtax at this time. The Members have been hearing from their constituents. Everyone knows that the delay in acting on the measure is for the purpose of permitting time for arm-twisting in the name of party loyalty.

It is appropriate to again point out that people discipline political parties—and politicians—at the polls. We all should read our mail, and perhaps try to evaluate the news as did the Mayor of Detroit. I ask that clippings and a typical letter from one of my constituents in Amite, La., follow.

The clippings follow:

[From the Washington Evening Star, June 24, 1969]

CITES CONCERN FOR FAMILY—DETROIT'S MAYOR CAVANAGH SAYS HE WON'T RUN AGAIN

DETROIT.—Detroit Mayor Jerome P. Cavanagh, who in 1961 became the first of a generation of "bright young mayors" claiming to solve the problems of the nation's cities, announced today he would not seek another term.

"The time has come for me to give greater consideration to the lives of my children," the 41-year-old, two-term Democratic mayor told a press conference. He was divorced in 1968.

Cavanagh said he still thinks the majority of the people in the city of Detroit support him.

He said the results of recent mayoral elections and primaries in New York, Los Angeles and Minneapolis, which have been interpreted as showing growing conservatism among urban voters "made my decision more difficult."

"If there was one thing that could have compelled me to run, it was these results," he explained.

Cavanagh, a liberal, indicated he thought it important that liberals stay and fight the growing trend of conservatism among urban voters.

Cavanagh, who has custody of four of his eight children, emphasized the burdens of his office and family responsibilities in announcing his decision.

"It was not an easy decision to reach," he said. "I have served nearly eight years in a job that has been described as one of the most difficult in America, next to the presidency."

Cavanagh, whose city in 1967 was the scene of one of the nation's worst racial riots in modern history, said he was proud of the record of his administration.

"I believe we have made municipal government more responsive and relevant to all the people of the city," he said.

Thirteen candidates already are in the mayor's race.

Cavanagh lost a Democratic primary election for the U.S. Senate in 1966 to former six-term Gov. G. Mennen Williams.

United Press International reported that Cavanagh's decision not to seek a third term appeared to stun his aides.

At a private meeting before the news conference, UPI said, many of the mayor's staff people arrived wearing "Cavanagh Cares" buttons, anticipating the launching of a campaign.

The mayor did not say what his plans would be when his term ends in January.

During the Johnson administration, Cavanagh was often mentioned as a possibility for a major federal appointment.

ASSIST BAR, JUDICIAL CONFERENCE—WARREN TO HELP DRAFT RULES

(By Dan Thomasson)

Retired Chief Justice Earl Warren will assist the American Bar Association (ABA), and the Judicial Conference in moulding a new set of ethical standards for Federal jurists, congressional sources said today.

Within moments after the swearing in ceremony for his successor, Warren T. Burger, yesterday, Mr. Warren expressed to friends his continuing concern over the loss of public confidence in the judicial system—an erosion attributable largely to the outside activities of former Associate Justice Abe Fortas and Justice William O. Douglas.

AMITE, LA.,
June 19, 1969.

HON. JOHN R. RARICK,
House of Representatives,
Washington, D.C.

DEAR MR. RARICK: This letter is being written by me—"Me" being a plain debt ridden, sur-taxed Southern American housewife. There are many more in the South—North—East—West—just like "Me."

My son volunteered for duty in Vietnam, not because he believes in "the war," but because his friends are "there" and the action is "there" and Old Glory is "there." This is a promise. I will not stand idly by on the sidelines with tears in my eyes and watch while the "black nationalist flag" replaces "Old Glory." I heard this happened in New Orleans. The first time it happens before my eyes—Old Glory will retain her place or blood will flow. And so many people misunderstand this same feeling that many Southerners have for the "Stars and Bars." This grand old flag is respected, not so much as a symbol of rebellion, but rather as a banner under which our ancestors fought honorably for the cause of States Rights. We were defeated because we were physically overwhelmed. "Might" still does not make "right." It is still my belief and my interpretation of the Constitution that towns, Parishes and States can better understand local problems and run their own affairs than the Federal Government. What does a Cajun know about building an igloo? What does an Alaskan know about crawfishing?

Since the Federal Judges take wide circles in interpreting the constitution and use this to their own advantage, has the possibility of a very simple and plain amendment to the Constitution been considered? For instance, why not introduce an amendment to the Constitution stating:

"Matters involving the education of children shall be left in the hands of individual local school boards and local school boards shall see to it that tax monies are distributed equally to each school for each educable child."

Now that seems simple enough. Another thing, I don't like the phrase "federal monies." Those Federal monies, friend, belong to me and all the other surcharged-tax paying Americans in the United States and not to the Supreme Court and HEW. And it seems to me we have an awful lot of "taxation without representation."

One thing more, don't feel bad because "The Supreme Court" let Adam Clayton Powell back in Congress. It stands to reason if that bunch don't believe in God, then they've got to go along with the Devil.

Sincerely,

JERRY PULLIAM.

OEO FRAUD

(Mr. ROGERS of Florida asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. ROGERS of Florida. Mr. Speaker, I have come across the most flagrant case of misrepresentation and outright fraud by a Government agency that it has been my experience to see.

The Office of Economic Opportunity has deceived the Congress, other agencies of Government and the American people by its underhanded and self-serving system of evaluating projects.

At great expense, OEO hires outside organizations to evaluate projects. They thus give the impression that the evaluation is an independent one, unprejudiced and unbiased. Then these evaluation reports, in the name of these supposedly independent firms are given wide circulation in support of OEO programs. They are even used by committees of Congress and by the General Accounting Office.

I have written proof, from one of these evaluating firms, that there is nothing independent about these reports at all.

The so-called "specialists" who conduct the investigations are handpicked by OEO itself, not the evaluation firm, so that OEO can dictate the result of the evaluations.

Not even the evaluation firm, which receives the financial benefit of this arrangement, approves of it. It is a clear deception, hidden from those who would read such a report on the letterhead of an outside organization thinking that it is an independent effort.

It is a fraud.

On June 10, in previous remarks about the evaluation of South Florida Migrant Legal Services Program, Inc., I pointed out to the House that Volt Information Sciences Services, Inc., was given a contract by OEO and paid to evaluate that project for refunding.

My investigation shows that OEO itself picked the four-man evaluation team, not Volt. Three of the four selected by OEO had close enough connections to the program to be disqualified. Volt says that they would not select individuals with potential conflicts of interest. But OEO did not permit Volt to make the selections. OEO did so itself.

One individual in particular, the team chairman, is listed as a "Volt consultant" on the report. Yet, the records of the OEO program being investigated show that this man was also the Washington representative of this same program.

OEO selected as chairman of an evaluation team, a Washington liaison man of the project to be evaluated. And OEO required its supposedly independent evaluation firm to pay this man for his services and submit his report as its independent evaluation.

The President has asked Congress to extend OEO for another 2 years. He has appointed a new Director, Don Rumsfeld, and given him Cabinet rank within the new administration. The President and Mr. Rumsfeld have taken over responsibility for a program which requires their immediate attention. Judging from the results of the November election, a majority of Americans voted against many of the policies and practices of the Johnson-Humphrey administration. Their votes, either for Mr. Nixon or for Mr. Wallace, were a clear mandate for change within the White House and the executive branch. Certainly, the poverty program must be high on the list of those programs and policies which must be drastically reformed.

I urge the President and Mr. Rumsfeld to immediately suspend all contracts which give OEO the right to select members of supposedly independent evaluation teams, and to repudiate any existing evaluation reports which have been submitted in this fraudulent manner. I call on them to immediately suspend the South Florida Migrant Legal Services Program, Inc., and to conduct a full and complete investigation, including an audit of all expenditures of the $800,000 given this program, to determine why OEO found it necessary to handpick evaluators rather than permit an honest investigation prior to recommending refunding of this program. And I urge them to authorize a new migrant legal services program, operated by responsible members of the Florida Bar Association and local bar associations, to provide legal services for the migrant and rural poor.

For the RECORD, here is documentation indicating the extent of these conflicts of interest:

First, excerpts from evaluation report, indicating team members.

Second, letter from Volt, confirming contract and fees.

Third, excerpts from project records indicating potential conflicts.

Fourth, letter from Volt confirming OEO selection of evaluators.

The material follows:

EXCERPT FROM EVALUATION REPORT

To: Christopher Clancy, Acting Director, OEO Legal Services.

From: John G. Murphy, Jr., Volt Consultant, Professor of Law, Georgetown Law Center, Washington, D.C.

This report summarizes the findings of a four man evaluation team sent to inspect the South Florida Migrant Legal Services Program April 14–17, 1969. Others on the team were Stuart Land, a member of the firm of Arnold & Porter, Washington, D.C.; Michael Trister, Director of the North Mississippi Rural Legal Services Project; and A. C. Strip, a Columbus, Ohio, attorney representing the Legal Aid Committee of the American Bar Association.

LETTER FROM VOLT DATED JUNE 2, 1969

DEAR CONGRESSMAN ROGERS: Thank you for your letter of May 21, 1969. We have reviewed the performance of four Volt specialists in the performance of a task assignment relating to the South Florida Migrant Legal Services Program, Inc., under the provisions of OEO Contract B89–4391. The results of this review are as follows:

This task was accomplished by the four specialists identified in your letter.

The specialists were or are to be paid fees and incidental expenses as follows:

John G. Murphy, Jr.; a fee of $280 for four days' professional services, per diem of $60, and travel expenses of $177.49.

Stuart Land; no fee, per diem of $52, and travel expenses of $189.00.

Michael Trister; a fee of $280 for four days' professional services, per diem of $60, and travel expenses of $177.49.

A. C. Strip; a fee of $300 for four days' professional services, per dem of approximately $40 and travel expenses to be determined.

It is not Volt's policy or practice to have anyone other than Volt regional representatives select specialists to be engaged for specific assignments.

Volt does not knowingly assign specialists to tasks in which the specialists have interests in the case.

Sincerely yours

DR. DAVID M. SNYDER,
Vice President.

EXCERPT FROM THE REPORT OF EXECUTIVE DIRECTOR, SOUTH FLORIDA MIGRANT LEGAL SERVICES PROGRAM, INC., TO THE BOARD OF DIRECTORS, DECEMBER 20, 1967

"Also while at Georgetown he (SFMLS Assistant Director) met Professor John G. Murphy, Jr., Co-Director, Legal Internship Program, Georgetown University Law Center, who has agreed to act as the Program's liaison man in Washington. His function will be to contact various government agencies upon our request and forward to us such information as he may acquire from these agencies."

LETTER FROM VOLT, DATED JUNE 16, 1969

DEAR CONGRESSMAN ROGERS: It was a pleasure to meet with you and your staff members to discuss your concerns on the project evaluation which was recently conducted on the "South Florida Migrant Legal Services Program, Inc., of Miami, Florida.

As I pointed out, we have a contract with OEO to provide the necessary qualified personnel, facilities, materials and services required to furnish services of specialists and provide assistance and support to OEO/CAP in developing, conducting and administering programs under Titles II and IIIB of the Economic Opportunity Act of 1964, as amended.

Our contract states, "although the Contractor is responsible, OEO, may however, make recommendations to the Contractor relating to the specialists. No specialists shall be permitted to provide services under this contract if he proves to be unacceptable to OEO." Needless to say, we are not happy with this clause.

In the past, OEO with few exceptions has reserved the right to select the specialists to provide technical assistance to the Legal Services Program.

It is our desire, Mr. Rogers, to have complete authority in the selection of specialists for specific assignments. This procedure would enable us to provide quality services which would cause a more effective program.

If we can be of further assistance to you in the future, please feel free to call on us.

With warmest regards.

THERON J. BELL,
Director, Public Affairs.

INDEFINITE WITHHOLDING OF CERTIFICATION FOR DOMESTIC AIR ROUTES TO THE PACIFIC

(Mr. PICKLE asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. PICKLE. Mr. Speaker, the announcement yesterday by the CAB that it was indefinitely withholding the issuance of certification for the domestic routes to the Pacific has added confusion and disbelief to practically all certificated air carriers in America.

This is the fifth delay, at the request of the White House, which the CAB has granted. This delay is causing deep financial injury to many of the carriers involved. It is causing great inconvenience to the public; it particularly leaves Hawaii in an uneasy status.

The Trans-Pacific case has shuttled back and forth several times from the White House to the CAB. During this time the Board has withheld these domestic routes pending some decision by the White House and each time the White House has apparently sent it back for some reason. At the President's own request, the Board last week apparently has recommended to the White House a carrier to the South Pacific with connections from the eastern seaboard to the Midwest and to the South Pacific, following the President's guidelines. If this recommendation was made and not accepted by the White House, the public is entitled to know the reason. If the Board has not made a recommendation or has not given sufficient information to the White House, that reason should be known. If there are other reasons for which this Trans-Pacific case cannot be settled, the public is entitled to know the reason.

Meanwhile, these carriers which have been granted domestic routes, yet have not been granted the certificates because the routes are attached to the Trans-Pacific case, have been expending considerable funds in anticipation of the start of the routes.

It is not fair that they be kept in the dark or strapped to a heavy financial expenditure for an indefinite period of time. They must anticipate the inauguration of the flights, air pilots, hostesses, and other crewmembers, hire advance personnel and establish some kind of office, as well as many other heavy expenses.

The failure to release these domestic routes has a serious impact on several carriers. One carrier may even go bankrupt if this expense is continued, and other carriers have spent $2 to $3 million in anticipation.

In short, Mr. Speaker, the delay in the Trans-Pacific case appears to be without good explanation. On the face of it, it appears unbelievable the way this case has been and is being handled. I call on the CAB and the White House to proceed with an order to settle this controversy. The public and the air carriers are entitled to better treatment.

POLITICAL IMPRISONMENT

(Mr. LOWENSTEIN asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. LOWENSTEIN. Mr. Speaker, not long ago, the South African Government released from political imprisonment one of South Africa's most distinguished citizens, Robert Sobukwe, the leader in happier days of the Pan African Congress.

The civilized world, so long accustomed to dark tidings from South Africa, blinked at the unfamiliar flicker, and hoped for better things to come, perhaps even for a return toward the minimal standards, of a rule of law so long banished from their troubled land.

Now comes the Lenkoe affair and with it, apparently, the early end of fragile hope.

A Lesotho citizen named James Lenkoe was suddenly taken from his home near Johannesburg by the special branch of the South African police. A day later he was found hanging in a cell in a prison in Pretoria. He had been questioned all day, and his wife was told that he had then hanged himself.

During the subsequent postmortem, however, the eminent American pathologist, Dr. Alan Moritz, testified that an injury on Mr. Lenkoe's body had been caused by electric shock. The suspicion that Mr. Lenkoe was in fact electrocuted has grown with the odd behavior of the South African Government since the body was discovered.

Allegations of torture in South African prisons are, of course, not new, but the South African Government has always professed indignation at these allegations.

Now that Government has, among other things, seized the passport of Mr. Joel Carlson. Mr. Carlson is the lawyer who represented Mr. Lenkoe's widow, and who developed evidence of torture in the Lenkoe case. Dr. Moritz said he is "very distressed" by the action against Mr. Carlson, but "not at all surprised."

My experience in Johannesburg made me feel that Mr. Carlson was living dangerously by crusading for human rights—that he was regarded by the government as a public enemy.

Many Members of this House are also very distressed—distressed by the renewed evidence of mistreatment of South African political prisoners, and distressed by the harassment of those who seek to show up such mistreatment and whose efforts one would think would be hailed by the South African Government if its professed indignation about such charges was an indication of a desire to correct such conditions where they exist.

The harassment of Mr. Carlson has provoked a protest from the Lawyers' Committee for Civil Rights Under Law, a group whose members include many of the most distinguished leaders of the American bar. The statement of the lawyers' committee follows:

The Lawyers' Committee has been advised that the South African government has taken away Mr. Carlson's passport, thereby restricting his movements outside the country. The Lenkoe inquest, as a result of the diligence of Mr. Carlson, associated counsel, and the testimony of Dr. Moritz and medical colleagues in South Africa, has cast doubt on the manner of Lenkoe's death. This case has over the past few days received considerable publicity, which has not been favorable to the police and prison officials.

In the opinion of the Lawyers' Committee, any interference with and harassment of an attorney who has, under instructions from others, carried out his duties in the highest tradition of the legal profession, would be totally unwarranted. The Lawyers' Committee intends to continue to instruct and support Mr. Carlson in carrying out his professional responsibility. We hope that he will not be interfered with, and that his freedom to travel, particularly while engaged in counseling clients, will not be infringed. The Lawyers' Committee will seek to continue its interest in the above matters, and its established professional association with Mr. Carlson in the interests of the preservation of the rule of law, which includes the right of any counsel to carry out his duties in dignity and to protect the rights of his clients without intimidation.

The Anglo-Saxon bar has an ancient tradition that lawyers have a duty to defend in court persons accused of crime, no matter how unpopular or dangerous, and to be protected in their exercise of this responsibility by the bar, the courts and, indeed, all arms of a civilised government. We hope that this tradition can and will be preserved by our South African brethern at the bar.

At the same time that these sad events have been taking place, two reporters of the leading Johannesburg newspaper, the Rand Daily Mail, are being brought to trial on charges of publishing false information about prison conditions. In Parliament, the Government has proposed legislation that would add to the immunity from legal procedure of the security police. The New York Times editorial of June 19 summarized the situation as clearly and fairly as anyone could:

SOUTH AFRICAN "JUSTICE"

While trying to maintain the trappings of proper legal procedure, South Africa's Nationalist Government adds steadily to its arsenal of police-state laws and practices. Legislation now in Parliament would make the country's notorious security police immune from any effective public scrutiny.

The Bureau of State Security is already shrouded in secrecy, but the new bill provides severe punishment for any disclosure of a "security matter," specifically including any matter related to security police activities. No evidence could even be given in court if the Prime Minister or anyone designated by him declared it prejudicial to state or public security.

The timing of this move to give security police even greater immunity is not accidental. It is unquestionably related to the Government's seizure last week of the passport of Joel Carlson, an eminent white civil rights lawyer, and to the trial of Laurence Gandar and Benjamin Pogrund of The Rand Daily Mail on charges of publishing false information on prison conditions.

Mr. Carlson is involved in a case which has produced sensational evidence of the use of electric shock torture by security police. This corroborated one Rand Daily Mail disclosure as well as some testimony at the Gandar-Pogrund trial.

James Lenkoe, a Lesotho national, was seized by security police at his home near Johannesburg and his wife was later notified that he had hanged himself in his cell. She contacted Mr. Carlson, who obtained a second post-mortem which aroused the suspicion that Mr. Lenkoe had been electrocuted. Now an eminent American pathologist, Dr. Alan Moritz, has told an inquest that beyond reasonable doubt an injury on Mr. Lenkoe's body was caused by electric shock.

However the court cases turn out, this much is clear: Mr. Carlson has lost his passport because he was too skilled, even when up against monstrous laws and the apartheid system, in protecting the rights of Africans and exposing police barbarism. Messrs. Gandar and Pogrund have been brought to trial not because their disclosures were false but for serving as alert and courageous critics of a tyrannical regime—and thus serving the cause of press freedom everywhere.

The South African Government would be wise to cease its harassment of Mr. Carlson, and to cooperate fully in investigating the circumstances attending Mr. Lenkoe's death. If it is found that Mr. Lenkoe was tortured, one would hope that the government would want to bring those responsible to justice.

The South African Government should also be aware that the trial of the two journalists will be closely watched, that the impression abroad is that those responsible for appalling prison conditions should be punished, not those who expose such conditions.

In the most precise sense of the word, it is the South African Government that is now on trial, not those who are in its political prisons, nor those who seek to make more humane the conditions in those prisons.

The questions of the sugar quota for South Africa and of the continuing permission for South African Airways to land in this country are now under public scrutiny. It is thus both appropriate and inevitable that the behavior of the South African Government should be observed carefully by Americans concerned about how their landing fields are used and how their money is spent.

AMERICAN ASTRONAUT NEIL ARMSTRONG

(Mr. FOREMAN asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. FOREMAN. Mr. Speaker, the eyes of the world are looking for that day when American Astronaut Neil Armstrong steps onto the surface of the moon. In New Mexico—our residents are very proud of this feat—especially since many components of the lunar land-

ing craft were tested at the NASA facility near Las Cruces. Mr. James Carpenter, a public information officer for the Las Cruces schools, is one of these New Mexicans. He has suggested—and the Las Cruces Chamber of Commerce agrees, that all America should fly our Nation's flag on that eventful day. Mr. Carpenter believes a feeling of national pride unequaled since World War II should sweep over our Nation with the success of Apollo 11. Mr. Speaker, I include a letter from the Las Cruces Chamber of Commerce to President Nixon in the RECORD at this point:

JUNE 17, 1969.

President RICHARD NIXON,
The White House,
Washington, D.C.

MY DEAR MR. PRESIDENT: The nation and the world know that the actual landing on the moon will culminate centuries of wonderment by peoples of the world. It also represents years of research, development, testing and planning by thousands of United States scientists.

Mr. Jim Carpenter, a citizen of Las Cruces, New Mexico, has suggested what could be the thoughts of two hundred million United States citizens; that when Neil Armstrong touches down on the moon concurrent recognition of this momentous occasion be made by a nation-wide display of our country's flag. We are all aware that the mission is fraught with danger and that successful accomplishment is not a foregone conclusion. Nevertheless we may hopefully prepare for honoring the occasion. Should this event occur during the hours of darkness, flags could be displayed during the following daylight hours.

The Las Cruces Chamber of Commerce, Las Cruces, New Mexico, wholeheartedly supports this proposal and respectfully asks you to issue an appropriate proclamation establishing procedures for observing this proud and memorable date.

Very respectfully yours,
CHARLES A. PINNEY,
Executive Manager.

MILITARY PROCUREMENT

(Mr. BRAY asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. BRAY. Mr. Speaker, according to a local publication, former Secretary of Defense Robert McNamara was interviewed by the Boston Globe the other day. He is reported to have said:

No amount of military hardware can buy us security and that is a fact we have yet to learn. . . . The Congress, you see, has bought Defense items the way women buy perfume If it costs more they conclude it must be better. Anything that's shinier, brighter, prettier they think the generals and "our boys" ought to have.

I spent much of my time fighting a Congress that wanted to spend too much on useless military projects. Any number of times I was ordered to begin work on a project which was totally wasteful.

I must confess that I am not surprised at this display of contemptuous attitude toward Congress on former Secretary McNamara's part. I certainly hope the World Bank is not being administered as poorly as the Department of Defense was under him.

The cost overruns and the failure of expensive military equipment of today are the direct responsibility of the systems analysts and the "management experts" of Mr. McNamara's regime.

Mr. McNamara well knows that Congress buys nothing. He should know, since he bought as little as possible; what he did buy turned out to be quite expensive, and in some cases, quite ineffective.

I need not belabor the TFX problem which was the result of a McNamara decision, probably the greatest blooper in American military procurement history. Mr. McNamara was blinded by one concept—commonality—and the taxpayers will be paying for that mistake for years to come.

Mr. McNamara wanted to destroy, for practical purposes, the military reserve structure of this Nation. The Congress prevented that.

Mr. McNamara refused to change our newest aircraft carrier the *John F. Kennedy* to nuclear propulsion despite the vigorous protests of the Navy and Congress. President Nixon pointed out during his campaign that—

Most naval authorities around the world describe that decision as an irretrievable and major mistake.

Mr. McNamara turned down the Navy's request to build the high-speed submarine. If he and his systems analysts had been permitted to have their way we would have stopped building any nuclear submarines after this year. Thank God the Congress and Secretary Clifford reversed that disastrous decision.

Mr. McNamara did not want to build nuclear-powered frigates, but wanted to continue studies instead. Had Mr. McNamara had his way, we would still be studying nuclear power, while the Russians are building more and more nuclear-powered submarines to be able to sink what Navy we have.

If Mr. McNamara, as quoted, said that no amount of military hardware can give us security, then certainly he misled the American people during the 7 years he reigned as supreme purchaser of military equipment in the Department of Defense.

Is he now joining the growing list of people who told Congress one thing while they were in Government, and now, when they are out, tell us the opposite?

Mr. McNamara was a great advocate of the parity concept. That is: Do not try to be superior to the Soviet Union in anything, and they will be good boys and not try to surpass us. That was his theory in ballistic missiles and that was his theory in naval ship construction.

As a result, the Russians are overtaking us, so far as naval supremacy is concerned. They vastly outnumber us in submarines. They outnumber us in cruisers. They outnumber us in amphibious vessels. They outnumber us in minesweepers.

We know that the Russians have at least six new prototype fighters flying. All we have at this point is the F–111, and that is not an air-to-air fighter.

Vice Admiral Rickover would not be on active duty today if Mr. McNamara had had his way. Thank God we had people like Chairman HOLIFIELD, the late Honorable William Bates, and Chairman RIVERS, or Admiral Rickover would have been kicked out and nuclear-powered propulsion would have been set back and America would have suffered.

So poorly prepared were we when the *Pueblo* was seized—thanks to McNamara—that we could not even go to the rescue of one of our own naval vessels in a Korean harbor. Yet, he wasted a billion dollars on the useless "McNamara line" across Vietnam.

History will prove him to have been our most expensive Secretary. A Secretary who produced little but cost effectiveness studies and a huge management bureaucracy—about 50 times larger than when he took over—a bureaucracy which is still stifling our Defense Department.

Morale hit a new low under his regime, so far as the military profession is concerned. But the greatest crime of all was the concept of gradual escalation, which he imposed on our military leaders in Vietnam. The skeletons of 36,000 American boys attest to the brilliance of that decision.

Tears came to McNamara's eyes as he related to a congressional committee his son's concern that his integrity was being questioned in the TFX issue. But now he is reported to have revealed his contempt of Congress with the declaration: "I defied Congress, crept as close to the edge of the law as possible and got away with it because of some damn good lawyers in the Pentagon."

The magic of Mr. McNamara's spell has come and gone. The damage he did while he was here was enough. The least he could do now is to keep quiet—before he does the Nation more harm.

OUTSIDE INCOME OF FEDERAL JUDGES

(Mr. RAILSBACK asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. RAILSBACK. Mr. Speaker, recently the Judicial Conference met. One of the matters they met to deal with was the question of outside income and whether Federal judges ought to be able to earn outside income. I think it was laudable that they decided to prohibit Federal judges from receiving outside income without obtaining permission first.

However, there are two rather glaring deficiencies in the actions taken by the Judicial Conference which lead me to believe that there is still a pressing need for legislation. No. 1, they do not include the members of the Supreme Court within the rules. No. 2, they failed to provide any enforcement provisions.

For these reasons, Mr. Speaker, I have taken most of the recommendations of the Judicial Conference and put them into a bill. I have provided that all judges including Supreme Court Judges, come within the scope of the bill. I have added to it as well some enforcement provisions, so if indeed some of the judges continue to do what they have done in the past, then we, the Federal Government, will have a right to enforce the provisions to prevent them from violating their trust.

The matter of judicial independence

and integrity has recently become a matter of national concern. When discussing this issue it is important to realize that two distinct aspects of judicial independence have been involved. The first relates to the relative position of the Supreme Court as one of the three equal branches of Government under our system of separation of powers. The other aspect is equally important and relates to the fundamental requirement that our judicial structure remain totally free of outside influences separate from those exerted by Congress and the executive branches of Government. To allow one branch of our Government to dominate and detract from the effectiveness of the other two is one thing, but for a branch to lose independence to private interests outside the governmental structure based upon financial or personal gain of its members is even more insidious.

There can be no question that judges and Justices are individuals and subject to the temptations and desires that exist within every human. The law has long recognized, however, that certain positions in our society require that those who hold them put aside those interests and conflicts which would detract from their independence and impartiality. A judicial assignment is a position of high trust and requires more than a discretionary denial or avoidance of inconsequential conflicts. It demands that not only actual conflicts be eliminated, but that appearances of conflicts also be assiduously avoided.

Perhaps no conflict of interest detracts more from the dignity and integrity of a judicial position than a financial conflict, whether proven or implied. Of the many social contacts maintained by judicial officers none is so pernicious as an economic relationship. Nothing impunes a judges' motives as effectively as the suggestion that his decision was tempered or affected by financial ties or the prospect of personal economic gain. What makes this charge so treacherous is the fact that innocent and distant relationships are just as damning as those which actually altered a judicial mandate.

Our Federal judicial system and its esteemed members have, in the past, been forced to conduct their nonjudicial activities without an objective set of standards by which to gage their conduct. While every foreseeable conflict does not lend itself to the application of objective criteria and would not therefore be diminished by their existence, financial relationships cannot be so classified.

The time has come to recognize that our Federal judicial system must once and for all be removed and protected from future financial involvements that have impugned its activities and diminished its effectiveness in the past. Our Nation requires a full-time judiciary devoted to the impartial application of the law of the land. As long as financial conflicts of interest are possible, our courts will never be above suspicion.

As a Nation whose basis for orderly existence is founded upon respect for the law, such a condition cannot be allowed to exist. In an effort to completely remove the cloud of financial conflict of interest from our Federal judicial system. I am introducing legislation which would prohibit the receipt of income for services from sources other than the United States except in those instances where specific authorization was obtained prior to performing the service. In addition, there is provision for the annual disclosure of the nature and extent of investment income in order that it be revealed and made subject to the light of public scrutiny.

Mr. Speaker, the bill I introduce is based in large part upon the recent recommendations of the Judicial Conference of the United States. It does, however, vary in certain significant aspects. First, it applies to all members of the Federal judiciary, including members of the Supreme Court. Certainly the reasons for requiring financial disclosure by lower court judges are equally applicable to those who sit on our highest court. Of what use is a code of ethics for our Federal judicial system that specifically excludes the Supreme Court from its provisions?

In addition, the legislation I propose would strengthen the Judicial Conference proposal by providing that violations would constitute a high misdemeanor. Conviction of such an act would provide grounds for impeachmnt under article II, section 4, of the Constitution.

Service on the highest court of our land and on the other Federal courts is not and can never be a part-time job. The increasing pressures of crowded court dockets on both the trial and appeal levels require constant attention. It is no longer possible to adequately deal with the issues and problems now facing our courts on other than a full-time basis.

The integrity of our Federal courts should no longer be a matter of discussion and debate. There should be no question about such matters. If there is basis or reason for such discussions, the judiciary has failed to meet its responsibility to remain above suspicion.

Mr. Speaker, I intend to circulate my bill to allow those who so desire to join me as cosponsors. In this regard I would welcome their support and interest in this endeavor. The bill follows:

H.R. 12434

A bill to amend title 28, United States Code, to prohibit Federal judges from receiving compensation other than for the performance of their judicial duties, except in certain instances, and to provide for the disclosure of certain financial information

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

SECTION 1. Section 454 of title 28, United States Code, is amended to read as follows:

"§ 454. Practice of law by justices and judges; additional compensation; disclosure of financial information.

"(a) No judge or justice appointed under the authority of the United States shall engage in the practice of law.

"(b) Except as provided in subsection (c), no judge or justice appointed under the authority of the United States shall accept compensation of any kind, whether in the form of loans, gifts, gratuities, honoraria, or in any other form, for services performed or to be performed by him, other than that compensation provided by law for the performance of his judicial duties.

"(c) A judge or justice may accept compensation other than that provided by law for the performance of judicial duties if, upon application of such judge or justice, the judicial council of the circuit (or in the case of a judge or justice on a court which is not part of a circuit, the judges or justices of the court who are in active service) approves the acceptance of such compensation upon a determination that—

"(1) the services are in the public interest or are justified by exceptional circumstances, and

"(2) the services will not interfere with his judicial duties.

The services to be performed and the compensation to be paid under this subsection shall be reported to the Judicial Conference of the United States and made a matter of public record.

"(d) Each judge or justice shall file annually (commencing May 15, 1970 for the preceding calendar year) with the Judicial Conference of the United States, on forms to be approved by the Judicial Conference, a statement of his investments and other assets held by him at any time during the year as well as a statement of income, including gifts and bequests, from any source, identifying the source, and a statement of liabilities.

"The statements shall be kept on file with the Judicial Conference and available for such use as the Conference and the Judicial Councils of the circuits may require, as well as for public disclosure as determined by the Judicial Conference to be in the public interest, pursuant to regulations promulgated by the Conference.

"(e) Any judge or justice who violates subsection (a), (b), or (d) is guilty of a high misdemeanor."

Sec. 2. The item relating to section 454 in the table of sections for chapter 21 of such title is amended to read as follows:

"454. Practice of law by justices and judges; additional compensation; disclosure of financial information."

EXPROPRIATION IN PERU

(Mr. EDWARDS of Alabama asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. EDWARDS of Alabama. Mr. Speaker, on October 9, 1968, the Government of Peru expropriated the assets of the International Petroleum Co., a U.S.-owned company in Peru.

I suppose any national government has the right to take control of foreign owned property, but certainly the owners have a right to fair compensation.

This principle is given recognition in our law by the Hickenlooper amendment to the Foreign Assistance Act of 1961 as well as section 408(C) of the Sugar Act. The Hickenlooper amendment provides that when any country expropriates U.S.-owned property and fails to provide compensation within 6 months then U.S. assistance programs are suspended.

On April 9 the 6-month period expired without compensation by Peru. The State Department agonized for some time about what to do, and decided to do nothing.

This was hailed as a victory. Specifically, one report said it was a "triumph of diplomatic one-upmanship" by the United States.

On the day before the expiration of

that 6-month period, April 8, a crowd of people in Lima attacked the U.S. Information Service there with rocks and Molotov cocktails. They charred a front door and shattered a large window.

Since that time Peru has seized American fishing boats operating within what Peru claims as 200-mile coastal waters but well outside of the 12-mile zone which has been considered as an international standard and which this country recognizes.

Yesterday, according to news reports, the Peru Government expropriated land holdings including substantial land owned by citizens of this country.

Mr. Speaker, these are facts which are on the record for all to see.

I call upon our Government today to suspend all programs of assistance to the Government of Peru in accord with the Hickenlooper amendment.

I say to my colleagues that if provisions of the foreign assistance legislation cannot be implemented, then further appropriations for the program should be seriously questioned.

One would think that after 20 years of trying to make defeats look like victories in our diplomatic dealings with other countries, we would catch on. But we do not.

Neither Peru nor any other country is going to stop harassing the United States so long as we knuckle under to every outrage perpetuated on us, calling it a new and greater triumph.

Let us use some commonsense in our dealings with other countries, just once.

DAVIS—THE UNIVERSITY THAT MRAK BUILT

(Mr. LEGGETT asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. LEGGETT. Mr. Speaker, this month at the Nation's leading agricultural college—the University of California at Davis, in my congressional district—the chancellor will retire.

Emil M. Mrak is perhaps as unseemly a name as SPIRO T. AGNEW—both describe important Americans. Mrak assumed chancellorship of the old Cal Aggie College 10 years ago and carefully managed the broadening of the curriculum, the development of a new law school, the development of a new medical school, and a college enrollment expansion from 2,500 to 11,100 this spring.

The Davis campus for my money and my daughter, Diana, is the best in the West, and Mrak made it that way.

By personalizing the university administration, Emil Mrak has helped to bridge the gap between students and faculty and sometimes the larger gap between faculty and administration.

During the Davis-Mrak years, many wonderful things happened in American agriculture. Mrak was one of the first to detect and become alarmed at the agricultural pollution of our economy and he took steps to effect change. At Davis, we invented the quick frozen dried method of dehydration and more agriculture machinery than any other specific center in the country.

The university that Mrak built was described in the University Centennial magazine last year, as follows:

DAVIS

This campus, spreading over 3,800 acres in the Valley, lies beside a small town, surrounded by rich farmlands. It physically resembles an Ivy League campus, with hundreds of trees, green and spreading over sprawling lawns. Here students and professors alike bicycle along paths without cars.

It retains some of the flavors of rural life, only a nostalgic memory on most larger American campuses today. The informality, friendliness, and an effective honor code at exam time are characteristics of the campus.

These stem from what was once called the University Farm, founded 63 years ago at Davis to help the California farmer. Davis has since grown into a general campus with 10,000 students, and there are plans for 9,000 more. But the origins in agriculture remain evident in the style and prestige of the place.

The College of Agricultural and Environmental Sciences has made many contributions to agriculture, still the state's leading industry, and since 1922 the college has offered four-year undergraduate programs. Annually, it attracts hundreds of foreign students from developing countries where techniques learned at Davis can help in grappling with desperate problems related to hunger. Its scientists have helped provide resources for connected studies such as the new Institute of Ecology and a National Center for primate Biology.

The latter relates especially to the School of Veterinary Medicine, established in 1946. This school, in turn, is planning coordinated research with the School of Medicine, which will take in its first students next fall. At the same time, many studies at the Food Protection and Toxicology Center have significance far beyond the farmer's fields.

Today, the College of Letters and Science offers programs in 26 departments. The College of Engineering and the Law School are expanding rapidly. Research includes a Radiobiology Laboratory for studying long-term effects of radiation and the Crocker Nuclear Laboratory for the study of low and medium energy physics. The Institute of Governmental Affairs concentrates on state and local government problems, and there is a new Center for the Administration of Criminal Justice.

Amid this increasing complexity, the campus administration is striving to retain the warmth of earlier days. Nearly half the students live on the campus, and recreational areas are being expanded. So far, the efforts have succeeded. Students, specializing in nuclear engineering or political science, adopt the "Aggie" nickname and use it as a theme for activities on the campus. The rustic flavor is generally enjoyed as a tradition, although certain segments of the student body now treasure it for its vanishing virtues.

Emil Mrak is not complacement over his success nor is he oblivious to the problems facing Davis and other universities in the coming few years.

I fervently hope that the university continues to grow in the Mrak mold with his keen communication and understanding. I would hope that we would really not learn to love and cherish the Mrak years as an end in and of themselves, but a sturdy foundation upon which future western education was built.

Last week Ron Blubaugh in the Sacramento Bee described his final interview with Emil Mrak—my candidate for a great American. The article follows:

UCD'S MRAK FEELS DISTORTED NEWS IS HELPING DESTROY UC

(By Ron Blubaugh)

DAVIS.—Emil M. Mrak will not be retiring this summer with the usual buoyant feeling that goes with the completion of a job well done.

Instead, Mrak will carry a certain sense of sadness with him from the chancellorship of the Davis campus of the University of California. It is a sadness rooted in a belief that no matter what he has done, the University of California is suffering, perhaps fatally.

"My feeling is that there are forces out to destroy the University of California," Mrak said in a recent interview. "I am convinced myself, that if it is not already destroyed, it is badly damaged.

"I have told my wife I am almost sorry I did not terminate my chancellorship last year. It is so discouraging. We don't have any money. I have to spend all my time keeping peace."

Mrak has been a UC faculty member for 32 years, the last 10 as Davis chancellor. He cannot recall a more difficult period for the university or for higher education.

"The great strength of a democratic society is its university system," he said. "I think the forces out to destroy the university are aiming at democracy. I am so depressed about the thing because I almost wonder if our society is on the way out. I really worry for my children."

If such remarks seem unusually candid, they will come as no surprise to long-time acquaintances of the chancellor. He has a reputation for being blunt.

"He says what he thinks," is the way Dave Ernst, UC Davis student body vice president, described Mrak. "That is what people appreciate about him."

More than one reporter can personally attest that Mrak speaks directly—and in no vague terms. He has been known to evaluate the work of a newsman in salty sailor words. So strongly does he feel about the news media that he accords it a special place in his analysis of the grief of higher education.

DISTORTED VIEW

As the chancellor sees it, campus woes start with the actions of a radical group of students. The news media distort these activities by larger-than-life reporting. This leads to an adverse reaction by the general citizenry bringing pressure on politicians who then lash out at the campus.

"I have always said the left started working on labor and was not successful so it now is working on the universities," Mrak explained. "There are relatively few who are nihilists but they are out to destroy everything. They are always looking for an issue. More moderate students then join in on the issue and something happens that gets them all going. It ends up with the madness of crowds."

Then come the news media.

"We have some people who read and believe the newspapers when what they have is inaccurate; and believe the television when it is so perverted," Mrak said. "These actions of the newspapers and television create what the destructionists want. They are marvelous fuel on the fire. It helps them."

Angry as he can be with the newspapers, it is television which really raises Mrak's ire. Television can create the illusion that the viewer sees the event when in reality he sees only a portion of it.

TV INCIDENT

"I am really disturbed by television," he said. "When I was in Costa Rica (two weeks ago) there was a group of 50 to 75 students outside the presidential palace yelling "Go home Yanks." NBC was there and right in the middle of it.

"Then another group of students came in there to chase the first bunch away. The television team folded up their cameras and ig-

nored it. To me, this is typical of television with all of its subtle implications to destroy our society."

Where does this lead? To a public reaction Mrak calls "murder."

"I have a very disheartened and dismal outlook on the future of higher education in California for years to come. The citizens of this state, instead of trying to make educational changes and improvements, are saying 'If this is the way the students are we will have to penalize them.' This does not help the state. It is going to hurt the state, in my opinion.

"I have a feeling the politicians are frustrated. They want to see this thing stopped. So do I. A lot of them feel they should leave it to us.

"But there is not as much interest in the university. There is not as much interest in paying for it. I have had many politicians tell me that supporting the university is a liability to them. So why should they bother?"

SON OF A CHEF

Born in San Francisco in 1901, Mrak is the son of a chef turned restaurant owner turned prune grower. And he might have followed in his father's career were it not for the price of prunes the year he finished high school.

Prune prices were so low it was barely possible to make a living from that year's crop. Mrak decided to go to college rather than become a grower. He went to UC Berkeley and worked his way through school. Later, he obtained a doctorate and became known as one of the world's authorities on yeasts, particularly as they affect food preservation.

He has won a number of honors for his research and knowledge about food technology. He was chairman of the department of food technology at Davis and Berkeley when he was named chancellor.

During Mrak's tenure as chief of Davis, the campus has been transformed from an agricultural campus to a full university. Enrollment grew from 2,500 students in 1959 to 11,100 this spring. The size of the faculty jumped from 448 to 1,559. The budget rose from $13 million to $65 million.

Such statistics tell part of the story of Mrak's tenure, but not really the portion he favors. Mrak considers holding down the growth to be one of his greatest accomplishments.

"I battled it," he said. "I am still battling it. There is nothing magic in the figure of 27,500 students (the UC-established size for all general campuses but Davis). Nobody knows how they got that figure. They had to cut the Berkeley campus off at some place and that is what the enrollment was when they decided to cut it off.

"We have had on this campus a fine student-faculty relationship. We have had an honor spirit. You can't maintain the faculty-student relationship and honor spirit at a monstrosity like Berkeley or UCLA.

"The people in Berkeley (at the statewide UC headquarters) look at statistics. They don't look at the educational problems in such size, or the people or the human problems. All they think about is their damned figures."

Although he has won some battles with the statewide UC administration, Mrak is not convinced he won the war. The first enrollment ceiling at Davis was 5,000 students, Mrak explained, then 10,000 then 15,000 and now 18,500.

"We have been fighting a rear-guard action all the way," he said.

Next fall, the growth will for the first time exceed the room on the campus.

"We will turn away our first qualified applicants," he said.

Mrak's answer to operating a university campus is good communications.

"What is needed is personal communication," he said. "The next chancellor (James Meyer) will have to do it. But how do you talk to 11,000 students? I don't know. This is the trouble with our larger campuses."

At Davis, Mrak has sought to handle the communications problem by keeping an open door to students. He invites them to visit him and let off steam. They do. They go to his office. They stop him on the campus. They go to his home. He puts his students first. They rank ahead of the paperwork and the bureaucratic problems of administering a giant school.

GIVE AND TAKE

"He goes out of his way," said Jerry Takehara, a junior. "There is a lot of give-and-take. He figures that with communication there is less chance for misunderstanding. You saw what happened today. He put us ahead of you."

Takehara's reference was to Mrak's decision to keep newsmen waiting past an appointment in order to keep his commitment of an open door to students.

Anyone walking across the campus with the chancellor can see the informality he has with students. They walk up to him and engage in easy conversation.

Mrak moves as easily with local businessmen as he does with students. Among some of his business associates in Yolo County he is known as a good man with a "gut bucket." A one-stringed bass rhythm instrument. He is said to have given displays of musical wizardry on this washtub fiddle at more than one party.

And as easily as he moves with students and businessmen, Mrak also walks in the highest levels of government. He currently is a member of a presidential commission visiting the Latin American nations to "look and listen." Gov. Nelson Rockefeller is the chairman of the commission. Mrak is one of 20 advisers accompanying the New York governor. The Davis chancellor was chosen because of his knowledge about food and agriculture.

He also is a member of several foundations.

Officially Mrak's last day on the job is June 30.

"Really, I am sliding out of it all too fast, now," he said just before leaving on a five-nation tour last week.

Chancellor Mrak in the university school of medicine February report set forth his own perspective on higher education, as follows:

THE CHANCELLOR SPEAKS

I would like to discuss some of the changes going on in the universities today, and I can assure you that some of the changes are just as puzzling to me as they are to you. And, as you well know, these changes are not in any way confined to Berkeley, or to California, or even to the U.S. Students in most parts of the world are making themselves heard. I cannot speak for the students abroad. but I may be able to bring out some of the aspects of the changes here in California.

In this, my final year as Chancellor, I have been looking back a little to note the many changes that have occurred since my college years began in the dark days of the depression in this country—the early 1930's. Those were the days often referred to as the Joe College, Rah-Rah days, the days of the coonskin coat and the football hero we have all seen depicted in some of our American movies. It was a difficult time for the poor boy in this country to get an education, and many of us had to take whatever menial job we could find to keep in school. There was also a very clear class distinction between the lowly freshman, the sophomore and the upper classman. But that was the time, too, when class distinctions started to disappear. For one thing, the sophomores began wearing blue jeans and lumber jack shirts—a brazen step toward change. And, in those days too, the faculty was all powerful, but, I like to think, very responsible.

Following World War II we saw great changes in the universities. For one thing there was the tremendous influx of war veterans attending on government support. This brought many into the colleges and universities who would otherwise never have been able to afford it. It also helped break down the last class barriers among students. We also began to see the great increase in government support of faculty research—and with it an increased emphasis on research and the "publish or perish" notion of the faculty. This in many ways made the faculty more aloof from the students, since the faculty interests inadvertently turned to more and more research. This change in interests and emphasis, I believe, changed the philosophy of the basis for appointment and promotion. The Russian space program, too, gave a further boost to the idea of more research and more intensive science and engineering education.

These changes were most dramatic in the curriculum of the high schools, with greater emphasis on the sciences and basic educational courses. When these highly trained young students began showing up in the colleges and universities, they felt that the higher education had not moved ahead far and fast enough. They then began to make their thoughts known. Ironically, while the students and administration were interested in making changes, the faculties were not. The faculty is always the most conservative body on the campus, when it comes to matters of direct concern to them, but extremely liberal when it comes to matters relating to others.

On the campuses, we were stuck with the old rules of former years, but at the same time a changing type of student. Much of the cause of the free speech movement, I believe, came about because of the retention of pre-war rules on the campuses.

Furthermore, we see the disadvantaged groups flexing their muscles and making their needs known very strongly. If one group feels it is not getting its full share of rights and privileges, it demonstrates in one way or another, to promote its interests, or what it believes are its interests. Certainly each group should receive its full share and equal treatment—this we cannot deny. Many individuals in our state and nation have long ignored the rumblings of the unsatisfied groups, and are suddenly confronted with a major crisis.

Certainly the faculties have not been ready for this crisis. They are slow to accept new ideas, as I said. The Regents and the faculties need to clearly define and accept responsibility as well as authority. Currently, the Chancellor is caught in the middle. He has very little power to bring about changes—he can only use persuasion. On our own campus we have been fairly successful in meeting the needs of the students in their pleas for a more meaningful and a more exciting education, but we still have a long way to go.

My personal philosophy in handling the many problems of a rapidly growing campus in these times, is to try to listen to all sides, and all groups, and to try to bring representatives of each group together. But this takes a tremendous amount of time and effort. We put students on as many committees as possible in order to get them involved in the administrative process. And too, our Academic Senate is beginning to listen more to students when it comes to educational innovation and planning.

When President Hitch stated last spring that the University would be directly involved in the Urban Crisis program, we immediately brought together a group of students and faculty to recruit economically disadvantaged students to Davis. Most of the recruiting was done by the students over the past summer, and we have been very successful. A large number of these students are now studying at Davis, under special scholarship programs.

The same student-faculty committee is now involved in other aspects of the Urban Crisis program.

Recently, we inaugurated a program called Project Involvement in an effort to involve students, faculty, alumni, and staff members too in discussions and planning sessions concerned with problems facing the campus. It is very gratifying to see how well the program has been received, and how nearly 30 task groups are discussing all types of programs, such as greater communications on the campus, educational reform, our place in international communications, our involvement in urban extension, man and resources in the face of growing population pressures. We have great hopes for this program and have found a high degree of campus participation.

In reviewing the changes and problems facing us in higher education today, I cannot forget the press and TV. With the first cries for higher quality education at the beginning of the space age, and a little later with the free speech movement, the press "discovered" higher education as good news copy for selling more papers. In many ways the press and TV helped bring out the needs of education. But they also added greatly to its problems, and, as I see it, possible destruction—yes, possible destruction—by misrepresenting student activities. The press and TV are powerful tools, and dissident students know how to use them to their advantage. In reporting the activists' side, the press all too often overlooks the less exciting efforts of the great mass of students and faculty to get changes made. Our students constantly complain that the few who hold a rally against the administration get full attention from the press, but the many, very many more, indeed, who tutor disadvantaged students or sponsor a summer camp for them, etc., get no coverage, or at least very little. It just is not dramatic enough for the press. Perhaps we need to educate the reading and viewing public as well as the press.

In these remarks I have tried to point out some of the changes and problems facing us today in higher education. Unfortunately, I do not have answers. We are all seeking those answers, and any suggestions are welcome. I would like to list several broad points I think the Regents must consider if we are to have peace and quiet on our campuses.

1. Academic freedom.
2. What does the delegation of authority to the faculty mean?
3. What is faculty responsibility—not now defined.
4. Where does the administration fit in—now impossible.
5. Define procedures.
6. Recognize the impossibility of rules and laws.
7. Define good taste.

EMIL C. MRAK.

NARCOTICS CONTROL LEGISLATION

The SPEAKER. Under a previous order of the House, the gentleman from California (Mr. TUNNEY) is recognized for 60 minutes.

Mr. TUNNEY. Mr. Speaker, the extremely serious problem of narcotics and dangerous-drug addiction in the United States has been thoroughly documented in recent years. There can no doubt of the socially corrupting influence of addiction—especially with its major role in the rapidly rising crime rate.

There is a wide-ranging variety of laws designed to curb the selling and use of narcotics in the United States, but it is obvious from arrest and conviction statistics that such laws are not having the desired effect. It therefore is equally obvious that the next legal steps must be aimed at stopping the flood of narcotics into this country.

A recent factfinding visit to the California-Mexico border at San Ysidro, across from Tijuana, allowed me to observe the relative ease with which narcotics can enter the U.S. Federal border-inspection personnel are forced to cope with a crushing amount of pedestrian and vehicular traffic daily. Only 1 percent of the vehicles entering the United States ever are searched, and the decision to search is frequently made on the basis of an inspector's intuition. Federal officials tell me there is no way of knowing how many vehicles pass through with contraband cargoes. Long lines of cars, often forced to wait as long as 1 hour, develop from the inability of our inspection personnel to process them any faster while still attempting to stem the flow of narcotics. And it can be safely assumed that the vast majority of travelers are law-abiding citizens enjoying our sacred principle of open borders.

Therefore, I am introducing legislation that would increase by 50 percent the personnel strength of our border inspectors. It would be a first small step toward more effectively stopping the narcotics traffic, while at the same time serving the public's right to unimpeded foreign travel.

During my discussions with Federal customs and narcotics authorities, I was shocked to discover that the majority of dangerous drugs—more specifically, pills—confiscated by our border inspectors were manufactured by well-known U.S. drug firms.

It was explained to me that, quite legally, such firms can fill orders from foreign purchasers without any verification other than a foreign address to which the shipment is to be consigned. It works like this: The U.S. drug firm receives an order from a Mexican drugstore for a commercial quantity of pills of the type we consider dangerous drugs. The shipment is sent to a California warehouse near the border, but consigned to the drugstore. The "store" usually turns out to be nonexistent, according to Federal investigators.

A Mexican national claiming to represent the drugstore picks up the shipment in California. Up to this point, no U.S. law has been violated. The individual then either smuggles the pills into Mexico to avoid paying Mexican taxes, or simply sells the pills illegally in the United States. But those pills confiscated at the border are those which were smuggled into Mexico and then sold to peddlers—usually Americans—who attempt to smuggle the dangerous drugs into the United States for illegal sales, mostly to juveniles.

There is no way of knowing how many American-made pills end up on the illegal U.S. market without ever leaving the country. But an indicator of the vast quantity of pills labeled "Made in U.S.A." and which the wholesaler intended to be sold illegally in the United States is in the scores of boxes of confiscated pills stored in the Bureau of Customs' vault in San Diego. And an indicator of the increasing traffic in narcotics and dangerous drugs lies in the statistics on arrests for their possession and usage.

Arrests of adults in San Diego alone are up 400 percent since 1960, and arrests of San Diego juveniles are up 1,400 percent during the same period. Yet the border inspection system and manpower have remained basically unchanged during the last 5 years.

Remedies have been suggested which are acceptable to one Federal agency but not to the other. The manufacturers and distributors clearly do not want to be overregulated. The gravity of the problem coupled with its complexity calls for a study by the concerned agencies, so that Congress may be sent their best thinking on the problem and the interdepartmental friction may be eliminated before congressional consideration begins in the appropriate committees. Therefore, I am introducing companion legislation calling upon the Attorney General, the Secretary of Health, Education, and Welfare, and the Secretary of the Treasury to conduct a comprehensive investigation and study of the extent and nature of the illegal importation of narcotics and dangerous drugs into the United States, and to report to Congress within 12 months with findings, conclusions, and recommendations.

IN PROTEST OF CUTTING OF FUNDS FOR PORT OF NEW YORK AND NEWARK BAY

The SPEAKER. Under a previous order of the House, the gentleman from New Jersey (Mr. DANIELS) is recognized for 60 minutes.

Mr. DANIELS of New Jersey. Mr. Speaker, I rise today to protest against administration measures which very literally make the northern New Jersey-New York area the stepchild of the Nation.

I am making reference to the double-barreled attack upon the Port of New York. As all Members know, the original budget of the Army civil works program for fiscal year 1970 has been sharply cut back. Had the cuts been uniform we would not be on the solid ground we are today. On the contrary, the cuts show obvious discrimination against the New York-New Jersey port area.

Originally the budget called for $769,420,000. The revised budget now calls for a cut from the earlier figure to $627,055,000 which represents a slice of 19 percent.

Confining our examination today to the Nation's 17 major seaport projects, which were funded in the original budget for fiscal year 1970, we find that of this figure a reduction of 36 percent was affected.

Of the 17 seaport projects, eight sustained no cuts at all.

The two port of New York projects actually sustained 39 percent of the total recommended cuts in the funding of all major seaport projects throughout the Nation.

Contrast this, if you will, with the cut made in the Arkansas River project which was cut back by only 2 percent from $59 to $58 million.

Or, the C. & D. Canal which is designed to link the Ports of Baltimore and Philadelphia. It was cut only a token 8 percent.

The $4 million for the widening and deepening of the channel of the Port of Providence, R.I., was not cut at all.

If the administration used a surgeon's

scalpel on other projects in other parts of the Nation, it seems equally clear that a meat ax was used on the Port of New York.

Mr. Speaker, this House and the other body as well, has made known that it wants action in Newark Bay. The Congress has authorized funds for this project in the last 2 fiscal years. However, the executive branch of the Government—and I have no partisan ax to grind because the present administration is no more at fault in this matter than the previous one—has to date, directed that no work be started on this project.

Now, of course, with the "freeze" on, the administration is using the fact that no work has been done is justification for not starting any work. Clearly, this is circular reasoning at its worst.

I do not wish to leave the impression that we who are protesting today are merely porkbarrelling and ignoring greater justification in other parts of the Nation for similar projects because our area is involved. Far from it.

We think these two projects are vitally needed for the safe and adequate handling of the large tankers and the burgeoning movement of container ships and other large vessels which use Newark Bay and the New York Harbor.

Mr. Speaker, we are prepared to make out a case for the New York Port area. We ask no special consideration. We seek to have these funds restored because the Port of New York is of concern to the health and safety of this Nation. On the other hand, as legislators from this area we cannot be asked to support projects remote from our own constituencies unless our area receives equal treatment. And, Mr. Speaker, the New York-New Jersey Ports have not received their due amount of consideration from the Federal Government.

Mr. Speaker, let us for just a moment look at what a little Federal assistance can do for the Port of New York.

It is significant to take note that the half a billion dollars invested in new and rehabilitated docks and wharves in the Port of New York, from 1946 through 1965 resulted in nearly 100 new or modernized ship berths. This is more than half of all the new facilities built or renewed in the entire Nation for the same period, and seven times the ship berths built or reconstructed by the second-ranking port area. It is another fact that while the U.S. port industry invested more than $2.5 billion in terminal investment for the period throughout the Nation, the Federal investment in seaport channel development for a comparable period was less than half this non-Federal investment. In New York Harbor, this 1-to-2 ratio between Federal and non-Federal investment is not being maintained. Through the late 1940's to the mid-1960's, the annual average Federal investment in the construction of ocean channels in the Port of New York has been about $3 million, while non-Federal investment in terminals has averaged about $24 million. This represents a 1-to-8 ratio, which indicates that the rate of Federal investment in our harbor is well under the national average.

Mr. Speaker, there are a number of distinguished Members who can spell out what these programs mean to specific areas within the New York Harbor, Newark Bay port areas. I am happy to have so many New York and New Jersey Members with us today. I think this points out the fact that we in the New York metropolitan area mean business and that we are in dead earnest about the discrimination against the economic interest of New York and New Jersey.

Mr. Speaker, it is our hope that President Nixon will have second thoughts about this unwise decision and that he will use his good offices to restore these funds to the executive budget and that the able chairman, the gentleman from Texas (Mr. MAHON), and the other distinguished members of the great Committee on Appropriations will do their share toward funding these two projects.

Mr. SANDMAN. Mr. Speaker, I am concerned that a 36-percent cutback in funds for the Newark Bay channel has been proposed in the revised executive budget for fiscal year 1970.

In 1966, the Congress and the President authorized a deepening of the north reach of the Newark Bay channel from its present 32 feet to a new depth of 35 feet, as well as a deepening of the Hackensack River from 30 to 32 feet in a 4-mile area. As part of the overall Newark Bay-Hackensack River improvement project, the provision of a maneuvering area 1,300 feet long and 900 feet wide just below the Passaic and Hackensack Rivers was also approved.

Water commerce on Newark Bay plays a key role in New Jersey's industry and industrial jobs. Of particular interest is the importance of petroleum, and the fact that in 1966, 410 ocean tanker movements—that is, vessels drawing more than 19 feet of water, handled petroleum products on Newark Bay. Of these, 176 ships upon arrival in Newark Bay drew 29 or more feet of water. This means that these vessels could have navigated the present 32-foot-deep north reach only at high tide.

In addition to petroleum, the industrial terminals along the northern shore of the bay, and lower reaches of the river, handle the waterborne movements of sulfur, chemicals, coal, and asphalt. Some of the larger industrial-type tonnages handled on Newark Bay in 1966 are as follows—in short tons:

Aluminum ores and concentrates	17,330
Chrome ores and concentrates	57,858
Crude petroleum	49,728
Salt	70,945
Basic chemicals and plastics	366,146
Soap	73,796
Gasoline	1,330,232
Jet fuel	1,143,651
Kerosene	499,509
Fuel Oils	1,914,687
Naphtha	73,296
Iron and steel products	366,768
Copper alloys	171,294
Iron and steel scrap	706,210

I think it is clear that the deepening of the northern reach of the Newark Bay channel and the deepening of the Hackensack River will prevent costly delays to such vessels awaiting high tide and contribute to the overall economy of New Jersey and the Nation.

Mr. MINISH. Mr. Speaker, I rise to associate myself with the remarks of the distinguished gentleman from New Jersey (Mr. DANIELS). As he has demonstrated, the proposed budget cuts for seaport projects clearly discriminate against the New York-New Jersey ports.

Widening of the dangerously narrow Newark Bay channel was authorized by the Congress in the Rivers and Harbors Act of 1966. Twenty-two civic and maritime organizations from the New York-New Jersey metropolitan area have recommended that $5 million be provided to launch this project in fiscal year 1970. The previous administration called for only $3.5 million to widen the Newark channel. Unbelievably, this figure has been cut 86 percent, to $500,000, in President Nixon's revised budget.

Mr. Speaker, there have been numerous serious accidents in the Newark Bay channel in recent years as more and larger vessels attempt to navigate the narrow passage. I urge that the full $5 million be appropriated to begin this vital project.

Mr. HELSTOSKI. Mr. Speaker, I represent a congressional district which has a considerable stake in the economic well-being of the Port of New York and the Newark Bay channel. Because of this, I am quite concerned over the administration's proposed cuts in the executive budget for fiscal year 1970, and I feel that it discriminates against the New York-New Jersey ports.

The original budget for fiscal year 1970 recommended $3.5 million for the Newark Bay channel project. In reviewing the recommended figure, the present administration reduced this figure to $500,000, a figure which will keep the project alive but will not provide funds to make any headway. In addition to this, the administration made a $2,400,000 cut for the improvement of New York Harbor anchorages—a very severe cut which will have to be restored at a future date, but greatly crippling any increase in anchorage capacity needed immediately.

The total budget cuts recommended by the administration for 17 major seaport projects amount to 36 percent of the requested amount. The total budget cut amounts to $13,750,000, of which the New York-New Jersey ports are expected to absorb $5,400,000 or 39 percent of the total reduction.

I cannot agree with the thinking of the administration on this problem. The appropriations for the New York-New Jersey harbor facilities should have been increased rather than decreased.

At the height of the recent longshoremen's strike in New York Harbor, as many as 41 ships were reported to be at anchor at one time in the upper and lower New York bays. Where they found room to anchor is something of a mystery to me, since there are at present no more than 17 deepwater anchorages officially designated for this purpose in these two areas. Plans authorized by the Congress and the President in 1965 call for increasing this capacity to 25 spaces, and for enlarging certain existing anchorage spaces to safely hold today's larger vessels. So far, nothing has been done to provide this improvement.

Despite today's electronic aids which have limited value for close-in navigation in congested harbors, anchorages

which are wide and deep enough and, hopefully, empty, have considerable safety value for the mariner in fog or heavy rain and snow as a place to keep clear of difficult-to-see channel traffic. Anchorages are also used by bulk carriers awaiting anchorage, and by large tankers that must await a higher tide or lighten oil cargoes into barges to allow these vessels to enter the port's inadequate East River, Kill van Kull, Arthur Kill, and Newark Bay channels to their unloading terminals. Actually, sample studies by the Port of New York Authority have shown that often vessel demand exceeds anchorage capacity in the harbor.

Port interests are seeking to have additional 40-foot-deep anchorage space provided in the Lower Red Hook Flats for use principally by tankers as part of the overall improvement of the New York anchorages accomplished quickly and with no further delay. I submit that the improvement is vital to the entire harbor and necessary for safer and more efficient navigation. Accordingly, I wish to give it my full and unqualified support.

Mr. RODINO. Mr. Speaker, I am pleased to join with my distinguished colleague from New Jersey, and my neighbor across Newark Bay, in urging restoration of the cuts made in the budget request for funds for the urgently needed work in Newark Bay channel and the New York Harbor anchorages.

In the 27 years following the opening of Port Newark in 1918, the seaport operated at a loss and cost New Jersey taxpayers nearly $400,000 a year. By 1947, 1 year before it was leased to the Port of New York Authority, the seaport handled a little over 800,000 tons of cargo and employed a steady work force of about 1,500 persons with an annual payroll of $33,280,000. About nine out of every 10 of these employees and those working at the nearby Elizabeth-Port Authority Marine Terminal, live in New Jersey.

How has this fantastic growth come about? Since the facility was leased by the port authority, more than $105 million has been spent on its improvement, so that today this 707-acre facility boasts 36 ship berths and, together with the Elizabeth terminal, handles some 40 percent of the Port of New York's general cargo. By 1975, another $20 million will have been spent to complete the entire facility which will at that time offer 37 ship berths, will handle about 5.7 million tons of cargo and employ 5,300 persons earning $39,700,000 a year. There can be no doubt that Port Newark is a vital segment of New Jersey's economy. It offers employment in the heart of an area that urgently needs jobs and employment.

In 1919, a year after Port Newark was opened, the Federal channel serving the seaport was authorized for deepening to 20 feet and widening to 400 feet. And while the channel today is 35 feet deep, it is incredible to realize that despite today's much larger and increased numbers of vessels using Newark Bay, the channel still narrows in one section to 400 feet. It is beyond doubt that a widening of this channel—to a uniform width of 700 feet as authorized in 1966—is critically needed if this vital harbor facility is to continue to grow to serve the Metropolitan New York-New Jersey region and if the ocean vessels that use it are to be assured safe navigation.

Mr. Speaker, I strongly urge that a realistic level of funds be approved. The original budget called for $3.5 million for the Newark Bay channel project, and it is most disheartening that the present administration has unwisely reduced the request for these funds to the appalling pittance of $500,000. Congress, I feel sure, has better knowledge and foresight and will act accordingly.

Mr. FARBSTEIN. Mr. Speaker, I vigorously oppose the administration's recommended cut of $13,750,000 for harbor projects. The impact of this cut would be unproportionately heavy on the New York and New Jersey port systems. Thirty-nine percent of the total or $5,400,000 would have to be absorbed by New York and New Jersey ports. The two most directly affected projects would be the Newark Bay channel project, and the New York deep water area anchorage project, which deeply affects the residents of my congressional district. The latter project would increase the depth of the water anchorages off of Brooklyn from the present depth of 30 feet to approximately 40 feet. This will enable sea-going oil tankers to await movement to port and be processed by customs officials in the proximity of the harbor. Since oil is the largest commodity being brought into New York, the need for this dredging to enable tankers with their full loads to actually dock is economically important. Otherwise, tankers will remain out to sea and have to lighten their loads before coming into the shallower water near the docks. This process is expensive, slow and inefficient.

The need for this project was established by a Corps of Engineers' study which led to the 1966 passage of expenditures totaling $2,900,000.

The 1970 budget would cut this sum to a token $500,000 while present economic conditions would require $3,500,000 to accomplish its original goals.

Here we see the emasculation of a project whose economic benefits will far outdistance the initial expenditure in the name of balancing the budget. I feel, as Congress and the President felt in 1966, that this project merits completion and I urge the chairman of the Public Works Appropriation Subcommittee, the distinguished gentleman from Ohio (Mr. KIRWAN) and the members of his subcommittee to restore the full amount necessary to successfully complete this project.

Mr. GALLAGHER. Mr. Speaker, I rise first to thank my good friend and colleague, the distinguished gentleman from New Jersey, for reserving this time period for a full discussion of the Newark Bay channel-widening project. This is a subject which vitally concerns the people of New Jersey and which vitally affects the entire Nation.

Mr. Speaker, it is no mistake that Newark Bay has come to be known as the Time Square of the maritime world. Like that famous street, Newark Bay is seriously overcrowded, overused, and overburdened by the tremendous flow of traffic which passes through it. It does not require an expert on marine traffic to comprehend the intolerable dangers to life and property in a situation where a narrow harbor entertains most of the marine traffic on the eastern seaboard. However, in the event that statistics are desired, let us consider the example of two ships passing in the channel, one a 90-foot-wide United States Lines container ship and the other a 102-foot-wide oil tanker; with four 25-foot-wide tugboats accompanying the vessels, more than 292 feet of the 400-foot-wide channel is utilized. In other words, there is only 100 feet of maneuvering area for these two giant ships. Only 100 feet in which two giant ships must safely pass.

Unfortunately, this example is not the product of a sadist's vision. It is fully representative of the typical, minute-by-minute activity in the Newark Bay Channel. It is an example which helps explain the reason why 33 men lost their lives in 1966 when the Texaco tanker *Massachusetts* and the tanker *Alva Cape* collided in Newark Bay. Thirty-three men dead for absolutely no justifiable cause.

What is perhaps sadder, indeed more tragic than the very loss of 33 lives in the *Alva Cape-Texaco* incident is that the entire disaster could easily have been averted. For more than 7 years prior to the fateful meeting of the two tankers, the Port of New York Authority had been petitioning the Federal Government for funds to widen and deepen the Newark Bay channel. But the petitions went unanswered. And the channel stayed too narrow. And the ships collided.

Mr. Speaker, for the past years I have been offering amendments to the budget to include sums for the Newark Bay project. Together with the diligent men of the Port of New York Authority, I have pointed out the dire need to begin construction of the channel facility. For the past two fiscal years, these amendments have been successful; this Congress appropriated money to start the project. Yet, strangely enough, not one dime of this monetary appropriation has ever reached the Port of New York for commencement of the project.

Nevertheless, we all had new hope last year that the situation would be remedied. Former President Johnson sent up a budget request which included $3.5 million for the Newark Bay channel widening; although this figure equaled only one-fifth of the estimated cost of completion, it represented a major step forward—indeed, it was a figure which would have permitted the project to begin.

The hope generated by former President Johnson's request was shortlived. The new administration trimmed the funding request for Newark Bay to a mere $500,000, not even enough money to enable a contract to be put out on the project. Even worse, under the guidelines issued by the Bureau of the Budget, it was ordered that no new construction on any projects begin this year. This means that even if money were found for the Newark project, construction would still be postponed because of the Bureau of the Budget guidelines.

Mr. Speaker, the problem at Newark Bay is far from new. We have there an old and dangerous situation. We are courting disaster in the Newark Bay channel every day that we fail to com-

mence its widening. We are literally asking for another marine disaster, with a staggering loss of life and property, every minute that we delay funding of the project.

I am well aware of the current fiscal crisis in our Nation; I fully understand the need to curb inflation and to hold the line on nonessential Government expenditures. This is good economics. But it is false economy to cut funds from absolutely essential projects; it is false economy, indeed, to cut funds from projects which are in themselves new sources of income, ratables, and jobs. Newark Bay is such a project on both counts: it is vital and it is an income producer. With its existing disadvantages, the New York-New Jersey Harbor still generated over $940 million in customs revenues in 1968, a sum equivalent to one-third of all customs revenues.

If economic considerations are used to justify the slash in Newark Bay funds, these considerations are not only misguided, but are highly dubious in actual application. Let me be perfectly clear on this point. The administration's revised budget reduces the total "Construction, general" sum in the Army Corps of Engineers' civil works program for fiscal year 1970 from $769,420,000 to $627,055,000, or a total reduction of only 19 percent. This point must be emphasized: the total reduction amounts to 19 percent. Now, in an astonishing contrast, the reduction in the Newark Bay channel project constitutes an 86-percent slash. Eighty-six percent cut from one project when the total line cut in the budget is only 19 percent.

Is it possible that these figures do not speak for themselves? Is it possible that one could fail to see the poor treatment accorded the Newark Bay project in this revised budget? Mr. Speaker, this is a project which has been awaiting funding since 1959; and we now come in with a revised budget request that lops more funds from this vital project than it does from any other single major construction proposal on the line.

If there is an economic philosophy at work here, I fail to see it. I would like to have it explained to me, because I fail to understand why a project which has been argued, debated, and proposed since 1959 now suffers an 86-percent slash. I cannot perceive the economic theory behind a near fatal blow to a project which affects commerce throughout the eastern seaboard and which, in turn, affects commerce throughout the United States.

There would be rather small justification for the Newark Bay cut if this were a brandnew project; but there is no justification for the cut considering that this project has been authorized for funding since fiscal 1968. The Congress has recognized the need to widen and deepen Newark Bay; the Congress has made its intention clear that the construction begin. Such legislative intent may not easily be dismissed in the name of economy—especially when true economic considerations militate in favor of beginning the project. It is not economy to cut what is essential for that which seems expedient.

Mr. Speaker, I do not ask or suggest today that money be cropped from other projects in order to fund Newark Bay. The sad state of port facilities in the United States makes it imperative that most, if not all, the marine projects on the Army Corps' agenda be completed. But the money for Newark Bay is available; all I ask is that the Newark Bay project receive its fair share, its fair share in proportion to the burden it carries. We have tremendous marine traffic in the Newark Bay channel today; this traffic will suffer a bounding increase in the coming years which will make the currently intolerable situation a navigational nightmare. It is merely a question of time before captains refuse to sail their tankers and container ships through the narrow confines of Newark Bay; and none could fault a captain for making such a decision.

We have developed a maritime obstacle course in the Newark Bay channel. It is as if we proffered a challenge to ships to try and enter the port without damage to their equipment and their crews. This is a deadly game of marine roulette in which there are no victors.

Mr. Speaker, I have given testimony to the Appropriations Committee urging that the cut funds be restored to the Newark Bay project. I am hopeful that the distinguished members of the committee will recommend such a restoration. Then, it will be the responsibility of this and the other body to pass the complete appropriations request in this area and make it possible for the channel widening project to begin.

We are all fortunate to have such dedicated men at the New York Port of Authority who have struggled so diligently over the years for this project. The Federal Government, however, should not have required that these men make request after request for the funds. Given the situation at Newark Bay and the manner in which it affects the entire Nation, the Federal Government on its own should have insisted that the widening project begin. The Federal Government should have made the commitment. Mr. Speaker, I believe this Government did make the necessary commitment when former President Johnson sent in the $3.5 million request for Newark Bay. We must honor that commitment and restore the cut funds.

Let us be loud and clear this time so there is no mistaking our sense of urgency about this project and our total dedication to safety in our harbors. Let us indicate to all people that we will not pay homage to false economy at the expense of reason, and perhaps life itself.

The Newark Bay channel project has been waiting too long. If the aggravated congestion there results in yet another maritime disaster, the specter of negligence will haunt this Government for all time.

Mr. Speaker, I urge the distinguished Members of this body to join together in restoring the $3 mililon in cut funds to Newark Bay. As we consider ourselves the greatest commercial nation in the world, let us provide port facilities commensurate with that lofty position.

I thank the gentlemen for their consideration.

Mr. BIAGGI. Mr. Speaker, I rise in vigorous protest to the administration's proposals directed upon the Port of New York through indiscriminate budget cuts in the Army civil works program for fiscal year 1970.

The New York-New Jersey port areas' budget has been slashed in the amount of $142,365,000—which is a mighty large slice. Eight of the 17 seaport projects have escaped the butcher's cleaver.

One of the remaining nine projects had only $1 million cut from their funds in the original budget for fiscal year 1970. Reductions in varying degrees are the recommended cuts in the funding of the other seaport projects. But the two Port of New York projects are the recipients of the 39 percent of the total cutback in funds. There is no doubt in my mind that the New York-New Jersey ports are being handed highly inequitable consideration—without justification.

I firmly believe that the President may realize—before it is too late—the tremendous service which the Port of the New York can provide to the Nation with the proper amount of Federal assistance. Hopefully, the funds will be restored to the full amount of $769,420,000. Anything less would prevent these two vitally necessary projects from providing the safe and effectual handling of the large tankers and movement of container ships and other large vessels which utilize the Newark Bay and New York Harbor.

Mr. SCHEUER. Mr. Speaker, I rise today to join Congressman DANIELS in expressing concern over administration fund cuts for the Port of New York. The proposed budget of the Army civil works program for the fiscal year 1970 has been reduced by 19 percent. This cut most severely affects the New York-New Jersey port area.

I fail to understand why the large and successful Port of New York, which serves not only our country but also foreign shipping and commerce, has been subjected to a blatantly discriminatory reduction of 36 percent while many other ports retain their original appropriations untouched.

The administration should restore the funds to the Port of New York to insure its health and stability which is essential to the vitality of our international trade.

GENERAL LEAVE TO EXTEND

Mr. DANIELS of New Jersey. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days in which to extend their remarks on the subject of my special order.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from New Jersey?

There was no objection.

ON THE FIRST AMENDMENT TO THE CONSTITUTION

The SPEAKER pro tempore (Mr. PATTEN). Under previous order of the House, the gentleman from California (Mr. BROWN) is recognized for 60 minutes.

Mr. BROWN of California. Mr. Speaker, the first amendment to the U.S. Constitution, if I recall it correctly, says that the Congress shall make no law respecting an establishment of religion, or prohibiting the free exercise

thereof, or abridging the freedom of speech, or of the press, or the right of the people peaceably to assemble, and to petition the Government for a redress of grievances.

For the past six Wednesdays at noon a small group of U.S. citizens have assembled on the Capitol steps peaceably and have petitioned the Government for a redress of grievances.

On five of those weekly occasions all of the members of that group were arrested by the Capitol Police. On the sixth Wednesday, which was today, at 12 o'clock noon, they were permitted to exercise their constitutional right without being arrested.

Mr. Speaker, I want to take a few minutes this afternoon to put in the RECORD documents and other materials which relate to this little episode in the history of the Capitol, and to make a few remarks pertinent thereto.

I want to say first that the American citizens who had appeared here on the Capitol steps for six successive Wednesdays were not arrested today because the presiding judge of the District of Columbia Court of General Sessions, Judge Harold Greene, last Thursday handed down an opinion which resulted in the dismissal of all the charges against these citizens on last Friday. I think Judge Greene should be highly commended for the decision which he handed down. He acted in accordance with the highest traditions of the judicial system in dealing with a case which, to some, at least, may have appeared quite complicated. In handing down a decision based upon first amendment issues in the form that he did he acted in a fashion which generally is reserved to much higher courts.

Judge Greene, in examining the charges against these citizens, reviewed the issues at considerable length. On the first occasion in which arrests were made the police acted under a section of the District of Columbia Code known as the Illegal Assembly Section. The court before which those arrested appeared ruled in that case almost immediately that the charges were vague and ambiguous, and dismissed them. On the second and succeeding occasions, another section of the code was used, the one generally known as the Illegal Entry Section. Some people might wonder how persons peacefully assembled in a public place could be accused of illegal entry, and the judge discussed this at some length.

He points out that there are cases in which it is possible to prohibit the entry of the public from public grounds, and he states the reasons and the kinds of circumstances under which this can be so. He then says:

> There are other types of government land, public parks, streets and sidewalks and historic landmarks, which may not ordinarily be closed to the public for reasonable use. The Capitol of the United States, a national historic shrine, and the political centerpiece of the nation, is in the latter category. It may not be declared off limits to the public. Indeed, the Congress invites and welcomes the public.

He went on to say that individual citizens could not be held to be without lawful authority to remain thereon within the meaning of the unlawful entry statute in the absence of some other specific bar to their presence. He said:

> That bar could not legally be an order by the chief of the Capitol Police issued on his own authority.
>
> He can order the ejection only of those who have no legal right to be there.

The judge went on to point out that many groups assemble on the Capitol steps under many different circumstances and that there are no rules which can be used to judge which groups are there properly and legally and which are not.

This fact was testified to by several witnesses including the chief of police himself who further testified that the general standard used, and it is one of long standing with considerable precedent, has to do with the controversiality of the groups. The judge deals at considerable length with this standard of controversiality.

He says:

> The standard of noncontroversiality is impossible of even-handed, impartial and constitutional application.

He goes on to say further that under our constitutional system, no public official—executive, legislative or judicial—can have the power to permit or prohibit assembly on property belonging to the people based on his notion of what stand on public issues may be controversial.

In short, he says, for several reasons the controversiality standard employed by Chief Powell is not compatible with constitutional values and principle.

He says further:

> Absent compelling circumstances, members of the public may not be excluded from public areas because of their purpose to use these areas for exercise of First Amendment rights. The streets and parks have immemorially been held in trust for the use of the public and, time out of mind, have been used for purposes of assembly, communicating thought between citizens, and discussion of public questions. That use may be regulated, but it must not in the guise of regulation, be abridged or denied.

Then he says in a further paragraph which impresses me very greatly, and which I commend to the attention of all Members of the House:

> In this day of the violent confrontation, the harsh non-negotiable demand, the disregard of the most elementary forms of civilized discourse, it is especially important that peaceful speech and courteous persuasion be given their rightful chance. It would be strange, indeed, if our constitutional system, and especially the First Amendment, were to countenance the congregation on the grounds occupied by the national legislature of all manner of groups except those who wish to speak out peacefully on the controversial issues of the day. That is not the mark set by the Bill of Rights.
>
> It is presumably for that reason that Mr. Justice Stewart, speaking for a near unanimous Supreme Court, held in the controlling case of Edwards versus South Carolina, that nonviolent demonstrations on the grounds of the South Carolina State Capital were constitutionally protected from interference, and reversed breaches of the peace convictions of 187 Negroes protesting there against alleged discrimination.

I shall put in the RECORD the full text of this opinion because I think it bears reading by every Member of the House.

I recognize there are some, perhaps many, in this House, who will disagree with the logic and the thrust and the conclusion of Judge Greene's opinion. I am not here to extoll its merits because I agree with it, or to criticize those who may disagree with it. I am here primarily to ask all of us, including myself, to be more sensitive about the way in which we use our authority as Members of the Congress of the United States in dealing with the fundamental rights of American citizens.

The Constitution protects all of us. It protects those with whom we agree as well as those with whom we disagree. And it is all too easy, as we have seen on many, many occasions throughout this land, to feel that we should use the laws, we should use the powers which we have as members of legislatures, or as members of police forces, to suppress that which makes us uncomfortable and to permit that which is noncontroversial. As Judge Greene says, this is not the standard set by the Constitution. I do not think we need to be reminded that the Constitution of the United States was written at a time of crisis and controversy. It has written into it specific guarantees for the protection of controversy, for the protection of those who are unpopular, for the protection of minorities.

And we have a special duty in these times when our country is sorely divided to make sure that these protections apply to everyone regardless of their views. The important thing which the judge considered here was whether this was a peaceable assembly. If it is a peaceable assembly it is protected. If it is not peaceable, of course, then it is not protected, and I would be the first to seek reasonable regulations under which we could all be assured that an assembly was peaceable.

Let me say a word also about the Capitol Police in this situation, I know it is all too easy to engage in condemnation of the police in these times. In this particular situation I have nothing but praise for Chief Powell and his officers, and the way in which they carried out the duties required of them. Chief Powell was not, in my opinion, acting on his own arbitrary initiative. He was acting in accordance with precedents and instructions which he has been called upon to carry out for a considerable period of time. I do not think he liked what he had to do, and yet he carried out the job with a minimum of disruption, a minimum of difficulty, with the greatest of courtesy and consideration for the citizens he felt he was required to arrest.

So I think it is right and proper to give recognition and credit to the chief for the way in which he carried out this job.

It is, of course, very easy for people who are entrusted with the enforcement of the law, for the arrest and incarceration of those who may be violating the law, to lose their sensitivity to human values and to feel that they are always right in whatever they may do. I think the House can be proud of the fact that Chief Powell is not one of that type, and that given adequate instruction, precise instruction, and a firm legal basis on which to act, he will continue to carry out in the very highest fashion the enforcement of the law in accordance with the Constitution and in accordance with the needs of the Members of Congress

for protection from disruption of their activities.

I would like to point out that today this country is greatly divided. There are deep divisions among our citizens with regard to many important issues facing this country.

It is at times like these that it is particularly difficult for law enforcement officers to carry out their duties. There are many questions with regard to the fundamental assumptions upon which our Government acts. There are questions as to the values of the society.

There are some who feel that, instead of being a humane society, dedicated to freedom and human welfare, we have become a society obsessed with the exercise of power, with the accumulation of material goods, and with the establishment of these objectives—power and property—as of higher priority than the rights and welfare of human beings.

It is truly tragic when these divisions occur on the scale which they are occurring in this country today. In my view we are not likely to pass quickly over this time, we are not likely to get back quickly to the tranquility which we all seek, which is based upon large measure of agreement of the citizens of this country with regard to the goals we are seeking to achieve as a country. There is no such agreement today.

I do not wish in these few brief moments this afternoon to continue to belabor this point. I have here a set of documents which amply explains the entire history of these incidents on the Capitol steps, which explains to some degree my reasoning and the reasoning of other Members of Congress who took an interest in these events.

(Mr. BROWN of California asked and was given permission to revise and extend his remarks and include extraneous material relating to the subject matter of his special order.)

BACKGROUND CHRONOLOGY: A QUAKER ACTION GROUP DEMONSTRATION ON EAST FRONT STEPS OF CAPITOL MAY–JUNE 1969

Mr. BROWN of California. Mr. Speaker, this spring the Philadelphia-based "A Quaker Action Group" decided to emphasize its resistance to this country's policies in Southeast Asia, and the vehicle chosen for this demonstration was to be a reading of the names of American war dead upon the steps of the Capitol Building. The following pamphlets describe the initial plans:

A CALL TO THE LIVING FOR A ROLLCALL OF THE DEAD IN WASHINGTON, MAY 23–29, 1969

MAY ACTION

In April there was a renewal of resistance to the Vietnam war. Demonstrations in 42 cities all across the country revealed, once again, to government officials that millions are opposed to the war. But, the suffering and slaughter continues. The Administration and Pentagon still have the same policy of maintaining the Thieu-Ky dictatorship by 500,000 U.S. conscripts. They still have the same policy of deceiving the American people.

It is an unnecessary war. It is an illegal war. It is an immoral war. It is poisoning the life of mankind all over the globe. It must be ended.

In May we must escalate resistance. Our resistance must speak loud and clear in Washington and all over the country.

35,000 U.S. military personnel have been killed in the Vietnam war. The slaughtered Vietnamese are many fold that number.

On May 23–29 we intend to read the names of Americans killed in Vietnam—at the White House, Capitol, Pentagon, State Department—in the street and in offices. Our reading is in mourning for Americans killed in a tragic and immoral war and in penance for the deaths of countless Vietnamese whose names are known only to suffering family and friends.

SPEAK LOUD AND CLEAR

Congressman Paul Findley placed the names of the U.S. war dead in the Congressional Record on March 25, 1969. On that occasion he said: "If the premise is accepted—as I believe it must—that our military policies have been based on false assumptions all along, then the best way to honor the war dead is to take steps to assure that the casualty list stops growing—In my view, these names should be called to the attention of the administration and the American people because they establish as no other arrangement of words can possibly do the true dimensions of the Vietnam war in total overall terms as well as the most intimate."

The officials of Washington may not allow the reading of the names of the dead on the streets and in public buildings. In Washington, as elsewhere, there is a general move to curb dissent and war resistance. We trust an increasing number of people are prepared to suffer arrest that free speech and resistance to the Vietnam war may be maintained and intensified.

RESIST WHERE YOU ARE

Not everyone can or should come to Washington. Read the names of the war dead at local draft boards or induction centers. Read the names at the entrance to a military installation or in the public square. In some cities the Women's International League for Peace and Freedom and other organizations will be reading the names of war dead in their own city.

THE SPIRIT OF OUR RESISTANCE

May Action will be undertaken in the spirit of nonviolence and openness. It is open to all who share our purpose and method. The project may at many points involve civil disobedience against attempted curtailment of civil liberties and in resistance against the Vietnam war. Persons beyond draft age are particularly invited to share the suffering of young men who are resisting conscription.

We are committed to interdependence of the human family. World community is our purpose: nonviolent direct action and civil disobedience against acts of war and oppression is our method. It was in that constructive program of world community building that we sailed the *Phoenix* to both North and South Vietnam with medical supplies; demonstrated in Warsaw Pact countries against the invasion of Czechoslovakia; and held a vigil in the Panama Canal Zone at Fort Gulick. In the U.S. we have resisted conscription and taxes for war; and walked with the oppressed in the Poor People's Campaign.

ORDER OF EVENTS

Friday, May 23, 9:00 a.m.: Orientation and planning session at Friends Meeting House, 2111 Florida Ave., N.W., Washington, D.C.; 12:00 a.m.: Reading of names of war dead at the Capitol, the White House, State Department, and the Pentagon. (We are trying to secure names of Vietnamese dead also.) At some place we will read the whole list of 35,000 which takes about 20 hours.

Saturday, May 24: The reading of the names of the war dead in public places all over Washington.

Sunday, May 25: Meeting For Worship and workshops for a sustained effort the following week.

Monday through Thursday, May 26–29: Reading of the names (or portion of the list) of the war dead in offices of Congressmen, Senators, Administration officials. (Other nonviolent actions may be undertaken during that week as determined by A Quaker Action Group and other participants.)

LET US SPEAK TRUTH

Let us speak truth to the people of the United States about the war in Vietnam.

Let us speak truth to power.

Let us persist in speaking truth where people are unwilling to hear the truth.

WHY WE MUST SPEAK TRUTH

We must speak truth because far too many human beings have suffered and died in Vietnam, for far too long.

We must speak truth because our government is still talking rather than acting to end this suffering.

We must speak truth because our government lacks not the means but the *will* to end this war.

HOW WE WILL SPEAK

We will read the names of 35,000 Americans killed in Vietnam, at such places as the Capitol, the White House and the Pentagon.

We will speak regardless of penalties which we may suffer, such as imprisonment.

We are willing to accept arrest and jail. We hope that our action will speak to our fellow citizens to open their eyes to the truth about Vietnam, and to give our government the will and the courage to end this war.

WHAT WE ARE ASKING

We ask immediate U.S. military withdrawal from Vietnam.

We ask self-determination for the Vietnamese people.

We ask others to stand up and speak the truth about Vietnam.

WHAT WE STAND FOR

We stand for openness and truth.

We follow the way of non-violence because we are deeply convinced that violence cannot be overcome by more violence.

We believe in a world community of all mankind and want to use our talents and resources for that purpose.

Speak with us.

A QUAKER ACTION GROUP

A Quaker Action Group was organized in July, 1966 to engage in nonviolent action for peace and justice. We sponsored voyages of the Phoenix to North and South Vietnam for relief of suffering and as a protest against the inhumanity of the Vietnam war. We have participated in the Poor People's Campaign, organized a vigil at Fort Gulick in the Panama Canal Zone, protesting U.S. military policy in Latin America. We have worked for the community of mankind which transcends armed national states.

(NOTE: A White Paper on the Vietnam war has been prepared by the American Friends Service Committee. We commend it as the best short statement of truth about the Vietnam war.)

Mr. Speaker, the initial attempt to read the names came on May 23, and Capitol Police arrested the group of 10 who continued down the list of war dead after they were told by police that they would be jailed if they persisted. Five days later, on Wednesday, May 28, another group of 11 persons started from the point at which the first group had left off; they, too, were arrested.

On both days, demonstrators acted peacefully and did not resist arrest. Threat of continued arrest did not halt prospects of further demonstrations, as shown by the following leaflet printed by A Quaker Action Group:

WE MUST CONTINUE

At noon on Friday, May 23rd, 10 people began reading the names of American soldiers killed in Vietnam on the east steps of the Capitol building. They did this in a spirit

of mourning for those who have died, both Vietnamese and American, and to bring home to the American people the continuing horror of this senseless and inhuman war. They were arrested. On Wednesday, May 28th, 11 others took their place and continued the reading. They also were arrested.

We must continue. On Wednesday, June 4th, and on each succeeding Wednesday, the reading of the names will continue. We must continue to point out the true dimensions of this war; we must continue to point out that over 1,000,000 Vietnamese and 37,000 Americans have died; we must continue to point out that the peace talks in Paris are a tragic farce and that the war has continued to escalate despite the talks. We must, and we will, continue.

Join with us in Washington. There is no longer time for silence even when speaking out means arrest. The suffering of arrest is insignificant when compared to the suffering the Vietnamese have endured and must continue to endure until this war, our war, is brought to an end.

Join us as we speak the truth at the Capitol, in the jails and in the courts. Meet us at 515 East Capitol St., Washington, 9 AM every Wednesday. (Tel. 544-9259). Overnight housing available.

Sponsored by A Quaker Action Group.

Two days before the second arrests, Lawrence Scott, executive secretary of A Quaker Action Group, wrote the following letter to Police Chief James M. Powell:

A QUAKER ACTION GROUP,
Philadelphia, Pa., May 26, 1969.

JAMES M. POWELL,
Chief of Capitol Police,
The Capitol,
Washington, D.C.

DEAR CHIEF POWELL: We in A Quaker Action Group regret very much causing you repeated difficulties. You have impressed us as being a law enforcement officer of high integrity. I believe in the need of democratic government with just and equitable laws as a condition of human community. Yet, I also believe that the armed national state with its power struggles and war as an instrument of foreign policy has become the primary violator of human community. Therefore, laws and policies of armed national states which perpetuate violent attacks against world community must be resisted and disobeyed as a duty to mankind and as allegiance to God the Creator.

As I indicated to you when you arrested ten of us on the Capitol steps on Friday, May 23, I shall make every endeavor not to infringe upon the rights of others.

There is much precedent for our actions in history. The Temple in Jeruselem was the seat of both religious and secular authority for the Jewish people. Jesus opposed the corrupt and venal power of the Temple officials by overturning the tables of the money changers, and speaking plainly to the officials of his nation. A few weeks after Jesus was crucified his followers assembled on the portico of the Temple (a situation similar to assembling on the steps of our Capitol) and spoke of why Jesus was crucified by the Jewish authorities. Some were arrested and imprisoned. Their answer to the Jewish authorities was "Whether it is right in the sight of God to listen to you rather than to God, you must judge, for we cannot but speak of what we have seen and heard."

In 17th Century England the Quakers not only refused to abide by the prohibition against open worship; but refused to give undemocratic deference to class disinctions and to those in authority representing that immoral requirement. When their Meeting Houses were burned they worshiped openly alongside the ashes. When many of the adults were in prison the children carried on the open defiance by worshiping and speaking openly. Quaker colonists to America contributed greatly to freedom and democracy as expressed in our State and Federal constitutions. (When I was in Mississippi coordinating the rebuilding of burned churches in 1964-65 I worshiped with black rural congregations who defied the tyranny of our day by worshiping and speaking freely alongside the ashes of their church.)

The present Nixon policy with reference to Vietnam seems to be one of buying time by allaying citizen opposition to the war. But what is he buying time for? He is buying time so that by ruthless bombing, use of anti-personnel pellet bombs, napalm, crop killers, poison gas and every other barbarous means he can force the Thieu-Ky dictatorship on the Vietnamese people. That regime has imprisoned and tortured even meek Buddhists who have spoken for peace and neutrality. It has denied freedom of press and other liberties. It is a government made up of landlords and corrupt generals who fought with the French colonizers. That is what time is being bought for and why our government continues to slaughter the population of Vietnam and our own American young men.

We shall continue to speak openly in Capitol porticoes and other public places against this inhuman Vietnam war. If you imprison those of us who act in open nonviolence it is our faith that others will take our place in an upsurge of dissent and sanity.

My friendly regards to you and all other representatives in the United States Government.

Sincerely,

LAWRENCE SCOTT.

A Quaker Action Group vowed to keep attempting to read the war dead names—as long as the war continued, and on June 3, a representative of the group visited my offices. I agreed with the group that they should have the right to read the names, upon the steps and I sent the following letter, stating my position, to all Members of Congress—in both House and Senate:

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D.C., June 4, 1969.

DEAR COLLEAGUE: I have agreed to join with a few members of A Quaker Action Group today (June 4th) at 12 noon on the East steps of the Capitol to continue reading from the CONGRESSIONAL RECORD the names of those American soldiers killed in Vietnam, and bringing to the attention of the Congress this matter of great national importance.

On two previous occasions within the past few days members of this group have been arrested for doing this, and two of the group are currently in the D.C. jail.

I feel sure you will be interested in observing our efforts today.

Sincerely,

GEORGE E. BROWN, Jr.,
Member of Congress.

I also sent letters to the Speaker of the House, the Vice President, and Chief Powell, requesting that the group be allowed to read the list of war dead without fear of arrest:

JUNE 4, 1969.

Hon. JOHN W. MCCORMACK,
Speaker of the House of Representatives,
Washington, D.C.

DEAR MR. SPEAKER: I have agreed to join with a few members of A Quaker Action Group today (June 4th) at 12 Noon on the East steps of the Capitol to continue reading from the Congressional Record the names of those American soldiers killed in Vietnam, and bringing to the attention of the Congress this matter of great national importance.

On two previous occasions within the past few days members of this group have been arrested for doing this, and two of the group are currently in the D.C. jail.

I am respectfully requesting that you instruct the Capitol Police to not interfere with their efforts to read the rollcall of the Vietnam dead from the Congressional Record. I believe that they have an absolute Constitutional right to do what they are doing and that the arrests are unwarranted.

Thank you for your attention to this request.

Sincerely,

GEORGE E. BROWN, Jr.,
Member of Congress.

JUNE 4, 1969.

Hon. SPIRO T. AGNEW,
Vice President of the United States and President of the Senate, Washington, D.C.

DEAR MR. VICE PRESIDENT: I have agreed to join with a few members of A Quaker Action Group today (June 4th) at 12 Noon on the East steps of the Capitol to continue reading from the Congressional Record the names of those Americans killed in Vietnam, and bringing to the attention of the Congress this matter of great national importance.

On two previous occasions within the past few days members of this group have been arrested for doing this, and two of the group are currently in the D.C. jail.

I am respectfully requesting that you instruct the Capitol Police to not interfere with their efforts to read the roll call of the Vietnam dead from the Congressional Record. I believe that they have an absolute Constitutional right to do what they are doing and that the arrests are unwarranted.

Thank you for your attention to this request.

Sincerely,

GEORGE E. BROWN, Jr.,
Member of Congress.

JUNE 4, 1969.

Hon. JAMES M. POWELL,
Chief, U.S. Capitol Police, Washington, D.C.

DEAR CHIEF POWELL: I have agreed to join with a few members of A Quaker Action Group today (June 4th) at 12 Noon on the East steps of the Capitol to continue reading from the Congressional Record the names of those American soldiers killed in Vietnam, and bringing to the attention of the Congress this matter of great national importance.

On two previous occasions within the past few days members of this group have been arrested for doing this, and two of the group are currently in the D.C. jail.

I am respectfully requesting that you not interfere with their efforts to read the rollcall of the Vietnam dead from the Congressional Record. I believe that they have an absolute Constitutional right to do what they are doing and that the arrests are unwarranted.

Thank you for your attention to his request.

Sincerely,

GEORGE E. BROWN, Jr.,
Member of Congress.

At noon on June 4, two other Members, Mr. KOCH and Mr. DIGGS, and I met with the representatives of A Quaker Action Group on the east front steps of the Capitol, and all three of us participated in reading from the list of war dead. At that time, I made the following statement:

STATEMENT OF HON. GEORGE E. BROWN, JR.,
JUNE 4, 1969

I am joining A Quaker Action Group on the Capitol steps today because I share their concern, and I believe that they have an absolute Constitutional right to do what they are doing. I have asked the Speaker of

the House and the President of the Senate to instruct the Capitol Police not to interfere with the group's efforts to read the roll-call of the Vietnam dead from the Congressional Record. I have advised the police that I feel the arrests are unwarranted.

I am in wholehearted agreement with the group's feeling that the Vietnam war is an unnecessary, illegal and immoral war that must be ended. It is a tragic error perpetuated by a stubborn and arrogant bureaucracy.

Over the past five years I have stated many times that I believe there is no chance of a military victory and the 35,000 names of these young Americans who have died bear irrefutable witness to the monstrous cost of this monumental mistake in our foreign policy.

The new Administration is not moving toward peace any faster than the previous Administration. The opportunity to admit past mistakes, with humility, is being lost and the perpetuation of old policies is rapidly making them the new policies, as well—which President Nixon's Administration will be forced to defend.

If we recognize, admit and move to rectify our past mistakes, it would follow that we would have no reason to illegally suppress the efforts of this group. Therefore, I cannot sit idly by and be a party to this suppression by ignoring the arrest and imprisonment of sincere, patriotic and concerned Americans whose only crime is to remind us of the hideous side of the war which we too often tend to forget.

Again, the demonstrators were arrested. These news stories describe the situation:

[From the Washington (D.C.) Post, June 5, 1969]

CONGRESSMEN JOIN PROTEST AT CAPITOL

(By Claudia Levy)

Three Congressmen joined 13 members of A Quaker Action Group yesterday on the east steps of the Capitol to read the names of Vietnam war dead. The Quakers were arrested but the Congressmen weren't.

Reps. George Brown (D-Calif.) and Edward I. Koch (D-N.Y.) were left standing alone on the steps, despite their insistence that their congressional immunity to arrest be waived.

Rep. Charles Diggs Jr. (D-Mich.), who had also read from the listings of dead servicemen, had to leave moments before the arrests at 12:30 p.m. to attend a Michigan delegation caucus.

"These are my guests," Brown told Capitol Police Chief James W. Powell. "They have constitutional rights as citizens to be here."

Powell said while the demonstrators were free to visit with any member of Congress, they could not assemble on the steps to petition.

"Since when is it illegal for this small group to come here and grieve over this matter?" asked David Richards, 25, of Chester, Pa.

"If you think this group is breaching the peace," Brown said, "then I waive my congressional immunity and ask to be arrested." Members of Congress are subject to arrest only on charges of treason, felony or breach of the peace when Congress is in session.

"Do to me what you'd do to any citizen," Koch told Powell. "They're not violating any rules, but their constitutional rights are being violated by you and your men."

Police, who had cleared the steps of spectators, began leading off the demonstrators.

"Well," Brown said to Koch, "let us continue reading."

As they attempted to speak, police began pushing a crowd of 100 newsmen, tourists and sympathizers across the roadway directly below the steps, ordering them to move on.

Brief scuffling erupted but there were no other incidents.

Powell said the Congressmen would not be arrested because there was "insufficient breach of the peace in their case."

The 13 demonstrators, the third such delegation to appear at the Capitol this year, were charged with illegal entry. They included Joan Nicholson, 35, of Philadelphia, one of two persons who finished serving eight-day sentences at 8 a.m. yesterday for a Capitol demonstration last week.

Also arrested yesterday were Richards; Bob Tatman, 22, of Wynnewood, Pa.; Harriet Barlow, 27, 3708 Drummond st. Chevy Chase; Michael Panella, 23, of Media, Pa.; David Kelly, 18; L. A. Ford, 20, Terry Buckalow, 28 and Jim Hart, 27, all of Philadelphia; Boykin Reynolds, 21, 4701 Connecticut ave. nw.; Jan Green, 42, Lincoln, Va.; Betty van Huyack, 34, 2773 N. Wakefield st., Arlington and David R. Hartsough, 28, 1332 A st. se.

The 13 appeared before Judge Alfred Burka in the Court of General Sessions yesterday. Tatman, Richards and Panella pleaded no contest and were given suspended sentences with one-year unsupervised probation. The others were released on personal bond pending trial.

[From the San Jose (Calif.) Mercury, June 5, 1969]

THREE DEMOS JOIN QUAKER PROTEST

(By Baxter Omohundro)

WASHINGTON.—A California congressman and the Capitol police were eyeball-to-eyeball Wednesday, and the lawmen finally blinked.

Rep. George Brown (D-Monterey Park) challenged police to arrest him as they moved into jail 13 Quakers who had gathered on the Capitol steps to quietly protest the war in Vietnam.

Brown and two other House Democrats, Edward I. Koch of New York and Charles Diggs of Michigan, joined with the protesters, but only Brown specifically waived his congressional immunity after the group was warned that arrest was imminent.

But Capitol Police Chief James M. Powell refused to take him or his colleagues into custody as a score of his officers escorted the Quakers to awaiting paddy wagons.

Brown, an announced Senate candidate, earlier had read Constitutional provisions on the rights of assembly, free speech and free press plus congressional immunity from arrest for crimes other than "treason, felony or breach of peace" and said he was waiving his immunity.

Powell, whose men booked the Quakers for unlawful entry under an act of the last Congress, said he didn't consider the demonstration a breach of the peace sufficient to warrant arresting the congressmen.

The congressmen and the Quakers, taking part in the third such demonstration sponsored by the Quaker Action Group of Philadelphia, took turns reading from a list of U.S. war dead published in the Congressional Record on March 25.

After clearing the steps of newsmen and noon-hour spectators, Powell, speaking through a bullhorn, repeatedly warned the seated demonstrators to leave. He set a deadline of 12:30 p.m., a half hour after the protest began, then signalled the arrests to begin. Brown and Koch took up reading the list as the unresisting Quakers were escorted away.

Although the arrests were peaceful, police later shouted and shoved at spectators and newsmen who had gathered to talk to Brown and Koch. Diggs had left before the arrests began.

"Throw them into the streets," ordered Police Capt. Leonard Ballard when the group failed to promptly move from the driveway by the east front of the Capitol.

At one point, Koch angrily complained to police for shoving two young women in the group.

"Act like gentlemen, can't you," he said.

However, there were no further arrests as the group shuffled off by twos and threes in the warm sunshine.

Speeches by the congressmen and the protestors were generally applauded by about 100 spectators, many of them staffers from congressional offices, but one man called the Quakers "stooges for Communist world slavery."

Brown sent letters to all of his Democratic colleagues telling them of his intention to join the protestors. He said he also asked Senate and House leaders that the Capitol police be ordered not to arrest them.

The Californian said he plans to join the Quaker protests whenever they are held, and a spokesman for the group said others are planned in coming weeks.

The next day, June 5, I made the following remarks upon the floor of the House:

READING OF NAMES OF AMERICAN DEAD IN VIETNAM ON CAPITOL STEPS

(Mr. BROWN of California asked and was given permission to address the House for 1 minute, and to include extraneous material.)

Mr. BROWN of California. Mr. Speaker, yesterday at 12 noon, I and two of my colleagues joined 12 members of a Quaker action group on the steps of the Capitol in reading the names of the honored American dead in Vietnam from the Congressional Record. On Memorial Day, I had the honor of paying similar tribute to these brave men at ceremonies conducted by the American Legion post of my hometown of Monterey Park, Calif.

There was a difference in the two events. In my hometown, before an American Legion honor guard and representatives of every civic organization, I spoke of the ideals these men died to preserve, and the responsibility of the citizens, and their elected representatives, to insure that no American soldier died in a cause that was not just, did not protect freedom, did not promote the welfare of the oppressed people of the earth.

On the steps of the Capitol, speaking only the names of the American dead, I was confronted with a platoon of armed policemen who ordered a halt to the reading of the names, and when this illegal order was not obeyed, arrested the 12 members of the Quaker action group and took them to jail. My request to be arrested with them was refused.

I love my country just as much in Washington, D.C., as I do in Monterey Park, Calif. I honor the American men who have died in Vietnam just as much in Washington, D.C. as I do in Monterey Park. I make the same demands for an immediate end of the war while at home in Monterey Park as I do in these Chambers or on the steps of the Capitol. And I will continue to do so.

But in Washington, D.C., there seems to be more fear that these dead, sent to die by the action or failure to act, of the Members of this Body, will return to haunt our dreams.

If we sent these men to die in mistaken cause, as I believe we did, their deaths will not be absolved by sending even more to die with them. Their deaths will be absolved by rectifying the errors of past policy, by confessing that we sinned, and by choosing the path of righteousness in the future.

I urge this course on my colleagues.

I include herewith my own statement issued yesterday in connection with this event:

"STATEMENT OF HON. GEORGE E. BROWN, JR., JUNE 4, 1969

"I am joining A Quaker Action Group on the Capitol steps today because I share their concern, and I believe that they have an absolute Constitutional right to do what they are doing. I have asked the Speaker of the House and the President of the Senate to instruct the Capitol Police not to interfere with the group's efforts to read the roll call of the Vietnam dead from the Con-

gressional Record. I have advised the police that I feel the arrests are unwarranted.

"I am in wholehearted agreement with the group's feeling that the Vietnam war is an unnecessary, illegal and immoral war that must be ended. It is a tragic error perpetuated by a stubborn and arrogant bureaucracy.

"Over the past five years I have stated many times that I believe there is no chance of a military victory and the 35,000 names of these young Americans who had died bear irrefutable witness to the monstrous cost of this monumental mistake in our foreign policy.

"The new Administration is not moving toward peace any faster than the previous Administration. The opportunity to admit past mistakes, with humility, is being lost and the perpetuation of old policies is rapidly making them the new policies, as well—which President Nixon's Administration will be forced to defend.

"If we recognize, admit and move to rectify our past mistakes, it would follow that we would have no reason to illegally suppress the efforts of this group. Therefore, I cannot sit idly by and be a party to this suppression by ignoring the arrest and imprisonment of sincere, patriotic and concerned Americans whose only crime is to remind us of the hideous side of the war which we too often tend to forget."

On June 9, Lawrence Scott sent the following letter to all Members of Congress:

A QUAKER ACTION GROUP,
Philadelphia, Pa., June 9, 1969.

Senators and Representatives, U.S. Congress, Washington, D.C.

DEAR FRIEND: Three times during the past month small groups sponsored by A Quaker Action Group have been arrested on the east Capitol steps for holding a silent meeting for worship in which we read the names of the U.S. servicemen killed in Vietnam. By this action it was not our intention to disrupt the work of Congress, nor do we believe that has been the result. It was not our intention to infringe upon the rights of others, nor do we believe that has occurred.

The court cases resulting from the arrests have afforded an opportunity to re-affirm the rights of freedom of assembly and speech. That service is being carried forward by the American Civil Liberties Union. We are glad to be the occasion for, and to cooperate with, that purpose. Yet, our primary goal was not to test the constitutionality of the statutes which interfere with freedom of expression.

In our public witness on the steps of the Capitol it was not our intention to be arrested and suffer in jail. We are engaged in constructive work and professions and it is not easy to disrupt our life by jail sentences. Nor is it easy to suffer the indignities and cruelties of the Washington jails, even though it does give us some identification with what the poor and the black often suffer. However, we accept arrest and imprisonment as part of our witness if that is necessary.

It has been our primary goal by this expression of mourning and public witness on the Capitol steps to speak truth about the Vietnam war to the Congress and the American people. We want you to know our primary purpose, because we intend to pursue it persistently at the Capitol and other places in Washington by various means of nonviolent action as led by the Spirit. If that should result in disruption of the war-making activities of the United States Congress or Administration we would consider that a valid use for our lives and freedom.

We urge the Congress of the United States to use every means of power at its disposal to stop the slaughter and withdraw all American forces from Vietnam. We feel the Congress should reassert its responsibility for foreign policy and budgetary allocations. The "greatness of America" lies in vastly different means and ends than those proposed by President Nixon. It lies in a whole different dimension of freedom and world community.

We intend again on June 11, at 12 noon, to assemble peacefully on the east steps of the Capitol and resume the reading of the names of the young Americans who were sent to their deaths in Vietnam. At the same time we will mourn the Vietnamese killed by United States military might. We shall mourn for the Vietnamese and Americans maimed and crippled for life. We shall mourn for the Vietnamese and Americans suffering in prisons because of their dissent and resistance to war.

If you share our purpose of immediate United States military withdrawal from Vietnam and agree to a discipline of nonviolence in the witness on the Capitol steps and acceptance of arrest without resistance, if that should occur, we invite you to join us in worship and in reading the names of Americans killed in Vietnam as published in the Congressional Record.

In closing we wish to express our deep appreciation to those Senators and Congressmen who are working courageously to end the war in Vietnam.

Sincerely,

LAWRENCE SCOTT.

After the June 4 arrests, other Members of the House began to show interest in the right of A Quaker Action Group to read the list of war dead names. The following letter from three other Members, the gentlewoman from New York (Mrs. CHISHOLM), the gentleman from California (Mr. EDWARDS), and the gentleman from New York (Mr. KOCH), and myself was sent to all Members of Congress on June 9:

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D.C., June 9, 1969.

DEAR COLLEAGUE: Last Wednesday, June 4th, twelve members of A Quaker Action Group were arrested on the Capitol steps for reading from the Congressional Record the names of American soldiers killed in Vietnam. This arrest, the third in three weeks, was made despite the fact that the twelve were peaceably assembled and were joined by three members of Congress who read the names with them.

Chief Powell, of the Capitol Police, testifying on June 6th in the Court of General Sessions on a defense motion to dismiss the charges against those arrested, said that all other things being the same, he would have arrested even one person reading the names of the Vietnam war dead on the Capitol steps. Chief Powell indicated that he felt the Capitol Police Board (composed of the Architect and the two Sergeants-at-Arms), the Speaker, and the President of the Senate would direct him to take such action.

In our opinion, these arrests clearly deprive the arrested of their rights under the First Amendment of the Constitution. This issue will be resolved by judicial process.

We feel strongly that only by protecting the constitutional rights of those who engage in peaceful assembly and petition can we discourage those who are urging other tactics. We will, therefore, join members of A Quaker Action Group again on Wednesday (June 11th), at noon to continue reading from the Congressional Record the names of the Americans who have died in Vietnam.

The participation of other concerned Members is invited.

Sincerely,

GEORGE E. BROWN, Jr.,
SHIRLEY CHISHOLM,
DON EDWARDS,
EDWARD I. KOCH,
Members of Congress.

When demonstrators began to read from the list again on June 11, they were arrested by Capitol police. Four Members of Congress, Mr. KOCH, Mr. MIKVA, Mr. JACOBS, and I, also read from the roll of war dead.

However, on June 11, a new approach to the readings was attempted. A representative of A Quaker Action Group presented a petition to me, a peaceful petition of redress of grievance as noted in article I of the Bill of Rights. I accepted their petition and instructed them to continue reading the war dead names as a part of the petition. The following newsstory reports what happened:

[From the Post Advocate, June 11, 1969]

GEORGE BROWN AGAIN JOINS QUAKERS IN ANTI-WAR PROTEST

WASHINGTON.—Rep. George D. Brown, Jr., D-Monterey Park, today participated in a second anti-war demonstration with a group of Quakers on the steps of the Capitol. Three other congressmen took part in the demonstration.

Twenty members of the Quaker Action Group, who were reading aloud the names of the Vietnam war dead, were arrested by Capitol police when they refused to obey an order to leave the steps.

Brown and Reps. Edward I. Koch of New York, Andrew K. Jacobs of Indiana and Abner J. Mikva of Illinois were not arrested.

Police chief James N. Powell told them they were immune to arrest while congress is in session and could not waive their immunity.

Powell told the Quakers they were violating a section of the District of Columbia code which makes it a misdemeanor to refuse to leave the public building when requested to by the person in charge.

This is the fourth time the Quaker group has read the names of Vietnam war dead on the Capitol steps and the fourth time they have been arrested.

Brown took part in the demonstration last week for the first time.

At the start of the read-in Brown welcomed the Quakers and told them they had a right under the First Amendment to remain there as long as they were peaceable. The demonstration lasted 40 minutes.

George Willoughby, 55, of Wallingford, Penn., co-chairman of the Quaker Action group read a statement which said the Quakers were there to peaceably assemble and petitioned congress and the American people for a redress of a grievance.

He said they were grieved that the Vietnam War continued. All U.S. troops should be withdrawn from Vietnam as a step towards ending "An immoral war," Willoughby said. He was one of those arrested.

Brown yesterday sent all members of congress a letter inviting them to participate in the demonstration today. He said the previous arrest, clearly deprived the arrested of their rights under the First Amendment of the Constitution.

"We feel strongly that only by protecting the constitutional rights of those who engage in peaceful assembly and petition can we discourage those who are urging other tactics," the letter said.

That day I issued the following press release; at this point I would also like to insert an article by Thomas J. Foley, of the Los Angeles Times Washington news bureau:

CONGRESSMEN DEFEND RIGHT TO GATHER ON CAPITOL STEPS

Congressman George E. Brown, Jr. (D–Calif.) was joined this week by a growing list of colleagues in extending an invitation to

all of the Members of Congress to join a group of Quakers on the center steps of the Capitol today (Wed.) at Noon to defend the group's right to assemble there peacefully.

Brown, along with Representatives Don Edwards (D–Calif.), Shirley Chisholm (D–N.Y.), Edward I. Koch (D–N.Y.), referring to arrests made by Capitol police on preceding Wednesdays, stated that "these arrests clearly deprive the arrested of their rights under the First Amendment of the Constitution."

"We feel strongly that only by protecting the constitutional rights of those who engage in peaceful assembly and petition can we discourage those who are urging other tactics," the invitation to other Members continued.

Last week, Brown, Koch, and Rep. Charles C. Diggs, Jr. (D–Mich.) joined with the Quaker group in reading the names of the Vietnam war dead from the Congressional Record. The Quakers were arrested but the police declined to arrest the Congressmen on the grounds of their Constitutional immunity from arrest for most offenses while Congress is in session.

In a newsletter to his constituents, Brown noted that "several times a day, especially during the summer months, groups of visitors are taken to the Capitol steps by Congressmen, assembled there, have pictures taken, hear speeches by the Congressmen, and hold ceremonies of different types—even to the extent of bands playing."

The California Congressman contends that the laws are being enforced arbitrarily because Congress is afraid to face the fact that its own mistakes have been partly responsible for needless deaths in Vietnam.

[From the Los Angeles (Calif.) Times, June 11, 1969]

QUAKERS TEST MORE THAN LAW

(By Thomas J. Foley)

It was Mr. Bumble in Oliver Twist who said "If the law said that, the law is a ass."

It appeared dangerously like last Wednesday when, on the East Front steps of the U.S. Capitol where Presidents are inaugurated, a dozen peaceful-minded and peaceful-acting men and women began reading from the Congressional Record.

The law said they'd have to stop and depart. If they didn't, they would be arrested.

Two sympathizers, Reps. George E. Brown Jr. (D-Calif.) and Edward I. Koch (D-N.Y.), said they had invited the people to be there and read.

No difference, said the law. The record-reading continued. So the 12 were all trundled off to the pokey.

To the law, the fact they were standing where the East Front steps are 72 feet wide and thus not blocking access to the Capitol was irrelevant.

So was the fact that every member of Congress knew in advance the 12 would be there and what they would be doing. Likewise that Rep. Brown had spoken to Speaker John McCormack and urged him to permit it.

There was no element of surprise, no rush on the Capitol, no shouting. Not even any cop-baiting.

These are the essential facts of the matter. And they should be viewed in the clear and shining light of the First Article of the Bill of Rights:

"Congress shall make no law . . . abridging the freedom of speech, or of the press, or the right of the people peaceably to assemble, and to petition the government for a redress of grievances."

There are other facts, of course. But they are material, not to the law looking like an ass, but to explaining why the 12 people were arrested.

The 12 are Quakers and pacifists, and they were reading from the Record a list of the Americans who had died in Vietnam. The list had been placed in the Record by Rep. Paul Findley (R-Ill.), an early advocate of pulling U.S. troops out of the Southeast Asian nation. Reps. Brown and Koch agree.

It is also true that the Quakers don't mind being arrested, that they are willing to go to jail for a cause and that they will take the case to the Supreme Court if necessary.

It also should be pointed out that last Wednesday was the third Wednesday they had shown up to read their list and that they, or some of their friends, will be there again this Wednesday.

But these facts only explain why it happened rather than whether it should happen.

One need not agree with the Quakers' point of view to feel a sense of outrage at this procedure.

There are innumerable legal arguments, and these will eventually be settled in the court. The American Civil Liberties Union is backing the Quakers and will see it through.

The law enforcers arrested the Quakers under one law but defended their actions in court under another. Rep. Brown believes the congressional Establishment has sufficient discretion to allow the Quakers to do their thing. The Establishment argues that they can't permit one group to do this but not another.

What seems to come through it all is a sense of fear by Speaker McCormack and the police officials of what might happen in this day of violent demonstration if they let up for the 12 Quaker pacifists.

It may even be a legitimate fear.

But what a commentary on the law, the times and man himself.

After the first arrests at which I had been present—June 4—I felt that the law employed to stop the readings was unreasonable, and I testified for the defendants in their motion to dismiss the charges. The case for that dismissal is contained in the following brief, submitted by Ralph J. Temple, of the American Civil Liberties Union:

[District of Columbia Court of General Sessions, Criminal Division]

UNITED STATES OF AMERICA, PLAINTIFF, v. JOAN NICHOLSON, JIM B. HART, BOYKIN A. REYNOLDS, BETTY VAN HUYCK, DEFENDANTS, SUPPLEMENTAL MEMORANDUM OF DEFENDANTS IN SUPPORT OF MOTION TO DISMISS THE INFORMATIONS, JUNE 12, 1969

(Criminal Nos. 20210–69A, 20211–69A, 20216–69A, 20220–69A)

Ralph J. Temple, Suite 501, 1424 16th Street, N.W., Washington, D.C., Attorney for Defendants.

Of Counsel: Robert Maynard, American Civil Liberties Union Fund.

This memorandum in support of the defendants' motion to dismiss the informations is filed as a supplement to the defendants' memorandum filed with the Court on June 6, 1969. The statement of facts is set out in the earlier memorandum and will be repeated here only in summary form.

STATEMENT OF FACTS

The defendants were among thirteen persons arrested on June 4, 1969, while standing at one extreme side of the East Front Center steps of the United States Capitol. At the time they were taking turns reading the list of Americans killed in the Vietnam war. This was the third such set of arrests in a period of less than two weeks. On May 23rd, 10 persons were arrested for the same activity and charged with incommoding the steps. The informations were dismissed as unconstitutionally vague. On May 28th, eleven persons were arrested under identical circumstances, and jury trials were scheduled for those who pleaded not guilty. The last two sets of arrests were made on charges of unlawful entry. All three assemblages were sponsored by A Quaker Action Group. On all three occasions the persons assembled did not block passage on the steps, engage in noisy or disorderly conduct, or interfere with anyone.

EVIDENCE ADDUCED AT HEARING ON MOTION TO DISMISS

I. On June 6 and 9, 1969, the Court conducted a hearing on defendants' motion to dismiss the informations on constitutional grounds. The defense presented the following witnesses who testified in substance as follows:

A. *Lawrence Scott*, a staff employe of A Quaker Action Group, testified that the purpose of the assemblages on all three occasions was to influence the Congress, the Government generally, and the public that the war in Vietnam should be ended. He testified that the Capitol Grounds and the Capitol steps were of particular importance in communicating the group's message because expressions at that location received more public and Congressional attention, particularly because of the greater attention of the news media, and because of the symbolic importance of coming to the site of Congress to petition.

B. *Congressman Edward Brown of California and Congressman Edward Koch of New York* testified that they welcomed the presence of the Quakers in this kind of assemblage on the Capitol steps. They testified that many groups had been permitted to gather on the East Front Center steps and on the House entrance steps on the East side in the past. There were introduced Defense Exhibits 6 through 15 showing groups from 12 to 100 in number gathered on the House steps. In Defense Exhibit 13, a uniformed band is shown on the House steps bearing banners and a sign on a drum identifying the group. Both Congressmen testified that they believed that assemblages such as those of the defendants were important to their roles as legislators in dramatically and effectively communicating views held by segments of the public to them, to other congressmen, and to the public.

C. *David Clark* testified that on May 28th, the same day that the second set of Quakers was arrested on the Capitol steps, he saw a group of about 40 persons sitting on steps on the northern side of the Capitol, with one of the group wearing an NAACP button. He testified that he saw another group gathered on the House entrance steps on the East side, apparently having their picture taken, a third group of about 75 persons sitting on a fence around a grassy area on the Capitol grounds, and a fourth group of 125—7th and 8th graders in their school uniform coming down the East Center steps. Cairk testified that in July 1968, 55 persons participating in the "Poor Peoples' Campaign" were allowed to assemble on the Capitol grounds near the House entrance on the East side.

D. *William Blum* testified that on June 4, 1969, the same day that the defendants were arrested, he saw a group of about 100 persons sitting on the House entrance steps on the East side, singing.

E. *Chief of the Capitol Police James Powell* testified that his actions in arresting persons on the steps on May 23, May 28 and June 4th were partly on the basis of D.C. Code, Section 9–124, and partly on the basis of unwritten rules established by the Capitol Police Board and communicated to him orally by the Speaker of the House and members of that Board.

(1) *Special Rules:* Chief Powell testified that special rules apply to the Center steps which bar all assemblages there unless permission is obtained from the Speaker of the House. He then testified that different rules apply to the House and Senate steps on the East side, whereby the Speaker will give permission to certain groups to assemble there for photographs or to meet with their Congressmen. The Chief was unclear as to whether different rules were applicable, since in all cases, he testified, the permission of the Speaker was necessary (permission of the Sergeant at Arms of the Senate for the Senate steps, and permission of the Architect of the Capitol for certain other purposes).

(2) *Standards:* Chief Powell testified that generally the Speaker decided which groups could and which could not assemble on the Capitol Grounds. The Chief testified that the decision was made on the basis of whether, in the Speaker's judgment, the group which wished to assemble was non-controversial and non-political. He testified that if a group was for or against a cause, or if it was "too liberal or too conservative" it was not allowed to assemble. He testified that this was a difficult judgment to make and that it had to be made on a case by case basis by the Speaker of the House.

(3) *Factors Leading to Arrests:* Chief Powell testified that he would have arrested the group of 13 persons assembled on the steps on June 4th even if all had been standing, even though they were blocking no one's way, and even if there had been only three assembled, only two assembled, or only one person standing on the steps reading the list of the Vietnam war dead. He testified that the factors underlying the arrests were: (a) the group did not have the permission of the Speaker of the House; (b) the group had notified the news media in advance of their planned assemblage; and (c) news media and other persons were attracted by the assemblage.

F. The defense also presented a newspaper article from the Washington Post dated May 22, 1968, reporting that a group of 350 persons from the "Poor Peoples' Campaign" was permitted to move on the Capitol Grounds in groups of 20. The Government stipulated that the newspaper reporter if called would so testify. The defense also presented in evidence, with the permission of the Court, the transcript in *United States* v. *Buchard,* D.C. Ct. Gen. Sess., U.S. 16019–68 (Sept. 16, 1968), for proof of:

(a) The Government's concession that "boys scouts or schools . . . parade there on occasions" (Tr. 15; see also p. 23); and

(b) The testimony of Sergeant Joseph Schaap of the Capitol Police (Tr. 26, et seq.) that he had the authority to permit groups of 5 or 6 persons, or groups as large as 10 persons to assemble on the Capitol Grounds (Tr. 34, 42, 48).

II. The Government presented as a witness Chief Powell, who testified as to the details of the arrests on June 4th. Chief Powell also testified that non-political uniforms, banners and signs might be allowed, but not a "political" uniform, such as that of the American Nazi Party. He could not make a judgment as to the uniform of the American Legion. Under questioning by the Court, the Chief testified that there was no certain way that a group could determine in advance whether it would break the law by coming on the Capitol Grounds and he suggested that the way to find out might be to ask a policeman at the Capitol Grounds.

ARGUMENT

I. *Assemblages Are Protected By the First Amendment:* "Demonstrating," "picketing," or "patrolling"—has recently been reaffirmed by the United States Supreme Court to be "speech" and therefore entitled to the full protection of the First Amendment:

"We start from the premise that peaceful picketing carried on in a location open generally to the public is, absent other factors involving the purpose or manner of the picketing, protected by the First Amendment." *Food Employees* v. *Logan Plaza,* 391 U.S. 308, 313 (1968).

The Court has long recognized that such speech is traditionally and properly exercised in and on public streets, sidewalks, parks and other public places:

"Wherever the title of streets and parks may rest they have immemorially been held in trust for the use of the public and, time out of mind, have been used for purposes of assembly, communicating thoughts between citizens, and discussing public questions. Such use of the streets and public places has, from ancient times, been a part of the privileges, immunities, rights, and liberties of citizens." *Hague* v. *C.I.O.,* 307 U.S. 496, 515 (1939) (Opinion of Roberts, J.).

But it is not just "pure speech" in and on public parks and streets that receives First Amendment protection; the peaceful expression of views by marches, demonstrations, assemblies, sit-ins, and even silent protest, is included as well.

"As this Court has repeatedly stated, these [First Amendment rights of speech, assembly, and petition for redress of grievances] . . . are not confined to verbal expression. They embrace appropriate types of action which certainly include the right in a peaceful and orderly manner to protest by silent and reproachful presence, in a place where the protestant has every right to be. . . ." *Brown* v. *Louisiana,* 383 U.S. 131, 141–42 (1966). See *Shuttlesworth* v. *City of Birmingham,* 37 U.S.L.W. 4203 (March 11, 1969).

It follows that if open advocacy of views is to exist, then the advocates of those views must be given access to public parks and other areas from which they may communicate their message to the public. The judicial expansion of First Amendment rights over the past few decades "has fostered the accompanying doctrine that the individual must be afforded an appropriate 'public forum' for his peaceful protests." *Davis* v. *Francois,* 395 F. 2d 730, 733 (5th Cir. 1968). The First Amendment sanctions, not just "speech," but "effective speech," see *Edwards* v. *South Carolina,* 372 U.S. 229, 235 (1963); *Saia* v. *New York,* 334 U.S. 558, 561 (1948); *Davis* v. *Francois, supra* at 735; *Williams* v. *Wallace,* 240 F. Supp. 100, 106 (M.D. Ala. 1965), and the effectiveness of this speech often turns on the nature and existence of a public forum.

The First Amendment itself explicitly recognizes "assembly" as a condition precedent to an individual's "effective" exercise of speech:

"Effective advocacy of both public and private points of view particularly controversial ones, is undeniably enhanced by group association, as this Court has more than once recognized by remarking upon the close nexus between the freedoms of speech and assembly. *De Jonge* v. *Oregon,* 299 U.S. 353, 362; *Thomas* v. *Collins,* 323 U.S. 516, 530. It is beyond debate that freedom to engage in association for the advancement of beliefs and ideas is an inseparable aspect of the 'liberty' assured by the Due Process Clause . . ." *N.A.A.C.P.* v. *Alabama ex. rel. Patterson,* 357 US 449 (1957) See *Williams v. Wallace,* 240 F. Supp. 100, 106 (M.D. Ala. 1965).

These rights occupy a "preferred position" among constitutional liberties, *Saia* v. *New York,* 334 U.S. 558, 562 (1948), they can only be curtailed upon a showing by the government of a "compelling" regulatory interest. *N.A.A.C.P.* v. *Button,* 371 U.S. 415, 438 (1963).

II. The Government Cannot Restrict First Amendment Rights Absent Proof of a Showing that a "Compelling" Governmental Interest is Involved the Restraints Are "No Greater Than Are Essential," and the Restrictions Are No More Than "Incidental" Curtailments of Those Rights: The First Amendment freedoms of speech assembly to petition for the redress of grievances, and association, occupy a "preferred position" in the spectrum of constitutionally guaranteed liberties *Kovacs* v. *Cooper,* 336 U.S. 77, 88 (1949); *Saia* v. *New York,* 334 U.S. 558, 562 (1948); *Thomas* v. *Collins,* 323 U.S. 516, 529–30 (1945); *United States* v. *Cruikshank,* 92 U.S. (2 Otto) 542, 552–53 (1876). Therefore, the burden of justifying restrictions on these rights rests with the government. Accordingly, before the Government can impose restrictions upon the exercise of First Amendment freedoms, it must sustain its burden of proof by demonstrating the existence of a "compelling," *N.A.A.C.P.* v. *Button,* 371 U.S. 415, 438 (1963); *Sherbert* v. *Verner,* 374 U.S. 398, 403 (1963), or "paramount," *Thomas* v. *Collins,* 323 U.S. 516, 530 (1945), governmental interest which justifies that regulation.

The Supreme Court has developed standards for the permissible regulation of conduct when it is combined with various forms of speech. These standards permit restrictions on the *conduct* element, or "time, place and manner," of demonstrations and similar public gatherings, *Cox* v. *New Hampshire,* 312 U.S. 569, 575–76 (1941), but do not, of course, permit restrictions on the content of the speech itself. *United States* v. *O'Brien,* 391 U.S. 367, 376 (1968). What may be regulable is only the manner in which the speech-content is presented. A regulation could not, therefore, censor the message on a handbill or placard, no matter what the conditions of its presentation were.

The constitutional guideline developed by the Supreme Court in the area of speech-plus-conduct is to permit narrowly and precisely drawn time, place and manner regulations so long as they do not restrict the physical aspects of demonstrations any more than the government can show to be absolutely necessary to permit other competing lawful uses of public space. The Court, therefore, has struck down time, place and manner restrictions which "deny or *unwarrantedly abridge* the right of assembly and the opportunities for the communication of thought and the discussion of public questions immemorially associated with resort to public places." *Cox* v. *New Hampshire,* 312 U.S. 569, 575–76 (1941) (emphasis supplied). Only a "serious interference with normal usage of streets and parks," *Kunz* v. *New York,* 340 U.S. 290, 293–94 (1951) (emphasis supplied), can be prohibited by the government, and any restrictions must embody "narrowly drawn, reasonable and definite standards for the officials to follow . . .," *Niemotko* v. *Maryland,* 340 U.S. 268, 271 (1951). At all times the First Amendment freedoms must be kept "in a preferred position." *Saia* v. *New York,* 334 U.S. 558, 562 (1948).

Thus, a community cannot prohibit the distribution of pamphlets and other literature to prevent littering and unsightly sidewalks, *Schneider* v. *State,* 308 U.S. 147 (1939); a local regulation cannot prohibit the circulation of anonymous pamphlets, *Talley* v. *California,* 362 U.S. 60 (1960); a municipal ordinance cannot prohibit the use of loudspeakers or sound trucks on public streets, *Saia* v. *New York,* 334 U.S. 558 (1948), or the ringing of doorbells, *Martin* v. *City of Struthers,* 319 U.S. 141 (1939), in the name of community tranquility; and a local regulation cannot prevent the playing of religious phonograph records on public streets absent a "clear and present menace to public peace and order . . .," *Cantwell* v. *Connecticut,* 310 U.S. 296, 311 (1940).

Recently, the Supreme Court has explicitly restated the constitutional requirements for time, place and manner standards regulating peaceful picketing and other forms of public demonstrations. In *Food Employees* v. *Logan Plaza,* 391 U.S. 308, 313 (1968), the Court declared "peaceful picketing," which "involves elements of both speech and conduct," i.e., "patrolling," to be "protected by the First Amendment," and in *United States* v. *O'Brien,* 391 U.S. 367, 376 (1968), the Court warned that "when 'speech' and 'nonspeech' elements are combined in the same course of conduct," only a *sufficiently important* governmental interest in regulating the nonspeech element can ever justify even "incidental limitations on First Amendment freedoms." (Emphasis supplied.)

The standards by which the government may restrict the exercise of the rights to speech, petition, and association, therefore, are clear. As the Court held in *United States* v. *O'Brien, supra,* any regulation restricting the full and free exercise of normally protected speech-conduct activities will be declared unconstitutional unless: (1) the

regulation "furthers an important or substantial governmental interest"; (2) the "governmental interest is unrelated to the suppression of free expression"; and (3) the incidental restriction on alleged First Amendment freedom is no greater than is essential to the furtherance of that interest." *United States* v. *O'Brien*, 391 U.S. at 377. (Emphasis supplied.)

III. Assembly and Speech Cannot Be Prohibited in Generally Unrestricted Public Areas: Public property may be restricted to certain uses, and it generally is so restricted inside public buildings and offices. However, open areas to which the public is generally admitted without special restrictions and under the same circumstances as the public uses of parks and sidewalks, may not be barred to those wishing to assemble, petition, and exercise expression.

Thus, for example, in *Adderley* v. *Florida*, 385 U.S. 39 (1966), where the Court unheld trespass convictions of those who demonstrated on jailhouse grounds, the Court emphasized:

"This particular jail entrance and driveway were not normally used by the public . . . (385 U.S. at 45)

* * * * *

"There is not a shred of evidence in this record that this power [to order persons off the jail grounds] was exercised, or that its exercise was sanctioned by the lower courts, because the sheriff objected to what was being sung or said by the demonstrators or because he disagreed with the objectives of their protest. The record reveals that *he objected only to their presence* on that part of the jail grounds reserved for jail uses. *There is no evidence at all that on any other occasion had similarly large groups of the public been permitted to gather on this portion of the jail grounds for any purpose.*" (385 U.S. at 47) (Emphases added.)[1]

The record shows that the Capitol Grounds are generally open to the public for the same unrestricted use that other public places are open. Under D.C. Code, Section 9–123, a series of specific actions inside and outside the buildings on the Capitol Grounds are prohibited in almost any indoor and outdoor public places.

In *Hague* v. *C.I.O.*, 307 U.S. 496 (1939), the Court affirmed an injunction issued against enforcement of laws prohibiting public meetings in Jersey City. The Court distinguished an earlier decision in the following terms (307 U.S. at 515, 516):

"The ordinance there in question apparently had a different purpose from that of the one here challenged, for it was not directed solely at the exercise of the right of speech and assembly, but was addressed as well to other activities, not in the nature of civil rights, which doubtless might be regulated or prohibited as respects their enjoyment in parks. In the instant case the ordinance deals only with the exercise of the right of assembly for the purpose of communicating views entertained by speakers, and is not a general measure to promote the public convenience in the use of the streets or parks.

"* * * * *

"We think the court below was right in holding the ordinance quoted in Note 1 void upon its face. It does not make confort or convenience in the use of streets or parks the standard of official action. It enables the Director of Safety to refuse a permit on his mere opinion that such refusal will prevent 'riots, disturbances or disorderly assemblage.' It can thus, as the record discloses, be made the instrument of arbitrary suppression of free expression of views on national affairs for the prohibition of all speaking will undoubtedly 'prevent' such eventualities. But uncontrolled official suppression of the privilege cannot be made a substitution for the duty to maintain order in connection with the exercise of the right."

The government may not discriminate against First Amendment rights. If a public area is generally unrestricted, speech and assembly cannot be prohibited thereon.

IV. Capitol Grounds, Unlike Jail Houses and Courts, Cannot Be Immunized From Peaceable Assembly: In *Edwards* v. *South Carolina*, 372 U.S. 229 (1963), the Court reversed breach of the peace convictions resulting from an assemblage of almost 200 chanting, clapping demonstrators on the grounds of the South Carolina State Capitol. The language of the Court indicates its acute awareness that it was addressing itself to a demonstration on a peculiar piece of ground. The Court went out of its way to stress that the uniqueness of the ground as that of a state legislature gave particular importance—rather than less protection—to the First Amendment rights involved.

"They peaceably assembled at the site of the State Government and there peaceably expressed their grievances . . ." (372 U.S. at 235).

The Court, in an 8 to 1 opinion by Justice Stewart, called this an exercise of the rights of speech, assembly, and petition "in their most pristine and classic form." (*Ibid*) The Court also added the following footnote to the above quoted sentence:

"It was stipulated at trial that the State House grounds are occupied by the Executive Branch of the South Carolina government, the Legislative Branch and the Judicial Branch, and that, during the period covered in the warrant in this matter . . . the Legislature of South Carolina was in session." (372 U.S. at 235, note 10).

The Court stated that "an evenhanded application of a precise and narrowly drawn regulatory statute" would be upheld, and gave as an example "a law reasonably limiting the periods during which the State House Grounds were open to the public." (385 U.S. at 236).

In *Cox* v. *Louisiana*, 379 U.S. 559 (1965), when the Court, although reversing convictions, stated that it recognized the validity of a state law prohibiting picketing near a courthouse, it stressed the necessity to protect the judicial function from public "pressures." (379 U.S. at 491). This is a recognition that the courts, unlike the Executive and Legislature, are not intended to be responsive to public sentiment, but that, to the contrary, there is a substantial governmental interest in immunizing judges and jurors from public sentiment. The Court went so far as to suggest that picketing even a courthouse might be protected if it were directed, not at the judicial process, but at the mayor or another official "who just happened to have an office located in the courthouse building." (379 U.S. at 567).

The distinction was also emphasized by Justice Black (who had joined in the opinion in *Edwards*, *supra*), in his opinion upholding the trespass convictions of those who demonstrated on the jailhouse grounds in *Adderley* v. *Florida*, *supra*. Justice Black said:

"In Edwards, the demonstrators went to the South Carolina State Capitol grounds to protest. In this case they went to the jail. Traditionally, state capitol grounds are open to the public. Jails, built for security purposes, are not. (385 U.S. at 41).

We have found no case holding that orderly assemblies may be prohibited on the grounds of a legislature, generally open to the public.

In *Feeley* v. *District of Columbia*, 220 A. 2d 325 (D.C. App. 1966), *reversed*, 128 App. D.C. 387, F. 2d 216 (1967), the District of Columbia Court of Appeals suggested that Section 9–124 of the D.C. Code was a valid provision since it "is clear and nondiscriminatory on its face and prohibits any and all groups from parading or assembling in a certain defined area." Counsel has been informed that in an unreported order the D.C. Court of Appeals summarily reversed the decision of Judge Halleck in the case of *United States* v. *William R. Riley*, cited at pp. 4–5 of Defendants' earlier memorandum.

First, the reference in *Feeley* does not have reliable status as stare decisis. The references to Section 9–124 were dictum in the opinion. In reversing, the United States Court of Appeals emphasized that Section 9–124 of the D.C. Code was not relied upon by the Government in prosecuting the cases. Thus, the reference in *Feeley* is dictum referring to a statute not in issue in the case, contained in an opinion reversed on appeal. The reversal in *Riley*, being unreported and without opinion, is also unreliable. It could have been reversed on the ground that the Government was not permitted to present its proof.[2]

Second, the statement in *Feeley* is wrong, in light of the Supreme Court decisions cited above. As between those decisions and the dictum contained in a decision reversed on other grounds, this Court should adhere to the path struck by the Supreme Court in *Edwards*, *Cox*, and *Adderley*, indicating that capitol grounds, unlike jails and courts, are not constitutionally to be immunized from public assembly, expression and orderly influence.

Finally, it is clear on the record before this Court that the restrictions on assemblages on the Capitol Grounds have not been uniformly and evenhandedly applied. To the contrary, the testimony of Chief Powell established that groups are permitted or barred on the basis of whether they are non-controversial, non-political, for or against a cause, or too liberal or conservative. This evidence goes to more than the application of the statute; it reflects on the assumptions of the D.C. Court of Appeals in its dictum in *Feeley*.

Thus, in *Feeley*, in quoting Section 9–124, the Court above neglected to refer to those parts of 9–124 and 9–128 which authorize the Speaker of the House and others to "suspend" the restrictions on assembly for "occasions of national interest becoming the cognizance and entertainment of Congress." If there had been any thought that these words provided a sufficiently narrow and precise standard to govern the giving and withholding of permission to assemble, the experience under the statute, as shown on the record in this case, dispels it. The statutory scheme is shown, by the experience under it, to confer upon the officials an overly broad discretion which has permitted them to discriminate in an arbitrary manner in permitting and prohibiting assemblages. Hence, the statute is unconstitutional on its face.

Moreover, if it were permissible to bar all assemblages, the Government could not distinguish between those which were for purposes of expression and those that were not. See *United States* v. *O'Brien*, *supra*; *Hague* v. *C.I.O.*, supra. The fact that the statute has been applied, not to bar assemblages, but to suppress certain views, is

---

[1] See, also, Justice Douglas' statement in his dissenting opinion that (385 U.S. at 48, 54):

"There may be some public places which are so clearly committed to other purposes that their use for the airing of grievances is anomalous. There may be some instances in which assemblies and petitions for redress of grievances are not consistent with other necessary purposes of public property. A noisy meeting may be out of keeping with the serenity of the statehouse or the quiet of the courthouse. No one, for example, would suggest that the Senate gallery is the proper place for a vociferous protest rally."

[2] Indeed, in *United States* v. *Buchard* (cited in defendants' earlier memorandum, p. 5), decided one week after the summary reversal in *Riley*, Judge Edgerton rejected the Government's argument that *Riley* overruled *Banks*, and adhered to Judge Greene's interpretation of Section 9–124.

further evidenced by Chief Powell's testimony that he would have arrested two persons (see *Hunter* v. *District of Columbia*, 47 App. D.C. 406 (1918)), and even one person reading the list of Vietnam war dead as a protest against the war. Thus, the statute is unconstitutional as applied.

V. The Rules Which Were Relied Upon By the Government are Unconstitutionally Vague: At this point, it is still difficult to discern the theory of the prosecution. The Government stated it was not relying on Section 9–124. Near the end of its argument, the Government suggested that it might be relying upon Section 9–123(b)(7) prohibiting parading, picketing, and demonstrating "within" the Capitol Buildings. No evidence, authority, or reasoning was presented, however, to rebut the normal understanding that "within" a building includes that portion within the walls and under the roof.

Chief Powell never seemed clear under which law he was acting. He testified that he was acting under unwritten rules promulgated by the Capitol Police Board which at various times in his testimony he believed were the same as and different from Section 9–124 and other unwritten rules regulating the use of other steps and the Capitol Grounds generally. Chief Powell conceded that a citizen cannot know in advance which of his actions might violate the law on the Capitol Grounds. Clearly, the rules applied are unconstitutionally vague. See *Wright* v. *Georgia*, 373 U.S. 284, 292, 293 (1963); *Edwards* v. *South Carolina*, *supra*, 372 U.S. at 236–37; *Cox* v. *Louisiana*, *supra*, 379 U.S. at 574.

CONCLUSION

The Government emphasized in its argument that these are turbulent and violent times. All the more reason to draw sharply the lines between peaceable assembly and mob intimidation—all the greater the importance of keeping open all orderly and lawful means of protest. As the Supreme Court said in *De Jonge* v. *Oregon*, 299 U.S. 353, 364–65 (1937):

"The greater the importance of safeguarding the community from incitements to the overthrow of our institutions by force and violence, the more imperative is the need to preserve inviolate the constitutional rights of free speech, free press and free assembly in order to maintain the opportunity for free political discussion, to the end that government may be responsive to the will of the people and that changes, if desired, may be obtained by peaceful means. Therein lies the security of the Republic, the very foundation of constitutional government."

For the reasons stated in this memorandum and in Defendants' earlier memorandum, the Court should dismiss the informations on the ground that the statutory scheme restricting assemblages and speech on the Capitol Grounds and the "rules" thereunder are unconstitutional on their face and as applied, or in the alternative, are unconstitutionally vague.

Respectfully submitted.

Last Wednesday, June 18, members of a Quaker Action Group tried for a fifth time to continue reading the names of Vietnam war dead. Five Members of Congress, Mrs. CHISHOLM, Mr. CLAY, Mr. KOCH, Mr. MIKVA, and I, again joined in the reading. Thirty-four persons were arrested in two separate demonstrations, as noted in the following news item:

[From the Washington (D.C.) Post, June 19, 1969]

PROTESTS FOR PEACE BRING 34 ARRESTS ON STEPS OF CAPITOL

(By Paul W. Valentine)

Thirty-four Vietnam war protesters were arrested yesterday on the Capitol steps in two separate incidents after they refused to stop reading the names of 35,000 American war dead.

Their arrest—on charges of unlawful entry—was similar to group arrests made four times earlier this month and in May by Capitol Police.

The action came during a day in which another 150 war and draft protesters visited the offices of some 80 Senators in small delegations, to poll the Senators' views on the war, the political nature of the Saigon government and the right of American servicemen to dissent from the war.

The visitors reported mixed receptions from the Senators, ranging from friendly support to hostility to evasiveness or no response at all.

The visits were organized by a national coalition of peace groups including the Fellowship of Reconciliation, Clergy and Laymen Concerned About Vietnam, Resist, and Women Strike for Peace.

They finished a two-day program of direct action in the city directed at focusing Government and congressional attention on what the protesters consider to be inequities of the war, the draft and the punishment of GIs who protest the war.

At the Capitol steps, five Congressmen joined a group of 16 persons reading the list of American war dead at noon.

The protesters, organized by A Quaker Action Group, were ordered arrested 35 minutes later by Capitol Police Chief J. M. Powell.

The Congressmen, who are immune from arrest for such misdemeanors while Congress is in session, were left alone.

As the 16 protesters were led away by police, a 17th was arrested on a charge that he was unlawfully displaying a protest banner on the Capitol grounds.

Federal law forbids all political and other demonstrations on the grounds.

A crowd of about 300 tourists, sympathizers and Capitol Hill employees looked on during the arrests as a light rain began to fall.

Many in the crowd applauded the protesters and raised their fingers in the "V" peace signal.

The five Congressmen—Reps. Shirley A. Chisholm (D-N.Y.), George E. Brown (D-Calif.), William L. Clay (D-Mo.), Edward I. Koch (D-Liberal, N.Y.), and Abner J. Mikva (D-Ill.)—continued to read the war dead list briefly after the protesters were taken away. Then they left.

"I look to the day when the Speaker of the House is out here reading with us," Brown said to Chief Powell as the two passed each other on the steps.

Koch decried what he considers the absurdity of the law forbidding peaceful demonstrations on the Capitol grounds.

Two hours later, a second group of 17 protesters assembled on the same steps, resumed reading the list and were also ordered arrested by Powell.

Both arrest procedures were orderly.

The 34 appeared before General Sessions Court Judge Tim Murphy in a seven-hour marathon session that ended at 10:30 p.m. For the first time, those who do not live in the area were required to post $30 bond for pretrial release.

All those freed on bond were released under the condition that they not participate in other demonstrations on Capitol Hill.

This brings the total of arrests to 88 since A Quaker Action Group, a Philadelphia based organization, sponsored the first "read-in" on the steps May 23, a Friday.

Members and supporters of the group have reappeared on the steps every Wednesday since then.

In a third incident during the day, eight other war protesters were arrested in the Pension Building at 5th and G Streets nw., where several Selective Service offices are located. The group was reading the war dead list and were arrested on unlawful entry charges when they refused to leave at the 6 p.m. closing time.

The 150 protesters who visited the Senators' offices yesterday were following up a June 2 letter sent to all 100 Senators by Richard F. Fernandez, director of Clergy and Laymen Concerned About Vietnam.

The letter asked the Senators whether they believe the United States should support the "repressive regime" in Saigon, whether the military should punish servicemen for dissenting and whether the Senators will act on these issues.

Most visitors said they did not see individual Senators, but received especially favorable responses from the offices of Sens. Thomas F. Eagleton (D–Mo.), Mark O. Hatfield (R–Ore.) and Vance Hartke (D–Ind.).

Mr. Speaker, by late last week, the overall situation appeared this way. A Quaker Action Group was adamant in its plans to continue attempting the readings irrespective of the constant threat of arrest. An increasing number of Members of Congress stood behind the group, and argued along with it there should be no legal obstacle to the reading of names upon the steps. The Capitol Police, under orders from the Capitol Police Board, insisted that arrests would continue as long the demonstrations persisted. At the same time, the District of Columbia general sessions court was considering the motion to dismiss charges in the earlier cases.

Then last Thursday, Judge Harold H. Greene decided that the demonstrators did have the right to read the war dead names as long as the activity was carried out in a peaceful, nondisruptive manner. I now place in the RECORD Judge Greene's opinion:

[District of Columbia Court of General Sessions, Criminal Division]

UNITED STATES OF AMERICA, PLAINTIFF, *v.* JOAN NICHOLSON, JIM B. HART, BOYKIN A. REYNOLDS, MARY E. VAN HUYCK, DEFENDANTS

(Criminal Nos. 20210–69A, 20211–69A, 20216–69A, 20220–69A)

OPINION

On June 4, 1969, defendants (together with nine others) were arrested for and charged with unlawful entry, in violation of D.C. Code § 22–3102. Two days later, prior to trial, defendants moved to dismiss the informations on constitutional grounds. The testimony[1] taken on the motion concerned primarily the standards used in administering the laws relating to the use by the public of the Capitol Grounds. That portion of the testimony is detailed and discussed *infra*, principally at pp. 5–7.

The evidence also showed that defendants (who are members of and sponsored by the Quaker Action Group) were arrested on the center steps of the East Front of the Capitol while they were reading a list of the Vietnam war dead from the Congressional Record. The arrests occurred when the defendants refused to leave in compliance with an order from James M. Powell, Chief of the Capitol Police.[2] Other Quakers in groups of approximately the same size had previously been arrested when they engaged in similar conduct under the same sponsorship. There is an indication that these activities will continue.

I

The unlawful entry statute provides for the punishment of anyone who, being on public or private property "without lawful authority to remain . . . thereon", refuses

Footnotes at end of article.

to leave on demand of the person lawfully in charge. As applied to privately-owned land, this kind of law generally raises few difficult legal problems because ownership of such land ordinarily includes the right, arbitrarily or otherwise, to curtail admission and use.

The application of trespass statutes to government land presents greater complexities. Some species of government property—*e.g.*, the offices of executives and those of many other government workers; conference chambers; scientific or research facilities; storage warehouses of valuable commodities—are entitled to be as immune from invasion by one not wanted on the premises as is private realty. But there are other types of government land—public parks, streets and sidewalks, and historic landmarks—which may not ordinarily be closed to the public for reasonable use. See *Hague* v. *C.I.O.*, 307 U.S. 496, 515–16 (1939); *Marsh* v. *Alabama*, 326 U.S. 501 (1946); *Cox* v. *Louisiana*, 379 U.S. 536 (1965); *Shuttlesworth* v. *Birmingham*, — U.S. — (1969); *Gregory* v. *Chicago*, — U.S. — (1969).

The Capitol of the United States, a national historical shrine and the political centerpiece of the Republic, is in the latter category. It may not be declared off limits to the people. Indeed, the Congress invites and welcomes the public.

In view of the broad and general invitation extended to the citizenry to this preeminently public building and the surrounding grounds, individual citizens could not be held to be "without lawful authority to remain . . . thereon", within the meaning of the unlawful entry statute, in the absence of some other, specific bar to their presence.

That bar could not, legally, be an order by the Chief of the Capitol Police issued on his own authority. Chief Powell would have the power to order someone ejected from the Capitol Grounds by virtue merely of his official position only if he had the same kind of proprietary interest in and control over the United States Capitol than an ordinary householder has with respect to his own home—which clearly he does not. See *Hague* v. *C.I.O.*, *supra*, 307 U.S. at 514. He can order the ejection only of those who have no legal right to be there.

In other words, the order to these defendants to leave was valid only if it was based on something other than and additional to the unlawful entry statute itself or the Chief's official status. And the only other source of authority cited by the prosecution is the Capitol Grounds statute, D.C. Code §§ 9–118 to 9–132.[3] Thus, it is the meaning and the validity of the Capitol Grounds statute which are really at issue here—the unlawful entry law adds nothing.[4]

II

Defendants argue that the statute is vague and for that reason unconstitutional. *Cox* v. *Louisiana*, *supra*; *Wright* v. *Georgia*, 373 U.S. 284, 292 (1963); *Lanzetta* v. *New Jersey*, 306 U.S. 451 (1939); *Connally* v. *General Construction Corp.*, 269 U.S. 385, 391 (1926).

D.C. Code § 9–124 forbids anyone to "parade, stand, or move in processions or assemblages . . . or to display . . . any flag, banner, or device designed or adapted to bring into public notice any party, organization or movement" except as permitted by the Speaker of the House and the President of the Senate for "occasions of national interest becoming the cognizance and entertainment of Congress" (D.C. Code § 9–128).[5]

The statute (particularly section 128) is sufficiently broad as interpreted by those charged with its enforcement[6] to lend itself to selective application. Moreover, the standards actually employed have been imprecise, fluctuating, and unavailable to the public.

Chief Powell, who enforces the Capitol Grounds statute, was questioned at some length concerning his understanding of the standards governing that enforcement. He testified that there are no written rules; permits likewise are usually not in writing; members of the public have no way of knowing whether they might be in violation of the law or how to avoid violations except by prior experience or by inquiries to Members of Congress or members of the Capitol Police Force;[7] the rules applicable to the grounds are not identical to those applicable to the steps, and those which govern the use of some steps differ from those applicable to other steps; no assemblages for any purpose are allowed on the steps without a permit, but high school students and other undefined groups sometimes do not need a permit if they assemble on the steps for photographs which are taken more or less "spontaneously" or within fifteen minutes or so; such groups are allowed to meet in uniform, but not the American Nazi Party, and possibly, or possibly not, the American Legion; banners and flags may not be deployed, but a "non-political organization which had no pro or con might be permitted to display banners; a relatively small group talking on the steps for approximately half an hour might or might not be in violation if its members refused to obey an order to leave; and decisions are made on a case-by-case basis rather than according to precise general rules.

The internal inconsistencies revealed by Chief Powell's testimony are further complicated by the fact that others in a position to know contradicted some of his assertions.

Chief Powell stated that permits are required regardless of the size of the group; Sergeant Schaap of the Capitol Police Force testified (in another proceeding) that groups of as many as ten persons may assemble without a permit; members of the Poor Peoples Campaign were allowed on the grounds in groups of twenty; press reports indicate that demonstrators in large numbers supporting Representative Adam Clayton Powell were permitted on the steps because Chief Powell had "orders to permit the demonstration;" and on the occasion of an earlier Quaker arrest, four other fairly sizeable groups were permitted freely to gather in the vicinity.

Chief Powell maintained that Members of Congress require permits for group gatherings on the Capitol steps like everyone else. But Representative George E. Brown and Edward I. Koch both testified that permits are not required on such occasions; that "innumerable" such groups are invited[8] by Members of Congress to the steps; that by custom "it has never been required that one ask permission to do this;" and that these activities take place constantly at the sole discretion and on the sole authority of the Congressman involved.[9]

The vagueness of the administrative practice and the selectivity with which it is applied may also be illustrated by the fact that, when these defendants were arrested, the Congressmen who were with them and who participated in the same conduct, were not (although they specifically waived any congressional immunity).

The conclusion is inescapable that, as the law is administered, it is impossible for anyone to know whether his presence, or the presence of his group, on Capitol Hill is lawful or unlawful. There is no set of regulations, orders, rules, or standards which he can consult, and the precedents of administration themselves are contradictory and uncertain.

Chief Powell's suggested remedy—that a member of the Capitol Police Force be asked for advice—does not solve the problem, for two reasons. First, the evidence is that no set of standards exists that is followed by all members of that Force. Second, and more fundamentally, in a government of laws, the regulation of conduct—particularly conduct in the sensitive area covered by the First Amendment—must be predicated on a set of definite rules, not on the opinions of police officers. Cf. *Cox* v. *Louisiana*, *supra*, 379 U.S. at 552.

Broad laws can be given structure by consistent patterns of administration. But the enforcement of this law, as revealed by this record, has done nothing more than to add to its uncertain substance the grains of individualized decision-making—a process which has failed to provide it with constitutional strength. Compare *Staub* v. *City of Baxley*, 355 U.S. 313, 322 (1958).

It remains to be determined whether statutory construction can give more definitive shape to this law and thus save it from invalidity.[10] Cf. *Screws* v. *United States*, 325 U.S. 91 (1945).[11]

The evidence, the arguments, and the background materials indicate that three lines of construction are conceivable, two indicated by the predominant patterns of administration, the other by several indicia of congressional history and understanding.

III

Leaving to one side the aberrations and ambiguities, Chief Powell's testimony suggests that, insofar as enforcement of the Capitol Grounds statute is concerned, groups of persons are classified generally into three broad categories. The first is comprised of school children and some others who are permitted to gather for such activities as the taking of "spontaneous" photographs with their congressional representatives without the necessity for a waiver or permit. The second category consists of groups which are "noncontroversial and nonpolitical." Upon request, these groups are given a waiver by the Speaker, the President of the Senate, or both, permitting them to assemble on the Capitol Grounds. Those who are deemed to be controversial or political are in the third category and are refused a waiver, no matter how small the group[12] or how well behaved its members.

The standard of noncontroversiality[13] is impossible of even-handed, impartial, and constitutional application.

What one person may consider well settled and beyond debate may be highly controversial to another. Even students—whom Chief Powell considered the least controversial of all—are scarcely always that, in this age of college and high school demonstrations and confrontations. With controversiality as the yardstick, who would and who would not be permitted to assemble on Capitol Hill—an organization of student radicals; an equal number of middle-of-the-road fraternity men; or an organization of militant young conservatives? Is a group advocating segregation more controversial or less so than one preaching integrated housing?[14] Is an organization protesting the Vietnam conflict more or less controversial than another supporting the war?

The answers obviously depend upon the point of view of the person making the determination.

But under our constitutional system, no public official—executive, legislative, or judicial—can have the power to permit or to prohibit assembly on property belonging to the people based on his notions of what stand on public issues may be controversial. In the first place, the concept of controversiality is simply not sufficiently tangible to serve as a solid basis for this kind of decision. Beyond that, lack of controversy is too easily equated with orthodoxy, and controversy with dissent. Yet the controversial is as entitled to be heard as the indisputable, and it may need a hearing far more. In short, for several reasons the controversiality standard employed by Chief Powell is not compatible with constitutional values and principles.

IV

The government suggests, alternatively, that it may be that the distinctions which

Footnotes at end of article.

are being made in the administration of the Capitol Grounds law have their roots not in the political coloration of the particular groups but in the type of activity they engage in while at the Capitol. If they come as tourists or visitors, it is said, they are permitted to gather; if they come to engage in persuasion by speech or sign or assembly, their presence is prohibited. This, the prosecution argues, is a perfectly proper and constitutionally unobjectionable practice. But this restatement of the permit policy amounts to but another way of saying that the Capitol Grounds are open to all except those who seek to use them for the exercise of First Amendment rights. That, however, is a constitutionally impermissible standard, not only under the First Amendment but also under the due process clause of the Fifth Amendment.[15]

Absent compelling circumstances, members of the public may not be excluded from public areas because of their purpose to use these areas for the exercise of First Amendment rights. *Cox* v. *New Hampshire*, 312 U.S. 659 (1941); *Niemotko* v. *Maryland*, 340 U.S. 268 (1951); *Food Employees* v. *Logan*, 391 U.S. 308, 315 (1968); *Kunz* v. *New York*, 340 U.S. 290 (1951); cf. *United States* v. *O'Brien*, 391 U.S. 367 (1968); *Stromberg* v. *California*, 283 U.S. 359 (1931). For the streets and parks "have immemorially been held in trust for the use of the public and, time out of mind, have been used for purposes of assembly, communicating thought between citizens, and discussing public questions." That use may be regulated "but it must not, in the guise of regulation, be abridged or denied." *Hague* v. *C.I.O.*, *supra*, 307 U.S. at 515. For these reasons, and because First Amendment rights occupy a "preferred position" (*Saia* v. *New York*, 334 U.S. 558 (1948)), the burden is on the government to establish the existence of compelling circumstances, justifying a restriction. *NAACP* v. *Button*, 371 U.S. 415, 438 (1963).

A legislative body particularly could not permit access to it of only the innocuous, for peaceful, reasoned controversy and debate are the very lifeblood of the democratic process.

In this day of the violent confrontation, the harsh, non-negotiable demand, the disregard of the most elementary forms of civilized discourse, it is especially important that peaceful speech and courteous persuasion be given their rightful chance. It would be strange, indeed, if our constitutional system, and especially the First Amendment, were to countenance the congregation on the grounds occupied by the national legislature of all manner of groups except those who wish to speak out peacefully on the controversial issues of the day. That is not the mark set by the Bill of Rights.

It is presumably for that reason that Mr. Justice Stewart, speaking for a near-unanimous Supreme Court, held in the controlling case of *Edwards* v. *South Carolina*, 372 U.S. 279 (1963), that non-violent demonstrations on the grounds of the South Carolina State Capitol were constitutionally protected from interference,[16] and reversed breaches of the peace convictions of 187 Negroes protesting there against alleged discrimination.

Lest there be any question about what was meant in *Edwards*, the Court removed that doubt three years later in *Adderly* v. *Florida*, 385 U.S. 39 (1966). In that case, in upholding a conviction for assembling not far from jail, the Supreme Court drew a sharp distinction between such a meeting and one held close to a structure housing a legislative body. Said the Court (385 U.S. at 41): "In *Edwards*, the demonstrators went to the South Carolina State Capitol Grounds to protest. In this case they went to the jail. Traditionally, state capitol grounds are open to the public. Jails, built for security purposes, are not."

Edwards could be distinguished from the instant situation only on the theory that there is a First Amendment right to speak, assemble, and petition near State legislative buildings but no right to do so near the buildings occupied by the Congress of the United States. Not only is there no warrant in either logic or history for such a distinction, but to make it would turn upside down both the constitutional and the practical realities.

The first Amendment which protects the rights to free speech, assembly, and petition, is addressed primarily to the Congress, and only by implication has it been applied also, by way of the Fourteenth Amendment, to the States. Moreover, in this day of great federal power and influence, the right to petition is, if anything, more important in relation to the federal authorities than it is in relation to the governing bodies of the individual States. In short, *Edwards* applies here *a fortiori*.

For these reasons, the statue could not constitutionally be applied to enforce a policy of keeping off the Capitol grounds groups of persons merely because they are controversial in character or because they seek to exercise First Amendment rights.[17]

V

The other possible line of construction of the law rests on legislative history and statutory development. It is not solidly grounded in administrative practice or actual use; yet, for reasons which will be developed below, it is the one to be followed.

The original purpose of section 124, when enacted in 1882, was not to bar all controversial groups or to keep from the Capitol Grounds all except tourists and visitors, but only "to prevent the occurrence near [the Capitol] of such disturbances as are incident to the orderly use of public streets and places." 22 Stat. 126.

Recent amendments to the companion section 123 and their legislative history indicate that the congressional view concerning the scope of regulations of conduct on the Capitol Grounds has not significantly changed since 1882.

Section 123 was amended in 1967 to establish a number of specific and carefully circumscribed prohibitions with respect to activities in the Capitol Buildings and on the Capitol Grounds.[18]

In the course of committee consideration of the bill[19] which, with some modifications, became the present section 123, Senator Jordan, chairman of the subcommittee conducting the hearings, made quite clear at the very outset that what was intended was to provide adequate safeguards "to insure that Congress can transact its business and perform its constitutional functions in an orderly manner, without interference," and at the same time "to guarantee that there is no infringement on the rights of the people . . . to assemble peaceably and to petition the Government for a redress of grievances" (Hearings, p. 1).

Senator Tydings similarly drew attention to these dual purposes, stating that what was needed was language "which would protect the reasonable right of peaceful picketing or demonstration, but which at the same time would give power to promulgate reasonable regulations" so as to prevent violations of the criminal provisions and to protect the orderly functions of the legislative branch (Hearings, p. 19).[20]

It must be borne in mind, too, that while the enforcement practices of the statute have been described in terms of the controversial-noncontroversial dichotomy, underlying at least some of those practices was the desire to assure the security of the Congress from interference and disturbance, in line with the original purpose of the statute and the reason for the 1967 amendments. Finally, it may be noted that the District of Columbia Court of Appeals recently concluded (*Feeley* v. *District of Columbia*, *supra*, note 17) that the Capitol Grounds statute was designed to guarantee noninterference with the work of the legislature, the maintenance of the free and undisturbed movement of tourists and visitors, and the protection of the landscape.

While, of course, these bits of legislative and administrative purpose do not compare in volume with the long-standing, though somewhat confused, administrative practice, they should nevertheless be given controlling weight, in view of the paramount rule of statutory construction that it is the duty of the Court to adopt a construction, if it is possible to do so, which will save the statute from unconstitutionality, rather than one which would result in its destruction. *Lynch* v. *Overholser*, 369 U.S. 705 (1962); *Rescue Army* v. *Municipal Court*, 331 U.S. 549, 568–575 (1947); *Ashwander* v. *T.V.A.*, 297 U.S. 288, 345 (1936); *Greene* v. *McElroy*, 360 U.S. 474 (1959); *United States* v. *Harriss*, 347 U.S. 612, 618 (1954); *Screws* v. *United States*, 325 U.S. 91, 100 (1945); *Schneider* v. *Smith*, 390 U.S. 17 (1968); *Bolton* v. *Harris*, — U.S. App. D.C. —, 395 F. 2d 642 (D.C. Cir. 1968).

Adherence to this rule is particularly important in the present context. Too many legislative bodies, from the Senate in ancient Rome to the French Chamber of Deputies in modern times, have been pressured and intimidated by groups hostile to democratic forms of government for anyone to be oblivious of the danger that such potential intimidation presents. For that reason, special care must be exercised not to read the law so as to leave a vacuum,[21] if it is at all possible to do so.

VI

I conclude that the legislative and other materials discussed under V *supra* provide a sufficient basis for restricting the scope of section 124 to the imposition of criminal punishment for acts or conduct which interferes with the orderly processes of the Congress, or with the safety of individual legislators, staff members, visitors, or tourists, or their right to be free from intimidation, undue pressure, noise, or inconvenience. As so limited, the statute is constitutional.

It is appropriate, therefore, under the statute, to bar or to order from the Capitol Grounds, any group which is noisy, violent, armed, or disorderly in behavior; any group which has a purpose to interfere with the processes of the Congress, any Member of Congress, congressional employee, visitor, or tourist; any group which has the effect, by its presence, of interfering with the processes of the Congress, any Member of Congress, congressional employee, visitor, or tourist; and any group which damages any part of the building, shrubbery, or plant life.[22]

Accordingly, the prosecution will be permitted to proceed by way, first, of an opening statement if it wishes to do so. If that opening statement outlines evidence which prima facie would justify a conviction based on the standards here laid down, the trial will go forward. If the government concludes that it is unable to make an opening statement outlining acts which would constitute an offense under the statute as interpreted herein, or if the Court should conclude after hearing the opening statement that no offense has been stated, the charges will be dismissed.[23]

HAROLD H. GREENE,
Chief Judge.

FOOTNOTES

[1] Those testifying were Congressman George E. Brown of California; Congressman Edward I. Koch of New York; Chief of the Capitol Police James M. Powell; Lawrence Scott, Executive Secretary of the Quaker Action Group; and David Clark and William Bloom, two observers of the allegedly illegal acts.

[2] The Capitol Police declined to arrest the three Members of Congress who participated in this activity, although they waived their congressional immunity.

[3] That statue can also be found in 40 U.S.C. § 193.

[4] Chief Powell testified that no one is arrested under the unlawful entry law who has a permit issued pursuant to the Capitol Grounds statute; and that "identical" standards are applied under the two laws in determining whether a violation occurred.

[5] The power to suspend the statutory prohibitions devolves upon other officials in the absence of the Speaker and the President of the Senate.

[6] These officials (presumably in reliance on the "becoming the . . . Congress" clause) have construed the exception contained in section 128 as authorizing them to issue permits for a great many relatively pedestrian assemblages, such as the taking of photographs on the Capitol steps. The Attorney General, on the other hand, has interpreted the same provision as justifying the grant of permits only for "such official ceremonies as the quadrennial inauguration of the President in front of the Capitol." Brief of the Department of Justice in No. 21,566, *Jeannette Rankin Brigade* v. *Chief of Capitol Police* (D.C. Cir.) p. 21.

[7] But, as appears *infra*, at least some Members of Congress and some Capitol Police officers differ with Chief Powell as to the correct procedure and the proper standard, and they may also differ with each other.

[8] Defendants suggest that as guests of one or more Members of Congress they were not subject to prosecution under the statute. The Court is not prepared to find that the waiver power granted to the Speaker and the Vice President by section 128 has been delegated by custom and practice to individual Members, particularly when, as here, the Speaker was requested, but refused, to grant a waiver.

[9] The version of the two Congressmen is supported by other evidence. A number of photographs showing large groups of persons on the Capitol steps were introduced. It also appears that, on at least one occasion, when a Capitol Police officer was about to order a group away, he desisted when he learned that a Member of Congress was with them. And a letter from Representative Michael J. Kirwan, chairman of the Democratic National Congressional Committee, advised all Democratic Congressmen that an official photographer would be available on the Capitol steps for four hours daily for photographing Members with groups of constituents.

[10] Thus far, there has been no significant court construction of the Capitol Grounds statute. See *Jeannette Ranking Brigade* v. *Chief of Capitol Police*, 278 F. Supp. 233 (D.C. D.C. 1968), See also, the testimony of United States Attorney David Bress before the Senate Subcommittee on Public Buildings and Grounds, *infra* note 19 (Hearings, p. 8). Thus, the present interpretation is being written on a relatively clean slate insofar as judicial construction is concerned, and there is no impediment to a construction which will save the statute.

[11] ". . . we are of the view that if [the statute] is confined more narrowly than the lower courts confined it, it can be preserved. . . ." (325 U.S. at 100).

[12] Chief Powell testified that in the instant situation—of Quakers reading the names of war dead from the Congressional Record—he would have issued an order to leave even if only a single person, rather than a group, had been involved.

[13] Although Chief Powell used this term in his testimony in delineate the various classes, he candidly acknowledged that "I'm not sure just what the expression 'noncontroversial' is."

[14] According to the evidence, at least one recent group gathering on the Capitol Grounds included someone with an NAACP insignia. Also, as noted *supra*, p. 6, members of the Poor Peoples Campaign were allowed on the Grounds in assemblages.

[15] Unjustifiable discrimination is prohibited by the due process clause. *Bolling* v. *Sharpe*, 347 U.S. 497 (1954); *Shapiro* v. *Thompson*, — U.S. — (1969).

[16] The Department of Justice appears to agree with this interpretation of *Edwards*. In its brief in *Rankin* (see *supra*, note 6) the Department interprets the teaching of *Edwards* to be "that the peaceful petition by non-obstructive small groups may not be abridged by being denominated a breach of the peace" (Br., p. 20). It follows that peaceful petition by non-obstructive small groups may not be abridged by being denominated an unlawful entry.

[17] *Feeley* v. *District of Columbia*, 220 A.2d 325 (D.C. App. 1966) is not to the contrary. The court's conclusion there that the appellants had no right to be present where they were arrested was predicated on a record which did not demonstrate—as the record here does—that other groups were using the Capitol Grounds. Beyond that, the *Feeley* court's comments concerning section 124 were dictum (see *Jeannette Rankin Brigade* v. *Chief of Capitol Police*, note 10, *supra* (278 F. Supp. at 234–35)) and its decision was later reversed. 128 U.S. App. D.C. 258, 387 F.2d 216 (1967).

[18] If section 124 were as broad in its sweep as the prosecution here believes it is, many of the 1967 amendments would have been unnecessary and surperfluous. Indeed, one of the new provisions forbids anyone to "parade, demonstrate, or picket *within* any of the Capitol Buildings" (section 123(b)(7)) (emphasis added), but it is silent with respect to the Grounds.

[19] Hearings before the Subcommittee on Public Buildings and Grounds of the Senate Committee on Public Works on S. 2310, 90th Cong., 1st Sess. (September 21, 1967).

[20] The Senate Committee Report on the 1967 amendments likewise emphasized the necessity for the maintenance of safety and order and the need to prevent "acts designed to impede, disrupt, or disturb the orderly conduct of the Nation's business" (S. Rept. No. 573, 90th Cong., 1st Sess., p. 7).

[21] As the discussion above indicates, the Capitol Grounds statute can be saved from total invalidity only if it is interpreted narrowly, consistently with its original purposes.

[22] In each category, the conduct would have to be more disruptive or more substantial (in degree or number) than that normally engaged in by tourists and others and routinely permitted on the Grounds.

[23] The Court's construction of the present statute is, of course, without prejudice to congressional adoption of more specific standards, such as, for example, those suggested by United States Attorney David Bress during the 1967 hearings (to require permits; specify the times, locations, size, and character of parades, assemblies, picketing activities, and demonstrations; prescribe limitations on the display of signs, banners, flags, or other symbols; and prohibit or limit the use of sound amplifying devices or conduct which may be disruptive of the legislative process or disturbing to the peace and the unique character of the area).

[From the Washington (D.C.) Post, June 20, 1969]

JUDGE RULES OUT BARRING PEACEFUL CAPITOL PROTESTS

(By William N. Curry)

Capitol Police cannot legally break up or arrest small groups of protesters who demonstrate peacefully on the Capitol grounds, the chief judge of General Sessions Court ruled yesterday.

"The Capitol of the United States (is) a national historic shrine and the political centerpiece of the Republic," Chief Judge Harold H. Greene said. "It may not be declared off limits to the people."

The ruling may open the way to unfettered political activity on the Capitol grounds by small peaceful groups.

Judge Greene's ruling came in the case of four Quakers charged with unlawful entry on June 4 when they tried to read a list of Vietnam War dead from the Capitol's east steps. The unlawful entry charge covers refusal to leave when ordered to.

The group was ordered off the steps by Capitol Police Chief James M. Powell because, the chief testified, they did not have a permit to use the steps. They were too controversial to get one from the Speaker of the House, the chief said.

"But under our constitutional system," Judge Greene said, "no public official—executive, legislative or judicial—can have the power to permit or prohibit assembly on property belonging to the people based on his motion of what . . . may be controversial.

"In short . . . the controversiality standard employed by Chief Powell is not compatible with constitutional values and principles," the judges said. "It is impossible of even-handed, impartial and constitutional application."

Therefore, Judge Greene held, if protesters are to be arrested for unlawful entry they must be guilty of something other than being controversial. He suggested the Government rely on the Capitol Grounds Statute, an 1882 law designed to prohibit disruptive activity near the Capitol.

The judge, citing the legislative history of that law, listed the conditions required for prosecution: A group would have to be noisy, violent, armed, disruptive of Congress or a threat to property. The law "could not constitutionally be applied to enforce a policy of keeping off the Capitol grounds groups of persons merely because they are controversial," he said.

The ruling was a victory for American Civil Liberties Union lawyer Ralph J. Temple, who had asked Judge Greene to dismiss the charges. But the judge said he would give the Government a chance to proceed under the Capitol Grounds Statute before dismissing the charges.

Judge Greene's ruling is not binding on other judges but there is a tendency among them to adopt the reasoning of a fellow judge.

U.S. Attorney Thomas A. Flannery said the Government would accept Judge Greene's offer to continue its case at a trial today. The outcome of that proceeding, Flannery said, will determine what the Government will do with the cases of 60 other protesters still awaiting disposition in arrests growing out of a recent series of Capitol demonstrations.

The next day, June 20, the charges against the demonstrators were dropped. I made the following statement at that time, and I would like to include along with it, an editorial from the Monday, June 23, Washington Post:

PRESS RELEASE FROM HON. GEORGE E. BROWN, JR., JUNE 20, 1969

Congressman George E. Brown, Jr., today issued the following statement in respect to the dismissal of charges by Judge Harold H. Greene, D.C. Court of General Sessions, against four members of A Quaker Action Group who had been arrested on the Capitol steps while reading the names of the Vietnam war dead:

I am, naturally, very pleased that Judge Harold H. Greene's opinion upholds the position which I have taken in regard to the reading of the names of the war dead from the Congressional Record on the Capitol steps.

I have previously stated that the Capitol Police had illegally ordered a halt to the reading of the names. I also stated that I felt the group had an absolute Constitutional right to assemble on the steps and to petition the Government for a redress of grievances, as provided in the First Amendment to the Constitution.

I further pointed out that the police were arbitrarily and discriminatorily misinterpret-

ing the law and placing a construction on it that was not appropriate. I asked the Speaker of the House, the Vice President, and the Capitol Police not to make these arrests. I invited the group to assemble on the steps, and I have invited other groups, advising them that I felt they were acting in accordance with their rights under the First Amendment. I had expected that invitation to be honored by the police on behalf of this group as well as for any other group.

I fully agree that there must be limits to the uses to which the Capitol grounds can be put, and wholeheartedly commend Judge Greene's statement that it is in order to bar from the grounds: ". . . any group which is noisy, violent, armed, or disorderly in behavior; any group which has a purpose to interfere with the processes of the Congress, any Member of Congress, congressional employee, visitor, or tourist; any group which has the effect, by its presence, of interfering with the processes of the Congress, any Member of Congress, congressional employee, visitor, or tourist; and any group which damages any part of the buildings, shrubbery, or plant life."

[From the Washington (D.C.) Post, June 23, 1969]

PEACEFUL DEMONSTRATORS

General Sessions Chief Judge Harold H. Greene brought common sense and a healthy respect for American traditions to bear upon the problem of political demonstrations on the Capitol grounds. What place more appropriate than the grounds of the Capitol buildings could be found for an orderly, peaceful effort to influence the judgment of the United States Congress? It is a public place. It is a place where the attention of legislators may be won by demonstrators. It is a logical place for citizens to assemble and to petition their representatives for a redress of what they deem to be grievances.

The test of any demonstration on the Capitol grounds should be its orderliness, not its advocacy. Demonstrators manifestly cannot be allowed to impede the business of Congress in any way, whether by noise or by blocking entrances to the Capitol or to congressional office buildings; nor can they interfere with the legitimate business of other citizens in seeking access to the Capitol. But the Quakers who met quietly on the Capitol steps recently and read aloud the names of war casualties were no impediment to the work of Congress. They were an embarrassment, perhaps, but certainly no threat to the orderly processes of government.

The 1882 Federal statute prohibiting all political demonstrations on the Capitol grounds is more appropriate to a government fearful of its citizens than to a government confident that it reflects their will, Judge Greene was quite right in questioning its constitutionality. He was quite right in resisting attempts by the Capitol Police to prevent orderly protest under vague charges of disorderly conduct. The test of orderliness is not agreement with the prevailing view; the test lies in a resort to reason instead of a resort to force.

(Mr. CLAY (at the request of Mr. BROWN of California) was granted permission to extend his remarks at this point in the RECORD).

Mr. CLAY. Mr. Speaker, since my participation with members of the Quakers on the steps of the Capitol, the courts have, in two instances, determined the Quaker action to be within the bounds of free speech and free assembly, guaranteed by the Constitution. The verdicts clearly indicate that free speech and free assembly cannot be abridged by the Speaker of the House or the President of the Senate.

Mr. Speaker, we must not cloud the issues in frivolous debate over the court decisions. The issues are, first, the rights of Americans to take a stand and to make known their views through both assembly and speech and, second, the reason for standing on the steps of the Capitol is to show the concern for American boys dying in a war which is unquestionably illegal and immoral.

Fears aroused because of the protest threaten to bring about the oppression of all Americans. Certainly, the quiet and responsible protest of the Quakers and their subsequent arrests makes this point more clearly than most incidents which occur daily across the country. Once we start imposing the law as an expedient means to curtail minority activities with which we disagree, we shall soon find the extension of this logic suppressing the activities of the majority. Rights denied one are potentially denied all.

Protest is not new to me, neither are the attempts of Government agents to stifle rightful assembly or speech. What is unique about this protest is that the protesters represent the overwhelming position of the majority in this country. This demonstration points up the concensus in America on the question of the Vietnam war. It points up the very real basis for so many protest activities in the Nation. The powers of a few entrenched Congressmen and strategically placed Government officials have thwarted the will of the people.

I support the Quakers on both counts—their right to assemble and speak and their reason for doing so at this time and place.

My opposition to the Vietnam war is long standing and unaltered. No number of recitations alleging our honor is at stake will shake my opposition. I am convinced that honoring any commitment vaguely implied by past Presidents has been met many times over. I adamantly stress the fact that commitments made to our own people in our own country have been and are being sadly neglected. In my own mind, I cannot find logic in the reasoning whereby we can postpone and/or overlook and underfund commitments to our own people without regard for honor—and at the same time expend billions of the taxpayers' money to honor a Vietnam commitment not clearly understood or accepted by Americans.

I object, Mr. Speaker, to the flag waving which accompanies each escalation of American spending and Americans dying in Vietnam. The emphasis is tragically misplaced. The flag waves over the poor and over the hungry and over the black and over the Quakers—just as it waves over soldiers going into battle. Sadly enough, there are now over 35,000 dead American soldiers over whom the flag waves. What we are saying, what Quakers are saying, and what I am saying, is that the flag should be waving over these boys which might still be enjoying life, were it not for a tragic war from which we should immediately remove ourselves.

And we will, Mr. Speaker, read names on the steps of the Capitol and march in silent vigil to let the powers of this administration know our opposition. Hopefully, this Government will not let more Americans be added to the list of war dead. It is not only our right but our responsibility as American citizens to continue protesting this war.

(Mr. MIKVA (at the request of Mr. BROWN of California) asked and was granted permission to extend his remarks at this point in the RECORD.)

Mr. MIKVA. Mr. Speaker, the Honorable Harold H. Green, chief judge of the criminal division of the court of general sessions for the District of Columbia, recently held that a group of Quakers who had been sitting and/or standing on the Capitol steps reading the names of Vietnamese war dead could not be lawfully arrested for that activity. Those of us who have been concerned about the arrests of these Quakers for such activities were gratified by the decision, but not surprised. Indeed, as the court pointed out, it would be surprising instead if the Capitol steps and the Capitol Grounds were held to be off limits to all first amendment activities which the arrests seemed to suggest.

The activities of the Quakers for which they were arrested and the activities of the Congressmen for which they were not arrested cannot be construed to be civil disobedience. What was being challenged in a traditional constitutional American way—was the imposition of an unlawful restraint of fundamental freedoms. Such a challenge can never be civilly or criminally disobedient and that distinction must always be preserved.

On the other hand, merely reciting the words "First Amendment" as some kind of incantation does not automatically protect all activities for which groups might seek to use the Capitol Grounds. What is involved is a classic case where rights may be in conflict. The job of government, and in this instance the officials who have jurisdiction over the Capitol Grounds, is to provide reasonable regulations which will order those rights to avoid the conflict. The ingenuity of our constitutional system has been that that marvelous document allows a full measure of freedom without ever leaving us helpless against chaos or disorder.

Specifically, regulations governing the Capitol Grounds ought to allow the exercise of any first amendment rights that do not preclude visitors to the Capitol from exercising their rights and that do not interfere with the business of the Nation which is to be conducted by Congress. Under such a formula for regulation, the right of the Quakers to sit in a small group on the steps of the Capitol and, without the use of a bullhorn or other amplifying device, recite the names of the war dead in Vietnam, in no way interferes with the rights of a visitor to enter the Capitol, without being accosted or offended

Nor does it interfere with the right and duty of Congress to carry on the Nation's affairs. Indeed, the protection of such a right in no way interferes with the right of the John Birch Society to quietly sit in another small group in another portion of the Capitol Grounds and read the names of the Quakers and their allies who they consider to have poor judgment in the matter, or worse.

I have taken the liberty to include at the end of these remarks a suggested set of guidelines or regulations, set within the present statutory framework, and

which would resolve these rights in conflict; obviously they are nonexclusive suggestions. However, they uphold both the Constitution and the necessity for supervising the Capitol Grounds. That duality is one that the court decision makes clear applies to the Capitol Grounds and the Quakers just as much as it does to a private home and a high school graduating class. Neither the uniqueness of the Capitol Grounds nor of the business that is transacted here can be allowed to trump those precious first amendment rights which helped to create that uniqueness in the first place.

GUIDELINES FOR THE PUBLIC USE OF THE CAPITOL GROUNDS

(Pursuant to 40 U.S.C. §§ 193j and 193k, and D.C. Code §§ 9–128 and 9–129)

Section 1. General. In order to admit of the due observance within the United States Capitol grounds of occasions of national interest becoming the cognizance and entertainment of Congress, pursuant to 40 U.S.C. §§ 193j and 193k and D.C. Code §§ 9–128 and 9–129, there are hereby established the following Guidelines for suspension of the prohibitions against use of the Capitol Grounds set forth in 40 U.S.C. § 193g and D.C. Code § 9–124.

Section 2. Scope and administration of guidelines.

(a) The exercise by the people of their right to assemble and to petition the Government for redress of grievances is recognized to be an occasion becoming the cognizance of Congress. Prohibitions against the use of the Capitol grounds will, therefore, be suspended as provided in section 3 of these guidelines for the purpose of orderly exercise of these rights, except when necessary to insure the following:

(1) to the members of Congress, their staffs and the remainder of the public their normal, unencumbered access to the public grounds, and

(2) to Congress the ability to transact its business and perform its constitutional function in a dignified and orderly manner, free from interference.

(b) The scope of 40 U.S.C. 193g, D.C. Code § 9–124 is limited to acts or conduct that interfere with the safety or normal function of the Congress, individual legislators, staff members, or visitors, or which threaten their right to be free from intimidation, undue pressure, noise or inconvenience.

(c) These guidelines shall be administered without regard to race, color, creed, national origin, or political viewpoint or affiliation.

Section 3. Suspension of prohibitions. The prohibitions contained in 40 U.S.C. § 193g, D.C. Code § 9–124, are hereby suspended (pursuant to 40 U.S.C. §§ 193j and 193k, D.C. Code §§ 9–128 and 9–129) during all hours at which the Capitol building is open to the public, subject to the following conditions:

(a) No person shall willfully destroy, damage, or remove property or any part thereof;

(b) No person shall use loud, abusive, or otherwise improper language, engage in unwarranted loitering or sleeping, create any hazard to persons or things, improperly dispose of rubbish, spit, commit any obscene or indecent act, engage in unseemly or disorderly conduct, throw articles of any kind from a building, or climb upon any part of a building;

(c) No person shall petition on the grounds while under the influence of intoxicating beverages or narcotic drug, or consume such beverage or use such drug while using the grounds;

(d) No person shall solicit alms or contributions, engage in unauthorized commercial soliciting and vending of any kind, distribute commercial advertising, or collect private debts on the grounds;

(e) No person shall obstruct the roads and walkways on the grounds in such a manner as to hinder their proper use, including the blocking of entrances, driveways, walks, streets, loading platforms, or fire hydrants;

(f) No person shall distribute pamphlets, handbills, or flyers, or display any banner, flag, or other such device within the area bounded by the following line: beginning at a point on the northeast corner of Independence Avenue and First Street, S.W., thence north to a point on the southeast corner of Constitution Avenue and First Street, N.W., thence east to a point on the southwest corner of Constitution Avenue and First Street, N.E., thence south to a point on the northwest corner of Independence Avenue and First Street, S.E., thence west to the point of beginning;

(g) Assemblages may be limited to forty persons when at any time they occur within fifty feet of any road, entrance, driveway, walk, loading zone or fire hydrant;

(h) Assemblages may be limited to a minimum of one hour when necessary to protect the dignity and decorum of the Capitol and to insure that other groups then present in the area shall have the opportunity peacefully to exercise their right of assembly on the grounds without thereby causing interference with the normal safety and function of Congress, individual Members, staff, or visitors.

Section 4. Powers of revocation and enforcement.

(a) Those officials authorized by 40 U.S.C. §§ 193j and 193k, D.C. Code §§ 9–128 and 9–129, to suspend the prohibitions on use of the Capitol grounds have the power to revoke the suspension described in Section 3 of these guidelines when there is cause to believe that any of the conditions outlined in subsections 3(a) through 3(h) will be or is being violated.

(b) The Capitol Police have the power

(1) to enforce the conditions outlined in subsection 3(a) through 3(h) of these guidelines; and

(2) to enforce the prohibitions contained in 40 U.S.C. § 193g, D.C. Code § 9–124, upon proper revocation of the suspension authorized by section 3 of these guidelines.

Mr. KOCH. Mr. Speaker, for the last 7 weeks a group of Quakers have assembled on the steps of the Capitol to read from the CONGRESSIONAL RECORD the names of American soldiers killed in Vietnam. They were joined from time to time by six Congressmen. I believe it fair to say that the Congressmen there assembled were in full accord with the sentiments of the Quakers whose purpose was to bring to the attention of the American public in a dramatic way that the war in Vietnam continues.

While I was in accord with their purpose, I supported their readings for the even more important reason of defending the rights guaranteed to all of our citizens under the first amendment, namely, the rights to peacefully assemble and petition the Congress for a redress of grievances.

The Capitol Police arrested more than 60 Quakers. It should be noted that some of them served—including a young woman—8 days in jail. Though in error, the arrests on the part of the Capitol Police were made in good faith and I want to commend Chief Powell for the way they did it.

But a lesson should be learned. One must distinguish between those who engage in peaceful protest and those who use violent methods and it is a great disservice to this country and to the cause of peaceful change to lump them together. It is particularly important in times of ferment, and surely we are living in such a period, that the channels of communication permitting peaceful change be safeguarded. If the Government is to be responsive to the will of the people and their need and demands for orderly change, we must preserve, without abridgment, the constitutional rights of free speech, free press and free assembly so as to maintain the opportunity for free and meaningful political discussion. As the Supreme Court has said:

> Therein lies the security of the Republic, the very foundation of constitutional government.

How meaningful in retrospect was the presentation of the Quakers in reading the names of the American war dead. It proceeded by 6 weeks a comparable use by Life magazine not of the names but of the pictures of those American soldiers who died in 1 week. Those pictures filled 11 pages of Life magazine dated June 27.

When I served in the U.S. Army from 1943–46, and part of that time in Germany, I often asked the question of Germans whom I met how it was that they could stand by and see the democratic process which existed before Hitler in Germany slowly destroyed. It did not happen overnight. Jews, Jehovah's Witnesses, Catholics, Protestants, and trade unionists who were ultimately led to the concentration camps were not dragged there the day after Hitler assumed power. No. It was a step-by-step escalation. Why did they not jointly protest? Invariably, the reply was "What could I do, I am just a small man—der kleine mann—and could do nothing." Yet in retrospect, if they had stood up at the beginning when the limitations were starting on the right to free speech it never would have reached the point when they would have been powerless to undertake any action.

I do not for a moment suggest that the United States should be compared with Nazi Germany even at its earliest stage. But what I do suggest is that we must never stand by and let an abridgment of those fundamental rights which all of us treasure to take place. Rather we must rush to defend the constitutional rights of others. For in defending them, we defend ourselves.

The courts of this country have played a great role in preventing the executive and legislative branches of our Government from usurping rights guaranteed to our people and last week in Washington, D.C., Judge Harold H. Greene, of the District of Columbia Court of General Sessions, added to that tradition by his opinion.

The court's decision is one more historic example of the courageous witness of the Quakers. But it is more than a Quaker victory. It is a victory for all of the citizens of this country.

May I add one postscript. Some have been critical of Congressmen participating in the Quaker assemblies. As a Congressman, I swore to support and defend the Constitution of the United States. I can think of no better place to do just that than on the steps of the Capitol.

GENERAL LEAVE TO EXTEND

Mr. BROWN of California. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days in which to extend their remarks on the subject of my special order.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from California?

There was no objection.

WIFE'S APPEAL FOR HELP TO VISIT LT. COL. JAMES LINDBERG HUGHES, PRISONER IN NORTH VIETNAM

The SPEAKER pro tempore. Under a previous order of the House the Chair recognizes the gentleman from New Mexico (Mr. LUJAN) for 5 minutes.

Mr. LUJAN. Mr. Speaker, a young wife and mother of Santa Fe, N. Mex., whose husband has been a prisoner of war in North Vietnam for more than 2 years, has issued a worldwide appeal for help in obtaining permission to visit her husband, Lt. Col. James Lindberg Hughes, in his prisoner of war camp behind the enemy lines.

I rise to implore my colleagues to lend their sympathetic support to Mrs. Hughes and to urge the cooperation of the State Department, the Defense Department, the President, and the leadership of North Vietnam in making it possible for her to do this.

Mr. Speaker, the people of America and of the world have been sickened by the reported barbaric and inhuman treatment of our captured fighters. Held incommunicado with no contact by the International Red Cross, no mail to or from their families, these men languish in a situation reminiscent of the Dark Ages. As far as they are concerned, the rules spelled out in the Geneva Convention on the treatment of prisoners of war do not exist.

Today, with the first dim rays of peace visible on the horizon, the thread of human sympathy that binds all of the peoples of the world pulls at our hearts and calls for a single, stirring act that will demonstrate to all humanity that man's compassion for man is still alive.

As the military forces of both sides scale their efforts to the progress of our diplomats at the peace table; as the people of North and South Vietnam join Americans in a common hope for honorable settlement of the conflict; as the leaders of the warring nations seek to demonstrate their sincerity in pursuit of this settlement, might not both sides now join in a common act of kindness that will accomplish more than 10,000 words in demonstration of that sincerity?

By permitting Mrs. Hughes to visit not only her husband but the husbands of scores of other grieving American wives, the North Vietnamese would take a long step toward convincing the world of their avowed concern for the future brotherhood of man. This single, simple act would reassure millions of wives and mothers around the world in their faith that we are, indeed, bound by a kinship of humanity that is greater than hate, more powerful than fear, more compelling than politics and paramount to the mutual cruelties of war.

In urging my colleagues to support Mrs. Hughes in her plea, I must emphasize that her request in no way represents a weakening of the resolve of our people in support of our national interests in Vietnam. On the contrary, Mrs. Hughes has repeatedly expressed her pride in her husband's military service to his country, her personal loyalty and belief in the cause for which he and his comrades are fighting, and her determination to remain true to the faith and patriotism that took them to war.

The granting of her request to represent all American wives and mothers on this compassionate pilgrimage would do no damage to America's interests nor to the interests of the enemy. It would strike only at the loneliness, the fears, the apprehensions and heartache of all the families of all prisoners of war, giving them a ray of hope and reassurance to cling to as both sides warily walk the road toward peace.

I ask the support of the Members of this House for this cause. I urge all neutral nations to heed the sentiments of this Chamber and to act as intermediaries with North Vietnam for Mrs. Hughes to visit her husband and other American prisoners of war as a nonpolitical, nonmilitary, nonideological deed of basic human kindness.

Mr. Speaker, under unanimous consent, I insert in the RECORD the text of Mrs. Hughes' letter in which she requests the assistance of our Government in her cause.

OPEN LETTER TO THE MEMBERS OF CONGRESS

The unawareness of the citizens of the United States and the seeming indifference of countries all over the world to the special plight of the prisoners-of-war being held captive in Vietnam is heartbreaking. This is especially compounded for families who have children growing without fatherly guidance.

These forgotten men in Vietnam who fought loyally for their country have become trapped in a tragic diplomatic crossfire. They can't be helped by our country—and, they won't be helped by North Vietnam. There is no free flow of mail between families. It has been four years for some families who only know the cryptic words "missing in action." There are no available lists of prisoners and very little contact with the outside world.

All that the families can do is to wait—patiently—which we have done in our case for more than two years—waiting for something to happen. But, nothing has, and we have come to a point where we feel that the world must be alerted and asked to participate in this problem. Help must come from neutral sources and impartial groups for these neglected Americans. People with hearts—outside the sphere of this political conflict—must come forth to offer assistance. These men, most of them pilots, are but innocent victims of a bad situation.

I implore that some neutral country intercede in behalf of the wives and families of the prisoners. People with sympathy in their hearts can accomplish miracles, and I truly feel that there are people such as this all over the world who are not aware of the plight of these men and the anguish caused their families by the insensitivity surrounding the problem. I am prepared to journey to Hanoi tomorrow as a wife and mother if this were allowed by the North Vietnamese and permitted by our own government.

I believe sincerely that even the people in North Vietnam realize that family ties are the same the world over, and I cannot feel they would ask less for their own people. If they were approached by an impartial nation, in behalf of the American families, they could not help but allow things they would want for their own people . . . the release of sick and wounded prisoners, free flow of mail between families, acknowledgment of lists and status of prisoners, and ultimate release of all prisoners on purely humanitarian grounds.

I would hope that the Congress of the United States would accept the challenge of this request and work along the lines I have suggested in hopes that it would evoke a favorable response from a sympathetic nation who might peruse the facts with the thought that "but for the grace of God, this could be me."

INTRODUCING THE NATIONAL KIDNEY DISEASE ACT

The SPEAKER pro tempore. Under a previous order of the House the Chair recognizes the gentleman from Pennsylvania (Mr. BIESTER).

Mr. BIESTER. Mr. Speaker, along with 79 cosponsors, I am introducing the National Kidney Disease Act, which is designed to provide a comprehensive approach to planning and implementing a national program for the treatment of kidney disease. The prime purpose of the bill is to encourage cooperative arrangements in the field of kidney disease to secure for patients the latest advances in diagnosis and treatment.

Kidney disease is one of our Nation's most widespread afflictions. Recently a group appointed by the Surgeon General estimated that over 7 million Americans suffer from kidney-related diseases and 100,000 deaths per year are caused by it.

While two life-saving techniques have been developed which could save the lives of 10,000 medically suited kidney patients—kidney transplantation and the kidney machine, less than 5 percent of these patients are receiving treatment and the sole reason is lack of funds.

Treatment expense is high—between $10,000 and $14,000 per patient per year in a hospital dialysis center. These costs can be reduced if treatment is carried out in the home.

But what is the cost to society if we do not offer these lifesaving treatments? Who knows what contributions would have been made by the individual who died, because he did not have the use of a kidney machine?

Should any physician be forced to choose among his patients as to who shall receive the lifesaving treatments? Or should he have the opportunity of offering these treatments to all of his patients who might benefit, but who surely will die within a matter of weeks without them?

In today's affluent society there should be means to provide needed training facilities, treatment centers, specialized professional personnel, and even the costs of necessary equipment and supplies for patients to treat themselves in their homes.

Artificial kidney machines have been in use in this country since 1946. On March 9, 1960, Dr. Belding Scribner of Seattle, Wash., placed the first patient with kidney failure on chronic maintenance hemodialysis. This individual is still living without the use of his kidneys.

The first kidney transplant in man was performed in 1936, 31 years before the

recent remarkable achievement of the first attempted heart transplant.

Yet now, in 1969, 33 years later, we are treating less than 5 percent of the ideal kidney patients using the strictest medical selective criteria, and a much smaller percentage of the total potential patients.

I believe it is time for the Congress to give immediate consideration to legislation providing for a comprehensive approach to kidney disease. I consider this as one of the most pressing health problems in the United States, because we can and must take advantage of the fantastic discoveries of medical research to provide the proven lifesaving treatment to the sufferers of kidney disease. Failure to take this step would be a demonstration of the performance gap, that gap which lies between our known and proven capability and our inadequate performance.

The same bill has been introduced in the other body by Senators JACOB K. JAVITS, Republican, of New York, HENRY JACKSON, Democrat, of Washington, WARREN G. MAGNUSON, Democrat, of Washington, and other cosponsors.

JOE McCAFFREY, 25 YEARS AS A CORRESPONDENT ON CAPITOL HILL

(Mr. PRICE of Illinois asked and was given permission to extend his remarks at this point in the RECORD.)

Mr. PRICE of Illinois. Mr. Speaker, this month marks the 25th anniversary of Joe McCaffrey's career as a press, radio, and television correspondent on Capitol Hill. One of the Capitol's most favorite people, Joe McCaffrey effectively conveys his solid grasp of the essence and feel of Congress in his insightful radio and television commentaries to the public.

It has been my great pleasure to have been able to follow Joe's quarter of a century work in covering congressional activities. I not only have enjoyed listening to his evening reports over radio and television through those years, but I have treasured the fact that through his long period I have had the opportunity to have frequent association with him.

As a former newspaper reporter and as one who has been in Congress during the same period Joe McCaffrey has been on the Hill, I think I am qualified to judge his record. Joe approaches his work with an objective point of view, always stressing the necessity of accuracy in reporting the news he relays to his listeners. He has always been impartial and fair minded in his treatment of the news.

Joe McCaffrey has always respected the trust and confidence Capitol Hill has placed in him. He has always respected the obligations and responsibilities of being a reporter and commentator. He is proud of his profession and he has brought additional honors to it.

Joe McCaffrey would be a valuable man to our educational systems throughout the country in teaching students about the legislative process, its people, and its institutions. No one is more expert in the field. I have always been impressed with his intimate working knowledge of Congress and his thorough understanding of the substantive issues involved—issues that he must know so well to properly serve the people who daily wait for his reports. No commentator recognizes more than Joe McCaffrey does the heavy responsibility that falls on him in keeping the people informed through objective, unslanted reporting of the news.

I am proud to join Joe McCaffrey's legion of friends in saluting him on his 25 years of great reporting as a Washington correspondent.

MISUSE OF PRIVATELY HELD GOVERNMENT PRODUCTION EQUIPMENT

(Mr. PODELL asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. PODELL. Mr. Speaker, a significant number of Government contractors are using Government-owned equipment, originally leased for use on Government projects, for private commercial production. According to a recent study by the General Accounting Office, this is being done without either knowledge or consent of the Government. Further, there is no adequate reimbursement being made to the Government for such use. This clearly violates intentions of the original practice of permitting businesses to use high-cost Government equipment for Federal top-priority defense projects. Use of such equipment for private commercial purposes gives these contractors an unfair advantage over industrial competitors who do not receive this taxpayer-supported benefit.

Over a year ago, it was estimated that nearly $15 billion worth of federally owned test equipment, tools, materials, and production equipment was in private hands. Production equipment alone was worth over $2.5 billion. Many major military contractors, especially those doing over half their business with the Government, could easily afford to purchase Government equipment they hold and use.

A bill was introduced in the 90th Congress to bring about improvements in Government management of privately held Government equipment. The Defense Department took steps of its own to improve its administrative oversight of this equipment. However, there is still a lack of firmly established guidelines and regulation which would apply not only to the Defense Department, but to all Government agency contractors. Senator PROXMIRE reintroduced the bill in this Congress to provide for these rules.

Today I am introducing in the House a companion measure. My bill would establish a number of requirements that are essential if further waste is to be avoided in use of Government-owned production equipment. It prohibits placing of federally owned production equipment into the hands of private contractors unless: First, it is set aside for strictly controlled emergency use as part of an overall mobilization plan; second, the contractor is a small business so defined by the Small Business Administration; or, third, the contractor's needs are so urgent that they cannot be met any other way. It provides for a uniform rental system with inventory records to be kept by contractors, and prompt return of equipment upon completion of work.

In addition, it provides for sale of production equipment on a negotiated sale basis to contractors already holding it. Finally, the bill provides for annual reports to Congress on all decisions placing in private hands equipment originally worth over $10,000. In order to guard against abuse in sales procedures, reports to Congress would also be required on sales of all equipment originally worth over $25,000.

By placing strict controls on Government production equipment now in private hands, we would be setting a precedent for further legislation providing overseeing of other federally owned equipment worth billions of dollars.

Mr. Speaker, misuse of Federal property under Government contract must be curbed. More stringent oversight is required on the part of any Government agency administratively responsible for such equipment.

POLITICS AS THE ART OF THE IMPOSSIBLE

(Mr. BRADEMAS asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. BRADEMAS. Mr. Speaker, on June 1, 1969, I had the pleasure of hearing the distinguished Assistant to the President for Urban Affairs, the Honorable Daniel P. Moynihan, deliver the principal address at commencement exercises at the University of Notre Dame in the congressional district which I have the honor to represent. Dr. Moynihan was awarded an honorary doctor of laws degree on this occasion.

Because I believe that many Members of Congress will find Dr. Moynihan's address on this occasion both thoughtful and provocative, I insert it at this point in the RECORD:

POLITICS AS THE ART OF THE IMPOSSIBLE

I take for my theme a sentence from Georges Bernanos "The worst, the most corrupting of lies are problems poorly stated."

My charge is similar. It is that much of the intense difficulty of our time is in nature conceptual, and that it arises from a massive misstatement of our problems. Intellectuals, if this view is correct, have done their work badly and there is little prospect that their mistakes will soon be undone. As ours was perhaps the first society consistently to expect the future to be better than the past, the apprehension that we may have profoundly mistaken the nature of our difficulties, so that we must expect years of effort to resolve the wrong problems and in presumedly unavailing ways, strikes with special force. A certain nostalgia arises for a future that now appears lost. It becomes necessary to live much more in the present than has been the American mode.

If this be no great pleasure, it can, nonetheless, be stimulating. Here a sub-theme can be taken from another alert Frenchman—when asked what he had done during The Terror, the Abbe Sieyes answered, "I survived." This must now be a very great concern of those Americans whose lives, in Midge Decter's formulation, are devoted to the direction of their thought. Anyone old enough to have had any intellectual contact with the 1930's will take my meaning. The men of both the left and right who dominated, even terrorized, *that* time lived in-

tense but brief lives. Their intellectual corpses are still stacked in the odd corners of universities, government departments, and the like where they do whatever it is they do. No one much cares, for they were subsequently judged to have been appallingly wrong about American society and, worse, were seen to have been unforgivably intolerant of any who hesitated to embrace their all-encompassing credos. Archibald MacLeish has remarked of his fellow poets that: "There is nothing worse for our trade than to be in style." The equivalent for those whose concern is government is submission to the noisiest problems of the moment to the exclusion of the most important ones.

What then are the "problems poorly stated" of our time? They are various but have, it seems to me, a unifying characteristic; namely, the rejection by those seeking a more just, more equal society of any indications that the society is in fact becoming more just and more equal. Society is seen in historical terms: what is not altogether acceptable is altogether unacceptable; gradations are ignored and incremental movements are scorned. Those who by disposition are incrementalists, or for whom the contemplation of society has led to a conviction that incremental change is a necessity not a choice in human affairs, are baffled by this attitude and resentful of it. The exchanges that follow are bitter and unproductive. It is at all events my view that this is so because the problems at issue have so far been defined in fairly traditional political terms when what in fact is at issue is an immense stirring, little understood, if indeed understandable, of cultural dimensions. Fundamental ethical and moral issues—religious issues—are involved: issues which politics, especially the politics of a liberal democracy, are uniquely unable to resolve.

Two years ago, in the Phi Beta Kappa oration at Harvard, I argued that in fact we were witnessing the onset of the first heresies of liberalism. Heresy is an unloved term, especially in a liberal society, but it has real meaning: the rejection of beliefs fundamental to the dominant, pervasive world view of the society involved. Of necessity, the heresies of liberalism would be procedural in nature, for it is in process that a liberal society defines itself. In thinking about the subject, I have not been able to get much farther than this, but neither have events moved so as to cast greater doubt on the thesis than that which must attend any such large assertion. To the contrary, the rejection of the *authority* of liberal processes, the code that holds it is bad form to club the Dean, that civic statutes must be abided by, that rules of order and civility will be followed at meetings—all that—continues apace, and the pace if anything quickens. As Robert A. Nisbet continues to remind us, when authority relations collapse, power relations take their place; and this process, too, has advanced. Violence, which is the means by which power relations are maintained, is considerably more widespread now than it was two years ago, and surely vastly more common at the end of the decade of the 1960's than it was at the beginning of it.

Nothing suggests that the pattern of former times will quickly reassert itself. To the contrary, the indications are that we rose to a new plateau of internal violence in the mid-1960's and that the most we can hope for is to keep from yet another escalation.

Such violence has, of course, made its way onto university campuses and this has led to great apprehension for the future of academic freedom. There are analogues, indeed precedents, for the violence of the streets, the poor, the police, and suchlike. But nothing like the present pattern of threats to and actual assault on university institutions and university members has ever yet occurred. Here, in particular, it would seem a future has been lost to us.

This has led to great despair among academic intellectuals: far greater than the news media have yet let on. For probably the first time in our history, professors speak of going into exile. Nor is the alarm simply that of Bourbons. A Marxist historian such as Eugene Genovese speaks with not a little alarm of the "pseudo-revolutionary middle-class totalitarians . . . of the left wing student movement", and one learns that even Professor Marcuse has suggested that professors ought to be treated differently from the oink-ish common swine.

The strongest view, from a notably unhysterical pen, is the recent assertion by Arnold Beichman, writing in *Encounter*, to the effect that university faculties "have quietly decided that for the foreseeable future the university is no longer a place where truth is to be pursued. What has been tacitly ratified is a decision that the American university is primarily (not secondarily) the springboard for upward social mobility as the ascriptive right for ethnic minorities."

This can be overdone. Beichman accurately (but almost alone in the flood of commentary) notes that ethnic mobility has always been a prominent component of higher education—certainly so from the time Catholics began to establish competitive institutions with Protestants. One recalls Yeats' letter of 1904 to Lady Gregory:

"I have been entirely delighted," he writes, "with the big, merry priests of Notre Dame, all Irish and proud as Lucifer of their success in getting Jews and non-conformists to come to their college and of the fact that they have no endowments."

One recalls far more vividly growing up in New York City in the poverty-ridden 1930's, and yet possessing in that Notre Dame football team a symbol of tribal might and valor that can stir the blood atingle to this day. O, the golden Saturday afternoons when, in the name of every Irish kid caught in the social wreckage of the eastern slums, thunder indeed shook down from the skies and those mighty Polish tackles swamped the Navy . . . !

If the demands of newer groups come as a shock to some, it is at least in part because this group function of higher education has tended to be ignored by those groups for which it has been functioning. Yet, the role was obvious enough; and it was not less clear that it would become, if anything, more pronounced to the degree that universities become more central institutions of the society. In the concluding paragraph of *Beyond the Melting Pot*, Glazer and I wrote that: "Religion and race define the next stage of the American peoples." We were not wrong, and one is mystified still that the proposition was viewed at the time by such skepticism on the part of so many. (Not a few of whom, it may be added, having become committed to ethnic studies, pursue the matter with a single-minded zeal that is notoriously the accompaniment of sudden religious conversion.)

Simultaneously, if somewhat incompatibly, universities have been mini-bastions of class privilege. This phenomenon has been evident enough in the insistance by almost all parties to intramural disputes that those involved are exempt from punishment for deeds that would send lesser persons—without the walls—to court at very least and prison in all likelihood. But again, this is nothing new.

Indeed, some good could come of this if the excesses of the moment were to serve to restore some perspective on just what universities are and what they can do. They are institutions inhabitated by younger and older persons of often very great abilities, but usually of very limited experience. With respect to their individual specialties, the judgment of the professors is singularly valuable. But their collective judgment is no better—could, indeed, be worse—than that of the common lot of men. This is not an incidental, random fact; it is a fundamental condition of human society, and the very basis of democratic government.

When William F. Buckley Jr., wrote that he would far rather entrust his governance—by which he would include the preservation of his civil liberties and his intellectual freedom—to the first hundred persons listed in the Boston telephone directory than to the faculty of Harvard College, he was saying no more than what Thomas Jefferson or Henry Adams would have thought self-evident. The remark was greeted with considerable derision in Cambridge at the time, but it may be stated with certainty that more than one tenured professor of that ancient institution has come of late to see its truthfulness with excruciating clarity.

All this is to the good. What is bad is that the diffusion of violence to the intellectual life of our society is likely to lead to even greater failure to correctly state our problems than has been the case to date. This is so for the most elemental of reasons. Intellectual freedom in the American university has now been seriously diminished. It is past time for talking about what might happen; it has happened. We would do well to clear our minds of can't on that subject. Especially in the social sciences, there is today considerably less freedom than there was a decade ago; and we should expect that it will surely be ten to twenty years before what we would hope to be a normal state will be restored.

I deem it essential that this almost suddenly changed situation be more widely understood; otherwise, the sickness of the time will gradually come to be taken for a normal condition of health—and that would be a blow not merely to the age, but to the culture. But if we do perceive our circumstance for what it is, if we do come to accept that for reasons of prudence, or cowardice, or incompetence or whatever, faculties have been everywhere allowing principles and men to be sacrificed, we will at least retain the understanding that something has gone wrong, something that it may be possible someday to right.

It is important then to survive, with our faculties, as it were, as little diminished as possible, and to seek to understand the times—which is to say to state the problems of the time correctly.

Few individuals can hope to contribute more than a small increment to this effort; but more, then, is the reason as many as possible should seek to do so. Hence, with less hesitance than might otherwise attend the effort to make a simple abstraction about a hopelessly complex reality, I would offer, from the world of politics, the thought that the principal issues of the moment are not political. *They are seen as such:* that is the essential clue to their nature. But the crisis of the time is not political, it is in essence religious. It is a religious crisis of large numbers of intensely moral, even Godly, people who no longer hope for God. Hence, the quest for divinity assumes a secular form, but with an intensity of conviction that is genuinely new to our politics.

It is important to be clear whence this peculiar secular moral passion arises. It is from the very eighteenth century enlightenment from whence arose the American civilization that has so far followed so different a course. The rejection of Christian religion by the Enlightenment has obscured the fact, especially to Christians, that it did not constitute a rejection of Christian morality. To the contrary, it was more often in the name of that morality that the creed was attacked. It was Rousseau, as Michael Polanyi argues (although others would disagree) whose work widened the channels of Enlightenment thought so that in fact "they could be fraught eventually with all the supreme hopes of Christianity, the hopes which rationalism had released from their dogmatic frameword." Wherewith, supreme of ironies, was loosed upon the world a moral fury that has wrought as much evil, in contrast with the mere brutality of the past, as mankind has ever known, an evil which may yet

destroy us. The process arises from a sequence of premises which are logically unassailable, yet which in practice produce a society that is inherently unstable. Polanyi states the argument, which he correctly observes, no one has yet answered:

"If society is not a divine institution, it is made by man, and man is free to do with society what he likes. There is then no excuse for having a bad society, and we must make a good one without delay. For this purpose you must take power and you can take power over a bad society only by revolution; so you must go ahead and make a revolution. Moreover, to achieve a comprehensive improvement of society, you need comprehensive powers so you must regard all resistance to yourself as high treason and must put it down mercilessly."

Repeatedly, as this fervor becomes pathological, a kind of inversion takes place which transforms violence from a means to an end to an end in itself. There are surprises but few mysteries to this process: the nineteenth century was able to read it in Russian novels; the twentieth to watch it on film. It has been the great disease of the committed intellectual of our time. Thirty years ago, Orwell wrote that: "The common man is still living in the mental world of Dickens, but nearly every modern intellectual has gone over to some or other form of totalitarianism." For that is the correct term. The total state; the politicization of all things. It would seem that Britain and America managed in the nineteenth century to escape any deep infestation of this view mostly by not thinking too closely about politics. But one result of this is that in political theory there is no serious counter argument: all one can say is that one does not like doing good by sending men "up against the wall" to use the apparent term of Che Guevera and the battle cry of the Barnard girls. For the disease is amongst us, and will spread. Incongruously, it appears to have taken roots within organized religion itself. The course of the coming generation is all but fixed: it will include a strong and possibly growing echelon that will challenge the authority of American institutions across the board, and will not be especially scrupulous as to how it does so. In this the extreme left is very likely to be joined by the extreme right, for to each the values and process of the present American democracy are the enemy to be destroyed.

All in all, there is cause enough for despair. As Midge Decter has put it: "When you are caught between left and right, the only way to go is down." But we are not yet down. We are a strong and competent people, increasingly, I think, aware of our troubles and dangers and shortcomings. The challenge to authority that is now upon us can strengthen and renew institutions as much as it can weaken them. And it can be fun. There is always room, as Orwell wrote, "for one more custard pie." We are not especially well equipped in conceptual terms to ride out the storm ahead, but there are things we know without fully understanding, and one of these is the ultimate value of privacy, and the final ruin when all things have become political.

Having through all my adult life worked to make the American national government larger, stronger, more active, I nonetheless plead that there are limits to what it may be asked to do. In the last weeks of his life, President Kennedy journeyed to Amherst to dedicate a library to Robert Frost and to speak to this point. "The powers of the Presidency," he remarked, "are often described. Its limitations should occasionally be remembered."

The matter comes to this. The stability of a democracy depends very much on the people making a careful distinction between what government can do and what it cannot do. To demand what can be done is altogether in order: some may wish such things accomplished, some may not, and the majority may decide. But to seek that which cannot be provided, especially to do so with the passionate but misinformed conviction that it *can* be, is to create the conditions of frustration and ruin.

What is it government cannot provide? It cannot provide values to persons who have none, or who have lost those they had. It cannot provide a meaning to life. It cannot provide inner peace. It can provide outlets for moral energies, but it cannot create those energies. In particular, government cannot cope with the crisis in values which is sweeping the western world. It cannot respond to the fact that so many of our young people do not believe what those before them have believed, do not accept the authority of institutions and customs whose authority has heretofore been accepted, do not embrace or even very much like the culture that they inherit.

The twentieth century is strewn with the wreckage of societies that did not understand or accept this fact of the human condition. Ours is not the first culture to encounter such a crisis in values. Others have done so, have given in to the seeming sensible solution of politicizing the crisis, have created the total state, and have destroyed themselves in the process. Irving Kristol has warned against it in terms at once cogent and urgent:

"The one way not to cope with this crisis in values is through organized political-ideological action. Most of the hysteria, much of the stupidity, and a good part of the bestiality of the twentieth century have arisen from efforts to do precisely this. Not only do such efforts fail; they fail in the costliest fashion. And if modern history can be said to teach anything, it is that, intolerable as a crisis in values may be, it invariably turns out to be far less intolerable than any kind of 'final solution' imposed by direct political action."

I surely do not argue for a quietistic government acquiescing in whatever the tides of fortune or increments of miscalculation bring about: and in our time they have brought about hideous things. I do not prescribe for social scientists or government officials a future of contented apoplexy as they observe the mounting disaffection of the young. I certainly do not argue for iron resistance, as other societies have successfully resisted somewhat similar movements in the past.

I simply plead for the religious and ethical sensibility in the culture to see more clearly what is at issue, and to do its work.

Sympathy is not enough. *Tout pardonner, c'est tout comprendre* is not a maxim that would pass muster with Bernanos or any who have helped us through the recent or distant past. If politics in America is not to become the art of the impossible, the limits of politics must be perceived, and the province of moral philosophy greatly expanded.

WHAT IS HAPPENING ON OUR CAMPUSES?—AN ARTICLE BY ROBERT H. WYATT, EXECUTIVE SECRETARY, INDIANA STATE TEACHERS ASSOCIATION

(Mr. BRADEMAS asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. BRADEMAS. Mr. Speaker, one of the most vigorous champions of education in my own State of Indiana is Robert H. Wyatt, executive secretary of the Indiana State Teachers Association. Mr. Wyatt, who is a former president of the National Education Association, recently published an article entitled, "A Look at the Universities—What Is Happening on Our Campuses?" in the summer 1969 issue of the Indiana Teacher.

I believe that Members of Congress will read with much interest the views of this distinguished educational leader, and I insert his article at this point in the RECORD:

A LOOK AT THE UNIVERSITIES—WHAT IS HAPPENING ON OUR CAMPUSES?

(By Robert H. Wyatt)

The problem of trouble on the campuses is of such significance that organizations interested in advancing the cause of education should give it continuing and penetrating study.

It is easy to leap to the conclusion that some obstreperous young people on our campuses are kicking up trouble and should be coralled and punished. It is also easy to accept the thesis that existing structure and operation of higher education are entirely good and proper—therefore any young person who goes to college should be grateful for the opportunity. It would then follow that he should take it or leave it, in accordance with his own abilities and virtues.

These concepts are fallacious. Higher education is to a certain extent a privilege of the individual, but society's stake in that individual's education is greater than the individual's own.

Education is the genius of this great republic. Free public education has truly been the source and motive power for the building of our great, affluent economy and the social and political system that provides the highest standards of living in the world.

Fortunately there have been statesmen through the years—such as Thomas Jefferson, Horace Mann, and John Dewey—who saw that education is of such import to society that it is the duty of society to try to nurture and develop all the talent the nation possesses, whether our young people want their talents developed or not. There are times in the life of a child when he might choose to discontinue his education. Such a choice might extend into his teens or twenties, but the decision must not be his alone. It must be the decision of society, exercised through the democratic process.

SOME "SOLUTIONS" BEYOND BELIEF

The current suggestions being offered by some politicans that dissenting students should be swept out of the colleges and universities are almost beyond belief in a free democratic society. One is tempted to ask, "Sweep them into what, or into where, and with what results?"

Fortunately many college administrators are exercising the boldness to reply to such political figures—even on the highest levels of government—that such proposals, however well-meant, could hamper or doom the efforts of intelligent college personnel to solve the baffling problems of educating America's youth.

False concepts of the purpose and function of education in a democracy are not new. They have been with us since the beginning of the Republic. What is new in this situation is the role and the direction the universities are taking.

UNIVERSITY TROUBLES FORECAST

Seven years ago, in 1962, at our French Lick Leadership Conference, I commented to you on some of the forces at work in the universities. On that occasion I said:

"It is one of the paradoxes of history that an organization or an institution has an overpowering tendency to envelop itself in forms and trappings and prerogatives that become more and more important as the years pass. In some instances these artificial objectives actually succeed in enslaving the institution to the preservation of the forms rather than serving the purposes for which the organization was established. This

danger to the virility, the creativeness, and the flexibility of an organization amounts to a kind of cannibalism which must be continually analyzed and fought off if the organization is to remain sufficiently dynamic to serve the cause it espouses.

"Educational institutions at this moment are being challenged by the great new developments in science, automation, and social consciousness which they themselves have developed in their classrooms. The forms and the trappings and prerogatives that have grown up in these institutions, their athletic programs, their mania for power, for bigness, for control, are threatening the adequacy, the efficiency, and the economy with which they are finding and serving the real objective of education—development of the intellectual resources of our country."

Above and beyond these activities, the relationship of the university with the military in diverting faculty talents into destructive research, the relationship of university staff and officials with numerous large corporations bent on pursuing their vested interests, and the lack of adaptability to new social, economic, and political events and movements—all these practices place in the hands of dissenting students enough substance and enough status that they should be heard and the time-worn programs of the universities should be shaken and re-examined.

Obviously we cannot approve or permit student violence and lawlessness to invade the rights of the other students and citizens. Obviously if there are any outside organization involvements or influences inciting violence in student groups they should be identified and exposed. It is indeed to be hoped that the responsible among the students will soon inspire the confidence of the mass of the sudent body and that the net results of the outbreaks of 1969 will be productive of true advances in our institutions of higher learning.

Students of this generation have had experiences with the mass media and with the accelerated urbanization of our society that have advanced their comprehension and their store of knowledge several years beyond that of their predecessors of the previous generation. In addition to that, the quality of education in the elementary and secondary schools has advanced so strikingly that a college freshman is at least two years advanced beyond his counterpart of the previous generations.

LET US HELP YOUNG HUMANITARIANS

The students are rendering a great service. Some of it is far too violent and should be curbed, but the great mass of students are grappling with the hard problems of today and are viewing them without the clouded vision that comes from vested interest of a material kind. Let's give them all the help and all the encouragement we can in their efforts to serve humanity early in life before other activities and programs clutter up their vision and impair their singleness of purpose.

The students actually do have valid complaints. Even the conservative Indianapolis Star in a recent editorial took the rather surprising position that:

"The faceless, factory-like quality of the larger universities confuses, frustrates, and ultimately alienates and angers many young students. They see themselves as cogs in a huge machine. They are herded around like livestock. They are moved by the numbers. They feel like zeroes in the equation of campus life.

"They are taught in oversize classes, sometimes so huge they cannot even see the far-off 'prof,' who is likely to be a teaching assistant, talking metallically through a public address system. They rarely if ever see the 'superstar' professors whose magic names helped lure them to that particular institution.

"It is no indorsement of the crackpot ideas and movements often spawned in such surroundings to recognize that much of the harsh criticism leveled at the faults of bigness is valid."

These facts and many others growing out of our current social and political life should shock college administrators into a re-evaluation of their programs and the extent to which their activities have strayed from the purposes for which the institutions were founded.

TIME TO RESTUDY STRUCTURES

To summarize, the fact is that the university, like all other institutions that are established for a purpose and which live on for many years after the purpose is identified, finds itself in the position of need for a restudy of its structure and its program to achieve those accepted objectives. The people who are involved in the conduct of an institution are subject to the human desire, subconscious or conscious, to maintain the forms and traditions that contribute to their interests.

On top of all this comes the shocking disregard of university finances by the Governor and the 1969 Legislature and the increases in tuition of 50 percent to 75 percent on the 18th Century thesis that education is a privilege to be paid for by those who are able—all this in apparent ignorance of the modern imperative for a population educated for the social and technological demands of the 21st Century.

To counteract this kind of thinking, the Indiana State Teachers Association should attempt to balance all of the factors in these modern student uprisings and assume a role of scholarly balance in appraising the situation.

The Association should and will take a constructive position on the need for junior community colleges; on the mania of the big university to capture and absorb private organizations for university prestige and power; and upon the distortionary drive to sell intellectual talent and research for great corporate and federal monies. We must lead in this imperative crusade to restore the universities to the pursuit of the goals that gave them birth.

THE HEART OF THE MATTER

(Mr. BRADEMAS asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. BRADEMAS. Mr. Speaker, one of the most distinguished leaders in American education is Dr. John H. Fischer, president, Teachers College, Columbia University.

On June 3, 1969, I had the pleasure of hearing Dr. Fischer deliver the principal address at the commencement day convocation at Teachers College. Dr. Fischer's address on that occasion was a most perceptive analysis of some of the problems confronting American education today and I therefore insert his address at this point in the RECORD:

THE HEART OF THE MATTER

It is too early to predict the full effects of recent university disturbances, but one consequence is already evident: Commencement oratory is flowing in new directions. There are those, of course, who were hoping for the total disappearance of this quaint art form. But that would be improbable, for it meets a deep-seated human need. The commencement speech is not only one of the oldest forms of confrontation—it is the Establishment's very own, and neither revolution nor reform is likely soon to do it in.

If the commencement address is not about to be abandoned, we may be confident that it will be altered. Today I make a token contribution to that process. In a public display of self-control, I shall refrain from giving the members of this class any advice whatsoever. For well over thirty years I have been advising graduates on how to manage the world, with results that are readily visible. You will understand, then, why it is difficult for me to deny you the advantage that so many of your predecessors have enjoyed. But I am resolute. As you pass today from the tranquil groves of academe to the crude contests of the outer world, you will simply have to make it on your own.

It is in the nature of exercises like these to incline our thinking to the future. This year the inducements to look that way are stronger than they ordinarily are, not only because the recent past is so full of events we would prefer to forget, but more particularly because of the promising new ventures that are under way.

In Columbia the year has been better than the staunchest optimist would have predicted last June. If in Teachers College the contrast between actuality and expectation has been less marked, it is because a year ago we were already set upon a good beginning. Since that time the widespread contribution of ideas, support, and leadership from every segment of the College has produced substantial gains in many aspects of our common concerns.

Recruitment and admissions policies have been revised to attract promising students whom traditional procedures might not identify.

New scholarships have been established to assist able but impoverished students, particularly among minority groups.

New programs and courses have been planned to respond to urban problems.

Students, faculty and staff have worked with our neighbors of Morningside, Harlem, and other communities to strengthen local educational programs, from the nursery school to the senior adult level.

A construction program is being projected with community help to meet simultaneously the expansion needs of the College and the housing needs of the area.

In the arts, the humanities, and the sciences; in policy and practice; in every area of human development; in health, recreation, rehabilitation and guidance; through teaching, research and service, the work of Teachers College has gone forward.

And as we have worked at these tasks we have found new ways to manage our institutional affairs. In making decisions, in formulating policy, in evaluating our performance, all of us, students, faculty, trustees and staff have learned together and from one another. And for that learning, the College is clearly the stronger.

Yet, better than any others could, the members of this company know that our attainments are well this side of perfection. Things that we ought not to have done we have done. Tasks that should by now have been completed remain unfinished. Still, this has been a year of growth and gain and the credit for it must be distributed widely. The finest part of the story, however, lies not in what we have finished, not even in what we have begun. The best part of all is in the still untapped possibilities that we have discovered and in our fellows.

The principal question every university faces today is how to respond to the tasks the times impose. On every campus we must decide to what ends we shall commit ourselves, to what purposes we shall direct our energies. Repeatedly we are reminded that we must disenthrall ourselves, and to be sure we must. The thralldom of old dogma, the inertia of inherited prejudice inhibits every fresh departure and delays us every day. But it is not only the past that retards our prog-

ress. Contemporary errors also warp our rationality and distort our judgment. Too often we forget that the means we choose in haste become at once the nearer edge of the end we shall inevitably reach.

In institutions dedicated to the unimpeded search for truth, where the relations of men and the exchange of ideas should be governed by the rule of reason, it is especially deplorable to see candor displaced by sentimentality and reason yield to force. None of our institutions is beyond need of improvement. In some we may be sure that significant change will not begin until keener vision is stimulated by increased vigor. Occasionally both may have to be introduced with some degree of external insistence. But nowhere can sound reform be accomplished through soft-headed acquiescence to misguided demands.

Some of the current efforts to expand opportunities for disadvantaged students offer ready examples of this error. The knowledge that advantaged students who are admitted to college and awarded degrees often obtain good positions in society has led some people to believe that the same happy fate will inevitably be shared by every disadvantaged youngster—if only he can manage to reach a campus and get his name on a diploma. From this misconception, only a few more wrong steps carry one to the conclusion that grades are meaningless symbols, degree programs barriers to block the poor, and every academic requirement but another trick to deny the deserving their natural rights.

The sensible, humane revision of admission policies and the imaginative redesign of curricula—both of which are necessary and overdue—could if we are not careful deteriorate into the perpetration of an academic fraud. The most damaged victims of that deception would be the very young people who can least afford it. That many of those responsible meant well, that the harm suffered was the unintended result of charitable motives, would be a cruelly ironic excuse. It would be a bitter mockery, indeed, if a century of struggle to win equal access to high quality education for all Americans should now end in a cheap scheme to assure every minority student a diploma signifying successful occupation of the dean's office.

But in decency and humanity, we cannot drop the matter there. For the plain fact is that young Americans by the tens of thousands, particularly the sons and daughters of our long-deprived minorities, are being denied the opportunities that are due them. A college education can no longer be regarded as a form of personal preferment, a privilege for those who can afford it, or a charity to be extended—sparingly—to those of the poor who display enough distinction or docility.

"In the conditions of modern life," Whitehead warned us long ago, "the rule is absolute. The race that does not value trained intelligence is doomed."

For the young person who would make the most of himself and of his place in society, no less than for the nation as a matter of public policy, higher education must be recognized as a universal necessity. The transition to such a view will not be easy. It happens, however, to be imperative, and in one way or another we shall have to manage the changes in personal attitude and institutional policy that it requires.

One consequence of such a shift will be to abandon the notion that a bachelor's diploma is a certificate of admission to the elite. Today we must be prepared to consider higher education as in 1848 Horace Mann viewed universal primary education: "the great equalizer of the conditions of men, the balance wheel of the social machinery." Seen in that light, the award of the bachelor's degree would signify not separation from the broad body of citizens but entry into the membership of those who have profited from the normal opportunity for intellectual development that free men should have.

In a society dedicated as ours has long been in principle, and must now be in practice, to personal fulfillment for all its people, education is demeaned if it serves mainly as a vast sorting mechanism. Schools and colleges have more important functions than screening the less apt from the more able, the less acceptable from the more presentable. The traditional view of the educational system as a pyramid that should be organized and administered to assure that only a few survive to the apex has become a wasteful and inhumane anachronism. The proper purpose of education is not to reduce but to increase the number of people who are enabled to perform nearer to the peak of their abilities. In an open society, schools and colleges should make it possible for ever larger proportions of the population to move to higher levels of performance and participation.

The inclusive approach to education requires us neither to abandon scholarly standards nor to reject the goal of academic excellence. On the contrary, the object should be to encourage enhanced respect for standards and higher achievement by larger numbers of students. To accomplish those ends, however, we shall have to assign higher priority to teaching and learning than we do to testing and screening. One of the best kept secrets of the academic world, as true today as it has been for centuries, is that reputations of educational institutions usually reveal as much about their admission policies as they do about the teaching proficiency of their faculties. From the nursery school to the graduate professional level, it is a truism of academic life that if the students are selected with sufficient care any institution can be made to look better than it really is. The test of a teacher or of a college is not the promise students possess before they arrive but how their performance has been affected by the time they leave.

Opportunities offered students need not be narrowed merely because an institution broadens its receptiveness. When windows are opened upon a wider world, the sharp-eyed see no less because companions of dimmer vision share the view. The perceptive observer sees even more when he helps another to expand his own awareness. Higher education can be made more inclusive without sacrificing either relevance or effectiveness. The evidence is abundant that uncounted thousands who are now denied access to higher education are entirely capable of profiting from scholarly discipline, if only they can obtain a suitable combination of incentive and opportunity. But they must find it in an environment that offers enough personal security to permit them to respond to the incentive and to take advantage of the opportunity.

It is no secret that many students of university age have been badly handicapped by poor primary and secondary schools. But their early deprivation is no reason to deny them later opportunity. Indeed, it is the clearest justification imaginable to see that they receive as young adults the advantages they missed as children. There can be little doubt that the expansion of opportunity in higher education is now retarded by our reluctance to liberalize admissions criteria and by habitual persistence in old predispositions.

I have invited your attention to this problem today not to suggest that solutions are readily available. You know as well as I that far from seeing clear answers, we do not yet understand the questions. But this much I do know: what we face here is essentially a moral issue. Profound academic and professional considerations flow from it. New formulations of policy and new patterns of practice must be devised to deal with it. We shall undoubtedly have to accustom ourselves to quite different ways of appraising potentiality and performance. The tasks that now fall to our profession will be exceedingly demanding.

But at the heart of the matter, where professional practice and public policy converge, the issue is essentially moral and, like most moral issues, ultimately simple. How shall our institutions, and we who are accountable for them, serve and enhance the individuality of each of our people? What power have we, and what duty, to help every young person not only to make his mark but to find his soul?

Only a brave man or a fool would claim to know the full meaning of the turmoil now that wracks the world. But the more I see of it the stronger my conviction grows that we may be witnessing the birth of a new era in relations among men, a period that may well be marked by a heightened regard for individuality and a wholly new appreciation of the meaning and possibilities of community.

The events that are shaking academic institutions today are one manifestation of this world-wide ferment, but they have a special significance of their own. For with remarkable clarity they reveal the values and the commitments of a substantial proportion of the leaders of the new generation.

To understand what is occurring, to sense its import now and for the future, we must read the signs with care. The spume that blows from the wave crest is not to be confused with the running of the tide. It would be a serious error to assume that the disruptors, the exhibitionists, and the barbarians who make a mockery of serious reform, represent today's students or speak for them. But it would be a far more profound error to underestimate the determination of large numbers of our finest young people to see that the management of our public and private affairs is made more responsive to the principles of decency and morality.

Father Andrew Greeley puts the matter well when he writes that the difficulty is not immorality, but that young people are "almost too moral for the ethical systems available to them."

There can be no doubt that the cost of change in some places is excessively high. Good people are being hurt and sound institutions are being needlessly damaged. But we must not allow our own perspectives to be distorted by the outrageous incidents that attract the cameras and gain the headlines. The froth is not the wave, and the wave is not the tide.

If there is any validity at all in this interpretation of our troubles, the implications for those who teach are at once staggering and enormously sustaining. For whatever the prospect, our best hope—our only hope—lies in cultivating the possibilities—intellectual, esthetic, moral—of every person in this land. It is a great work to which you have turned your hands and set your minds. As you try to measure up to it, I wish you well.

TO SAVE THE BIG WALNUT VALLEY IN INDIANA

(Mr. BRADEMAS asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. BRADEMAS. Mr. Speaker, I rise today to speak on a subject of concern to all of us here and to a great many of our citizens: the increasing threat which burgeoning industrial America poses to our natural environment.

The solution to the problems of the environs in which today's Americans live is a challenge to all of us in the 1970's.

But we must move quickly if we are to preserve the natural beauty of our land. Today I want to point out some of what we must do.

Our economy is now producing more than ever before, and the prospects for the future are even brighter. But we have paid dearly for our industrial growth in unnecessary damage to the natural resources of our Nation.

Oil from faulty drillings fouls our beaches and endangers marine life and water fowl.

Pollution of the air takes minutes from each of our lives.

Human and industrial waste soils our streams and rivers.

Poisonous pesticides and fertilizers contaminate our food.

One of our Great Lakes has been reported as "dead," and fatal illness threatens others.

Messy industrial areas, unsightly junkyards, ugly billboards, and thickets of powerlines diminish the joy of what we could otherwise see.

Mr. Speaker, we all know that for far too long, man has carelessly assumed that nature can absorb unlimited punishment. At long last people are becoming aware of their environment, conscious of the arguments set forth by conservationists for many years—and are beginning to show some willingness to conserve the remaining areas of our great outdoors and to repair the damage caused our environment by thoughtless policies of industrial expansion.

Unfortunately, we cannot now turn back the clock. Much of our natural environment has been permanently destroyed, but some portions can still be restored and others preserved. There is no formula for instant success in the effort to undertake measures to conserve our environment, but I am encouraged by recent progress made toward this previous objective.

ENVIRONMENTAL QUALITY COUNCIL

Mr. Speaker, earlier this month President Nixon focused public attention on the need for coordinated consideration of environmental problems by creating a Cabinet-level Environmental Quality Council. I am pleased to say that there is bipartisan agreement between the White House and Congress on the need for legislation and programs that will leave no doubt of a national resolve to stop fouling up our living and looking space.

Senator HENRY JACKSON of Washington, chairman of the Senate Interior and Insular Affairs Committee, has offered legislation which would establish a national environmental policy with a full staff in the Office of the President, supplementing the step already taken by our Chief Executive. This legislation seeks to "assure for all Americans safe, healthful, productive, and esthetically and culturally pleasing surroundings" in order to attain the most beneficial use of resources compatible with conservation and protection of the environment, and the preservation of historic, cultural, and natural values.

Here are two significant aspects of Senator JACKSON's bill:

First. It would recognize for each person a "fundamental and inalienable right to a healthful environment" and would impose on everyone a "responsibility to contribute to the preservation and enhancement of the environment."

Second. It would require every Federal agency to accept responsibility for the protection of our environment according to guidelines set up by Congress.

Only experience will point to the precise guidelines needed to halt the erosion of our environment. But in establishing initial policy, we in Congress must recognize that the needs of environmental quality will not be met simply by expanding traditional resource planning programs or through the improvement of economic or administrative efficiency. I make this observation for these reasons:

First. Our principal objective is not to meet target goals for commodity production.

Second. Our principal objective is not to draw upon our inventory of natural resources and predict consumption requirements.

Third. Our principal objective is not to reduce duplication of efforts on the part of Government agencies.

Fourth. Nor is our principal purpose to cut Government expenditures.

What we do can help achieve these objectives, but these goals are all incidental to an overriding purpose: to define the criteria essential to a healthy environment.

A FIRST STEP

Mr. Speaker, thus far, the problems of environment have been almost nobody's business but that of various conservation groups. It is time to make the problem of environment the paramount business of the Nation. The Environment Quality Council and the companion legislation represent a first step in this direction.

As we move to lift the quality of our environment, however, Congress, the executive branch, industry, and private groups must all realize that to accomplish this task, it will probably be necessary in some cases to change our goals and curtail present programs. If we do not, we may all suffer the consequences through the subtle beginning of man's own self-destruction.

My concern for our environment stems largely from its effect on our daily lives. It is the quality of American life to which we must now give more attention. One way in which we can preserve and protect our environment is to insure that our natural resources are employed to enhance the quality of life of every American.

The concept of the use of our natural resources has a double meaning. There are both the material definition and the perhaps deeper, more significant psychological, and spiritual meaning through which these resources can elevate the heart, mind, and spirit.

Of course we must develop our resources materially, but this does not obviate the need for land free from the structures of our modern society where each of us can walk—alone—away from the complexities of modern life.

The boy sitting on the steps of a tenement in New York City or South Bend, Ind., deserves a place where he can discover that the world does have clean air, and that life can offer more than the monotony of ghetto existence. The girl studying high school biology or the college student pursuing advanced studies in one of the natural sciences needs a place in which to observe his discipline in the state of nature. And a father must have a place where he can take his family for rest and recreation at reasonable expense.

OPPOSES BIG WALNUT CREEK PROJECT IN INDIANA

Mr. Speaker, because of the urgent necessity to develop our resources as recreation facilities while preserving them in their natural state, I have supported the fight to save the Indiana Dunes, and this is why I am today announcing my opposition to the Big Walnut Creek Reservoir project proposed by the U.S. Army Corps of Engineers.

It is this latter project, Big Walnut Valley—a living museum of natural history located in Putnam County, Ind., some 35 miles west of Indianapolis, Ind.—that I would like specifically to bring to the attention of my colleagues here today.

An ill-conceived and poorly justified proposal of the Army Corps of Engineers threatens to destroy the Big Walnut Valley. The valley has been declared eligible as a national natural landmark, one of only 130 sites in the entire United States to be declared of that quality and one of only two sites in Indiana now eligible for this nationally significant designation.

The Corps of Engineers is proposing to build a dam and reservoir in the Big Walnut Valley. Such a project would flood major portions of the valley, destroying its natural significance, erase the flood plain which is a major criterion, in natural landmark recognition, and ruin the ecological complex which makes the valley important.

SIGNIFICANCE OF BIG WALNUT VALLEY

Mr. Speaker, Big Walnut Valley is an unsurpassed and unduplicated relic of the last glacial age and was 15,000 years in creation. Parts of its ecology include Indiana's three largest remaining eastern hemlock trees, our two largest sassafras, more than 320 plant species, 125 or more species of birds, and Indiana's most extensive growth of Canadian yew. This valley represents a living library of nature which, if its qualities are preserved, will be of incalculable value to scholars and to universities. Scientists and conservationists point out that the significance of the Big Walnut Valley lies not simply in a few record trees or plant growths but in the larger environmental system suitable for their occurence and proliferation.

In fact, recognition by the Corps of Engineers of the area's ecological value even led them to the absurd inclusion of a "nature center"—containing a museum and observation towers from which visitors could watch herons—in the final plans for the project, while the corps proposes to destroy the valley.

The justification for the corps' Big Walnut proposal has been a benefit-cost ratio. According to the corps, flood control plus recreation value plus water shortage plus water quality control are

estimated to be worth more than the project would cost in tax dollars.

I cannot agree with the corps.

First, professional sedimentation tests indicate that the reservoir would be silted up in 100 years, a relatively short life span for this kind of project.

Second, "recreation" areas to the Army mean speedboats and fishing areas and picnic grounds. There are eight such "recreation" areas within a 50-mile radius of Indianapolis, but there is nothing for the outdoorsman who enjoys hiking in woods, fishing in fresh water streams, and the serenity of an unpolluted river running through a cool valley.

Third, there are abundant water storage facilities in close proximity of Indianapolis. Mud Creek and Geist Reservoirs alone could be expanded to add 49 million gallons in water storage without a Big Walnut Reservoir.

Fourth, optimum conditions for a storage reservoir are opposite from the optimum conditions for a flood control reservoir. Yet the crops claims both as a justification for this project.

REELSVILLE FAR BETTER SITE FOR DAM

Mr. Speaker, one of the 24 alternative sites to Big Walnut Valley, which the Army Corps of Engineers has concluded would be economically feasible and comparable in cost-benefit ratio, is a dam near Reelsville, Ind.

Under corps' criteria this location offers far superior flood control and recreational potential. Reelsville would provide 307 square miles for flood control as opposed to Big Walnut Valley's 197, and would offer 7,300 water recreation acres to the 4,500 of the proposed Big Walnut Reservoir.

Selection of the Reelsville site would save Big Walnut Valley from destruction. It is for this reason that I oppose the current plans of the Army Corps of Engineers' for this reservoir project.

OPPOSITION TO PROJECT SHARED

Mr. Speaker, I would like to add that my opposition to the corps' plan is shared by every major conservation group in the State of Indiana: the Izaak Walton League; the Indiana Conservation Council,, an affiliate of the National Wildlife Federation; the Save-the-Dunes Council, which for years has battled to save what is left of our Lake Michigan shoreline; the National Audubon Society, now headed by Dr. Elvis J. Stahr, former president of Indiana University, who has made personal appeals to save the valley; the Indiana Academy of Science, which includes the foremost life and earth scientists of the major colleges and universities in the State; and most of our country's major conservationists, including the Sierra Club and the Wilderness Society.

Further, officials of Indiana's three largest metropolitan school districts—Indianapolis, Fort Wayne, and Gary—have signed letters for the record asking that the corps' plan be changed to prevent any flooding in Big Walnut Valley.

Mr. Speaker, while all of these professional leaders and conservationists would not argue the need for sound water management programs, their perceptiveness leads them to the justified position that we need not destroy our greatest remaining natural areas on the anvil of a benefit-cost ratio.

INDIANA'S NATURE PRESERVES ACT

Mr. Speaker, I might say too, that Indiana's General Assembly passed a landmark bill in 1967, The Nature Preserves Act, which allows the State to acquire and manage areas such as the Big Walnut Valley in the public interest for educational, scientific, and aesthetic purposes. While the State has not yet been persuaded that the Valley should be preserved, there is no question that Big Walnut Valley, as a national natural landmark, would occupy perhaps the highest priority for dedication as an Indiana nature preserve and an asset for the entire Midwest. Two competent ecological studies—one conducted by Dr. Robert O. Petty for the National Park Service and the other by Dr. Alton Lindsey under provisions of the statewide study financed by the Ford Foundation—place the Big Walnut Valley, in its presently unimpaired state, at the pinnacle of Indiana's remaining natural treasures.

COMPROMISE SOLUTION URGED

Mr. Speaker, currently an appropriation of $50,000 has been included in the President's recommended budget for fiscal year 1970 to be used by the Corps of Engineers to initiate "advance engineering and design studies" on the Big Walnut Reservoir project. I would urge that instead, the Army Corps of Engineers be instructed to use these funds to study and select one of the many alternative sites for the proposed reservoir, alternative sites which would impound no water for a distance of 3 miles North of U.S. Highway 36, and thereby not endanger Big Walnut Valley. I would also urge that the corps be charged specifically with investigating the potential of the Reelsville site for such a reservoir.

Mr. Speaker, if this course were followed, a reasonable compromise could be found between the forces favoring and opposing the proposed reservoir for Big Walnut Valley. Fairness to all concerned should surely be our concern here, and the action I am now proposing would be fair. It would not eliminate the possibilities of the Army Corps of Engineers constructing a reservoir in the area; nor would it eliminate for all time one of America's great natural landmarks. What I propose is in the spirit of give-and-take, of compromise, and a blending of varied interests which has marked resolution of a great many other similar projects which have come before the purview of this House.

COORDINATED CONSERVATION POLICY NEEDED

Mr. Speaker, in concluding my remarks, let me reiterate my statement at the outset of my remarks. The challenge to conservation in the next decade is in seeking solutions to the totality of problems that threaten our environment. But the enormity of the task will require that we double our efforts in the future, if we are to reverse the trend of man's determined rush to destroy himself.

We must work to awaken all Americans to the need for a rational schedule of action to conserve our environment instead of our our past hit-and-miss programs that have depended on annual political or budgetary pressures.

Mr. Speaker, we need a coordinated national, regional, and local environment policy. For unless our country is willing to move forward in some coordinated fashion, all the talk of a great American future may be lost in the destruction of our own natural surroundings.

We need to understand the vital importance of this challenge to prevent the desecration of our environment.

But it is not enough simply to understand. We must act to build a nation where there is joy for us and for those who come after us in the beauties of land and water and sky—and where we will be proud to have the quality of our environment be the measure of the quality of our civilization.

To achieve this high goal, we have a long way to go.

But, Mr. Speaker, I am confident that many Americans across the country will help reach this destination.

CORPS OF ENGINEERS BIRTHDAY

(Mr. ROBERTS was granted permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. ROBERTS. Mr. Speaker, on the 149th anniversary of the formation of the Army Corps of Engineers, the Longview Journal published an editorial which enumerated the contributions and accomplishments of the corps to the entire State of Texas as well as the east Texas area. I would like to join the Journal in saluting the Corps of Engineers.

From its distinguished founding in 1775 by George Washington to its present program of public works and development of our Nation's resources, the Army Corps of Engineers has maintained a reputation of excellence.

So that my colleagues may know the esteem with which Texans regard the Engineers, I would like to include the editorial in my remarks.

The article follows:

CORPS OF ENGINEERS BIRTHDAY

The U.S. Army Corps of Engineers marked its 194th anniversary the other day (June 16) and this newspaper, long familiar with some of the activities of this hard-working agency, extends its congratulations.

The Fort Worth District, the Galveston District, and the New Orleans District—each of which has an area of responsibility in the East Texas region and in fresh water stream basins which course through the region served by the Longview News and Journal—marked the birthday in different ways.

The largest construction agency in the world, the Army Corps of Engineers was founded by George Washington in 1775 to provide combat support to the embattled Continental Army. Across the succeeding years, the Corps has played a distinguished role in every battle and campaign in which the Army has engaged, from Bunker Hill to the jungles of Vietnam.

The Corps of Engineers, through its civil works program, also has been and continues to be the principal developer of the nation's water resources—a fact which makes this agency of vital importance to the East Texas region.

The Corps has developed 19,000 miles of inland and intra-coastal waterways, and 500 coastal Great Lakes and waterway harbors.

The $5 billion the Corps has spent to date on flood control has already saved the nation over $15.5 billion in flood losses. The often flood-ravaged Sabine River basin looks forward to eventual control work by the Corps.

In a ceremony at New Orleans, District Engineer Col. Herbert Haar pointed up some of the accomplishments of his district—projects which can be appreciated here in the upper reaches of such Mississippi and Red River tributaries as the Cypress and Sulphur Rivers.

Among the projects Colonel Haar noted were the shallow draft Gulf Intracoastal Waterway and its network of feeder streams, the deep draft channel in the Mississippi and the Mississippi River-Gulf Outlet, a far advanced flood control program—and the part these improvements are playing in the economic development of Louisiana.

Colonel Haar also took a look to the future, saying: "The new era holds even greater challenge for us. Ahead lie four hurricane protection projects (among others) the problem of transforming a major river—the Red—from a useless liability to a valuable asset. . . ."

The Galveston District, which has responsibility in the lower basin of the Sabine, could cite similar major coastal and inland projects completed and now serving the needs of the region and others still in the works or in planning stages.

The Fort Worth District lists numerous major projects contributing to progress in its area, and is busy and will be for some time in studies and planning a comprehensive flood control program in the Sabine Basin—the need for which was demonstrated at a Congressional hearing in Longview early this year—with the prospect that it will be ready for submission to Congress for action probably in its next session.

We extend to these districts and their leaders and personnel, and to the entire U.S. Army Corps of Engineers, the congratulations and best wishes of the leadership and general citizenship of this East Texas region for the vast scope and high quality of its civil works program, as well as its indispensable contributions to the U.S. Army.

COMMENDATION OF ADDRESS BY CONGRESSMAN JACK H. McDONALD ON THE 1970 CENSUS ON POPULATION AND HOUSING

(Mr. BETTS asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. BETTS. Mr. Speaker, my distinguished friend and colleague, the gentleman from Michigan (Mr. McDONALD) recently made a significant speech on the 1970 census on population and housing which will be of interest to all Americans. The address, before the American Management Association in New York on June 24, 1969, reviews the main points of the current census controversy and summarizes the contentions of those who advocate census reform. Thoroughly documented in content, the analysis contains pertinent excerpts from statements of those who have expressed a professional interest in the forthcoming census; namely, noted legal scholars concerned with the right of privacy as well as users of statistical data.

I commend this timely and well-balanced address to the attention of all Members of Congress of the United States:

ADDRESS OF CONGRESSMAN JACK McDONALD

Thank you very much Mr. Chairman and members and guests of the American Management Association. It is certainly a pleasure to be here this morning. During the past year there has developed quite a controversy over the scope and nature of the questions to be asked in the 1970 Census. The Census and Statistics Subcommittee of the House Post Office and Civil Service Committee has completed eight days of hearings on Census legislation similar to my bill H.R. 251 which would limit to seven the number of census questions requiring answers under penalty of law; those categories are (1) name and address, (2) relationship to head of household, (3) sex, (4) date of birth, (5) race or color, (6) marital status, and (7) visitors in home at the time of the census. These proposals have also been considered by the Constitutional Rights Subcommittee of the Senate Judiciary Committee and the Joint Economic Committee. At the present time no further action has been scheduled, but the House Subcommittee is now reviewing all the testimony it has received. Since the time before Census Day is running out, Chairman Wilson has indicated he will act on this issue as soon as possible. Due to my active support of this legislation, when I saw the list of the other participants in this program I felt somewhat like Ho Chi Minh being invited to speak with the U.S. Joint Chiefs of Staff.

In all sincerity I would like to state at the outset that the fundamental problem of census reform is not one of governmental data collection versus non-collection. I am well aware of the importance such information has on many of your business activities. Moreover, if public officials are to formulate programs responsive to the needs of the people, it is imperative our decisions are based on up-to-date facts.

Nonetheless, we must answer the basic question of how to get the best data with the least amount of inconvenience and infringement on certain inalienable human rights, specifically, the individual's right to privacy. Now I fully recognize that the notion of privacy may be a rather subjective proposition. But I have serious reservations about the concept that loss of privacy is an automatic by-product of national growth. Dr. Taeuber of the Census Bureau acknowledged today's trend for information collection with this comment: "We've got to limit the freedom that American pioneers had . . . and a nation has to adjust to differences that exist in a country with 4 million people or 200 million".

Obviously, with increased population and advanced technology, one must make basic adjustments. However, I do not passively accept the fact that these changes necessarily mean one has to relinquish his right to privacy. In fact based upon the 1st, 3rd, 4th, 5th and 9th Amendments, and several U.S. Supreme Court rulings, this right is definitely entitled to constitutional safeguards. My strong feelings about this right does not arise out of an irrational fear of Big Brother. Two law professors have eloquently pointed out the basis of my concern. As Charles Fried of the Harvard Law School aptly points out "the right of privacy is one of the most important expressions of the individual's sense of worth and autonomy against impersonal institutions . . . Just as an insistence on property rights is not a symptom merely of greed but of a desire to maintain control over one's own person and resources, so also an insistence on privacy is not a symptom merely of secretiveness. It is a crucial aspect of one's sense of personal integrity and individuality to maintain control over information about oneself."

I also concur in the thoughtful statement of Arthur R. Miller of the University of Michigan Law School. He said ". . . The breadth of concern over the dehumanization of modern society and the animus directed at the information activities of the government cannot be ignored. The omnipresence of data collection activities and the computer cannot help but have a numbing effect on the congeries of values we subsume under the heading of 'personal privacy' and debilitate the citizen's conception of the government as a relatively benevolent or protective institution. The climate or atmosphere of suspicion engendered by an accumulation of invasions of privacy is of far greater concern than the direct harm caused by the particular incidents themselves."

Furthermore, I would like to call to your attention a letter from a former Census Bureau employee who resigned "for reasons of conscience" because of the intrusive nature of the program upon which this person was working. Although the name has been requested to be withheld, let me quote you some excerpts from this communique:

"Few realize that the Census Bureau no longer works on a 10 year population survey basis. Instead, they have continuous inquiries into every phase of America's homes and businesses.

"A plan has been set up dividing the entire nation into theoretical areas of 1,000 addresses. Ten addresses are selected in a given group of homes to be interviewed repeatedly for eight months in a twelve month period. Actually, the family is interviewed for 4 consecutive months, is allowed to rest for 4 months, then is interviewed again for 4 more months. In this way, a family's fortunes, misfortunes, and activities are covered for a full year.

"We told the people that the interviews were entirely confidential, that their identity was of no importance, and that their answers were for statistical purposes only. However, the respondent's name and Social Security Number and those of each member of his household—relative or otherwise—were entered on a large control card with his address and other interviewing forms carried his same control card number so that all of these papers could be kept together in government files, discrepancies checked out, etc. Interviewers were asked to return to homes where answers to questions were in disagreement with answers in previous months. The printed questions, tho prying may seem innocuous at first reading, but after eight months of repeated questioning we would ultimately find out everything concerning the family for five years back."

I think these remarks, especially the reference to the Social Security number, vividly point out the disquieting ramifications of the omnipresent whir of the computer. The computer can be a most valuable tool, but its use, especially by a governmental agency, must be closely scrutinized. To quote Dr. Alan Westin of Columbia University, "Once computers are installed, they acquire a momentum of their own . . . The result is that individuals and organizations today are being asked more detailed questions about themselves than was even possible or desired before computerization. Case studies of organizations adopting computers have shown that their information base is enlarged two or three fold, and that the new information is sought in areas, reporting sources, life, or activities that were previously immune from inquiry because of the physical or cost limits on acquiring, digesting, and using such information."

Couched in this framework, I cannot help but feel that many of the proposed questions in the 1970 Census questionnaire go too far beyond the basic intent of the Census, as spelled out in Article I of the Constitution, to justify requiring a mandatory response under penalty of law.

I realize that there is unanimity in the Executive Branch that a voluntary approach to the Census will not yield sufficient infor-

mation. In fact the Administration has gone so far to promote its point of view, that Vice President Agnew sent a letter in April to the governors of all fifty states asking them to contract their congressional delegations and to stress the alleged adverse ramifications to the states if a voluntary census were conducted. This is a most unusual procedure.

I am also aware that the Census figures are used to design both public and private voluntary sample surveys. However, I am not familiar with any data supporting the contention that criminal sanctions are any more productive. In fact, my personal experience as a Director of the 1960 Census in Wayne County, Michigan, leads me to believe that, in general, people are most cooperative in responding without any reference to the possibility of criminal punishment for noncompliance.

I know that the Census Bureau and many State agencies carry out various surveys on a voluntary basis with minimal difficulty. Furthermore, private opinion and marketing organizations often deal with most sensitive areas such as income levels and political beliefs and they have indicated that they have a very low refusal rate.

Now it has been said that proposals for conducting a substantial part of the census on a voluntary basis come predominantly from people with no evident credentials in sampling procedures or in survey techniques. However, I would like to cite you excerpts from a letter written by a statistician, indeed a professor who has worked with the Census Bureau on housing inventories in the cities of Philadelphia and Baltimore. Professor William G. Grigsby of the Institute for Enivironmental Studies at the University of Pennsylvania, admits to a general pro-Census Bureau bias. But he points out:

"In analyzing the point at issue, it is helpful first to understand the reasoning behind the position that the Bureau takes. Frankly, although I have followed some of the testimony, it is not altogether clear to me what the Bureau's underlying concern really is, since it regularly conducts all sorts of surveys on a voluntary-answer basis. The opposition to voluntary reporting in this instance would seem to stem primarily from a prior decision to rely heavily on a mail questionnaire. Response rates to mail questionnaires are typically quite low, and the Bureau could reasonably expect considerable difficulty in obtaining a high rate of completions if it did not have a certain amount of authority behind its request for information. If this is what worries the Bureau, however, the issue which should be resolved is whether a mail survey is feasible, not whether compulsion is necessary and proper.

"Even if my interpretation of the Bureau's position is incorrect, there are several compelling reasons for insisting on a voluntary census.

"First, assuming that proper follow-up procedures to the mail survey can be implemented, response rates should be higher, not lower, if a voluntary approach is used. Dr. Eckler has expressed the worry that local or national campaigns urging citizens not to respond would undermine a voluntary approach. The real danger is precisely the opposite; namely, that a compulsory approach would generate such campaigns, and on a wide scale. Dr. Eckler and others may be misreading public sentiment and under-estimating the vast changes in atttudes which have occurred since 1960 when: (a) the compulsory aspects of the census were not broadly recognized; (b) social unrest in the cities was minimal; and (c) inner-city families had not been continually besieged by information gatherers. In 1970, gaining the cooperation of the American public will depend much more on convincing them of the value of their cooperation than on threats of fines or imprisonment.

"Second, if the Bureau is forced to rely on compulsion to obtain its answers from a large segment of the population, the validity of much of the information is called into question.

"Third, the most widespread resistance will come from persons who are asked to fill out the long form, and there is something patently unfair in exposing this randomly-selected group to extra risks of punishment.

"Fourth, if most questions are put in a voluntary category, the chances of easily obtaining responses to the few mandatory questions increase. If all questions are made mandatory, however, resistance to the entire questionnaire stiffens. The Bureau evidently is either: (a) willing to take the risk of not obtaining complete enumeration in order to achieve depth; or (b) unreceptive to the argument that complete enumeration would be imperiled by compulsory procedures. Such confidence, though based on long experience, does not seem entirely warranted.

"Finally, compelling persons to answer questions about radios, cars, bathrooms, bedrooms, etc. is simply difficult to justify on any grounds. The importance of information about these items is the necessary condition for their inclusion in the census; it is most certainly not, however, a sufficient condition for making responses compulsory. Indeed, that this issue should even become a matter of serious debate ought to be a matter of general public concern."

In view of the vehement assertions of the unworkability of a partially voluntary census, I feel Professor Grigsby's expertise sheds new light on this subject.

I would also like to elaborate on some of the pragmatic considerations Professor Grigsby raised. Within the last decade this Nation has experienced an unprecedented amount of turmoil and dissension leveled against "the Establishment" by young people and minority groups. I am also quick to point out that the deep concern and frustration over the Census expressed by the average citizen is something we Representatives in Congress feel every day. In fact, I have received more letters on this subject since January than I have on any other issue, including taxes, crime, and Vietnam. Furthermore, the results of my latest Congressional questionnaire reflect that over 90% of my constituents favor H.R. 251.

This situation has relevance when we consider that the 19th Decennial Census will distribute 60% of its questionnaires on a mail-out, mail-back basis and the long forms involving from 66 to 89 questions will be asked of 20% of the population. As William Chartener, Assistant Secretary of Commerce, indicated in Congressional testimony, "The success of a Decennial Census has always depended upon—and enjoyed—the willing cooperation of our citizens, not on the threat of criminal penalties." Granted the threat of criminal sanctions is admittedly only that, since it is most unlikely it will ever be realized. However, in light of the indignant mood of the Nation's populace, many citizens may refuse to cooperate by failing to respond and challenge the Government to prosecute them. To make criminals out of a large number of otherwise law-abiding citizens seems to be misguided and unwarranted.

Moreover, I have serious reservations about the constitutionality of exposing only ⅙ of the population to the possibility of prosecution for non-compliance in answering the longer forms.

A good way to reduce this resentment and to promote an atmosphere of courtesy to encourage the needed cooperation would be to eliminate the mandatory nature for all but the seven basic categories I previously mentioned. I believe this approach is more likely to produce sound data as well as to restore some degree of confidence, respect, and understanding between the people and their government.

It is important to remember that 5.7 million people were not counted in the 1960 census and that census data serves as the basis for the allocation of funds for many important social programs in addition to legislative redistricting. This latter factor has great importance in light of last year's Supreme Court Ruling which requires mathematical precision in reference to the one man one vote concept and extends it to even elected county governing units. Therefore, in light of vital need for public cooperation to insure sound statistical readings coupled with the necessity to protect the right of privacy, it would seem more desirable for the Census Bureau in 1970 to accurately fulfill the basic constitutional purpose of the Census and more greatly satisfy Congressional mandates by limiting the number of questions to be asked under penalty of law rather than to risk the public's wrath and fail to effectively or adequately achieve either of these goals.

There are also other reforms that I would like to see carried out. I was most pleased when Secretary of Commerce Stans announced the following three changes to be implemented after the 1970 census: "(1) proposed questions will be submitted to the appropriate committees of Congress two years in advance of future censuses; (2) an increased number of representatives of the general public will be appointed to various advisory committees which contribute to the formulation of census questions; and (3) a blue-ribbon Commission will be appointed to fully examine a number of important questions regarding the Census Bureau, including whether or not the decennial census can be conducted on a voluntary or a partial voluntary basis. The Commission would also examine and offer proposals for modernizing and improving the operations of the Census Bureau." However, I would like these proposals enacted into law so that future Secretaries who may not be as sensitive to the problems of the census, will be required by law to continue these practices. I am also hopeful that Congress will pass a bill as the House did in 1967 which provides for a limited mid-decade census. I can point to several communities right in my own district where the population has doubled since 1960. And yet they still receive funds from both the state and federal government based upon the 1960 population reading which is now totally irrelevant. Due to great mobility of our citizens, I feel it is imperative to have some form of quinquennial census. In addition, I would like to have longer and more intensive training for enumerators. Under current procedures the average enumerator only receives 12 hours training. The people who will work in the core cities and difficult rural areas receive 22 hours preparation. It strikes me as somewhat strange that all of the testimony against a voluntary approach stresses the difficulty in obtaining data in these areas and yet so little time is devoted to training. One private national marketing firm in Detroit spends up to 5 full days training its interviewers. Due to the importance of their effectiveness, especially if we adopt a partially voluntary approach, it seems logical that training should be given greater emphasis.

I would also like to see greater research devoted to sampling techniques in order to reduce even further the number of individuals who will be asked to respond to long census forms. This year approximately 3 million households were relieved of the burden of answering the longest questionnaires. I am hopeful that the numbers can be reduced even further in the future.

Finally, although servicemen overseas are counted, they are not included in the population of their home state or local community, failure to place these people in any geographical area unjustly deprives their

states of federal funds and possibly representation at all levels of government. The Bureau is presently examining ways to correct this situation and I applaud this effort and hope it can be worked out by April.

I would like to conclude by stating that I have no objection to private industry and other concerns availing themselves of census data submitted by private citizens on various government sponsored questionnaires. Modern business, like modern government, needs accurate information to assist them in the complex process of decision-making. My primary concern is that the American citizenry has become so subjected to requests for data of questionable relevancy and of a highly personal nature, that people are losing control over the flow of information about themselves. What we in Congress are attempting to do is establish a balance between the individual's constitutional right to be left alone which Supreme Court Justice Douglas calls "The beginning of all freedom", and the government's need for information. As my good friend and colleague Jackson Betts eloquently stated "an individual's right of privacy transcends the rapid growth of technological sophistication in our country and is forever connected with our basic right of liberty. It must never be compromised in favor of well-meaning but nonetheless impersonal intentions of convenience, value, and efficiency."

I greatly enjoyed sharing my views with you on this important subject and I will be pleased to answer any questions you might have in the time remaining. Thank you very much.

INTRODUCING AGRICULTURAL ADJUSTMENT ACT OF 1969

(Mr. MICHEL asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. MICHEL. Mr. Speaker, today I have introduced the Agricultural Adjustment Act of 1969. This bill would have as its purpose, increasing per family farm income, bringing the supplies of cotton, wheat, feed grains, and soybeans into line with current demand, and at the same time, decreasing the taxpayer's costs in maintaining farm programs. This would come about through provisions to provide for an expanded cropland retirement program, the phaseout of current price support and adjustment payments, and the establishment of grants and loans for low-income farmers seeking more gainful employment.

Having served for a number of years on the Agricultural Appropriations Subcommittee, I am well aware of the cost of current payment programs in agriculture. We are currently making outlays of about $3 billion a year in price support and diversion payments to producers of wheat, cotton, and feed grains. This in itself should be a point of concern to all of us, but what is even more distressing to me is the fact that these programs are not doing the job they were intended to do.

Farm parity today stands at 75, two points below the level at the time the current farm bill was enacted. The farm population today is nearly 2 million less than it was at the time these programs were adopted. While carryover stocks of cotton have been cut considerably, stocks of wheat and feed grains are as high or higher than at the time we adopted the act of 1965. I could go on and on in citing figures which would prove that the Food and Agriculture Act of 1965 has not worked. We cannot continue to pour more than $3 billion a year into a farm program which is not working.

As I see it, there are only two ways for farmers to achieve net income: First, through Government payments, or second, through the market system. Government payments have not worked, as I stated earlier, and the taxpayers are not going to continue to be willing to provide this amount of money. The fact that this House imposed a $20,000 limitation on payments in the Agricultural appropriations bill is proof of what I say.

Therefore, my bill would phase-out these Government payments over a 5-year period, allowing the market to function as the determinant of farm income. For those who are concerned about moving to the market system, my bill provides an expanded land retirement program. This would allow these farmers to sit out the transition.

My bill also recognizes that a number of people currently in agriculture do not have the land and capital resources for one reason or another to stay in agriculture. For these people, we would provide them the opportunity to avail themselves of retraining grants designed to make them economic assets to their communities. These retraining grants would place emphasis on retraining rural people to fill current unfilled jobs in their local communities.

While this program would require a continuation of appropriations at approximately current levels over the first 2 or 3 years, by 1975 we can expect costs to be considerably less than current program costs. May I urge each of you to study my bill carefully. Our ability to produce an abundant supply of food and fiber in this country is undoubtedly one of our finest national assets. We must make sure that Federal farm policy does not thwart that ability in the future.

Mr. Speaker, following is a brief résumé of what my bill would provide, along with the text of the bill:

A LONG RANGE FARM PROGRAM FOR WHEAT, FEED GRAINS, COTTON, AND SOYBEANS

(1) The 5-year program would begin January 1, 1971 and run through December 31, 1975. It would amend the Food and Agriculture Act of 1965. The program would provide for a 5-year transitional period during which acreage controls, base acreages, marketing quotas, processing taxes and direct payments for wheat, feed grains, and cotton would be phased out.

(2) Limit the total funds that may be spent on all direct payments for wheat, feed grains, and cotton under the Food and Agriculture Act of 1965 to 80 percent of the amount spent on 1969 crops in 1971, 60 percent in 1972, 40 percent in 1973, and 20 percent in 1974.

(3) Reduce the cost of wheat certificates to processors to 80 percent of the 1969 level in 1971, 60 percent in 1972, 40 percent in 1973, and 20 percent in 1974.

(4) Effective with 1975 crops, discontinue all acreage allotments, base acreages, marketing quotas, processing taxes and direct payments (annual land diversion, compensatory, and certificate) for wheat, feed grains and cotton.

(5) Continue the cropland adjustment provisions of the Act of 1965 with amendments:

A. To require that programs be operated on a competitive bid basis with emphasis on whole farms, and

B. To direct the Secretary of Agriculture to retire at least 10 million acres per year in 1971, 1972, 1973, 1974, and 1975.

The Secretary would announce in advance the maximum acreage to be contracted for each year. If accepted bids do not exhaust this acreage, higher bidders could be offered the opportunity to negotiate contracts at the accepted bid level.

(6) Provide that loan rates for wheat, feed grains, cotton and soybeans, shall be set at *not more than* 85 percent of the previous three-year-average price, beginning with the 1971 crop year.

(7) Prohibit the sale of CCC stocks at less than 150 percent of the current loan rate plus carrying charges, except when sales are offset by equivalent purchases in the open market.

(8) In addition to and conditional on the adoption of items 2, 3, 4, 5: Authorize the Secretary of Agriculture to offer a special transitional program in 1971, 1972, 1973, 1974, and 1975, which would be open to any farmer who has had average gross annual sales of farm products of not more than $5,000 and off-farm income of not more than $2,000 per year for husband and wife for the immediately preceding three years. Such farmers would be eligible to receive one or more of the following:

A. Compensation for acreage allotments and base acreages surrendered to the Secretary for permanent cancellation. (This would apply to all commodities having acreage allotments or base acreages. Such compensation would be in addition to land retirement payments under the cropland adjustment program and would also be available to eligible farmers who wish to surrender their acreage allotments or base acreages without participating in the cropland adjustment program.)

B. Retraining grants of not to exceed $1,000.

C. Adjustment assistance of not to exceed $2,500 per year for two years.

D. Loans under existing credit programs to further facilitate the transition of eligible farmers to more gainful employment.

(9) Authorize the appropriations of such funds as may be necessary to carry out the programs enumerated in this bill.

H.R. ——

A bill to adjust agricultural production to provide a transitional program for farmers, and for other purposes

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the Agricultural Adjustment Act of 1969.

DECLARATION OF POLICY

SEC. 2. It is hereby declared to be the policy of the Congress and the purpose of this Act to (a) increase per family farm income; (b) bring the supplies of cotton, wheat, feed grains, and soybeans into line with current demand; and (c) decrease the public costs of maintaining farm programs. To effectuate this policy, programs are herein established to assist farmers in (1) carrying out a voluntary program of soil, water, forest, and wildlife conservations; (2) obtaining a commodity price in the marketplace higher

than levels at which commodity loans are made available by the Commodity Credit Corporation, and (3) achieving the transition and adjustment where necessary to more gainful employment.

TITLE I—EXTENDING AND MODIFYING THE FOOD AND AGRICULTURE ACT OF 1965—PRICE SUPPORTS FOR SOYBEANS—1971 THROUGH 1974

SEC. 101. The Food and Agriculture Act of 1965 (79 Stat. 1187), as amended, is amended by striking out "through 1970" wherever it appears in Titles III, IV, and V and substituting in lieu thereof "through 1974".

SEC. 102. Notwithstanding any other provision of law.

(a) That portion of price support which is made available through loans for the 1971 through 1974 crops of cotton, wheat, corn, oats, rye, barley, and grain sorghum under the authority of the Food and Agriculture Act of 1965 shall not exceed a loan level of 85 per centum of the average price received by farmers, excluding payments made by the Secretary, during the three complete marketing years immediately preceding the calendar year in which the marketing year for such crops begins.

(b) Total price support and diversion payments, including payments in kind, made to farmers by the Secretary under the authority of (i) section 16(i) of the Soil Conservation and Domestic Allotment Act as amended, (ii) sections 101(f) and 103(d) of the Agricultural Act of 1949 as amended, (iii) sections 339 and 379 c, d, and e of the Agriculture Adjustment Act of 1938 as amended, and (iv) section 107 of the Agricultural Act of 1949 as amended shall not exceed—

In 1971—80 per centum of the total of such payments made in 1969.

In 1972—60 per centum of the total of such payments made in 1969.

in 1973—40 per centum of the total of such payments made in 1969;

in 1974—20 per centum of the total of such payments made in 1969.

(c) The Commodity Credit Corporation shall sell marketing certificates for the marketing years for the 1971 through the 1974 wheat crops to persons engaged in the processing of food products in an amount equivalent to the following—

in 1971—80 per centum of the amount for which certificates were sold for the 1969 crop;

in 1972—60 per centum of the amount for which certificates were sold for the 1969 crop;

in 1973—40 per centum of the amount for which certificates were sold for the 1969 crop;

in 1974—20 per centum of the amount for which certificates were sold for the 1969 crop.

(d) Effective only with respect to the 1971 through 1974 crops of soybeans, price supports shall be made available to producers for each crop of soybeans at a level not to exceed 85 per centum of the average price received by farmers during the three complete marketing years immediately preceding the calendar year in which the marketing year for such crop begins.

SEC. 103. Effective with the 1971 crop of cotton, subsection (e) of section 346 of the Agricultural Adjustment Act of 1938, as amended, is amended by changing the second paragraph to read as follows:

"For the 1971 and 1972 crops of cotton, the annual national export market acreage reserve shall be computed by the Secretary and shall be equivalent to the amount of acreage deemed necessary to produce the amount of cotton which is estimated to be exported in the year the cotton is to be marketed."

SEC. 104. Effective with the 1973 crop of cotton, the Agricultural Adjustment Act of 1938, as amended, is amended by—

(a) Repealing section 346, and

(b) Changing the colon to a period in subsection (c) of section 347 and deleting the provisio.

TITLE II—TERMINATION OF EXISTING COTTON, WHEAT, AND FEED GRAIN PROGRAMS: ESTABLISHMENT OF PRICE SUPPORT PROGRAM FOR COTTON, WHEAT, FEED GRAINS AND SOYBEANS FOR THE 1975 AND SUBSEQUENT CROPS

SEC. 201. Notwithstanding any other provision of law, effective with the 1975 crops of cotton, wheat, corn, oats, rye, barley, and grain sorghum—

(a) sections 321 through 350 of parts II, III, and IV of subtitle B and section 379(a) through 379(j) of subtitle D of title III of the Agricultural Adjustment Act of 1938, as amended (52 Stat. 31; 7 U.S.C. et seq.), are repealed, parts V and VI of subtitle B are redesignated as parts II and III, respectively, and subtitle F is redesignated as subtitle D; and

(b) subsection (i) of section 16 of the Soil Conservation and Domestic Allotment Act (16 U.S.C. 590p), as amended, is repealed.

SEC. 202. Effective with the 1975 crop of wheat, the Act of May 26, 1941, as amended (Public Law 74, Seventy-seventh Congress, 55 Stat. 203), is repealed.

SEC. 203. Effective with the 1975 crops of wheat, corn, oats, rye, barley, and grain sorghum, section 327 of the Food and Agriculture Act of 1962 (Public Law 87-703, Eighty-seventh Congress) is repealed.

SEC. 204. Effective with the 1975 crops of cotton, wheat, corn, oats, rye, barley, grain sorghum, and soybeans, the Agricultural Act of 1949, as amended (7 U.S.C. 1421), is amended by:

(a) Changing section 103 (7 U.S.C. 1421 (d)) to read as follows:

"SEC. 103. Notwithstanding the provisions of section 101 of this Act, price supports shall be made available to producers for each crop of cotton, wheat, corn, oats, rye, barley, grain sorghum, and soybeans at a level not to exceed 85 per centum of the average price received by farmers, excluding payments made by the Secretary, during the three complete marketing years immediately preceding the calendar year in which the marketing year for such crop begins."

and

(b) Repealing sections 105 (7 U.S.C. 1441 note), 107 (7 U.S.C. 1445(a)), 402 (7 U.S.C. 1422), and subsection (f) of section 101 (7 U.S.C. 1441(f)).

TITLE III—RESTRICTIONS ON SALES BY THE COMMODITY CREDIT CORPORATION

SEC. 301. Section 407 of the Agricultural Act of 1949, as amended (7 U.S.C. 1427), is amended—

(a) by changing the period at the end of the fourth sentence to a colon and adding the following: "*Provided*, That, notwithstanding any other provision of law, beginning August 1, 1971, the Commodity Credit Corporation shall not make any sales (except sales offset by equivalent purchases, but including sales made in redemption of payment-in-kind obligations of the Commodity Credit Corporation under its programs) of its stocks of cotton, wheat, corn, oats, rye, barley, grain sorghum, or soybeans at less than—

"(1) 150 per centum of the then current loan rate for such commodity, plus reasonable carrying charges, or

"(2) the market price for such commodity at the time of sale,

whichever is higher."

(b) effective August 1, 1971, by deleting the seventh sentence and the last four sentences.

TITLE IV—AN EXPANDED CROPLAND ADJUSTMENT PROGRAM

SEC. 401. Section 602 of the Food and Agriculture Act of 1965 (7 U.S.C. 1138) is amended—

(a) by changing "1970" to "1975" in the first sentence of subsection (a).

(b) by deleting ", unless he determines that such action will be inconsistent with the effective administration of the programs," from the first sentence of subsection (d).

(c) by adding before the period at the end of the first sentence of subsection (d): "and shall encourage the inclusion of whole farms in such agreements. The Secretary shall announce in advance the maximum acreage of land to be contracted for each year; and if accepted bids do not achieve this maximum, the Secretary may offer higher bidders the opportunity to negotiate agreements equivalent to the accepted bid level: *Provided*, That, in determining annual maximum acreages, the Secretary shall design a program to obtain the retirement of not less than 10 million acres per year during the period 1971 through 1975"

(d) by deleting subsection (k)

(e) by redesignating the subsections in accordance with the amendments of this title.

TITLE V—FARMER ADJUSTMENT AND RETRAINING PROGRAM

SEC. 501(a) For the purpose of providing a transitional program to assist low-income farmers in making the necessary adjustments to nonagricultural pursuits and to provide opportunities for gainful employment, the Secretary of Agriculture is authorized to formulate and carry out a program during the calendar years 1971 through 1975 under which agreements would be entered into with farmers who—

Had average gross annual sales of farm products of not more than $5,000; and

Had average annual off-farm income of not more than $2,000 (including income of both husband and wife in the case of a married farmer)

during the three-year period immediately preceding the year in which the agreement is entered into.

(b) Agreements entered into under this section may include: (1) the surrender to the Secretary for permanent cancellation of acreage allotments and base acreages then under the control of the farmer in return for cash consideration in an amount determined to be appropriate by the Secretary; (2) adjustment assistance not to exceed $2,500 per year for a period not to exceed two years; (3) retraining grants for the purpose of covering tuition and other costs incident to training programs designed to provide skills deemed to be consistent with employment opportunities.

(c) The Secretary shall, in achieving the objectives of this section, utilize to the maximum extent possible existing federal and state programs designed to provide grants, loans, and other assistance which will further facilitate this adjustment program.

(d) The Secretary shall prescribe such regulations as he deems necessary to carry out the provisions of this title.

SEC. 502. The Commodity Credit Corporation shall not make any expenditures for carrying out the purposes of this Act unless the Corporation has received funds to cover such expenditures from appropriations made to carry out the purposes of this Act. There are hereby authorized to be appropriated such sums as may be necessary to carry out the program, including such amounts as may be required to make payments to the Corporation for its actual costs incurred or to be incurred under this program.

CLAREMONT EAGLE CHEERS NIXON ADDRESSES ON PATRIOTISM

(Mr. CLEVELAND asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. CLEVELAND. Mr. Speaker, it is

with pleasure that I draw to the attention of the House the following editorial from the Claremont, N.H., Eagle. In recent days, certain persons and parties who have never been friendly to the President, have pounced upon a couple of the President's speeches—both of which were well-reasoned, stately, timely, and fair addresses.

In these two speeches, patriotism was defended and the role of the professional fighting man extolled. This was especially pleasing. Throughout history the soldier and the sailor have been despised, kicked around, underpaid and scorned—until trouble came and overnight they became valiant heroes.

Well, we are in trouble now. It ill behooves those who attack the military to do so when it is the professional fighting man who defends—and often dies for—their privilege to attack him.

It is entirely proper for the President—the Commander in Chief—to recognize the patriotism and dedication of the professional fighting man. Indeed, it was good to hear him do so and to extoll good, old-fashioned love of country.

I agree with this editorial 100 percent and am pleased to put it in the RECORD in the hope that it will catch many other responsive eyes. I think it represents the thinking of most of the people in my part of the country and I hope the rest of the country.

It is good to have a President again who gives voice to the reasoned patriotism of the vast majority.

The editorial follows:

NIXON ON THE UNIFORM AND ISOLATION

President Nixon's first two addresses since assuming office which have had much grit have stirred both interest and the wrath of the liberals who have been waiting to tag "the new Nixon" with "the old Nixon."

Nixon's first address properly scored "those among us" who would urge unilateral disarmament pacts and treaties and other acts weakening America's now traditional peacekeeping role abroad.

In another talk, at the Air Force Academy, he properly scored the current fad which down-grades civic patriotism generally and the military and the uniform, specifically.

Nixon hit the nail on the head when he pointed out that the radicals attempting to destroy ROTC campus programs in civilian-oriented colleges are driving the military to enlarge their own military-oriented institutions to provide the nation with professional "officer corps."

The anger of the McGoverns and the Fulbrights, not to mention the pitiful McCarthy, is understandable when these sincere, but misguided senators were pegged as isolationists.

The President dug up the little-known fact that the late President Eisenhower's now famous warning to the nation about a growing power of the "military industrial" establishment was followed up with an equally succinct warning that the military must never be hobbled, downgraded or that a man of any rank need ever be ashamed of wearing a uniform.

What Nixon might have also said in both his graduation day addresses, is that much of the unrest and problems facing the nation today is the product of the teaching currently in vogue in most of our college and university campuses where the traditionalism and basic values previously carried from one generation to another are "out."

Now, faculties are finding for themselves that their own permissiveness has led to student anarchy.

CONGRESSIONAL REFORM AND COMPUTER UTILIZATION

(Mr. CLEVELAND asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. CLEVELAND. Mr. Speaker, I would like to call the attention of my colleagues to an address by Robert L. Chartrand, Information Sciences Specialist for the Legislative Reference Service of the Library of Congress, before the Symposium on Computer Utility cosponsored by the National Science Foundation, the Interuniversity Communication Council, and the Whittemore School of Business and Economics of the University of New Hampshire. The symposium was held for 3 days, May 5 through May 7, 1969, and attracted more than 150 representatives from universities, State and local governments, foundations, and industrial firms. The purpose of the symposium was to present authoritative opinions on the potential impact of regulated computer utilization on those areas where computer use interfaces with such fields as education, urban planning, and the legislative process. The conference director was Prof. Michael Duggan of the University of New Hampshire, and the sessions director was Dr. Manley R. Irwin, also of the University of New Hampshire.

Electronic data processing methods of handling information are of increasing concern to us in Congress. I am pleased to call attention to Mr. Chartrand's report on progress in some phases of machine support inside the Congress. It follows:

CONGRESS CONSIDERS COMPUTERS

Throughout the world the much-vaunted potential of the computer has stirred comment and argument. The impact upon all elements of our civilization is undeniable, and the future expansion of this technological influence seems inexorable. Electronic wizardry is a fact of daily life, manifested in the crediting of purchases, the rate of progress through traffic, the maintenance of countless records about each human being. Some persons believe that the computers of tomorrow will allow man to exist in utopian leisure, but this is refuted by those who perceive the inevitable demands upon those who would master their milieu. Listen to the words of Norbert Wiener:

"No, the future offers very little hope for those who expect that our new mechanical slaves will offer us a world in which we may rest from thinking. Help us they may, but at the cost of supreme demands upon our honesty and our intelligence. The world of the future will be an even more demanding struggle against the limitations of our intelligence, not a comfortable hammock in which we can lie down to be waited upon by our robot slaves."

With this admonition in mind, let us turn to the dilemma of those who share in the governing of our nation—the United States Congress. Charged to represent more than 200 million citizens, this beleaguered band of 535 Representatives and Senators strives to cope with an array of problems both mundane and exotic. Constituent demands vie with committee responsibilities and the all-important duty of casting the legislative vote. Never is there enough time. All too few the loyal staffers to share the load. And always that load is mounting . . . mounting apace with the volume of mail to be answered, the visits and telephone calls to be handled, the sheer number of persons to be serviced. Again and again the cry is heard: how can we do things better?

There is, of course, no panacea for the struggling congressional office. It is true that additional staffing and space can help, but the flood of information which comes to and is needed by members and their assistants must be coped with in the near future. In many cases, key information is difficult to locate and obtain. On the other hand, there is a plethora of material which arrives, often unsolicited, in every congressional office. At this juncture, alert "hill dwellers" may ask the questions which re-echo in the committee rooms and member quarters: can the computer help? Can this systems analysis that we hear so much about give *us* a break?

INITIAL LEGISLATIVE PROPOSALS

Congressional sensitivity to the potential of the computer and systems methodology has increased considerably since the early 1960's when the then Senator Hubert H. Humphrey was exhorting his colleagues to understand how computers could assist the Congressman in his daily chores. The first bill calling for the creation of an automatic data processing facility exclusively for Congress was introduced by Representative Robert McClory of Illinois late in 1966. During the 90th Congress (1967–1968), several proposals were put forward. While more than a dozen House bills called for the establishment of the congressional ADP capability within the legislative Reference Service of the Library of Congress, Representative William S. Moorehead of Pennsylvania opted for an independent facility which would be under the jurisdiction of a Joint Committee on Legislative Data Processing. The Reorganization Act of 1969, originally prepared as the result of the work of the Monroney-Madden joint committee, emhasizes the importance of modernizing congressional information handling in several of its recommendations. First, the proposed Joint Committee on Congressional Operations would be responsible for "continuing study of automatic data processing and information retrieval systems for Congress." Second, the Comptroller General, the Secretary of the Treasury, and the Director of the Bureau of the Budget would be responsible for the development, establishment, and maintenance of a "standardized information and data processing system for budgetary and fiscal data for use by all Federal agencies." Third, the Legislative Reference Service was "authorized to perform machine operations and acquire automatic data processing equipment and personnel for that purpose."

This, then, was the period of orientation and awakening to what might be done with computers. Those knowledgeable about the capacities of equipment and "software" program testified that many applications had been fully developed which could assist Congress in its day-to-day functions. Included were the retrieval of topical research information on the basis of searching textual material; an example might be a query calling for passages or citations pertinent to the subject of "transportation planning." Legal type information—the United States Code or the Supreme Court decisions—also has been of high interest and value to the Congress, and has been the subject of concentrated systems development by the University of Pittsburgh Health Law Center and the United States Air Force Accounting and Finance Center as part of Project LITE (Legal Information Through Electronics).

Also of continuing concern to various legislative elements is authorization and appropriations narrative and statistical information. While the Bureau of the Budget has commenced placing some of its budgetary data on magnetic tape, no action has been taken to make machineable files available to interested committee members. Infor-

mation on committee and subcommittee activity—date and place of hearings, witnesses to appear, topics to be discussed—is needed and would lend itself to ADP handling. The list is not a short one, and is limited only by the imagination and industry of those responsible for improving the operation of Congress.

ACTION IN THE 91ST CONGRESS

Activity in the 91st Congress has reflected the transition from a period limited to casual awareness to one featuring a resolve to create an actual computer-centered systems capability. Early in the first session, Representative John Brademas of Indiana prepared a resolution which later was endorsed by the Democratic Study Group and the Democratic Caucus:

"Resolved, That the Committee on House Administration be fully supported by Democratic members in efforts to improve the efficiency of operations of the House of Representatives, and we urge that these efforts include, but not be limited to, the use of computers and of a centralized mail processing system."

The intent here was to devise a course of action which would allow a careful review of existing ADP activities within the legislative branch, and provide for a coordinated planning of their future development and mutual supportability.

At the present time, there are three established facilities within the legislative branch. The Office of the Clerk of the House of Representatives operates an NCR Century 100 computer, located in the Rayburn House Office Building, which is used for payroll operations and such housekeeping tasks as the maintenance of inventories of equipment. The Senate Sergeant-at-Arms office has an IBM 360 Model 20, soon to be enlarged to a Model 40, which is used exclusively in mailing operations. It should be noted that the Clerk of the House has taken steps to establish a mailing operation comparable to that of the Senate, and has received proposals from industry. The Library of Congress computer, an IBM 360 Model 40, features the capacity to handle routine "batch processing" functions and a series of 20 remote typewriter terminals. All but one of these are situated in the Legislative Reference Service, where they are used for insertion, editing, and recall of various types of data (e.g., public bill and resolution content and status). The other terminal is located in the House Banking and Currency Committee, where it is employed in handling legislative calendar information, and other selected tasks.

The need to assign authority and responsibility for the development of a congressional ADP capability motivated Representative Jack Brooks of Texas to introduce a bill (H.R. 404) requiring the Comptroller General to "develop, establish, and maintain data processing and information systems necessary for the effective and efficient fulfillment of the substantive responsibilities of the Congress." It has been emphasized that the projected congressional information system for handling fiscal and budgetary information would not duplicate the system under development by the Bureau of the Budget. The Comptroller General, Elmer P. Staats, in testimony before the Subcommittee on Government Activities of the House Committee on Government Operations (on April 23, 1969) reflected an understanding of the size of the task suggested for GAO. He noted that the creation of such a system perhaps should be "the responsibility of the Congress itself in order that it could have complete control over the system and thus be assured that its needs will be fully served."

The proper role of each of the involved elements of the legislative branch also was a subject for discussion by the House Committee on House Administration, which assigned responsibility for investigating the potential of ADP for the Congress to the Special Subcommittee on Electrical and Mechanical Office Equipment.

PRIVATE SECTOR ANALYSES

Discussion and introspection on the impact of computers and a more systems oriented approach to congressional information handling has not been limited to the public sector. One of the most worthwhile pioneering undertaking in the private domain was the publication of a series of scholarly monographs by the American Enterprise Institute for Public Policy Research. The volume, entitled *Congress: The First Branch of Government,* featured the commentary and recommendations of such political scientists as James A. Robinson, Charles R. Dechert, and Kenneth Janda. This trio focussed upon the nature of congressional decision-making, the role of information in the formulation of alternatives and eventual decisions, and the possible contributions to be made by using advanced tools and techniques.

During the same period (1965–1966), a "Management Study of the U.S. Congress" was prepared by Arthur D. Little, Inc. Commissioned by NBC News, the investigating team analyzed the functioning of Congress, and made certain recommendations concerning the organization, staff support, committee procedures, and analytical capabilities of the Congress. These were transformed into a television feature called "Congress Needs Help" and later appeared under that title in book form.

As the subject of congressional effectiveness gained greater public attention and publicity, a number of documents began to appear containing opinions on the role of technology, as well as other changes which might be effected, in the Federal Congress. Industrial firms prepared proposals for designing and implementing a computer system for the Congress. General studies looking at the application of electronic technology to diverse activity areas were written, sometimes at the request of congressional members or committees. These ranged from "Automatic Data Processing and the Small Businessman" and "Systems Technology and Judicial Administration" to "The Federal Data Center: Proposals and Reactions." The Republican Task Force on Congressional Reform and Minority Staffing drew upon the experience of nearly a score of members to write a book entitled *We Propose: A Modern Congress,* which featured a chapter on the use of ADP by Representative Fred Schwengel of Iowa.

At the beginning of the 90th Congress, the Brookings Institute played host to a group of Representatives who sought a forum in which to discuss informally the need for better ways of performing their legislative and constituent support tasks. Special seminars for congressional staff members also were organized by the Legislative Reference Service. The need for an exploratory discussion involving academicians, industrial analysts, and Federal government information specialists was recognized by the American Enterprise Institute, which sponsored a two-day meeting featuring a dual objective: to discuss the broad subject of information support—the requirements, the relevant counterpart systems, the state-of-the-art—for our legislators, and secondly, to look at the impact of the Federal Planning-Programming-Budgeting System on congressional appropriations activity. The results of this gathering were published under the title *Information Support, Program Budgeting, and the Congress,* and represent both formal expressions of opinion by qualified persons and a record of intensive dialogue. The participants were in agreement as to the criticality of providing those who govern: ". . . maximum resources to define objectives, formulate programs, allocate manpower and moneys, and identify alternative courses of action."

UNDERSTANDING THE ROLE OF ADP

One of the aspects of computer support which has arisen again and again is that of cautioning decision-makers *not* to ignore those problem elements which defy computerization. Concern for this matter was voiced by Dr. Donald N. Michael when he said that:

"Already planners and administrators are tending to place undue emphasis on—that is, coming to value most—those aspects of reality which the computer can deal with just because the computer can do so. The individual—the point off the curve—becomes an annoyance."

While members of Congress have evinced an interest, indeed worry, about the establishment and growing assertiveness of the Federal PPB System, they have examined the impingement of that system of their own fiscal deliberations in only the most minimal way. The whole question of which agency is spending how much money on what program is very much in the legislative spotlight, but the stress on information control has been random at best. On one hand, there has been a call for the regular issuance of a catalog on Federal assistance programs (led by Representative William V. Roth of Delaware); on the other, many members have urged the establishment of an Office of Program Analysis and Evaluation. Implicit in these and other recommendations is the use of sophisticated management strategies and data handling techniques.

If the underlying problem is that of information acquisition and control—and this is not to ignore the predicaments brought about by having to file, manipulate, and retrieve desired data—there needs to be a close scrutiny of the sources available to the Congress for its information. Closest to the member are his office files, usually known only to one or two longtime staffers. Next, he may turn to the non-partisan Legislative Reference Service, which in 1968 received more than 130,000 requests for information from congressional members, committees and constituents. Executive branch agencies also provide numerous reports and isolated items of information. The Congressman also may choose to obtain requisite information from lobbyist groups, universities, or business and commerce institutions. The sources are many, their willingness to support the legislator unflinching for the most part, but the system is haphazard.

As the Congressmen attempt to orient themselves to the potential of ADP, they may look at the experience of the business community or of certain state legislatures. In the past few years, several states have moved aggressively to use computers and systems analysis in their legislative and administrative activities. New York, Pennsylvania, Florida, Wisconsin, Iowa, to name a few, have utilized consultant expertise and the latest in hardware-software configurations to allow members of the legislature to draft bills, have access to current committee activity information, query the computer regarding bill content and status, and draw upon specially formatted budgetary data when needed. The lesson is a good one, both in terms of the benefits being derived from an ADP-centered system and the limitations of this type of support.

THE POTENTIAL FOR THE CONGRESS

A highlight of several large information systems which has attracted congressional attention is the ability to access computer files from distant locations, with very little delay in entering or extracting desired information. "Time-sharing" has added a new dimension to information processing, and the knowledge on the part of Congressmen that they could sit in their offices or committee rooms and interrogate a computer and almost immediately receive answers to their queries has been exhilarating. Time and space have been conquered, and priority information can be at their fingertips.

A challenge still remains. The university researcher, the industrial designer, the governmental systems man—each has expertise gained as the result of training, trial and error, and sustained interaction with his peers. It is imperative that this knowledge and energy be applied to the initiation of innovative methods for improving our governmental functions. Decision-making remains an art rooted in the science of information management. The United States Congress, in confronting the domestic and international pressures of our times, must strive to improve its own capacity to cope with these problems. Technology is a known quantity which, if properly applied, can offer positive support to the legislators as they ponder the vote-casting alternatives, function as effective committee members, and continue to render assistance to the citizenry of the Nation.

CRIME ON THE STREETS

(Mr. BARRETT asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. BARRETT. Mr. Speaker, the people of this Nation, particularly those living in urban areas, must have and have a right to have a decent safe environment. The streets and neighborhoods must be safe. This is basic to a decent living environment.

Unfortunately, however, we are informed that the incidents of crime in our cities are on the increase, particularly those perpetrated by the youth, individually and in gangs. The juvenile gang situation in Philadelphia has become acute. Fights between youth gangs are almost a daily occurrence and 24 youths have been killed since the first of the year.

The members of the Philadelphia congressional delegation are gravely concerned over the situation and fear that the Federal and State Governments are not taking the necessary actions to assist the city to combat this problem.

The Philadelphia Inquirer yesterday, in reporting on the testimony of Philadelphia's outstanding police commissioner, Frank L. Rizzo, before the State crime commission, said that there are 77 youth gangs in the city having a membership of from 300 to 800 youths. Commissioner Rizzo has accurately portrayed the youth gang problem and suggested specific changes to deal with it; one of which is the employment of gang control workers from the ghettos who know gang members best and are able to work with them. Funds for this purpose can and should be provided under the Omnibus Crime Control and Safe Streets Act of 1968. The Department of Justice should act now to provide these funds before the situation worsens.

Yesterday's Inquirer also contained an excellent editorial on this matter which I include for all to read:

WE MUST STEM THIS TIDE

Police Commissioner Rizzo, as the first witness at the State Crime Commission's hearings on youth gang violence in Philadelphia, put the urgency of the problem in proper perspective at the outset when he said:

"Let us not propose another crime survey. My filing cabinets are jammed with surveys and reports. The time for surveys and studies is past. The time for action is now."

The police commissioner gave realistic dimension to the subject matter of the hearings in these words: "Gangs are a part of the overall juvenile crime problem . . . In the city of Philadelphia today, about fifty percent of all persons arrested for serious crime—robberies, rapes and homicides—are juveniles."

He zeroed in on the immediate need when he told the commission: "The war against crime must start at the juvenile level. The juveniles roaming our streets today are the criminals of tomorrow. We must stem this tide with a policy of punishment to fit the crime. The city's criminals, juvenile and adult, must realize that if they break the law, they will be punished severely."

To accomplish this requires community cooperation—especially from the courts and the correctional institutions. Mr. Rizzo pinpointed the present difficulties in forthright language that goes right to the heart of the matter: "Because of the deficiencies in our detention system, judges are compelled to release juvenile offenders they might otherwise detain. Thus, the hard-core juvenile criminal is returned to the streets, free to arm himself with a gun or knife and kill. This is one of the causes of the sharp increase in gang-related slayings here. On the other side of the coin, we have a few judges who, under the guise of rehabilitation, would return any juvenile offender to the street, whether detention facilities are available or not. Pure and simple, this is a deadly game of Russian roulette, with the citizens of Philadelphia as the potential victims."

Referring to the problem of overly lenient probation policies, the police commissioner noted: "In the past, I have asked judges of the Family Court to revoke the probation of juveniles arrested for another crime. The judges have not done this. I feel that this inaction has permitted additional gang members to roam the streets, increasing the possibility of violence."

Commissioner Rizzo, in his accurate portrayal of the youth gang problem in its various manifestations, and in his specific proposals for changes in the law and in court procedures to facilitate the confinement of juvenile hoodlums and the protection of the public, has pointed the State Crime Commission hearings in the right direction.

TRIBUTE TO JAMES CHANEY, ANDREW GOODMAN, AND MICHAEL SCHWERNER

(Mr. RYAN asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. RYAN. Mr. Speaker, 5 years ago I rose in the well of the House to report that three young Americans engaged in making political democracy a reality in Mississippi had been reported missing on June 21, 1964. Later the three—James Chaney, Andrew Goodman, and Michael Schwerner—were found murdered, the victims of accumulated hatred and intolerance in Mississippi.

Because the sacrifices these three young men made continue to have meaning for us today, let me briefly discuss the circumstances of their death and the political climate which made possible their murder.

Andrew Goodman and Michael Schwerner went to Mississippi to conduct voter registration drives and to open freedom schools under the auspices of the Council of Federated Organizations, an alliance of several civil rights groups which included the Congress of Racial Equality, the Southern Christian Leadership Conference, the National Association for the Advancement of Colored People, and the Student Nonviolent Coordinating Committee.

Along with other volunteers, Andrew Goodman and Michael Schwerner were preparing to offer courses of study designed to make possible greater freedom for Negroes in Mississippi—courses in the humanities, liberal arts, mechanical training, and the rights and duties of citizenship.

Michael Schwerner and his wife, Rita, had opened one of the first two freedom schools in Mississippi. The school was housed in a five-room structure in Meridian and included a library of some 10,000 books which were available to everyone in the community.

These three—Michael Schwerner, Andrew Goodman, and James Chaney, a young Negro from Mississippi—had committed themselves to realizing political equality in Mississippi.

On June 21, 1964, they were brutally murdered.

At the time of their deaths, Congress had not yet passed the Voting Rights Act of 1965, nor even the Civil Rights Act of 1964. Negroes in Mississippi were barred from public accommodations, discriminated against in education and employment, and denied the guarantees and Federal protection established by the civil rights legislation which followed. They faced the bitterness of white citizens unwilling to concede political equality to Negroes, and a society seeking to maintain segregation as a way of life. Yet they risked and eventually lost their lives to carry on the important work of voter registration and education despite these obvious hazards.

The deaths of James Chaney, Andrew Goodman, and Michael Schwerner demonstrated to Congress the urgent need for Federal intervention in Mississippi and other areas of the South. Their sacrifice hastened the passage of the Voting Rights Act of 1965. Where they and other civil rights workers led the way into a hostile political environment, Federal registrars and election observers have followed. And the assumption of responsibility by the Federal Government for enforcing the guarantees of the 15th amendment is bringing about profound changes in the political life of the South.

On the date of the enactment of the Voting Rights Act in 1965, some 856,000 adult Negroes were registered to vote in Alabama, Georgia, Louisiana, Mississippi, South Carolina, and Virginia. As of the summer of 1968, 1,596,000 were registered.

Before the Voting Rights Act, only 31 percent of the voting age blacks in the 13 States of the old Confederacy were registered. As of the summer of 1968, 62 percent were registered.

But much remains to be done. Although 62 percent of voting age Negroes are now registered in the 13 States of the Old South, 78 percent of the white voting age population is registered. In the six States directly covered by the act, only 57 percent of the nonwhite voting age population is registered, as opposed to 79 percent of the white voting age population.

A comparable measure of the progress attained under the Voting Rights Act is the increase in black elected officials in the South. Before 1965, there were approximately 70 elected black public officials in the South. Today, there are nearly 400, of whom 286 are in the six States fully covered by the act, and North Carolina, which is partially covered.

Similarly, while 18 black people are now members of Southern States legislatures, no black person has yet been elected in Alabama or South Carolina, and only one has been elected in Louisiana, Mississippi, North Carolina, and Virginia, respectively. Instances of political harassment and intimidation of blacks seeking to register or vote continue to be reported.

During the past few months, Subcommittee No. 5 of the House Committee on the Judiciary has been considering legislation introduced by several Members of Congress, including myself, which would extend the coverage of the Voting Rights Act for another 5 years. In addition to myself, numerous individuals—including Julius Glickstein, acting director of the Commission on Civil Rights, and our colleague from Michigan (Mr. CONYERS)—have testified to the need to extend the coverage of the act for at least 5 additional years, and urged that the Judiciary Committee send legislation which would accomplish this to the floor of the House.

Thus far, however, consideration of the bill by the full committee has been delayed by the failure of Attorney General John Mitchell to appear before the subcommittee, on five different occasions now, the Attorney General has agreed to appear before the subcommittee, only to subsequently request a postponement of his scheduled appearance. The distinguished chairman of the Judiciary Committee, the gentleman from New York (Mr. CELLER), has extended a sixth, and, I understand from the press, final, invitation to the Attorney General to testify on Thursday of this week.

Although the exact content of Attorney General Mitchell's testimony is not known, it is expected that he will propose that the Voting Rights Act of 1965 be amended to abolish literacy tests nationwide, and delete section 5 of the act, which requires that a State covered by the act obtain approval from the Federal District Court of the District of Columbia before enacting changes in its election laws or procedures. While I support the nationwide abolition of literacy tests, I believe such legislation must not be allowed to frustrate the principal purpose of the Voting Rights Act of 1965, which is to provide Federal intervention in the States covered on behalf of the disadvantaged and disenfranchised and to insure that the guarantees of the 15th amendment will be enforced. The provisions of section 5, which provided the basis for a major U.S. Supreme Court decision, *Allen* v. *State Board of Elections* (37 U.S.L.W. 4168, Mar. 4, 1969), must be retained as a guarantee that new discriminatory election procedures will not be adopted by the States covered by the act.

As the statistics which I have cited earlier demonstrate, much remains to be done if political equality is to become a substantive reality in the South. As a consequence, it is imperative that the provisions of the Voting Rights Act be extended for at least 5 more years.

Faced with hostility and the threat of violence, James Chaney, Andrew Goodman, and Michael Schwerner nevertheless dedicated themselves to the task of making all American citizens—regardless of color—citizens in the real sense of the word. Their sacrifice should inspire the Congress to insist that the Federal Government continue to provide assurances against political discrimination until equality has become a reality in the South.

OIL TAXES

(Mr. WAGGONNER asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. WAGGONNER. Mr. Speaker, in an effort to refute some of the claims and misstatements that have been made about the oil and gas industry, the Oil & Gas Journal of Tulsa, Okla., recently published an open letter containing many valuable and basic facts about the oil and gas industry. I feel that a careful reading of this communication will dispel some of the erroneous charges advanced by the opponents of the oil depletion allowance.

Many of you, I am sure, have questioned some of the alleged facts which have been thrust upon the ordinary citizen regarding taxes derived from the oil and gas industry. Comparatively speaking, only a small part of the industry's story has been related to the persons whom a reduction in the allowance will affect most—the taxpayers whose daily consumption of oil and gas products forms a vital segment of our economy.

These products are an integral part of the multifaceted lives of 20th-century men. It is impossible to conceive of any business or personal activity which does not demand an ever-increasing supply of petroleum products and services. Our constantly dwindling crude oil and gas reserves could pose a very serious threat to our national security, particularly with the unrest existing in the world today.

So that I might share with my colleagues another side of the story—the industry's position—I include the open letter as part of my remarks:

OPEN LETTER

To: The U.S. voter.
Subject: Oil taxes.

Percentage depletion has been on the federal law books for 43 years. And for 36 of these years, it has been vociferously attacked as an unfair "loophole" for avoiding taxes. It's happening again.

The attackers have been highly placed: Former presidents, cabinet members, lawmakers, college professors. As well as unwashed radicals, uninformed housewives, and entertainers who make poor jokes.

Congress through it all has refused to junk the provision or even modify it.

Why have the attacks by so-called tax reformers failed?

Several reasons.

Opponents haven't advanced a single new argument that wasn't thoroughly considered prior to passage of the 1926 measure. Congress consistently has decided benefits outweigh costs.

Depletion also is tied closely to the basic concepts of our constitution. These are: Never tax capital. Tax only the income from capital. Taxing away capital is likened to killing the goose that lays the golden eggs.

Why then do the attacks persist?

Taxes are pinching everyone. They always go up. Never down. The bureaucratic taxer-spenders as well as tax-burdened companies and individuals are eager to shut off tax avoidance to ease the pinch. It's easy to level an emotional diatribe against depletion and then hoot down any reasoned explanation of the complex issue.

That's why we must examine the issue constantly.

Percentage depletion has two objects: Recover the producer's capital. And give him an incentive to drill more wells, find more oil.

How does it work?

Stripped of its emotional setting, percentage depletion is simply a deduction available to oil and gas producers—and producers of more than 100 other minerals—in figuring their taxes on income from wells.

The producer may deduct 27½% from the gross annual income of a lease or property. This is tax free. The figure, however, may not exceed 50% of the net income of the lease. This limitation actually prevents most producers from taking the full deduction. In practice, it averages only 23% and in many cases is much less than that.

This policy recognizes that oil in the ground is part of the producer's capital. It is like real estate. But this capital is used up—or depleted—by operation of an oil or gas well. The rate of deduction, when determined 43 years ago, was estimated as equal the capital value of oil in the ground. It's now probably less, and a higher rate would be more equitable.

Opponents, however, favor stripping depletion back until it assures the producer he will recover his actual investment or costs in a lease. After this amount is recovered over a period of time, deductions would end. The producer's income taxes would increase. Thus cost depletion would serve a function similar to depreciation.

This overlooks the unique position of oil as capital in the ground. It also ignores the unusual risks involved in finding replacement petroleum. Depeletion encourages the producer to hunt new reserves—depreciation doesn't.

Say, for an example, an oil man recovered only has lease costs by deductions. He has no assurance he can take this fund, drill a single well and come up with any oil or gas. The odds are he will drill nine dry holes for every producing well. And what's more, he'll drill 46 marginal wells to every 1 that nets out a profit. Depreciation funds would melt quickly under these odds. But depletion funds from one good well give a producer the financial staying power to keep drilling.

What would happen if percentage depletion were ended?

It would drastically curtail the hunt for oil and gas. Our reserves would dwindle even more. Why? Because operators would become more selective and cautious in their drilling plans. They'd drill only the better prospects, shun the costly and high-risk ones.

Many producers would sell out and take advantage of the more favorable tax rates on capital gains from oil in the ground. They would thus escape the high regular rates on production. The buyer, in turn, would set up to deplete at 100% of his cost. So, it's difficult to see how the government could reap a tax bonanza from this change.

Consumers of petroleum products would suffer, too. The cost of crude oil and natural

gas would rise. This inevitably would be translated into higher product prices.

Whey then disturb a policy that promises to cause such an upheaval when the benefits are so uncertain?

But the critics cry: "Some companies pay no income tax at all. That's unfair."

Let's examine this one carefully. It comes up every time taxes are mentioned. It's becoming cause celebre among oil-industry critics.

In the first place, any producer who completely escapes income taxes doesn't do so with percentage depletion alone. The "50%-of-net-income" limitation prevents that. So, he must use the benefits of other deductions—most likely the expensing of intangible drilling costs and write-offs for dry holes.

By way of explanation, drilling costs come in two kinds. Tangible drilling costs, such as cost of tanks, equipment, and structures, are depreciated over the years. No argument here. Intangible costs, such as expense for wages, fuel, repairs, and all services, may be recovered the same way or as an operating expense in the year incurred. Most oil men elect to expense the intangibles. This allows them to get their money back more quickly to use in further operations. Expensing of intangibles does reduce the net income of the lease, even may create a loss. All this reduces the total subject to income tax.

There are a few facts, however, to keep in mind. The producer can deduct intangible expenses only once. They tend to reduce benefits of percentage depletion. And the producer, in order to have intangible deductions, must keep on drilling. This is exactly what the tax policies are designed to do—keep oil men drilling.

What else do critics find wrong about percentage depletion? What do they suggest?

Here are a few, and the answers to them.

Depletion allows companies to offset income from other sources, escape more taxes.

Percentage depletion cannot reduce taxable income from any source except the one lease or property on which it is computed. Oil companies aren't escaping taxes even if the bite of the income tax is lighter on them. It may surprise many to know that the total tax burden of the petroleum industry actually is heavier than average. In 1966, oil paid $2.5 billion in direct taxes. This $2.5 billion amounted to 5.1% of gross revenue from all operations. The direct tax burden for all U.S. business corporations was only about 4.5% of gross revenue. This is about 10% less than the tax burden of petroleum. That plays hob with the contention that oil companies don't pay taxes.

Oil profits are exorbitant. Too many oil millionaires are created by percentage depletion.

The average profit of 99 oil companies in 1968 was equal to a 12.9% return on net worth. This is below the 13.1% return on net worth earned by 2,250 manufacturing companies. There's certainly nothing exorbitant about this. Percentage depletion hasn't made oil millionaires. Oil fortunes rise from the combination in an individual of ability, stubbornness, and luck in finding oil. Success in finding oil is the key—not percentage depletion.

Oil producers don't use tax savings to look for more oil and gas.

The figures show differently. Statistics indicate oil producers would pay $1.3 billion more annually in taxes if present policies were ended. In the last 10 years, they have spent this—plus an average $3.1 billion more on exploration and development.

The depletion rate of 27½% is too high. Cut it to 20, 15, or 10%.

This is begging the question. A lower rate won't satisfy the critics. They'd be back at the next session to whittle away at the lower rate. As we've noted, the present rate probably already is too low to achieve an adequate return of capital. If it were lower, percentage depletion also would lose effectiveness as an exploration incentive. It would give oil men too little money to finance new drilling. Outside investors would fear other cuts. Uncertainty of their return piled on the normal risk of exploration would cool them on oil ventures. Exploration needs to be made more attractive to risk capital—not less.

Eliminate all deductions and grant an outright federal subsidy to encourage exploration.

Can you imagine what kind of drilling program would emerge if it depended on annual appropriations from Congress? What a boondoggle this opens up! The drilling decision-makers would be bureaucrats who are subject to political pressure and not fitted by training or position to take risks involved. Where would the savings be in this approach?

There are other arguments. None really new. All have been refuted time and time again. The fact they are being taken seriously is the big surprise.

It is especially surprising in view of the present low state of petroleum exploration. That's the new circumstance in the whole fight.

Our reserves of oil and gas are dwindling at a time they should be rising twice as fast. Spending on exploration should be doubled. Oil and gas now furnish 75% of our nation's energy. We're using petroleum at such a clip that consumption is expected to double by 1980.

Tampering with any policy that encourages exploration for petroleum is courting disaster. The facts speak just as clearly and loudly as ever against changing either the rate or principle of percentage depletion. Congress will serve the nation best by again refusing to change this policy.

LEAVE OF ABSENCE

By unanimous consent, leave of absence was granted as follows:

To Mr. ROSTENKOWSKI (at the request of Mr. BOGGS), for today, on account of a death in the family.

SPECIAL ORDERS GRANTED

By unanimous consent, permission to address the House, following the legislative program and any special orders heretofore entered, was granted to:

Mr. BROWN of California, for 60 minutes, today; to revise and extend his remarks and to include extraneous matter.

(The following Members (at the request of Mr. SEBELIUS); to revise and extend their remarks and include extraneous matter:)

Mr. LUJAN, for 5 minutes, on June 25, 1969.

Mr. BIESTER, for 10 minutes, on June 25, 1969.

Mr. HOSMER, for 15 minutes, on Friday, June 27, 1969.

(The following Members (at the request of Mr. PREYER of North Carolina); to revise and extend their remarks and include extraneous matter:)

Mr. GONZALEZ, for 15 minutes, today.

Mr. FARBSTEIN, for 30 minutes, on June 26.

Mr. DENT, for 60 minutes, on June 30.

Mr. LOWENSTEIN, for 60 minutes, on July 1.

EXTENSIONS OF REMARKS

By unanimous consent, permission to revise and extend remarks was granted to:

Mr. BURLESON of Texas and to include extraneous matter.

Mr. MICHEL and to include an article entitled "Anatomy of Loyalty," by Dr. Stanley Niehaus.

Mr. FISH to revise and extend his remarks and to include extraneous matter during debate on H.R. 7906.

Mr. GROSS.

(The following Members (at the request of Mr. SEBELIUS) and to include extraneous matter:)

Mr. DERWINSKI in two instances.

Mr. O'KONSKI.

Mr. FRELINGHUYSEN.

Mr. JOHNSON of Pennsylvania.

Mrs. HECKLER of Massachusetts in two instances.

Mr. SHRIVER in two instances.

Mr. MORSE in two instances.

Mr. HARVEY in two instances.

Mr. WYMAN in three instances.

Mr. ROBISON in two instances.

Mr. HALPERN.

Mr. SKUBITZ in four instances.

Mr. PELLY in three instances.

Mr. ASHBROOK.

Mr. TALCOTT in three instances.

Mr. MCKNEALLY in two instances.

Mr. HOSMER in two instances.

Mr. KEITH.

Mr. BUSH.

(The following Members (at the request of Mr. PREYER of North Carolina) and to include extraneous matter:)

Mr. CLAY in six instances.

Mr. RARICK in three instances.

Mr. BINGHAM in two instances.

Mr. HICKS in two instances.

Mr. DULSKI in two instances.

Mr. JACOBS.

Mr. PATTEN in two instances.

Mr. GONZALEZ in three instances.

Mr. NICHOLS in two instances.

Mr. FRASER.

Mr. RYAN in four instances.

Mr. EDWARDS of California.

Mr. PEPPER.

Mr. FEIGHAN in four instances.

Mr. ROONEY of New York.

Mr. JOELSON.

Mr. HANNA.

Mr. SCHEUER.

Mr. TUNNEY in three instances.

Mr. MACDONALD of Massachusetts.

Mr. VIGORITO.

Mr. FLYNT in two instances.

Mr. ZABLOCKI in two instances.

SENATE BILLS AND JOINT RESOLUTIONS REFERRED

Bills and Joint Resolutions of the Senate of the following titles were taken from the Speaker's table and, under the rule, referred as follows:

S. 38. An act to consent to the upper Niobrara River compact between the States of Wyoming and Nebraska; to the Committee on Interior and Insular Affairs.

S. 952. An act to provide for the appointment of additional district judges, and for other purposes; to the Committee on the Judiciary.

S.J. Res. 11. Joint resolution to provide for

the appointment of Robert Strange McNamara as Citizen Regent of the Board of Regents of the Smithsonian Institution; to the Committee on House Administration.

S.J. Res. 126. Joint resolution to increase the appropriation authorization for the food stamp program for fiscal 1970 to $750 million; to the Committee on Agriculture.

ENROLLED JOINT RESOLUTION SIGNED

Mr. FRIEDEL, from the Committee on House Administration, reported that that committee had examined and found truly enrolled a joint resolution of the House of the following title, which was thereupon signed by the Speaker:

H.J. Res. 790. Joint resolution making continuing appropriations for the fiscal year 1970, and for other purposes.

SENATE ENROLLED JOINT RESOLUTION SIGNED

The SPEAKER announced his signature to an enrolled joint resolution of the Senate of the following title:

S.J. Res. 123. Joint resolution to extend the time for the making of a final report by the Commission to Study Mortgage Interest Rates.

ADJOURNMENT

Mr. PREYER of North Carolina. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 6 o'clock and 45 minutes p.m.), the House adjourned until tomorrow, Thursday, June 26, 1969, at 12 o'clock noon.

EXECUTIVE COMMUNICATIONS, ETC.

Under clause 2 of rule XXIV, executive communications were taken from the Speaker's table and referred as follows:

888. A letter from the Secretary, Export-Import Bank of the United States, transmitting a report on the amount of Export-Import Bank insurance and guarantees issued in May 1969, in connection with U.S. exports to Yugoslavia, pursuant to the provisions of the Export-Import Bank Act of 1945, as amended, and the applicable Presidential determination thereunder; to the Committee on Foreign Affairs.

889. A letter from the Comptroller General of the United States, transmitting a report of the study of the acquisition of peripheral equipment for use with automatic data processing systems; to the Committee on Government Operations.

REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS

Under clause 2 of rule XIII, reports of committees were delivered to the Clerk for printing and reference to the proper calendar, as follows:

Mr. HALEY: Committee on Interior and Insular Affairs. H.R. 471. A bill to amend section 4 of the act of May 31, 1933 (48 Stat. 108); with amendment (Rept. No. 91-326). Referred to the Committee of the Whole House on the State of the Union.

Mr. FRIEDEL: Committee on House Administration. House Resolution 357. Resolution providing for an additional clerk for all House Members; with amendment (Rept. No. 91-327). Ordered to be printed.

Mr. COLMER: Committee on Rules. House Resolution 455. Resolution for consideration of H.R. 4229, an act to continue for a temporary period the existing suspension of duty on heptanoic acid (Rept. No. 91-328). Referred to the House Calendar.

PUBLIC BILLS AND RESOLUTIONS

Under clause 4 of rule XXII, public bills and resolutions were introduced and severally referred as follows:

By Mr. ADDABBO:

H.R. 12401. A bill to amend section 8336(c) of title 5, United States Code, to include the position of customs inspector in the category of hazardous occupations; to the Committee on Post Office and Civil Service.

By Mr. ESCH:

H.R. 12402. A bill to establish the calendar year as the fiscal year of the U.S. Government; to the Committee on Government Operations.

By Mr. FLYNT:

H.R. 12403. A bill to amend title 18 and title 28 of the United States Code with respect to the trial and review of criminal actions involving obscenity, and for other purposes; to the Committee on the Judiciary.

By Mr. HARVEY:

H.R. 12404. A bill to authorize the disposal of nickel from the national stockpile; to the Committee on Armed Services.

By Mr. KLUCZYNSKI:

H.R. 12405. A bill to amend title 39, United States Code, to extend to city, county, and State governments the third-class bulk mail rates for qualified nonprofit organizations; to the Committee on Post Office and Civil Service.

By Mr. MESKILL:

H.R. 12406. A bill to amend the Internal Revenue Code of 1954 to extend the head-of-household benefits to all unremarried widows and widowers and to all individuals who have attained age 21 and who have never been married or who have been separated or divorced for 3 years or more; to the Committee on Ways and Means.

By Mrs. MINK:

H.R. 12407. A bill to amend title 18, United States Code, to prohibit the establishment of emergency detention camps and to provide that no citizen of the United States shall be committed for detention or imprisonment in any facility of the U.S. Government except in conformity with the provisions of title 18; to the Committee on the Judiciary.

By Mr. MOSHER:

H.R. 12408. A bill to amend the Internal Revenue Code of 1954 to increase from $600 to $1,200 the personal income tax exemptions of a taxpayer (including the exemption for a spouse, the exemptions for a dependent, and the additional exemptions for old age and blindness); to the Committee on Ways and Means.

By Mr. MOSS:

H.R. 12409. A bill to amend the Fish and Wildlife Coordination Act to provide for the establishment of a Council on Environmental Quality, and for other purposes; to the Committee on Merchant Marine and Fisheries.

By Mr. MURPHY of New York:

H.R. 12410. A bill to amend chapter 13 of title 38, United States Code, to increase dependency and indemnity compensation for widows and children, and for other purposes; to the Committee on Veterans' Affairs.

H.R. 12411. A bill to modify the reporting requirement and establish additional income exclusions relating to pension for veterans and their widows, to liberalize the bar to payment of benefits to remarried widows of veterans, to liberalize the oath requirement for hospitalization of veterans, and for other purposes; to the Committee on Veterans' Affairs.

H.R. 12412. A bill to amend title 38 of the United States Code to liberalize the provisions relating to payment of pension, and for other purposes; to the Committee on Veterans' Affairs.

H.R. 12413. A bill to amend chapter 19 of title 38, United States Code, in order to increase from $10,000 to $15,000 the amount of servicemen's group life insurance for members of the uniformed services; to the Committee on Veterans' Affairs.

By Mr. PODELL:

H.R. 12414. A bill to amend chapter 137, title 10, United States Code, to limit, and to provide more effective control over, the use of Government production equipment by private contractors under contracts entered into by the Department of Defense and certain other agencies, and for other purposes; to the Committee on Armed Services.

H.R. 12415. A bill to amend title 18, United States Code, to prohibit the establishment of emergency detention camps and to provide that no citizen of the United States shall be committed for detention or imprisonment in any facility of the U.S. Government except in conformity with the provisions of title 18; to the Committee on the Judiciary.

By Mr. PODELL (for himself, Mr. DON H. CLAUSEN, Mr. CLEVELAND, Mr. CULVER, Mr. DOWNING, Mr. FRASER, Mrs. HANSEN of Washington, Mr. KEE, Mr. MANN, Mr. MOLLOHAN, and Mr. STAFFORD):

H.R. 12416. A bill to amend the Legislative Reorganization Act of 1946 to provide for annual reports to the Congress by the Comptroller General concerning certain price increases in Government contracts and certain failures to meet Government contract completion dates; to the Committee on Government Operations.

By Mr. RHODES:

H.R. 12417. A bill to amend the Communications Act of 1934 to establish orderly procedures for the consideration of applications for renewal of broadcast licenses; to the Committee on Interstate and Foreign Commerce.

By Mr. SAYLOR (for himself, Mr. SKUBITZ, Mr. ZION, Mr. BYRNE of Pennsylvania, Mr. CAMP, Mr. EVINS of Tennessee, Mr. EDWARDS of Louisiana, Mr. BURTON of California, Mr. MACDONALD of Massachusetts, Mr. SEBELIUS, Mr. WATKINS, Mr. ANDERSON of California, Mr. CARTER, Mr. COUGHLIN, Mr. DULSKI, Mr. ROSENTHAL, Mr. LUKENS, Mr. ADAMS, Mr. OBEY, Mr. ESHLEMAN, Mr. REUSS, Mr. LONG of Louisiana, Mr. FOUNTAIN, Mr. SMITH of California, and Mr. HUNT):

H.R. 12418. A bill to amend the Internal Revenue Code of 1954 to increase from $600 to $1,000 the personal income tax exemptions of a taxpayer (including the exemption for a spouse, the exemptions for a dependent, and the additional exemptions for old age and blindness); to the Committee on Ways and Means.

By Mr. TIERNAN:

H.R. 12419. A bill to expedite delivery of special delivery mail, and for other purposes; to the Committee on Post Office and Civil Service.

H.R. 12420. A bill to amend the Internal Revenue Code of 1954 to exempt from income tax retirement annuities and pensions paid by the United States to its employees; to the Committee on Ways and Means.

H.R. 12421. A bill to amend the Internal Revenue Code of 1954 so as to allow an additional income tax exemption for a dependent who is mentally retarded; to the Committee on Ways and Means.

By Mr. ALEXANDER:

H.R. 12422. A bill to amend the Agricultural Adjustment Act, as reenacted and amended by the Agricultural Marketing

Agreement Act of 1937, as amended, and for other purposes; to the Committee on Agriculture.

By Mr. BENNETT:

H.R. 12423. A bill to amend chapter 55 of title 10, United States Code, to provide health benefits for the dependents of war veterans who die of a service-connected disability; to the Committee on Armed Services.

H.R. 12424. A bill to authorize the establishment of the Revolution's Southernmost Battlefields National Park in the State of Florida; to the Committee on Interior and Insular Affairs.

By Mr. BIESTER (for himself, Mr. KUYKENDALL, Mr. CORMAN, Mr. HANSEN of Idaho, Mr. ADAIR, Mr. ADDABBO, Mr. ANDERSON of California, Mr. ANDERSON of Illinois, Mr. ANDREWS of Alabama, Mr. ANNUNZIO, Mr. ASHLEY, Mr. BLANTON, Mr. BOLAND, Mr. BRASCO, Mr. BRAY, Mr. BROWN of California, Mr. BUCHANAN, Mr. BUTTON, Mr. CARTER, Mrs. CHISHOLM, Mr. CLEVELAND, Mr. CORBETT, Mr. COUGHLIN, Mr. DERWINSKI, and Mr. DOWNING):

H.R. 12425. A bill to amend the Public Health Service Act so as to add to such act a new title dealing especially with kidney disease and kidney-related diseases; to the Committee on Interstate and Foreign Commerce.

By Mr. ADAMS (for himself, Mr. DULSKI, Mr. EILBERG, Mr. ESCH, Mr. FISH, Mr. FRIEDEL, Mr. FULTON of Pennsylvania, Mr. FULTON of Tennessee, Mr. GALLAGHER, Mr. HASTINGS, Mr. HAWKINS, Mr. HAYS, Mr. HOGAN, Mr. HUNGATE, Mr. HUNT, Mr. KEE, Mr. KEITH, Mr. KING, Mr. LEGGETT, Mr. MATSUNAGA, Mr. MCCARTHY, Mr. MCCLOSKEY, Mr. MCDADE, Mrs. MINK, and Mr. MOORHEAD):

H.R. 12426. A bill to amend the Public Health Service Act so as to add to such act a new title dealing especially with kidney disease and kidney-related diseases; to the Committee on Interstate and Foreign Commerce.

By Mr. BROTZMAN (for himself, Mr. MORGAN, Mr. MURPHY of New York, Mr. OLSEN, Mr. PATTEN, Mr. PELLY, Mr. PEPPER, Mr. PETTIS, Mr. PHILBIN, Mr. PODELL, Mr. PRICE of Illinois, Mr. RAILSBACK, Mr. RIEGLE, Mr. RHODES, Mr. ROSENTHAL, Mr. RUPPE, Mr. SCHEUER, Mr. STRATTON, Mr. TAFT, Mr. THOMPSON of Georgia, Mr. TIERNAN, Mr. TUNNEY, Mr. VIGORITO, Mr. WALDIE, and Mr. WHALLEY):

H.R. 12427. A bill to amend the Public Health Service Act so as to add to such act a new title dealing especially with kidney disease and kidney-related diseases; to the Committee on Interstate and Foreign Commerce.

By Mr. KYROS (for himself, Mr. WHITEHURST, Mr. WRIGHT, Mr. YATES, and Mr. YATRON):

H.R. 12428. A bill to amend the Public Health Service Act so as to add to such act a new title dealing especially with kidney disease and kidney-related diseases; to the Committee on Interstate and Foreign Commerce.

By Mr. KARTH:

H.R. 12429. A bill to amend the Atomic Energy Act of 1954 to make it clear that, in its agreement with a State for the control of radiation hazards from nuclear byproduct materials or other nuclear materials, the Atomic Energy Commission shall permit such State to impose standards which are more restrictive than its own standards for the regulation of such materials; to the Joint Committee on Atomic Energy.

By Mr. POAGE:

H.R. 12430. A bill to maintain farm income, stabilize prices, assure adequate food, reduce surpluses, lower Government costs, and for other purposes; to the Committee on Agriculture.

By Mr. PODELL (for himself and Mr. GARMATZ):

H.R. 12431. A bill to amend the Legislative Reorganization Act of 1946 to provide for annual reports to the Congress by the Comptroller General concerning certain price increases in Government contracts and certain failures to meet Government contract completion dates; to the Committee on Government Operations.

By Mr. QUILLEN:

H.R. 12432. A bill to amend chapter 83, title 5, United States Code, to eliminate the reduction in the annuities of employees or Members who elected reduced annuities in order to provide a survivor annuity if predeceased by the person named as survivor and permit a retired employee or Member to designate a new spouse as survivor if predeceased by the person named as survivor at the time of retirement; to the Committee on Post Office and Civil Service.

H.R. 12433.A bill to provide increased annuities under the Civil Service Retirement Act; to the Committee on Post Office and Civil Service.

By Mr. RAILSBACK:

H.R. 12434. A bill to amend title 28, United States Code, to prohibit Federal judges from receiving compensation other than for the performance of their judicial duties, except in certain instances, and to provide for the disclosure of certain financial information; to the Committee on the Judiciary.

By Mr. REUSS:

H.R. 12435. A bill to amend the Federal Water Pollution Control Act to protect the navigable waters of the United States from further pollution by requiring that synthetic petroleum-based detergents manufactured in the United States or imported into the United States be free of phosphorus; to the Committee on Public Works.

By Mr. RYAN:

H.R. 12436. A bill to provide for the establishment of the New York Harbor National Seashore in the States of New York and New Jersey, and for other purposes; to the Committee on Interior and Insular Affairs.

By Mr. TEAGUE of Texas (by request):

H.R. 12437. A bill to amend title 38 of the United States Code to provide for appointment of certain persons in the Nursing Service in the Department of Medicine and Surgery of the Veterans' Administration, and for other purposes; to the Committee on Veterans' Affairs.

By Mr. WHITEHURST:

H.R. 12438. A bill to protect interstate and foreign commerce by prohibiting the movement in such commerce of horses which are "sored," and for other purposes; to the Committee on Interstate and Foreign Commerce.

By Mr. JOHNSON of California:

H.R. 12439. A bill to provide for the disposition of community areas established for reclamation purposes on withdrawn or acquired lands of the United States, and for other purposes; to the Committee on Interior and Insular Affairs.

By Mr. MCMILLAN (for himself, Mr. BROWN of Michigan, Mr. BLACKBURN, Mr. CARTER, Mr. BERRY, Mr. JOHNSON of Pennsylvania, Mr. LEGGETT, Mr. HICKS, Mr. BOW, Mr. MIZE, Mr. ST GERMAIN, Mr. STANTON, Mr. ANDERSON of California, Mr. GALIFIANAKIS, Mr. REES, and Mr. ASHLEY):

H.R. 12440. A bill to provide for the more efficient development and improved management of national forest commercial forest land, to establish a high-timber-yield fund, and for other purposes; to the Committee on Agriculture.

By Mr. STEIGER of Arizona:

H.R. 12441. A bill to increase to 5 years the maximum term for which broadcasting station licenses may be granted; to the Committee on Interstate and Foreign Commerce.

By Mr. TUNNEY (for himself, Mr. VAN DEERLIN, Mr. WALDIE, and Mr. ROYBAL):

H.R. 12442. A bill making an appropriation to the Secretary of the Treasury to enable him to appoint additional customs agents and inspectors for Calexico and San Diego, Calif.; to the Committee on Appropriations.

H.R. 12443. A bill to provide for a 1-year study by the Attorney General, together with the Secretary of Health, Education, and Welfare and the Secretary of the Treasury, of the extent and nature of the problem of illegal importation of narcotics and dangerous drugs into the United States, and for other purposes; to the Committee on Ways and Means.

By Mr. UDALL:

H.R. 12444. A bill to designate the Mount Baldy Wilderness, the Pine Mountain Wilderness, and the Sycamore Canyon Wilderness within certain national forests in the State of Arizona; to the Committee on Interior and Insular Affairs.

By Mr. DORN:

H.J. Res. 796. Joint resolution proposing an amendment to the Constitution relative to qualifications and tenure of members of the U.S. Supreme Court; to the Committee on the Judiciary.

By Mr. JOHNSON of California:

H.J. Res. 797. Joint resolution authorizing the President to proclaim the period of October 5 to October 12, 1969, as "Angelo Noce Week"; to the Committee on the Judiciary.

By Mr. BOLAND (for himself, Mr. CLAY, Mr. CULVER, Mr. FULTON of Pennsylvania, Mrs. HECKLER of Massachusetts, Mr. LOWENSTEIN, Mr. OTTINGER, and Mr. POWELL):

H. Con. Res. 295. Concurrent resolution on urgency of arms control negotiations; to the Committee on Foreign Affairs.

By Mr. DELLENBACK:

H. Res. 456. Resolution urging the President to resubmit to the Senate for ratification the Geneva Protocol of 1925 banning the first use of gas and bacteriological warfare; to the Committee on Foreign Affairs.

MEMORIALS

Under clause 4 of rule XXII.

229. The SPEAKER presented a memorial of the Legislature of the State of Maine, relative to revision of the present system of administering Federal grants, which was referred to the Committee on Ways and Means.

PRIVATE BILLS AND RESOLUTIONS

Under clause 1 of rule XXII, private bills and resolutions were introduced and severally referred as follows:

By Mr. DERWINSKI:

H.R. 12445. A bill to confer U.S. citizenship posthumously upon Guadalupe Esparza-Montoya; to the Committee on the Judiciary.

By Mr. KLUCZYNSKI:

H.R. 12446. A bill to confer U.S. citizenship posthumously upon Guadalupe Esparza-Montoya; to the Committee on the Judiciary.

By Mrs. MINK:

H.R. 12447. A bill for the relief of James H. Kane; to the Committee on the Judiciary.

By Mr. REID of New York:

H.R. 12448. A bill for the relief of Sakiko O'Brien; to the Committee on the Judiciary.

By Mr. SANDMAN:

H.R. 12449. A bill for the relief of Angelo Ciro, Benedetta Ciro, and Francesca Ciro; to the Committee on the Judiciary.

By Mr. VAN DEERLIN:

H.R. 12450. A bill for the relief of Amparo Coronado Vieuda de Pena and her three minor children, Yolanda Pena, Marisela Pena, and Lorenzo Pena; to the Committee on the Judiciary.

EXTENSIONS OF REMARKS

CAPTAIN BOLDEN—STAR IN THE CAP OF ST. LOUIS

HON. WILLIAM (BILL) CLAY

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 25, 1969

Mr. CLAY. Mr. Speaker, today I humbly pay tribute to a man whose name will always echo in the history of St. Louis. Capt. Edward Bolden has made life better for a lot of people because of his understanding and concern for people. As a law enforcer, he has demonstrated that laws were written to protect and not to offend people. In truth, by his own character, he has shown us the compassion of the law. Capt. Edward Bolden has made many friends and he has influenced many people—just by doing his job well—and in so doing—he has distinguished himself far above and beyond any call of duty.

Capt. Ed Bolden—who is completing 35 years of dedicated service to the city and to the people of St. Louis—will enjoy a grand tribute upon his retirement. It will become him and his service and his unique capabilities in law enforcement.

I know Ed Bolden personally—he is the godfather of my eldest daughter, Vicki—and I feel confident in saying that this tribute, written by Nannie Mitchell Turner for the St. Louis Argue, June 20, 1969, will truly warm his heart. I add my salute, Captain Bolden, and my confident wish that your retirement will be an active one and that you will continue to play an active role in our community.

I commend Mrs. Turner for her insight into the man who has earned the highest respect of all St. Louis citizens. The article follows:

CAPTAIN BOLDEN—STAR IN THE CAP OF ST. LOUIS

(By Nannie Mitchell Turner)

On July 22nd, the ballroom of Stouffer's Riverfront Inn will fill up with a great cross section of St. Louisans to pay tribute to Police Captain Edward Bolden.

Captain Bolden has been unique in so many ways that I would like to tell you about him. For I have known him for all of the 35 years he has served with the Police Department.

In fact, my husband William and his brother, J. E. Mitchell were numbered among Bolden's earliest and staunchest supporters.

J. E. was a power in the City and I remember his saying that if Ed Bolden could be moved forward he would pave the way for more of our race. For it was obvious even then that the young policeman had what it takes.

A native St. Louisan, Bolden was born in our World's Fair year at almost the exact site of the present Police Headquarters at 12th and Clark. He is the son of Stanley and Cora Bolden. The elder Bolden died when Ed was just three years old. So even as a young grade schooler young Ed had responsibilities on his shoulders.

One of his teachers at Dumas School, Sally Henderson, saw in him something special and encouraged the youngster to succeed. It will be a truly touching moment to see the two of them together again.

When Ed was just twenty he joined the Catholic Church. That was pretty much of a trail blazing decision in those days. But Ed took the faith and his Christianity with quiet dedication. So much so that the dinner will be honored by the presence of Cardinal Carberry.

As a teenager Ed Bolden worked for the United Railway Company, which was the forerunner of the Public Service Company and Bi-State Transit. Then in 1933 he joined the Police Force. Except for the war years, when he served with the Counter Intelligence Corps, he has been a policeman ever since. An outstanding one.

Ira Cooper, our first Negro Police Lieutenant, was helpful in having Bolden promoted to a patrolman's rank after 2½ years of duty. Five years later, in 1941, he made Sergeant. Then, in 1953 he was promoted to a Lieutenant. He became the first Negro Captain of Police in 1956.

When you count the reasons why St. Louis has been a better place than most any other city, place Captain Edward Stanley Bolden high on that list. In his leadership and dedication to duty, he paved the way for a St. Louis police structure that has had for many, many years a reputation as the best integrated police department of any major City in America.

Both in the department and on the street, Ed Bolden is known as a gentleman; one who gets the job done—more often than not, the easy way. He saves his legendary toughness for the toughest situations.

There are some of the reasons why on July 22nd, hundreds and hundreds of people, representing absolutely every segment and area of St. Louis life, will gather in honor of one of St. Louis' finest.

MEMORIAL DAY SPEECH IN BEHALF OF SPANISH-AMERICAN VETERANS

HON. CLAUDE PEPPER

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 25, 1969

Mr. PEPPER. Mr. Speaker, I am very pleased to be able to call to the attention of my colleagues the brief but eloquent remarks of Dr. Manuel J. Reyes, Latin American Affairs editor of television station WTJV in my district, which he entered on Memorial Day in behalf of the veterans of the Spanish-American War. This is a testament to the cause of freedom and the friendship between the American and Cuban peoples. It follows:

STATEMENT BY MR. REYES

The Brave never die!

This is why, death will never defeat the Veterans of the Spanish-American War!

Those gallant men who in the year 1898, in the prime of their youth, renounced to all of life's wealth and as volunteers, (the first volunteers of the United States' Army) went overseas to defend freedom.

Strong men who, with their fighting, placed the United States in a category of first world power and as a country of hope for the poor and the oppressed.

Like I have done year after year, since I came into exile, I am here with you again, on this Memorial Day, to honor those who fell in 1898, fighting for the freedom and dignity of the human being.

Cuba was one of the countries where you and your fellow-soldiers went on that noble task.

This is why, today, as a Cuban that I am and will be until the day I die, even if I die at the last corner of the world, but as a Cuban, I want to unite my prayers to yours, with the greatest respect and admiration, as true brothers. I want to unite my prayers to yours on behalf of a country and a people who were not born to be slaves, on behalf of the Cuban people in the martyred island and in exile. Because, if my people were not silenced by terror and tyranny imposed over them, I know that if my people could talk, they would be here today, praying for those who fell at San Juan Hill in Oriente Province, so that Cuba could be free.

And it is because our brotherhood is sealed with the blood of those who, on your part or ours, joined in a common fighting action to free Cuba. There was no other alternative at that time.

And today, faced with a similar situation, which has already prolonged itself for over ten years, the alternatives have disappeared little by little. There is but one way left for the noble Cuban people in their fight to overthrow the tyranny. A way which you, united to the Cuban Freedom Fighters, bravely took in 1898. A way thru which there is no return and leads to a Spartan climax: Freedom or Ashes.

You helped to free Cuba during the past century. But today Cuba is living the worst tyranny of all its history.

The tragedy of the Cuban people is so great; the suffering of the Cuban mothers is so great; the despair of its best men is so great. . . . and at the same time, the courage of that same people is so great, that the only way left is Freedom, or let Cuba as a whole be burnt to ashes thru the will of its people. So that from the ashes of Communism, a new Cuba, free, sovereign, independent and democratic, will arise.

And today, by joining my prayers to yours, two people who were born to be brothers, by praying to God for the eternal rest of those who gave their lives in the Philippines, in Puerto Rico and in Cuba; let's tell them that their sacrifice was not in vain. Let's tell them to rest peacefully in their graves . . . because their heirs, making their glorious history come alive again, have joined to proclaim at this cemetery, before their graves, a cry that will be heard in Cuba, a cry which will shake the island from one end to the other; a cry which will raise the people against the tyrant: Freedom or Ashes!

JOE McCAFFREY

HON. PAUL G. ROGERS

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 24, 1969

Mr. ROGERS of Florida. Mr. Speaker, it has come to my attention that Joe McCaffrey is this month celebrating his 25th year as a Washington correspondent.

I think that this tenure is a remarkable one. But I bring this to the attention of my colleagues not because of this tenure but because I think he has served his profession well as a newsman.

Since coming to the Congress 15 years ago I have had contact with him and over the years have developed a trust in his reporting. I think that my colleagues

will agree that he has been fair in all issues.

I would like to commend Joe for the fine work he has done in the past. The caliber of reporting has always been on a high plane and continues to be. I know my colleagues would like to join with me in wishing Joe McCaffrey our best wishes during this anniversary month and continued success in the future.

I regard Joe McCaffrey as a true objective professional.

BURDENS UPON PRESIDENT NIXON ARE INCREASED UNNECESSARILY

HON. BURT L. TALCOTT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 25, 1969

Mr. TALCOTT. Mr. Speaker, a number of persons with responsible positions in the last administration were totally unsuccessful in achieving peace in Vietnam or elsewhere. Some of these persons are now telling President Nixon how to obtain peace. Some, with and without responsibility, are demanding that President Nixon publicly set forth a timetable for withdrawal of U.S. troops from Vietnam. Who would benefit most from the public disclosure of our prospective plans for terminating hostilities in Vietnam? Obviously the Vietcong, the NLF, the North Vietnamese and their Communist allies—the very persons and groups who have killed and harmed our troops and our prisoners of war and the very groups who have terrorized the South Vietnamese.

Certainly the public disclosure of our peace plans and our timetable for withdrawal ought to be confidential.

The persons in the Government, in the Congress, and in the news media who were totally unsuccessful before the inauguration of President Nixon ought to give this administration the same chance the last administration had to terminate the war. The continual interference and carping can only benefit the enemy, prolong the hostilities, and prejudice the South Vietnamese.

It should be quite obvious to all that the President is trying, that he is exploring all possibilities, that he is giving the aggressor every opportunity to respond to numerous overtures for peaceful negotiation and deescalation of hostilities.

An experienced, knowledgeable and astute observer of the political and international scene, Col. Allen Griffin, publisher of the Monterey Herald, a newspaper in my congressional district, has written a pertinent editorial which every Member of the Congress and every citizen should read. A reading of the editorial will help to clarify much of the clamor about troop withdrawal from Vietnam.

I include the June 19, 1969, editorial by Colonel Griffin at this point in the RECORD:

Although nobody knows what President Nixon's plan is or plans are for ending U.S. participation in the Vietnam war, there is no lack of politicians as well as schoolboys who try to get in on the act.

One of the noisiest is Senator Ted Kennedy, whose personal ambition is obvious to all. One of the most lurid is Senator McGovern, careless of word and reckless of phrase. Certainly the most sarcastic in whining southern diction is Senator Fulbright, too brilliant a Rhodes Scholar ever to be satisfied with anything except complete obeisance. The most intelligent, years before Mr. Nixon came to office as President, was General Gavin with the enclave theory.

Now Clark Clifford has come out with a set of proposals and hopes in the July issue of Foreign Affairs magazine to give further advice.

There are good grounds for everyone to have some sympathy with President Nixon's desperate problem of trying to get some sort, perhaps any sort, of agreement, provided it is an agreement, out of the Paris peace talks. Even when making his last broad proposals, the first that had been made by anyone, he emphasized that they were not rigid but were "flexible", putting it up to the North Vietnamese to make counter-proposals for consideration.

This the North Vietnamese refused to do. They were dealing from a position of strength. They had the complete backing of the Russians, their willing and happy arms suppliers. They were feeling the ebb of American power. And they already knew that the will of the American people had been undermined and softened. Victory seemed to be coming closer every month.

This is the situation that threatens the hopes of President Nixon, whose planning had depended upon logic and some quid for a little quod and also the hope that the Russians might provide an assist. Despite the best laid plans of "flexibility", the North Vietnamese have held fast, knowing that more American leaders would fall into the trap of demanding that the President give way further in the invalid hope that the North Vietnamese would suddenly become reasonable if not loving. What they want is to win the war and win the peace, both as complete victories. And they may.

The article by the most recently retired Secretary of Defense has much of great interest in it from the historical point of view. He was a friend of presidents before he became secretary. He was a hawk until towards the end of his career in Defense. He adds an interesting side-light about President Kennedy's determined attitude to preserve SE Asia. But it is more than doubtful if publication of withdrawal of troops, which Clifford recommends, would hasten an agreement with the enemy that even Clifford would accept. That's the nub of the problem. And that shows something of the burden President Nixon must carry while the North Vietnamese in Paris rub their hands and say, "We've hooked another big fish."

JOSEPH McCAFFREY CELEBRATES 25 YEARS AS NEWS CORRESPONDENT

HON. ANDREW JACOBS, JR.

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 24, 1969

Mr. JACOBS. Mr. Speaker, this month Mr. Joseph McCaffrey has been a Washington news correspondent for 25 years. His fans, particularly the young ladies who undoubtedly swoon as he reports the news on channel 7, will find this difficult to believe. Since more people watch his news program than watch the CONGRESSIONAL RECORD, the secret may remain relatively intact.

I have had the privilege of knowing Mr. McCaffrey over nearly the entire span of these 25 years and I have grown to admire him more as time goes by.

Mr. Joseph McCaffrey never knowingly did violence to the truth.

BLACK REPARATIONS WITH A RED TIE

HON. JOHN R. RARICK

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 24, 1969

Mr. RARICK. Mr. Speaker, with increasing frequency worship services throughout the country are interrupted by hoodlums demanding money. Other meetings are assailed with demands for money, called "reparations." The fact that such disruptions are unlawful—which is a euphemism for criminal—is quite plain. I do not know of any State in which extortion is not a crime. But for some very strange reason, nothing is done to the perpetrators of these outrages.

It is a matter of interest, and perhaps an explanation of the lack of prosecution, that the principal character in these demonstrations first gained his national status as a leader of SNCC, the misnamed Student Non-Violent Coordinating Committee, created with Communist funds by the equally misnamed Southern Christian Leadership Conference. The churches of the Nation, diverting the offerings of their parishioners to the so-called "civil rights" assault on the South, created a false image of decency for the throng of subversives, criminals and perverts which they financed. The Bible, in Matthew 7:6, speaks plainly of the result.

Yesterday, Mr. Speaker, I called to the attention of our colleagues some of the background and activities of James Forman, the "non-violent" extortioner of the churches. I include an article from this Sunday's Parade magazine, biographical material on Jessica Mitford, Forman's Communist mother-in-law, and another viewpoint on the same problem by Gen. Thomas A. Lane in his June 24, 1969, column "Public affairs."

The articles follow:

[From Parade magazine, June 22, 1969]

Q. James Forman, the black militant who wants $500 million in reparations from white churches and synagogues—isn't he married to a white woman?—Helen Maddox, Washington, D.C.

A. Yes. Forman is married to Anne Romilly, daughter of British-born writer Jessica Mitford, author of an expose on the U.S. funeral business called The American Way of Death.

BIOGRAPHICAL DICTIONARY OF THE LEFT—VOLUME III

(By Francis X. Gannon)

Jessica Mitford was born on September 11, 1917 at Batsford, Gloucestershire, England, daughter of Sydney Bowles and David Mitford (Lord Redesdale).

At the age of eighteen, Jessica married Esmond Romilly, a Communist. The newlyweds then went to Spain to fight alongside the Reds in the Civil War. In 1939, the Romillys moved to the United States. During World War II, Esmond Romilly was killed in action. (Depending on the whim of the moment, Jessica, in the course of interviews, sometimes says that her husband died while

in the Royal Canadian Air Force. At other times, she says he was killed while serving in the British Army.)

In 1941, Jessica went to work for the Office of Price Administration in Washington, D.C. After her husband's death, she moved to San Francisco where she continued working for the OPA. In 1944, she married Robert Treuhaft, an attorney with the OPA. (In later years, Treuhaft would become notorious for his legal work on behalf of individual Communists, the Communist Party, and Communist fronts. On several occasions, he was identified in sworn testimony as a Communist but when given the opportunity to contradict such testimony, he pled his privilege against self-incrimination under the Fifth Amendment.)

While still with the OPA in 1944, Jessica became financial director of the California Labor School, which was subversive and Communist. By 1945, the Treuhafts' home became a popular meeting place for Communists. In 1946, Jessica was a successful fund-raiser as a county financial director for the Communist Party.

From 1949 until 1955, Jessica was secretary of the East Bay Civil Rights Congress. In a recent interview (Boston Globe, June 4, 1968), she described that outfit as "jolly subversive. It wanted to overthrow all sorts of segregation laws." On the other side of the coin, the House Committee on Un-American Activities, the Senate Internal Security Subcommittee, and the Attorney General of the United States also cited the East Bay Civil Rights Congress as subversive—no jollity involved.

In 1956, Jessica worked a few months for the San Francisco Chronicle. She was fired from the Chronicle and shortly thereafter Jessica and her husband traveled to Communist Hungary in the wake of the Freedom Fighters' revolution which was crushed so barbarously by Khrushchev & Company. The Treuhafts, in an article for the Communist People's World (February 17, 1957), wrote a glowing account of life in Budapest. In 1958, Jessica went off on what appeared to be, at first glance, an unusual tangent. She launched an attack in Frontier magazine against undertakers. Meanwhile, in 1955, her husband had organized the Bay Area Funeral Society, a co-operative plan to finance burials. The set-up of the Society was socialistic and its directorship was studded with Communist fronters.

Five years later, Jessica hit the best-seller lists with a major attack on the undertakers with her full-length book, The American Way of Death—a hodgepodge of truth, half truths, innuendoes, and erroneous assertions. The left wing showered praises upon Jessica for her battle against the "capitalistic" villians of the undertaking profession. Even such prestigious Communist publications as the New World Review and the Moscow New Times spared space to hail Jessica's anti-capitalistic crusade. And with the publication of her book, Jessica's name became a familiar by-line in popular magazines.

Jessica really did not need her book to win the favor of the extreme left. Over the years, she had labored tirelessly for Communist causes: clemency for the convicted atom spies, the Rosenbergs and Morton Sobell clemency for convicted Communist Carl Braden; a petition against the Internal Security Act of 1950; a defense in Nation magazine of the anti-House Committee on Un-American Activities riots of 1960 in San Francisco; and, service in 1961 and 1962 as northern California representative for the Southern Conference Educational Fund, the financial backbone of the black power revolutionaries.

In 1966, Jessica became an associate editor of the far leftist Ramparts magazine. In 1968, she covered the Benjamin Spock trial when the baby doctor, turned ban-the-bomb-boob, was found guilty of conspiring to counsel, aid, and abet young men to evade the draft. Jessica represented the Ladies' Home Journal at the trial and she is under contract to write a book about the proceedings.

On many occasions under sworn testimony, Jessica Mitford (or as she is also known, Decca Treuhaft) has been identified as a Communist Party member and functionary, but when given the opportunity to confirm or deny either status, she has invoked the protection of the Fifth Amendment against possible self-incrimination.

Black Militants Demand New White Slavery

WASHINGTON.—From our own history, many Americans conclude that slavery is the ownership of black people by white masters. But that was only one facet of an ancient and widespread practice.

In the most primitive societies, tribes guarded their hunting grounds by making perpetual warfare against their neighbors. They fought to extend their own preserves or to resist intrusion from outsiders. Nature would support only a limited human population. The object of war was to kill off the enemy.

In the agricultural societies, war took a new turn. Although agriculture and animal husbandry made possible a higher standard of living, they also introduced the element of organized work. The work was drudgery. Citizens of the warrior state could escape it by enslaving instead of slaughtering the vanquished and using the slaves to do the work of civilization. In fact, slavery became the fuel of civilization. In ancient Rome, the work of empire and commerce, whether rowing galleys in the Mediterranean or tilling the fields of Campania or keeping the master's accounts was done by slaves.

In later times, traders who bought slaves from African Chiefs or raided tribal areas to capture the victims were serving the labor needs of higher civilization, Christian and Mohammedan. The richer the civilization, the greater the demand for slaves.

From earliest recorded history until recent times, slavery had been a part of civilization. It spared the life of the vanquished but commanded his lifetime of work.

Now we come in the twentieth century to the new slavery. On May 4, James Forman, intruding into New York's Riverside Church, demanded that the white churches of America pay an indemnity of $500 million to black citizens in compensation for past oppression and exploitation. On June 3, he raised his price to $3 billion. On June 6, he demanded $80 million of the United Presbyterian Church. On June 2, a group of his associates demanded $100 million of the Christian Science Church. On June 9, Roy Innis demanded that the bankers of America provide a fund of $6 billion for service to black Americans.

These are the traditional demands of conquerors. Having burned down the cities and destroyed the properties of white citizens in an act of war, the black militants now demand the labor of white citizens to the tune of $9 billion so that black warriors may live in the indolence becoming to victors. The alternative is renewed warfare.

It is apparent that these warriors regard politicians, clergy and bankers as the weak links of our civilization. Their judgment cannot be faulted. If they had tried this preposterous blackmail on a labor union, they would have been hooted out of the hall. But some clergymen are giving the demands serious consideration.

Enslavement is the use of force to appropriate the labor of others without compensation. Nobody has been enslaved in the United States in one hundred years, unless you subscribe to the marxist rhetoric that all capitalist employment is exploitation of labor. Black militants do use and seem to believe the marxist cant. But that is additional reason to dismiss their posturing.

Any clergyman who undertakes to pay such blackmail should be repudiated by his congregation. He is debauching the role of charity. In true charity, we voluntarily give the product of our labor to others who by misfortune are in need. To pretend that charity can spring from fear is a monstrous perversion. It conceals slavery in the garment of sweet charity.

A COLLEGE STUDENT SPEAKS OUT FOR MODERATION

HON. W. E. (BILL) BROCK

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 24, 1969

Mr. BROCK. Mr. Speaker, the June 17 issue of the Washington Evening Star included a most informative letter to the editor concerning campus unrest. I found it especially interesting in that it confirmed many of the findings of the informal congressional fact finding mission on 50 American campuses that I headed.

This letter is written by a single American college student, however, in many ways it reflects the feelings of the vast middle ground of students—a group of tremendous promise that we cannot afford to forget. I commend it to the attention of my colleagues and include it herewith:

Letter From College

SIR: The following is a letter from my daughter, a freshman at a mid-western university. I have blanked out references made to certain locations on the campus of this university.

"Dear Mom and Dad: Enclosed is an article on the Students for a Democratic Society from U.S. News and World Report. This is, as the King of Siam said, "a matter of much concern to me." Every single observation made is entirely correct and applicable to (name of university).

"I have determined that there are three kinds of people on campus—SDSers and company, socialities (fraternities and sororities) and us. We are the ones who came to college to get an education (to use an overworked phrase) and really don't give two hoots about May Queen, the next football game, or president of Student Council. This is probably a bad attitude, but, seemingly, these things are of only fleeting concern and there is no time for them. They have no far-reaching or long time influence.

Joe College is unquestionably dead, and no amount of grave-digging is going to resurrect him. While there is much brain power in these groups, they have insulated themselves from the rest. They believe that their Joe College ideals are sacred and do not realize they have been swept away by the tide. They don't even know they are being attacked, let alone how to retaliate.

"The radicals are a small hard-core group, yet they control this university. I don't believe the SDS was Communist initiated. The Communists were pleasantly surprised with its appearance. They use it and wield it to meet Communist goals but did not originate it nor identify themselves to its leaders as controllers.

"Nonetheless, SDS is not a mere tool. It acts radically, malignantly, and eradicatingly on its own, and its tactics are brilliant, as the article points out. It seems to me that at (name of college) at least they employ Hitler strategy—taking a small injustice and blowing it way out of proportion. Basically, it is true. This is seen in our ruckuses of the past two quarters—women's government and open houses. These are two areas which real-

ly don't matter one way or the other. We really don't care which may they do it. Technically, these SDS attacks are correct, but they are using them only as a means to anarchy.

"YOUNG AND POWERFUL

"What attracts students from white affluent or middle class backgrounds?" I think it is youth. SDSers are young and they are obviously powerful. I cannot think of two more mesmeric qualities than these. It is the same old kickback to rejection of parental authority. Deferred gravitation has taken on a completely new connotation. It no longer means doing without clothes, etc, in order to get a good education. It means working day and night to draft demands to school administration or to plan a take-over of campus buildings. They still don't have good clothes, etc., but they do have power and they have it when they are young. Grownups listen and if they're smart, they tremble. I believe this is a first in history.

"Attorney General Mitchell quoted some possibly fatal statistics in his address recently. Among other things, he said that only 200 schools (9%) have had disturbances. All right, but just look at which campuses have been disrupted—Columbia, Stanford, Harvard, Radcliffe, Cornell. These are our 'Ivy League' schools, the very best we have to offer. Of course these are the institutions which are going to come under attack. They're not starting with the little stuff and working up. They begin right at the top and hit hard. These figures erroneously lead one to assume that just because a school has had no trouble, no SDS exists. I said they were brilliant. I imagine that SDS could galvanize a murderous riot on any campus in the country, but it is not necessary. They already control the apex. (Why worry about the mares when they've got the stallion?)

"If it had been nipped in the bud—the administration could have easily done it. But educators, being a naturally passive lot, did nothing. It is now in our hands—the forgotten 98 percent (Mitchell said that less than 2 percent of our students had ever participated). And it would be so utterly easy for us to completely demolish them. One election where we crawled out of our test tubes, looked up from our slide rules, and put down our mugs of beer to nominate, elect and then support a good president and officers of Student Council. So simple, so very, very simple.

"GAGGING AT GNATS

"But it is not going to happen. Maybe when the doors to ———— Hall are bolted shut and priceless fossils are being dashed to the floor, costly experiments are casually smashed, and ten years worth of research data is gaily burned—but then it will be too late. Perhaps even now it is too late if what the article says about moving into business is true. Then it will become the federal government's job; and as we all know, it is too busy gagging at non-existent gnats (military-industrial complexes) and will let this camel go smoothly by.

"What's more, I don't think that people outside of education can even begin to grasp the imminent danger. They seem to think it is just college kids acting up, a bit more forcefully than ever before, but just college students after all. This is completely, utterly false. This is not kids' stuff. It has not been kids' stuff since Berkeley. SDS is dangerous, chaotically, murderously, violently so. It has got or just about got education under its cap. I think the actual show of arms at Cornell was a final testing to see if they're entrenched as well as they thought they were. They are!

"SDSers are not hippies, yippies, or drug addicts. They may look like them, but they're not. I think they use these groups as demonstrators and occupiers of buildings. It gives such people something to do and they easily follow along not even knowing what they're following. If SDSers were drug addicts they could not function so well. But if people think about SDS at all, they think this is what they are, a bunch of sick individuals who will lose their influence pretty soon and die as all drug addicts do. They are going to be disappointed.

"Where do the militaristic demonstrators come from? Everybody knows hippies are loving and nonviolent. The Negro militants provide this now-needed service.

"I think I have dwelt too long upon this subject. But the more I think about it, the more connections I can see, and logical joinings together of events, and it's getting more and more frightening. The idea of not having any school to go to in the next couple of years, let alone the one I want, is just a little bit scary. Something had better be done quickly and effectively or it won't matter whether I want to be a geologist or a philosopher because I won't be able to be either one. There will be no more schools as such and then there will be no more business. And it seems to me that if you destroy a country's educational system and economy, you've pretty well got the country wrapped up.—Your Daughter."

PARENT.

JUSTICE IN SOUTH AFRICA

HON. JONATHAN B. BINGHAM

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 24, 1969

Mr. BINGHAM. Mr. Speaker, a deplorable and outrageous series of events in South Africa, including government pressures brought to bear against a defense lawyer in the midst of proceedings, is reflected in the following statement by the Lawyers' Committee for Civil Rights Under Law—Arthur H. Dean and Louis F. Oberdorfer, cochairman—in a New York Times editorial, and in a number of articles appearing in South African newspapers:

STATEMENT BY THE LAWYERS' COMMITTEE FOR CIVIL RIGHTS UNDER LAW

(By Arthur H. Dean and Louis F. Oberdorfer)

The Lawyers' Committee has been advised that the South African government has taken away Mr. Carlson's passport, thereby restricting his movements outside of the country. The Lenkoe inquest as a result of the diligence of Mr. Carlson, associated counsel and the testimony of Dr. Moritz and medical colleagues in South Africa, has cast doubt out on the manner of Lenkoe's death. This case has, over the past few days, received considerable publicity which has not been favorable to the police and prison officials.

In the opinion of the Lawyers' Committee any interference with and harassment of an attorney who has, under instructions from others, carried out his duties in the highest tradition of the legal profession, would be totally unwarranted. The Lawyers' Committee intends to continue to instruct and support Mr. Carlson in carrying out his professional responsibility. We hope that he will not be interfered with and that his freedom to travel, particularly while engaged in counselling clients will not be infringed. The lawyers' Committee will seek to continue its interest in the above matters and its established professional association with Mr. Carlson in the interest of the preservation of the rule of law, which includes the right of any counsel to carry out his duties in dignity and protect the rights of his clients without intimidation.

The Anglo-Saxon bar has an ancient tradition that lawyers have a duty to defend in court persons accused of crime no matter how unpopular, or dangerous, and to be protected in their exercise of this responsibility by the bar, the courts and, indeed, all arms of a civilized government. We hope that this tradition can and will be preserved by our South African brethren at the bar.

[From the New York Times, June 17, 1969]

SOUTH AFRICAN "JUSTICE"

While trying to maintain the trappings of proper legal procedure, South Africa's Nationalist Government adds steadily to its arsenal of police-state laws and practices. Legislation now in Parliament would make the country's notorious security police immune from any effective public scrutiny.

The Bureau of State Security is already shrouded in secrecy, but the new bill provides severe punishment for any disclosure of a "security matter," specifically including any matter related to security police activities. No evidence could even be given in court if the Prime Minister or anyone designated by him declared it prejudicial to state or public security.

The timing of this move to give security police even greater immunity is not accidental. It is unquestionably related to the Government's seizure last week of the passport of Joel Carlson, an eminent white civil rights lawyer, and to the trial of Laurence Gandar and Benjamin Pogrund of The Rand Daily Mail on charges of publishing false information on prison conditions.

Mr. Carlson is involved in a case which has produced sensational evidence of the use of electric shock torture by security police. This corroborated one Rand Daily Mail disclosure as well as some testimony at the Gandar-Pogrund trial.

James Lenkoe, a Lesotho national, was seized by security police at his home near Johannesburg and his wife was later notified that he had hanged himself in his cell. She contacted Mr. Carlson, who obtained a second post-mortem which aroused the suspicion that Mr. Lenkoe had been electrocuted. Now an eminent American pathologist, Dr. Alan Moritz, has told an inquest that beyond reasonable doubt an injury on Mr. Lenkoe's body was caused by electric shock.

However the court cases turn out, this much is clear: Mr. Carlson has lost his passport because he was too skilled, even when up against monstrous laws and the apartheid system, in protecting the rights of Africans and exposing police barbarism. Messers. Gandar and Pogrund have been brought to trial not because their disclosures were false but for serving as alert and courageous critics of a tyrannical regime—and thus serving the cause of press freedom everywhere.

[From the Johannesburg (South Africa) Rand Daily Mail, June 17, 1969]

BELOW THE BELT

Punishment by administrative action has become part of the South African way of life. It takes various forms—banning, banishment and house arrest are examples—but a favourite is the withdrawal of a passport. There have been many striking demonstrations of the way this penalty can be imposed, the latest being the case of Mr. Joel Carlson, of Johannesburg. Like the others—a steadily growing number—on whom this disability has been imposed, Mr. Carlson has been given no reason for it. In some secret backroom sentence has been passed on him, but he is not even allowed to know what offence he is supposed to have committed

An obvious inference whenever this simple process is used is that while the Government wishes to strike at a victim, it has no case to present to a court—even in terms of the many Draconian measures under which we South Africans now live. So it uses the below-the-belt tactic of withdrawing a passport.

The Nationalist Government was not the first in this country to use this trick. But, after the courts had intervened to assert passport-holders' rights as they then were, the Nationalists saw to it that the law was changed to enable the Government to issue, withhold or withdraw passports at its pleasure. It has exercised this power ruthlessly and without favouring the public with any explanation of the circumstances in which it considers the privilege of holding a passport to be forfeited.

Since Mr. Carlson has not been told why he has to give up his passport, the public is entitled to make its own deductions. The most relevant point that it will note is that he has, in his professional capacity, been concerned in a number of attemps to investigate allegations of ill treatment of people in custody. In this he has had the support and help, some financial and some on a high technical level, of American lawyers, churchmen and other authorities.

Little effort is needed to work out that this is Mr. Carlson's "offence"—that he has had help from abroad in trying to ensure that all the facts were uncovered in certain cases. For this he has been penalised, and the penalty carries the usual intimidatory message for any others who might be disposed to act as he has.

It has still to be seen whether Mr. Carlson's professional colleagues will, through their organisations, raise their voices over the action that has been taken against him and demand a public explanation. That is what they should do—loudly and urgently. For this process of administrative punishment is a subversion of the elementary principles of justice as they were once understood in this country.

[From the Johannesburg (South Africa) Rand Daily Mail, June 14, 1969]

LAWYER IN LENKOE INQUEST HAS PASSPORT SEIZED

Police yesterday seized the passport of Mr. Joel Carlson, the Johannesburg attorney acting in the inquest on Terrorism Act detainee James Lenkoe. Mr. Carlson, in recent years, has represented many political prisoners who claimed maltreatment during detention.

He is also representing the widow of Mr. Nicodemis Kgoathe at the inquest into his death while being held in police custody.

The passport was taken at the office of the United States Consul General after a notice had been served on Mr. Carlson at his city office.

His United States visa was about to expire and he was having it renewed "as a matter of formality."

"I had no intention of leaving the country or visiting the United States in the near future as I am heavily involved at the moment in litigation casts," he said.

He added he would ask Mrs. Helen Suzman, M.P. for his constituency, to raise the matter as soon as possible in Parliament.

SURPRISE

"The withdrawal came as a complete surprise to me. I am a South African citizen—born and bred here—and I am not a member of any political party. I have only acted in professional matters," he said.

A detective sergeant visited Mr. Carlson at his office yesterday morning and demanded that he surrender his passport immediately. Mr. Carlson had to go to the United States Consulate where he received the passport and handed it over to the police.

He is an official observer for the International Commission of Jurists and for the International Press Institute at the Prisons' Act trial.

DETAINEE

He is also chairman of the Johannesburg Home and School Council.

In a case at present before the Pretoria Inquest Court, he is representing the widow of James Lenkoe, a Terrorism Act detainee who was found hanging from a belt at Pretoria local prison in March after a day-long interrogation by Security Police.

Mr. Carlson was the instructing attorney for the defence in the terrorism trial in Pretoria.

INVESTIGATION

He has a long history of acting for political detainees in cases of alleged assault by police.

In 1964, he called for an investigation into the conditions of 90-day detainees, after collecting affidavits, alleging torture during interrogation.

He wrote personally to Mr. Vorster, then Minister of Justice, asking for a commission of inquiry. This was refused.

In the late 1950s, he appealed to the Government to investigate the conditions of employment and detention of farm labourers, but his appeal was ignored and the government claimed that forced labour did not exist.

[From the Johannesburg (South Africa) Post]

TRAVEL BAN ON DEFENDER JOEL CARLSON

Mr. Joel Carlson, a Johannesburg attorney who has represented scores of political prisoners and who is the South African observer for the International Commission of Jurists, had his passport taken away by the Government this week.

Mr. Carlson, presently the attorney for the families of two detainees who have died while in Security Police hands, told Post that he knew of no reason why his travel papers should be taken away.

"I have no plans at present to travel outside South Africa," he said. "I have far too much work to do."

Last year he spent two months away from the country on a round-the-world trip that included 10 days in America.

AN ERROR

Mr. Carlson revealed that the order withdrawing his passport was the second attempt by the Department of the Interior to obtain it in recent months.

"Recently I was asked to hand my passport to the authorities because they had discovered there was an 'error' in it," he said. "I examined it myself and found no 'error'—so I did not hand it in."

Last week he handed the passport to the American consulate in Johannesburg to have his visa for the United States renewed. It was still in the hands of the Americans when the Government demanded it back on Friday and Mr. Carlson had to collect it from there.

Genial Mr. Carlson is well known to Reef Africans and well liked by them. He has devoted much of his career in the past 13 years to exposing injustice in South Africa and defending politicians or political prisoners in court.

His clients include both Nelson and Winnie Mandela. "I am at present struggling to let Nelson know that Mrs. Mandela has been detained by the police," he told Post. "I wrote a letter to Robben Island to Mr. Mandela. Its arrival has not been acknowledged and there has been no reply to my queries about it."

Mr. Carlson, a father of four, appeared somewhat shaken when interviewed by reporters at the American consulate on Friday afternoon, but showed little signs of strain when Post saw him again in the office of Advocate David Soggot yesterday afternoon.

He and Mr. Soggot were working hard on the Lenkoe and Kgoathe cases. Both these political detainees have died recently while in custody.

Mr. Carlson recalled that he had been involved in some of the most important political cases of the past 10 years.

These include the S.W.A. terrorism trial, which attracted world attention, the Looksmart Ngudle inquest—Mr. Ngudle was the first detainee to commit suicide while in custody—and the Gabrielle Mabinde case.

Mr. Mabinde not only won R3,000 costs from the State in a Supreme Court interdict, but was given an undertaking by the authorities that he would not be prosecuted.

Mr. Carlson's most successful battle was the row over people who were unlawfully arrested and "sold to the farms". In this 1959 affair the Government at first denied that the forced labour scheme existed, but after the courts had upheld more than 20 habeas corpus applications by Mr. Carlson, the Minister of BAD ordered the practice to stop.

Mr. Carlson won the support of the Press, churches, the Black Sash and ordinary people throughout the country and received hundreds of letters and telegrams of support during this legal battle.

Tomorrow he will be in court again in Pretoria when the widely publicised inquest on James Lenkoe, who hanged himself in a Pretoria local prison cell after allegedly having been given electric shocks, continues.

LAWYER'S PASSPORT: APPEAL TO THE MINISTER

(By Patrick Weech)

Mr. Joel Carlson, the Johannesburg attorney whose passport police seized this week, has asked Mrs. Helen Suzman to protest on his behalf to the Minister of the Interior.

Mr. Carlson is presently acting for the widows of two men who died in political detention recently. He is also official observer at the Prisons Trial for the International Commission of Jurists and the International Press Institute.

In Johannesburg yesterday, Mr. Carlson said: "I think the type of cases I have handled have not made me popular with the Government."

But, he stressed, "I have never made any political comment."

Referring to the "exposures" revealed in several cases, he said: "All the information received by me has been in my professional capacity. Where grave injustice has become apparent, I have written to the authorities advising them of the complaints."

On Friday night, Mr. Carlson sent a telegram to his Member of Parliament, Mrs. Suzman, asking her to "make representation on my behalf immediately to the Minister, protesting against this interference with my rights as a South African citizen.

NOT LEAVING

"I have no intention of leaving the country, of visiting anywhere. My family is here. I have four children. My house and practice are here. I am born, bred, educated and practise in Johannesburg which is my only home," the telegram said.

"I want to know the purpose and reason for removal of my South African passport, which was issued in December, 1965, to be valid for five years, until December, 1970."

Mr. Carlson said that about 10 days before his passport was seized, he received a telephone call "from some clerk in the passport office, asking me to bring my passport in to rectify an error.

"I examined my passport and as I found no error, I did not take it to them."

During the past 13 years, Mr. Carlson has often acted in matters where clients have alleged brutality while in custody. The allegations were brought to court in habeas corpus and other applications, and at inquest proceedings.

LABOUR SCANDAL

Mr. Carlson was largely responsible for the exposure of abuses in the farm labour scandal in the late 1950s involving allegations of brutality and ill-treatment. He acted in the case of Looksmart Solwandle Ngudle,

who in 1964 was the first 90-day detainee to hang himself.

He also acted in the case of Gabriel Mbindi, the 68-year-old detainee whose eardrums were perforated, and who was paid R3,000 by the State in settlement. Mr. Carlson acted for the accused in the Pretoria terrorism trial. He has campaigned for inquiries into conditions of political detainees, following allegations of brutality.

Mr. Carlson represents the widow of Mr. Nicodemus Kgoathe who died in custody. He is also instructing attorney for the widow of Mr. James Lenkoe, the Terrorism Act detainee whose body was found hanging in his cell in Pretoria Local Prison after interrogation by Security Police.

[From the Johannesburg (South Africa) Sunday Times, June 15, 1969]

ATTORNEY'S PLEA TO MRS. SUZMAN: "WHY HAS MY PASSPORT BEEN SEIZED?"

(By Margaret Smith)

Mr. Joel Carlson, the Johnannesburg attorney whose passport was seized by the police on Friday, has sent an urgent appeal to Mrs. Helen Suzman to make representation on his behalf immediately to the Minister protesting against "this interference with my rights as a South African citizen."

In his appeal to Mrs. Suzman, Mr. Carlson says: "For 13 years I have had cases which I have brought to court on behalf of clients involving allegations of brutality, starting with the farm labour scandal in the late 1950s, the appeal to the Minister involving allegations of torture during 90-day detentions, and more recently I acted for the South West African terrorists when this allegation was again brought up.

"I am at present acting for the widows of two detainees who died during interrogation—namely the cases of James Lenkoe and Nicodemis Kgoathe."

Mr. Carlson says in his appeal to Mrs. Suzman that he has no intention of leaving South Africa or of visiting anywhere.

MY HOME

"My family is here, I have four children, my house and my practice are here. I am born, bred, educated and practice in Johannesburg, which is my only home."

Mr. Carlson said he had never been a politician and had practised only in a professional capacity. He was not a member of any political party.

Yesterday he told me: "It is quite clear to me that although no reason has been given for the withdrawal of my passport, the powers-that-be disapprove of an attorney such as myself, who acts in a professional capacity for political clients and pursues their causes with energy and enthusiasm before the courts."

Mr. Carlson said that, time and again, questions had been asked about where the funds for the defense of his clients came from.

This was raised by the Afrikaans Press during the South West Africa terrorist trial.

"For this case, the money came from a most prominent member of the British House of Lords.

"I have also received funds from the most prominent and senior American lawyers who are concerned with injustices in countries such as South Africa.

"I have also received money from the National Council of Churches in America.

"The Government is well aware of the source of the financial support I receive.

"I have nothing to hide."

Mr. Carlson's passport was taken at the office of the United States Consul-General after a notice had been served on Mr. Carlson at his city office. His United States visa was about to expire, and he was having it renewed as a matter of formality.

Mr. Carlson was an official observer for the International Commission of Jurists and for the International Press Institute at the Prisons' Act trial.

[From the Johannesburg (South Africa) Rand Daily Mail, June 16, 1969]

CARLSON SAYS HIS TELEPHONE WAS TAPPED

Mr. Joel Carlson, the Johannesburg attorney acting in the Lenkoe inquest, claimed yesterday that for several weeks before the withdrawal of his passport, he had been watched and his telephone had been tapped.

Describing incidents preceding the withdrawal of the passport by a Security Branch officer, Mr. Carlson said: "From the first day of the Lenkoe application, I was suspicious of certain cars which seemed to have an unusual interest in my movements.

"I don't think the occupants tried very hard to hide their interest. This went on for a few weeks. On occasions I have approached gentlemen in Volkswagens parked outside my home, and asked if I could assist them. They said I could not."

Mr. Carlson said he had heard "strange clicking, echoing and fading disturbances" on both his home and office telephones.

"I hate to be a bedfellow of Barry Botha," said Mr. Carlson. "But I have many similar complaints about some of the improper uses to which State officials have been put in matters which shouldn't concern them or worry them in the slightest.

"Nothing I do should worry them. There is nothing subversive about my activities."

Mr. Carlson directly linked the withdrawal of his passport with the obtaining of expert testimony in cases involving allegations of brutality.

Particularly important, he said, was the "obtaining of evidence and advice of such a world-renowned authority as Dr. Alan Moritz."

The doctor testified about the cause of death of Mr. James Lenkoe, a Terrorism Act detainee, who died in Pretoria Local Prison after Security Branch questioning.

SUPPORT

Another probable reason for the withdrawal was the interest and support from American lawyers and churches, said Mr. Carlson.

"It is both difficult and expensive to obtain eminent doctors like Dr. Moritz to leave their heavy commitments in America to come and give evidence in proceedings here.

"This has only been made possible by the help of American lawyers who saw and spoke to Dr. Moritz, and persuaded him to come here and financed his journey.

"It is significant because it shows the concern of American lawyers in upholding the rule of law, not only in America but in South Africa and elsewhere where 'due process' is abused.

"Financial aid has been given by American lawyers and churches in cases involving the application of unjust laws which shock the conscience of lawyers upholding the principles of the rule of law."

SEARCHED

Mr. Carlson said he had been searched at Jan Smuts Airport on his return from visits to America in 1967 and 1968.

After the first visit, he said, he had been thoroughly searched. A letter carried from the Association of the Bar of the City of New York had been taken from him for about half an hour.

"I am sure a copy was made of the letter.

"In August, 1968, when I returned from America, I was thoroughly searched again and more documents removed temporarily."

Mr. Carlson said there was no secret about support he had received from America.

"The reason for the support is the horror felt by lawyers at the scope of some of our laws," he said.

Mrs. Helen Suzman, M.P., in whose constituency Mr. Carlson lives, has been asked to approach the Minister of the Interior about the withdrawal of Mr. Carlson's passport.

[From the Johannesburg (South Africa) Star June 16, 1969]

APPEAL TO M.P. BY CARLSON

Mr. Joel Carlson, the Johannesburg attorney whose passport was seized by the police on Friday, has appealed to Mrs. Helen Suzman, M.P., to make representations to the Minister of the Interior on his behalf.

Mr. Carlson is acting in two inquests into the deaths of two African men who died while being held in custody by the Security Police. They were Mr. James Lenkoe and Mr. Nicodemis Kgoathe.

Mr. Carlson handed over his passport to the police at the American Consulate in Johannesburg. His visa to travel to the United States was about to expire, and he had handed the passport in to have it renewed.

In his appeal to Mrs. Suzman he said that he had no intention of leaving South Africa or of visiting anywhere. His family, home and practice were in Johannesburg, where he was born and educated.

He said he had never been a politician and had practised only in a professional capacity.

Mr. Carlson has linked the withdrawal of his passport with the obtaining of expert testimony in cases involving allegations of brutality and with the interest and support of American churches and lawyers.

NO POLITICIAN

He said over the week-end that the Government was well aware of the sources of the financial support he received. In the South West Africa terrorist trial the money came from a prominent member of the British House of Lords.

He had also received money from the National Council of Churches in America.

He claimed that for several weeks before the withdrawal of his passport he had been watched and his telephone had been tapped.

Mr. Carlson was an official observer for the International Commission of Jurists and for the International Press Institute at the Prisons Act trial.

[From the Johannesburg (South Africa) Rand Daily Mail, June 17, 1969]

MAGISTRATE TELLS OPPOSING SIDES: I'VE HAD ENOUGH

The magistrate at the Lenkoe inquest, Mr. J. J. H. Tukker, yesterday postponed the hearing to Friday despite protests of counsel—and after telling counsel and prosecutor he had had "enough of your arguments."

Mr. D. Soggot, who is appearing for Mrs. Julia Lenkoe, widow of Mr. James Lenkoe, who died while a Terrorism Act detainee, told the court it would be impossible for him to prepare by Friday to question a surprise witness brought by the State yesterday.

However, Mr. Tukker ruled that the matter would proceed at 2 p.m. on Friday, even though Mr. Soggot had stated that he had an appointment involving senior counsel fixed for that afternoon.

The inquest is into the death of 35-year-old Mr. Lenkoe, who was found hanging by a belt in his cell at the Pretoria Local Prison late on the night of March 10, after daylong interrogation by the Security Police.

A second post-mortem was performed on him after a special application had been brought by his widow.

Evidence about copper found in a wound on Mr. Lenkoe's toe, possibly indicating an electric shock, has been given at previous hearings.

Mr. Tukker, who is on the bench with a medical assessor, Dr. W. J. Scheepers, yesterday heard:

From a surprise expert witness brought by the State that copper is present in every human body.

From the pathologist who conducted the second post-mortem that a wound on Mr. Lenkoe's toe must—beyond reasonable doubt—have been caused by an electric shock.

THICKSET MAN

Testifying yesterday Mrs. Lenkoe said she and her husband were awakened about 11:30 p.m. on March 5 by knocks on the windows and door of their home in Soweto township.

She at first restrained her husband from opening the door. When she peered through the window she saw a short, thickset White man who identified himself as a policeman.

One of the men said: "Are you Mofokeng?"

Before he could answer two hands gripped his wrists and pulled him into the doorway. Entering the house policemen asked her husband and her where they stole all the money which enabled them to live in their beautiful home. Her husband replied that he worked for his money.

An African constable clubbed her husband behind the bed, and the White policemen pushed her into the bedroom while another White policeman struck her husband three times on the head with his clenched fist.

After the room had been searched, the police took her husband away. She was refused permission to go to her neighbors and tell them what was going on, because she wanted witnesses and was not sure if the men in her house were really policemen.

Outside the house she saw two private cars and a police van. One car had a TPA registration. (Transvaal Provincial Administration) and because of this she soon afterwards made inquiries at the local Pretoria prison about her husband.

At the prison she was told she would not be able to see her husband for 180 days, but could come back on the following Sunday, bringing him clothing and food.

CONFIRMED

On the Sunday, when she returned, she was told at one gate her husband could not be found in the prison, and at another gate that she could not see or talk to him for 180 days.

On the following Tuesday two White policemen came to her home and demanded her husband's reference book. She searched in her bedroom for it but could not find it.

On the Thursday she went to town and, when she returned, her neighbours told her the police had called and that her husband was dead.

Next day, a Friday, an African constable confirmed that her husband had died.

The prosecutor, Mr. Jordaan, at this stage said that much had been said in evidence about the discovery of copper particles in a wound on Mr. Lenkoe's toe, and he was producing an expert witness.

The witness was Professor Bernard Meyer, professor of physiology and biochemistry at the University of Pretoria and author of 65 publications—seven of them on copper in the human body.

BALANCE VARIES

Professor Meyer said the skin was the biggest organism in the body, and the most involved. Virtually every kind of tissue to be found in the body was in the skin, which was made up of four layers.

The actual constitution of the skin differed from place to place on the body, and in some places the epidermis—the top layer—was as thick as 1 m.m. and at others as thick as 15 m.m.

Many factors could upset or affect the balance of the skin.

Much research had been done on the presence of copper in the body. It appeared with other trace elements, but differed in concentration from place to place in the body—and even in concentration in different parts of particular spots.

Generally there were about 100 milligrams of copper in the body, with generally the highest concentration in the liver, followed by the kidneys and the brain.

The amount of copper varied from organ to organ, and then even in the organs themselves from spot to spot.

The same applied to the skin. At one spot more copper might be found than at another adjoining spot.

It was also a fact that darker skinned people generally had more copper in them than light skinned people. There were also differences in the concentrations between men and women, and women in pregnancy or menstruation.

In fact he could, through measuring the presence of copper in a woman, show at a certain stage whether or not she was pregnantt.

In addition many illnesses and conditions were linked with a more than normal concentration of copper in the blood, while only a few illnesses showed a decrease in copper concentration.

More copper could also be found at the source of a wound, because of the extra bleeding and blood supply to that wound.

Of spectrographic tests conducted to show the presence of copper in Mr. Lenkoe's wound, Professor Meyer said that all the test had proved was that copper was present in the tissue examined—but there was no quantitative basis to the test.

Questioned by Mr. Soggot, Professor Meyer said he preferred to answer questions put to him in Afrikaans. After a while Mr. Soggot reverted to English for his questions, with Professor Meyer answering them in Afrikaans.

He said hundreds of factors could influence the presence or concentration of copper in the body. Even in the case of two experimentally perfect, identical people there would be differences in copper content.

[From the Johannesburg (South Africa) Rand Daily Mail, June 17, 1969]

I Believe Burn Is Electric One

Among the things which affected the concentration were the time of the day, temperature, the type of work, nutrition, exposure to sun, illness, cold, age, and even the type of shoes worn by the subject.

The percentage of copper in the case of a normal person in ideal conditions would be about 0.8, but actual human content could vary from 50 to 150 milligrams.

He had made no special study of copper in the skin, but believed that actual concentrations of the element could vary tremendously from minute spot to spot—as they did elsewhere in the body.

FROM TOE

Dr. Jonathan Gluckman, the pathologist who conducted the second post-mortem on Mr. Lenkoe, said he made slides of tissue taken from Mr. Lenkoe's body and there was no possibility of them having become contaminated by other metals.

The skin taken from the toe was a good deal smaller than a section taken from the neck.

He had reconsidered the slides and wanted to back fully evidence given last week by the visiting American pathologist, Dr. A. R. Moritz, that "columns" shown in the slides indicated the passage of electric current.

Dr. Gluckman said he agreed with Dr. Moritz's conclusions that Mr. Lenkoe received a thermal electric burn. These conclusions were based on the special microscopic appearances of the toe, the results of the spectrographic analysis which disclosed an excess of copper residue in the toe when compared with the neck and the peculiar columnar arrangements of the changes in the skin only found in electrical burns.

He was satisfied in his mind beyond reasonable doubt—and in the absence of any evidence indicating anything else—that Mr. Lenkoe's injury was thermal electric one.

Referring to a German scientist quoted in the case by State witnesses, Dr. Gluckman said he wrote to the scientist, Boehm, in Munich, last week with certain questions. When he received no reply he telephoned Boehm on Friday, and established that Boehm's experiments so far were confined to charring conditions under high temperature.

Professor Boehm told him that he still hoped to study the effects of low voltage burns on the human body—the type of injury which he believed was being dealt with at the inquest.

Dr. Gluckman handed in to court an artist's representation of the metallisation that would be caused if a shock were administered to the skin through a paper clip—showing uneven points of electrical entry into the skin.

Questioned by Mr. Jordaan, he said he wanted to "leave the door open" but believed the burn was electrically caused. If other evidence were produced he could reconsider his position.

In the case in point it was the first time he had ever dealt with electric burns to the skin, but as a trained pathologist he was often called on to diagnose an occurrence on seeing a certain thing for the first time.

He could track down works on the subject, as he had done in the Lenkoe case. He had sent the microscopic slides off to Professor Moritz in America and had conferred at length with Professor Moritz.

Professor Moritz gave his opinion on the slides shortly before he flew out to South Africa to testify.

Recalled by the State, Mrs. Lenkoe said she and her husband used candles in their home, but there were street lights about 200 to 250 yards from the house.

Mr. Soggot objected to a question put by Mr. Jordaan, saying he was in effect cross-examining Mrs. Lenkoe—something which he himself had not done to a witness.

He also objected to more than one question being put to her at once, and Mr. Tukker said he wanted no arguments in his court.

Mr. Tukker said he had "had enough of your arguments" and ordered Mr. Jordaan to continue.

Questioned about the fear of Lesotho people—Mr. Lenkoe was a Lesotho national—she said she did not know any witchdoctor in Johannesburg. Therefore she need not be frightened of them.

She knew nothing about a wound on her husband's hand, or about evidence that might be produced that a witchdoctor had given him a powder to smear on it, to cure it.

IMPROPER

When the question of the adjournment was considered, Mr. Jordaan said Professor Meyer would be available on Tuesday, Wednesday, Thursday and—with some difficulty—on Friday afternoon.

Mr. Soggot said this would not give Mrs. Lenkoe's legal representatives sufficient time to obtain the necessary transcript of Professor Meyer's evidence, translate it, and study it.

Professor Meyer had often been almost inaudible during his evidence and the evidence would have to be studied.

After telephoning the official court recording contractors, it was stated that the record would be ready at the latest by Friday morning.

Mr. Jordaan said that if he could prepare within days to question Dr. Moritz at earlier hearings—as he had done—Mr. Soggot could prepare to question Professor Meyer at short notice.

INVOLVED

Mr. Soggot said it was "wholly improper" to expect him to prepare himself in such a short time.

Mr. Tukker, after a short adjournment, ruled that the hearing would proceed on Friday.

Mr. Soggot said he failed to see why the public prosecutor's caprices should dictate to

the court what should happen. There was no reason why the matter should now suddenly become an urgent one.

Mr. Jordaan said Professor Meyer was only available this week. If the hearing did not continue this week he would not be available for a few months to come.

Mr. Soggot said there was no possibility that he could proceed with the matter tomorrow and that he was involved with an already planned consultation on Friday afternoon.

Mr. Tukker insisted that the inquest be resumed on Friday afternoon and adjourned the court.

[From the Johannesburg (South Africa) Star, June 16, 1969]

WIFE TELLS OF MIDNIGHT DETENTION

The midnight detention in Soweto of James Lenkoe, a Lesotho national who later died in prison, was described by his widow in a Pretoria Inquest Court today.

Mrs. Julia Lenkoe told the magistrate, Mr. J. J. H. Tukker, that White men had woken her and her husband at 11:30 p.m. on March 5 and had taken her husband away without explanation. During the incident she had been pushed by a policeman, she had seen her husband hit on the head by a White man and an African had also hit him on the back of the head.

The inquest court is investigating the death of James Lenkoe, who was found hanging by his neck from a belt tied to the bars of his cell in Pretoria Local Prison on March 10.

Mrs. Lenkoe said that after hearing of her husband's death, policemen visited her to ask whether she could identify her husband's belt, but she had never been shown the belt.

SHOCK EVIDENCE

Previous evidence has been that Lenkoe was found dead after a day of interrogation by security police. Counsel for his widow has alleged that Lenkoe received an electric shock and expert medical evidence has been led in support of this.

Mrs. Lenkoe told the court that after hearing a knock on the door of their house on March 15 they opened it when a voice said it was the police.

Two hands grabbed her husband's wrists as he stood at the door and pulled him outside. When the men entered the house they asked her where she had stolen the money to enable them to live in such a good house. She told them the money had been earned through work.

USED FIST

Later, she saw an African constable hit her husband behind the head. The police then told her to go back to bed and when she remained standing at the door of the bedroom a White policeman pushed her into the room.

She said she then saw another White policeman hit her husband smartly three times with his fist on the top of his head. The men came into the bedroom and started searching. They found nothing but asked where goods they saw in wardrobes had been stolen from.

She said she looked out of the window and saw three vehicles—one of them a police van. As one of the vehicles had a T.P.A registration she knew she should make inquiries in Pretoria

BOTH CAME TO JOHANNESBURG TO GET LEGAL ADVICE: THE WIDOWS OF SORROW MEET

Two widows whose husbands died in Pretoria while being held for interrogation by the Security Police, met for the first time yesterday at a lawyer s office in Johannesburg where they had come for advice.

They are Mrs. Julia Lenkoe, 33, of Naledi, Soweto, whose husband, Mr. James Lenkoe, was found hanged in a cell in March. At the inquest on his death, which is still being heard in the Pretoria Magistrate's Court, an allegation was made that he was given an electric shock before he died.

The other is Mrs. Onica Kgoathe, 44, of Hebron, north of Pretoria. Her husband, Mr. Nichodimus Kgoathe, died in hospital on February 4 after being taken from the Silverton police cells where he was being held.

At the inquest on his death evidence was given that he had been assaulted, but the magistrate found that no one was to blame for his death.

Mrs. Lenkoe, a mother of two, told Post that she stopped working at a factory where she was a machinist on March 2, the day her husband was arrested by S. B. cops for questioning. He said she and her two children, Emelda, four, and Lorraine, two, were being looked after by her husband's uncle who also paid the rent for her four-roomed house.

"My husband," she said, "had been working for the railways for 19 years and was a barrier attendant at Park Station when he was taken away and died.

"It was a shock to me when the police woke us up on the night of March 5.

"They did not tell me why they were taking him away. I only learned next day that he was being held in Pretoria. I hired a car to go there and was told to come back on Sunday. I went there but I was told that I couldn't see him because he was a detainee."

Mrs. Lenkoe said the police came to her house again on March 11 and asked for her husband's pass. On March 13 she got a message from a neighbour that the police had been there to tell her that her husband had died.

Mrs. Lenkoe said her husband was buried in Leribe, Lesotho, where he was born and the funeral expenses were paid by the family. She is now being supported by her husband's uncle.

Mrs. Lenkoe was born in Soweto. She told POST that she intended looking for another job. She had no intention of remarrying because of the memory of her husband.

"I don't think I'll get someone who'll treat me as he did," she said.

Mrs. Kgoathe has eight children. She told Post that the eldest, a son, was working. Three others were in high school at the Hebron Training Institution. Two have now left the school as a result of their father's death. There is no money.

"I am now wondering how I am going to bring the children up. They were keen on schools," Mrs. Lenkoe said.

TRIALS DEBATE STARTS FURORE

A heated debate on the colour question last night followed addresses by four speakers on "Political Trials in South Africa" at the University of the Witwatersrand.

The speakers—three prominent members of the Johannesburg Bar and Professor John Dugard of the university's Law Department—addressed more than 200 students at a symposium organised by law students.

Professor Dugard, who opposed political trials, said in most cases the trials hoped to eliminate or discredit one's political foes according to some prearranged rules.

"In recent years," he said, "the trial process has been used for both propaganda and removal purposes."

His views were corroborated by the next two speakers. The last speaker's views, however, caused a furore which lasted for more than an hour after he finished speaking.

"Before we can question the necessity for political trials in South Africa, we have to decide whether it is necessary to deter people from political activities," he said.

"In this country we have societies with incompatible values, and there is no justification for the tyranny of the majority under the guise of democracy."

He said that justice was no doubt an ideal state in heaven, but in his view a definition of justice could be that "equals must be treated equally and unequals must be treated unequally for the particular situation."

Jeers from the audience followed this statement, and he defended his view by saying that although people were taxed differently, this was considered just.

"You must realise," the advocate continued, "that all human rights are subject to restriction. We want freedom of speech, but this would not entitle us to libel our neighbours.

"Freedom connotes only an absence of restraint," he said.

Political trials were necessary as South Africa represented the "vanguard of the colour revolution in the world. By an accident of history we had amongst us a people who did not have the know-how technologically to advance themselves.

"We need political trials to prevent agitators from overthrowing the social system," he said.

He concluded his speech amid jeers from the students, and the meeting was thrown open to questions from the floor.

[From the Johannesburg (South Africa) Star, June 13, 1969]

POLITICAL TRIALS ARE "DIALOG OF DEAF"

The exchange between prosecutor and accused in contemporary political trials in South Africa was often "a dialogue of the deaf," Mr. G. Bizos, a leading advocate, said in Johannesburg last night.

Mr. Bizos was one of four speakers at a symposium organized by the Law Students' Council at Wits. on political trials in this country.

Mr. Bizos said that the classical type of cross-examination seemed to have come to an end in political trials, at any rate as far as prosecutor and accused were concerned. Instead there was accusation and counter-accusation—"a dialogue of the deaf," in which each hurled moral accusations at the other.

To represent accused in political trials, particularly terrorist trials, was a difficult and onerous task, he said. Defending counsel's loyalty was often questioned by supporters of the status quo, and he was often criticized by opponents of the regime for not protesting vigorously enough.

TERRORISTS

"But the rights of unpopular causes should not be swept aside. There must be no untouchables in the legal profession. If terrorists, saboteurs and Communists cannot find anyone to defend them today, who will be next?"

Prof. John Dugard of Wits. said that from the Government's point of view the Treason Trial of 1956 had not been a success. "It dragged on too long—from 1956 to 1961—and the public lost interest." It evoked little support from the Whites, did not intimidate the non-Whites and caused the Government embarrassment abroad.

Political trials, he said, had two objectives: the removal of an opponent and the mobilization of public support against the accused.

But the Government had learnt from the Treason Trial—and by altering the rules was now fulfilling these two objectives. Some of the Government's innovations were: the introduction of summary trials to speed up the whole process, the replacing of "the vague definition of treason" by "wide definitions of sabotage and terrorism," and the detaining of suspects for interrogation.

PUBLICITY

Mr. P. J. Hare, another advocate, spoke of political trials in the Eastern Province during the period 1960 to 1964. Some 800 political trials had taken place in the Eastern Prov-

ince, he said, but they had received little publicity and few people knew of them.

A feature of these trials was the harsh sentences. One man, for example, was sentenced to five years' imprisonment, being a member of a banned organization and attending a meeting of the organization. But in the Transvaal men convicted of much more serious offences—sabotage, for example—had received similar sentences.

Mr. S. A. Cilliers, also a Johannesburg advocate, said that in South Africa the choice was "between control and revolution," and that the value of the law as it pertained to political offences was that it acted as a restraint and a regulator.

[From the Johannesburg (South Africa) Star, June 16, 1969]

SOUTH AFRICAN PRISON SYSTEM—IN BOOK FORM

CAPE TOWN.—The Department of Foreign Affairs has launched the world-wide distribution of a 126-page evaluation of the South African prison system—a system, it says, is based on United Nations requirements and which measures up to the "highest standards."

It is an attempt to give the world a comprehensive picture of the South African penal system and to meet direct and indirect criticism. It will be sent to South Africa's 36 overseas diplomatic missions and it will go to all foreign missions in South Africa as well as criminologists and penologists in different parts of the world.

The expensively produced book contains hundreds of photographs of conditions and activities in a wide variety of South African prisons.

Throughout, the publication makes no distinction between White and non-White prisoners. It concentrates on the men and women sentenced to imprisonment and deals only briefly with prisoners under arrest or awaiting trial.

It makes no mention of people "detained" in terms of certain South African security legislation.

DEVELOPMENTS

The book said that for the last 50 years South African prison authorities had been in constant touch with other prison authorities and academicians, thus keeping abreast with new developments in prison techniques and methods.

It said the administration and management of penal institutions in South Africa were based on legislation conforming to the United Nations standard minimum rules and the major objective of the system was "renabilitation with a view to preparing the prisoner for a normal and productive life on release."

The writer conceded that the checks and balances in the system sometimes failed, that irregular treatment of prisoners sometimes occurred and that the system was not foolproof.

The following are some of the points made in the publication:

The picture painted by overseas critics of the South African penal system was without foundation.

The Government never attempted to conceal prison conditions and had frequently granted access to prisons to "properly qualified observers." These included judges, magistrates, international Red Cross investigators, Members of Parliament and overseas criminal and penal experts.

The imposition of "cruel, inhuman or degrading punishment, or punishment involving placing the prisoner in a dark cell for disciplinary or other offences, is not only a crime, but cannot be concealed . . . dark cells do not exist."

Medical services and food supplies were governed by the standard minimum rules, which were strictly applied.

Prisoners' rights and privileges were set out in a handbook which was handed to prisoners on admission.

[From the Johannesburg (South Africa) Rand Daily Mail, June 14, 1969]

STATE MAY INVESTIGATE KGOATHE CASE

The attorney-general of the Transvaal is considering possible further investigations into the death of an African Terrorism Act detainee, Mr. Nichodimus Kgoathe, 47.

A spokesman for the Attorney-General's office said yesterday the record of the inquest into Mr. Kgoathe's death was still being examined.

At the Pretoria inquest, a district surgeon testified that Mr. Kgoathe, whom he had examined in the Silverton police cells shortly before his death, had marks on his body which could have been caused by a sjambok and wounds which could have come from an assault with the buckle of a belt.

BODY PAINS

Sergeant Gildenhuys of Silverton where Mr. Kgoathe was detained before being taken to the H. F. Verwoerd Hospital on January 21, said Mr. Kgoathe complained of body pains. Instructions were given for a doctor to be called.

He saw Mr. Kgoathe again at midday and he still complained of pain. Mr. Kgoathe told him he was assaulted by Security Police during interrogation.

Mr. Kgoathe did not want to lay a charge and refused to make a statement. An entry to that effect was then made in the police records, Sergeant Gildenhuys said.

In statements before the court, it was said that Mr. Kgoathe sustained certain injuries when he slipped and fell while having a shower at police headquarters on January 16.

A post-mortem report said the cause of death on February 4 was bronchial pneumonia.

The magistrate found that, in the light of the evidence and statements before the court, he was not in a position to conclude that any person was responsible for Mr. Kgoathe's death.

As standard procedure, a record of the inquest was submitted to the Attorney-General's office for consideration.

Should further investigations be considered necessary, instructions will be issued to the Chief of the C.I.D. General D. J. Bester.

[From the Johannesburg (South Africa) Post, June 15, 1969]

TERROR ACT DETAINEES WILL BE TRIED

A senior officer at the headquarters of the Security Police in Pretoria confirmed yesterday that the people held during recent S.B. swoops were being detained under the Terrorism Act—and not the 180-day clause as reported earlier.

He said he expected some of the detainees to appear in court under the Act.

"But not all of them will be charged," he added.

As the matter will soon be before the courts the officer declined to say more.

The officer was confirming a statement made by Brigadier P. J. "Tiny" Venter, head of the Security Police, to a daily newspaper on Friday.

Brigadier Venter was commenting on the arrest and detention of Miss Shanti Naidoo of Doornfontein on Friday.

He explained that the detainees, who include photographer Peter Magubane, Winnie Mandela, Joyce Sikakane, a journalist and others were being held because of alleged activities in the African National Congress.

NAMES OF 25 HELD IN REEF SWOOPS

This week Post was able to get the names of 25 of the people held under the Terrorism Act after the recent police swoops in Soweto and Alexandra Township.

But POST could not get the full names of five of them. Relatives are still guessing where they are being held.

Some said that they had been allowed to take clean clothes and cigarettes to their relatives.

Mr. Mendel Levin, a Johannesburg attorney has been briefed on behalf of Mrs. Winnie Mandela and others.

Detainees from Soweto: Winnie Mandela, Peter Magubane, Joyce Sikakane, Mrs. Mabena, David Motau, Paulus Mashaba, Albert Mashamba, Mr. Singo, Mohale Maharyele, Mr. Shabangu, Mr. Monnapula, Esther Nkosi, Charlotte Nasinga, Joseph Zikalala, Johannes Thage, David Tshotetsi, George Themba and Boyce Ndungwane.

From Alexandra: Joseph Skoshana, Douglas Nvemva, Virginia Nkomo, Joyce Molefi and Martha Dlamini.

Another detainee is Ashanti Naidoo, a clerk of Doornfontein.

NEWSMAN HELD BY SECURITY BRANCH COPS

(By Percy Qoboza)

The security police yesterday detained one of South Africa's top African photographers, Mr. Peter Magubane. He is reported to have been held under the 180 days detention clause.

Mr. Magubane, who has been overseas on several occasions and whose photographs earned him international recognition and awards was taken from his place of employment.

Two cars bearing Pretoria registration numbers arrived at his Diepkloof home at 3 p.m. The police carried out an intensive two-and-a-half hours search before whisking him away to Pretoria.

NINE HELD

Mr. Magubane's detention now brings the total number of known people taken by the security police in Soweto to nine. Those taken include Mrs. Winnie Mandela, wife of Rivonia industrialist Nelson Mandela who is serving a life sentence on Robben Island, and Miss Joyce Sikakane, a reporter and colleague of Peter Magubane.

After the first swoop in Soweto, the chief of the Security Branch, Brigadier Tiny Venter, said that all the people detained were being held in connection with activities of the African National Congress.

[From the Johannesburg (South Africa) Rand Daily Mail, June 14, 1969]

INDIAN WOMAN IS HELD UNDER TERRORISM ACT

Security police detained an Indian woman, Miss Shanti Naidoo, of Rockey Street, Doornfontein, at her home yesterday.

Miss Naidoo, 34, was detained under the Terrorism Act.

It is believed that about 40 people have been detained under the Act recently in connection with alleged activities of the banned African National Congress.

Brigadier P. J. "Tiny" Venter, head of the Security Police, confirmed yesterday that Mr. Peter Magubane, the African photographer who was detained on Thursday, was being held in connection with the alleged activities of the A.N.C.

Brigadier Venter corrected a statement made by one of the officers who detained Mr Magubane to the effect that he was being held under the 180-day Detention Clause. He said that Mr. Magubane was being held under Section Six of the Terrorism Act, which defines the "detention of terrorists and certain other persons for interrogation."

The security chief declined to discuss whether there was any possible connection between the detention of a large number of non-whites in connection with alleged ANC activities and the detention of a British subject, Mr. Philip Golding, under the Terrorism Act.

He said as the matter was likely to come to court the subject was *sub judice*. He added that none of the non-Whites detained in

connection with alleged A.N.C. activities was being held under the 180-day clause, that is as potential witnesses.

[From the Johannesburg (South Africa) Star, June 13, 1969]

ANOTHER AFRICAN NEWSMAN ARRESTED

Another Soweto resident has been arrested by the Security Police.

Mr. Peter Magubane, a Press photographer and winner of several photographic awards, was detained yesterday. He lives at Diepkloof Township within the Soweto complex.

He is the second African newspaperman in Johannesburg to be detained by the Security Police. Another journalist, Miss Joyce Sikakane, was detained last month with Mrs. Winnie Mandela and others.

A day before the detention of Mrs. Mandela, Miss Sikakane, Mr. David Motau and Paul Matshaba, Mr. Magubane was picked up but later released.

He recently visited Pretoria on several occasions, in an effort to give parcels to Miss Sikakane and Mrs. Mandela.

[From the Johannesburg (South Africa) Rand Daily Mail, June 17, 1969]

WINNIE MANDELA WELL, SAY POLICE

The Security Police have given an assurance that if the condition of Mrs. Winnie Mandela—at present being detained under the Terrorism Act—shows any deterioration, a specialist will be called in for a consultation.

Mrs. Mandela, wife of the Robben Island prisoner, Nelson Mandela, is said to suffer from a cardiac condition.

Mr. Mendel Levin, a Johannesburg lawyer, who informed the Security Police of Mrs. Mandela's condition, said yesterday that the police told him Mrs. Mandela was examined and found to be in a good state of health.

WAR VETERANS BEING GOUGED BY HIGH INTEREST

HON. RAY J. MADDEN

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 24, 1969

Mr. MADDEN. Mr. Speaker, I have received a great number of letters and complaints from citizens in my district in opposition to the unnecessary advances of interest rates by the big eastern bank monopoly.

The protests that have been coming in to Members of Congress in both bodies against high interest gouging and the fabulous, and in many instances, fraudulent loopholes given to big oil, big foundations, big real estate, and so forth, are almost totally ignored by the leaders of the Ways and Means Committee, and many Members of Congress. This morning, I received a letter from Edmund A. Shelley, of the Shelley Real Estate and Insurance Agency of Highland, Ind., which I submit for the information of our colleagues. This letter is merely one of dozens received in my office complaining about interest rates, high taxes, tax loopholes, and so forth.

The letter follows:

THE SHELLEY AGENCY,
Highland, Ind., May 27, 1969.

Congressman MADDEN,
House of Representatives,
Washington, D.C.

DEAR CONGRESSMAN MADDEN: This letter is about the problem of availability of money for financing guaranteed VA and FHA loans.

Keeping in mind the fact that there is no, or very little, risk involved by mortgage companies when they make these loans. Even with this insurance or guarantee, these mortgage companies, in the face of constantly rising interest rates, are still making these loans at an outrageous discount rate.

As a large percentage of these lenders are life insurance companies, it might be well to check and see where this money is going. Life insurance premiums are not coming down! Dividends are not going up! To this citizen, all the above merely adds up to subsidized profits to the large lenders because of the Government Guaranteed basis on which these loans are made.

As a suggested cure for this unfair situation, I believe that ALL discounts should be outlawed on federal insured loans and if the mortgage institutions withdraw from the mortgage market, then the Federal Government should lend on these insured mortgages direct.

I am by no means a socialist, but where else can the Federal Government get a return of 7½% on its money? When private industry proves itself incapable of doing the job, then the government is usually forced to step in.

When we also consider that a large percentage of present day sellers are veterans of World War II, it seems that it is poor thanks for serving their country by being victimized by ruinous discounts. This situation is also part of the cause of the present rising market on real estate. Adding to the inflationary spiral and causing our present day veteran buyers to pay more for housing after serving their country.

Also conventional mortgages are going at a 7% interest rate in the Chicago area, against 7½% for FHA and GI (guaranteed) loans. I believe this is the first time conventional loans have gone at a lower rate than GI or FHA loans.

Very truly yours,

EDMUND A. SHELLEY.

FREEDOM BECOMES ILLEGAL

HON. JOHN R. RARICK

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 24, 1969

Mr. RARICK. Mr. Speaker, the recent decision by the U.S. Fifth Circuit Court of Appeals represents some of the more tragic judicial legislation in the public school field since our country became a Republic.

Who would ever believe that Federal judges, sworn to uphold the Constitution, would rule that freedom of choice in public education is illegal unless it accomplishes some bureaucratic theory of "desired goals."

In so ruling the U.S. court of appeals reversed 36 parish school boards and two city school systems, all in the State of Louisiana. Back in 1961, Federal judges had given their stamp of approval to the "freedom of choice plan," under which many of these boards were operating in good faith.

Not only is it becoming more and more obvious that Federal judges are being forced to run schools—a field in which they have no training or experience—but it is forcing them to trample under foot the greatest American birthright which it has traditionally been their duty to defend; that is, freedom.

When courts decree "freedom is a crime" it is later than most people would like to admit. Chief Judge E. Gordon West, of the Eastern District of Louisiana, in scathing comments accompanying the Fifth Circuit mandate plainly stated that most Americans know—that there is no law to support the decision.

Mr. Speaker, my remarks will be followed by the court decision in No. 27391 and news clippings, one outlining the handicaps of abolishing a school system in the South designed to meet local needs with the resulting loss of jobs and opportunities to educated, willing-to-work Americans.

The material follows:

[No. 27391]

JOYCE MARIE MOORE, ET AL., PLAINTIFFS-APPELLEES, VERSUS TANGIPAHOA PARISH SCHOOL BOARD, ET AL., DEFENDANTS-APPELLANTS

[Civil Action No. 15556]

APPEAL FROM THE UNITED STATES DISTRICT COURT FOR THE EASTERN DISTRICT OF LOUISIANA

(May 28, 1969)

Before Brown, Chief Judge, Godbold, Circuit Judge and Cabot, District Judge.

GODBOLD, Circuit Judge: We have before us appeals from three district court decrees covering thirty-six parish school systems and two city school systems, all in the state of Louisiana. These cases were submitted and argued April 21, 1969, two years after the en banc decision of this court in *Jefferson II*,[1] and eleven months after the decision of the United States Supreme Court in *Green v. School Bd. of New Kent County*.[2] All of the school districts involved are under the uniform decree that *Jefferson II* required for school systems in the Fifth Circuit operating under freedom of choice plans.

I. BACKGROUND

Twenty-nine of the districts are appellees in appeals from an en banc decision [3] of the District Court for the Western District of Louisiana, which declined to order modification, requested on the authority of *Green*, in existing desegregation plans.[4]

Eight parishes are appellees in similar appeals from a decree of the District Court for the Eastern District of Louisiana.[5]

The Tangipahoa Parish School Board is appellant in an appeal from another decree of the Eastern District [6] directing it to change from a *Jefferson*-decree freedom of choice plan to one calling for the assignment of students "by adoption of geographic zones, or pairing of classes, or both."

We begin with principles both basic and familiar to all who are concerned with the complex problem of ending the dual school system in the South. There can be no doubt of the duty of school boards to act affirmatively to abolish all vestiges of state-imposed segregation of the races in the public schools *United States v. Indianola Municipal Separate Sch. Dist.*, 5 Cir. 1969, ——— F.2d ——— [No. 25655, Apr. 11, 1969]; *Henry v. Clarksdale Municipal Separate Sch. Dist.*, 5 Cir. 1969 ——— F.2d ——— [No. 23255, Mar. 6, 1969]; *Adams v. Mathews*, 403 F.2d 181 (5th Cir. 1968); *Jefferson II, supra.*

The respective burdens and roles of school boards and district courts are articulated in *Green* itself:

"The burden on a school board today is to come forward with a plan that promises realistically to work, and promises realistically to work *now*.

"The obligation of the district courts, as it always has been, is to assess the effectiveness of a proposed plan in achieving desegregation. There is no universal answer to complex problems of desegregation; there is obviously no one plan that will do the job

---

Footnotes at end of article.

in every case. The matter must be assessed in light of the circumstances present and the options available in each instance. It is incumbent upon the school board to establish that its proposed plan promises meaningful and immediate progress toward disestablishing state-imposed segregation. It is incumbent upon the district court to weigh that claim in light of the facts at hand and in light of any alternatives which may be shown as feasible and more promising in their effectiveness. Where the court finds the board to be acting in good faith and the proposed plan to have real prospects for dismantling the state-imposed dual system "at the earliest practicable date," then the plan may be said to provide effective relief. Of course, where other, more promising courses of action are open to the board, that may indicate a lack of good faith; and at the least it places a heavy burden upon the board to explain its preference for an apparently less effective method. Moreover, whatever plan is adopted will require evaluation in practice, and the court should retain jurisdiction until it is clear that state-imposed segregation has been completely removed." 20 L. Ed. 2d at 724.

If under an existent plan there are no whites, or only a small percentage of whites, attending formerly all-Negro schools, or only a small percentage of Negroes enrolled in formerly all-white schools, then the plan, as a matter of law, is not working. *Henry v. Clarksdale, supra; Adams v. Mathews, supra.*

The good faith of a school board in acting to desegregate its schools is a necessary concomitant to the achievement of a unitary school system, but it is not itself the yardstick of effectiveness.[7]

The majority of the school boards involved in these appeals did not begin any type of desegregation of their schools prior to being ordered to do so for the 1965–1966 school year.[8] All have been operating for the 1967–68 and 1968–69 school years under *Jefferson*-decree freedom of choice plans for pupil assignments, which under numerous decisions of this circuit are required to be uniform.

All now know, judges, lawyers and school boards, that freedom of choice, *Jefferson* variety or otherwise, is not a constitutional end in itself but only a means to the constitutionally required end of the termination of the dual school system, *Green, supra; Jefferson II, supra.* Since *Green* this court explicitly has rejected freedom of choice plans that were found to be demonstrably unsuitable for effectuating transition from dual school systems to unitary nondiscriminatory systems. *See, e.g., Anthony v. Marshall County Bd. of Educ.*, 5 Cir. 1969, ——— F. 2d ——— [No. 26432, Apr. 15, 1969]; *United States v. Greenwood Municipal Separate School Dist.*, 406 F.2d 1086 (1969). *See also Graves v. Walton County Bd. of Educ.*, 403 F.2d 189 (5th Cir. 1968); *Bd. of Public Instruction of Duval County v. Braxton*, 402 F.2d 900 (5th Cir. 1968).

II. THE WESTERN DISTRICT CASES

The Western District Court, sitting en banc, found that the operation of *Jefferson*-type freedom of choice in the school districts before it "has real prospects for dismantling the dual system at the earliest practicable date. . . ." and concluded that the best method available to eradicate the dual system of schools in these districts is freedom of choice.[9]

Appellants in the Western District cases contend that the statistical record manifestly reveals that the dual system continues and that freedom of choice has failed to produce meaningful results. They urge that the statistical record requires reversal when considered in light of *Green* and the cases in this circuit following *Green.*

The appellee school boards insist that *Green* does not foreclose the continuation of their *Jefferson*-decree freedom of choice plans. They read the statistics as revealing that progress, though in most instances statistically nominal, has been made toward the elimination of the dual system. They urge that the district court appropriately could conclude that the uniform *Jefferson*-decree freedom of choice plans under which they are operating do provide the effective relief referred to by *Green,* because, in the language of *Green,* they are operating in good faith and under plans which have real prospects for dismantling the state-imposed dual system "at the earliest practicable date." 20 L. Ed. 2d at 724.

We turn to the facts. In the Appendix to this opinion we set out the best statistical data made available to this court for the 1967–68 and 1968–69 school years, and such data as presently is available for 1969–70 (recogizing that the latter necessarily is not complete: *see* note 2. to the Appendix.) In the current school year, 1968–69, in every one of these school districts there is at least one all-Negro school, in most districts many more than just one.

In all of the twenty-nine districts, for the current school year, only two white students exercised their freedom of choice by electing to attend all-Negro schools. To the extent data is available for the 1969–70 school year, from choice forms already exercised and reported to us since oral argument of these cases, no change of substantial consequence in this situation can be projected. *See* Appendix.

The number of Negro students attending formerly all-white schools has risen slightly since the adoption of the *Jefferson*-decree plans, but for the current school year the percentage this represents of the total Negro student population is minimal—only five of these twenty-nine systems have more than ten percent of their Negro children attending formerly all-white schools. Four parishes have less than one percent integration.

In no instance does the data made available to us for expected 1969–70 pupils assignment vary the situation existent for the current year sufficiently that compliance with constitutional standards can be projected.

We do not abdicate our judicial role to statistics. But when figures speak we must listen. It is abundantly clear that freedom of choice, as presently constituted and operating in the Western District school districts before us, does not offer the "real prospect" contemplated by *Green,* and "cannot be accepted as a sufficient step to 'effectuate a transition' to a unitary system." 20 L.Ed. 2d at 726–727.

In addition the boards are required to examine other alternatives. The presence of other and more promising courses of action at the least may indicate lack of good faith by the board and place a heavy burden on the board to explain its preference for an apparently less effective method. *Green,* at 20 L.Ed. 2d 724. If there are reasonably available other ways promising speedier and more effective conversion to a unitary non-racial system, freedom of choice must be held unacceptable, *Id.* at 725. *Anthony v. Marshall County, supra; United States v. Greenwood, supra.*

We reverse and remand these cases to the district court in order that a new plan may be put into effect in each school district. The obligation is upon the school boards to come forward with realistic and workable plans, and the assessment and initial review and approval or rejection of each plan is for the district court, not for this court, removed as we are from "the circumstances present and the options available in each of [twenty nine] instance[s]." *Green, supra,* 20 L.Ed. 2d at 724; *Anthony v. Marshall County, supra; United States v. Greenwood, supra; Adams v. Mathews, supra; Bd. of Public Instruction of Duval County v. Braxton, supra; Henry v. Clarksdale, supra.*[10] This is not to say that the district court on the scene may not, if it thinks best, require a uniform approach by all districts.[11]

There are many methods and combinations of methods available for consideration, either on a district-by-district basis or on a uniform basis if the district court so directs. Some of these are geographic zoning if it tends to disestablish the dual system, *Davis v. Bd. of School Comm. of Mobile, Ala.*, 393 F.2d 690 (5th Cir. 1968),[12] pairing of grades or of schools, educational clusters or parks, discontinuance of use of substandard buildings and premises, rearrangement of transportation routes, consolidation of schools, appropriate location of new construction, and majority-to-minority transfers. The resources of the Educational Resources Center for School Desegregation, at New Orleans, are available to the boards and may be utilized.[13] We set out in the margin the approach recently taken by the United States District Court for the District of South Carolina, sitting en banc in *Whittenberg v. Greenville County School District,* ——— F. Supp. ——— (D.C. S.C. March 31, 1969) a case concerning 22 of the 93 school districts in South Carolina.[14]

We are urged by appellants to order on a plenary basis for all these school districts that the district court must reject freedom of choice as an acceptable ingredient of any desegregation plan. Unquestionably as now constituted, administered and operating in these districts freedom of choice is not effectual. The Supreme Court in *Green* recognized the general ineffectiveness of freedom of choice.[15] But in that case, concerning only a single district having only two schools, the court declined to hold "that 'freedom of choice' can have no place in . . . a plan" that provides effective relief, and recognized that there may be instances in which freedom of choice may serve as an effective device, and remanded to the district court with directions to require the board to formulate a new plan.[16]

While we have directed most of our discussion to pupil assignment, integration of faculty is of equal importance, and the boards must come forward with affirmative plans in that regard. "[T]he school board must do everything within its power to recruit and reassign teachers so as to provide for a substantial degree of faculty integration," which includes withholding of teacher contracts if necessary, *United States v. Indianola, supra; United States v. Greenwood, supra.* The pattern of teacher assignments to a particular school must not be identifiable as tailored for a heavy concentration of either Negro or white students. *Davis v. Mobile County, supra; United States v. Greenwood, supra; United States v. Indianola, supra.*

Also a plan which will "effectuate a transition to a racially nondiscriminatory school system" must include effectual provisions concerning staff, facilities, transportation and school activities—the entire school system.

III. THE EASTERN DISTRICT CASES

In the Eastern District cases the district judge concluded that freedom of choice was working well and was the best available method for the school boards to reach their constitutional obligations.

Appellants and the school boards make the same contentions in these cases as were made in the Western District cases. Again, the statistical evidence makes abundantly clear that the freedom of choice plans as presently constituted, administered and operating, are failing to eradicate the dual system. *See* Appendix. For the current year not one of these districts has as many as ten percent of its Negro students enrolled in formerly all-white schools. The 1969–70 data shows that Iberville Parish has achieved ten percent, up from 9.2% for the current year.

Footnotes at end of article.

In all these districts no white student chose to attend an all-Negro school in the current year, and none has chosen an all-Negro school for 1969–70. Forty-six all-Negro schools exist in these parishes in 1968–69. As in the Western District, the partial 1969–70 data supplied to this court does not indicate any real chance of attainment of constitutional standards in 1969–70. The boards must adopt new plans.

In addition, in evaluating the plans before him the district judge did not apply the standard of whether the plans are working but rather that of whether they could work. This is an erroneous standard. When testing the sufficiency of a plan that has been in operation sufficiently long to produce meaningful empirical data, that data must be considered and a determination made of whether the plan is effectuating a transition to a racially non-discriminatory school system. And *Green* requires the district judge to weigh the existing plan in the light both of the facts at hand and of any alternatives which may be shown as feasible and more promising. The district court must consider the alternatives.

Also the district court erred in holding that segregation which continues to exist after the exercise of unfettered free choice is "de facto" segregation and as such constitutionally permissible.

These cases must be reversed and remanded under the same directions as the Western District cases.

IV. THE TANGIPAHOA PARISH CASE

Pursuant to *Green* the district court required the Tangipahoa School Board to present a new plan to replace the existing freedom of choice plan which on October 15, 1968 it found to be ineffective. The court conducted hearings, similar to those now mandated to be held in the Western District and for the other Eastern District cases, and approved a new plan. This court has said repeatedly what we say in this opinion, that the responsibility for structuring and administering existing and new plans for disestablishing the dual system is upon the school boards and the administrators, and the primary responsibility for assessing and reviewing the plan and adopting necessary changes is upon the district court on the scene rather than at the appellate level. In the *Tangipahoa* case the district court correctly applied this policy, after a review of the facts. We affirm its decision.

V

Moore v. *Tangipahoa Parish*, No. 27391, is affirmed. All other cases are reversed and remanded to the district courts with the following instructions.

(a) These cases shall receive the highest priority.

(b) No later than thirty days from the date of the mandate each school board shall submit to the district court a proposed new plan for its school district to be effective with the commencement of the 1969–70 school term. Provided, however, if the district court desires to require a uniform type of plan, or a uniform approach to the formulation of plans, or issue instructions to the boards of methods that it will or will not consider, or other appropriate instructions, it shall enter its order to that effect within ten days of the date of the mandate. If the district court enters such an order the maximum time for filing plans shall be thirty days from the date of such order.

(c) The parties shall have ten days from the date a plan is filed with the district court to file objections or suggested amendments thereto.

(d) For plans as to which objections are made or amendments suggested, or which in any event the district court will not approve without hearings, the district court shall commence hearings beginning no later than ten days after the time for filing objections has expired.

(e) New plans for all districts effective for the beginning of the 1969–70 school term shall be completed and approved by the district courts no later than July 25, 1969.

Because of the urgency of formulating and approving plans to be effective for the 1969–70 school term it is ordered as follows. The mandate of this court shall issue immediately. This court will not extend the time for filing petitions for rehearing or briefs in support of or in opposition thereto. Any appeals from orders or decrees of the district court on remand shall be expedited. Any appeal may be on the original record. The record on any appeal shall be lodged with this court and appellant's brief filed, all within thirty days of the date of the order of decree of the district court from which the appeal is taken.

FOOTNOTES

[1] United States v. Jefferson County Bd. of Educ., 372 F. 2d 836 (5th Cir. 1966) [hereinafter, *Jefferson I*], *aff'd with modifications on rehearing en banc*, 380 F. 2d 385 (5th Cir.) [hereinafter, *Jefferson II*], *cert. denied sub. nom.*, Caddo Parish Sch. Bd. v. United States, 389 U.S. 840, 19 L. Ed. 2d 103 (1967).

[3] Conley v. Lake Charles Sch. Bd., 293 F. Supp. 84 (W.D. La. 1968).

[4] By order of January 9, 1969, without opinion, this court, after a poll of its members, denied the motion of appellants in the Western District cases that those cases be heard by the court en banc. Cleveland v. Union Parish Sch. Bd., 406 F. 2d 1331 (5th Cir. 1969). The dissenting opinion to that order appears in 406 F. 2d at 1333.

Both the Western District and the Eastern District cases were among those consolidated on appeal in Adams v. Mathews, 403 F. 2d 181 (5th Cir. 1963).

[5] —F. Supp. ——— (E.D. La. 1969).

[6] —F. Supp. ——— (E.D. La. 1969).

[7] "Here the district court found that the school board acted in good faith. But good faith does not excuse a board's non-compliance with its affirmative duty to liquidate the dual system. Good faith is relevant only as a necessary ingredient of an acceptable desegregation plan."

Henry v. Clarksdale Municipal Separate Sch. Dist., *supra* at ——— [Slip op. at 2].

[8] Twenty-two of the school boards were ordered to integrate their school systems beginning with the 1965–66 school year. Two boards commenced with the 1964–65 school year. Nine began in 1966–67, and five did not begin until the 1967–68 school year.

[9] "With every ounce of sincerity which we possess we think freedom of choice is the best plan available. We are not today going to jeopardize the success already achieved by casting aside something that is working and reach blindly into an experimental 'grab big.'" 293 F. Supp. at 88.

[10] See the concurring opinion of Judge Rubin in *Duval County:*

"*Green* emphasizes that school officials have a continuing duty to take whatever action may be necessary to provide 'prompt and effective disestablishment of a dual system.' If one method is ineffective, they are to try another. Hence, no single plan is or can be judicially approved as a catholicon.

"*Brown I* and all of its successors, as well as *Green*, *Monroe* and *Raney*, contemplate that school plans will be prepared by local officials and school boards, not by courts. But if local officials fail to assume their responsibilities under the Constitution, district courts must continue to attempt to formulate the plans that should be prepared by school officials based on their expert knowledge, training and skill." (Citations omitted.) 402 F. 2d at 908.

[11] See, e.g. the discussion of Whittenberg v. Greenville County School District, (D.C. S.C., March 31, 1969), at note 14, *infra*, and accompanying text.

[12] But a plan which contributes toward preserving segregated schools by incorporating zones corresponding to racially separate residential patterns is unacceptable, United States v. Indianola, *supra*.

[13] A hearing has not yet been held on whether the Center's plan will be adopted. At least two district judges in Louisiana have ordered the use of the facilities of this center. Tangipahoa Parish, before us on this appeal, was ordered on October 15, 1968 to produce a plan for the 1969–70 school year for unitary operation of its school system. When the school board informed the court that it was unable to find a plan better than the one in existence, the court appointed the Center to prepare a plan.

In Harris v. St. John the Baptist Parish Sch. Bd., Civ. No. 13212 (E.D. La. Apr 23, 1969), the school board, after it did not come up with a plan of its own, was ordered to consult with the Center. A hearing was set on the Center's plan. The board came in with two plans of its own. The district judge accepted one of the board's plans, which incorporated some of the Center's suggestions.

[14] The district court directed that all school districts submit to the Office of Education, HEW, their existing method of operation, along with any changes proposed by them, and to seek to develop in conjunction with HEW an acceptable plan of operation "conformable to the constitutional rights of the plaintiffs . . . and consonant in timing and method with the practical and administrative problems faced by the particular districts." If a plan is agreed upon by the school district and HEW, the South Carolina district court will approve it unless the plaintiffs show it does not meet constitutional standards. If the school district already is operating under a plan approved by HEW, it will be adopted by the court absent a showing of constitutional infirmity. If no agreed plan is developed, the court will hold a hearing and enter its decree, considering the respective proposed plans of the district, the plaintiffs, and HEW.

[15] The Supreme Court said: "[T]he general experience under 'freedom of choice' to date has been such as to indicate its ineffectiveness as a tool of desegregation." 20 L.Ed. 2d at 725.

See also the opinion of District Judge Heebe in Moses v. Washington Parish School Board, 276 F. Supp. 834 at 851–852 (E.D. La. 1967):

"If this Court must pick a method of assigning students to schools within a particular school district, barring very unusual circumstances, we could imagine no method more inappropriate, more unreasonable, more needlessly wasteful in every respect, than the so-called 'free-choice' system.

"Under such a system the school board cannot know in advance how many students will choose any school in the system—it cannot even begin to estimate the number. The first principle of pupil assignment in the scheme of school administration is thus thwarted; the principle ought to be to utilize all available classrooms and schools to accommodate the most favorable number of students; instead, this aim is surrendered in order to introduce an element of 'liberty' (never before part of efficient school administration) on the part of the students in the choice of their own school. Obviously there is no constitutional 'right' for any student to attend the public school of his own choosing. But the extension of the *privilege* of choosing one's school, far from being a 'right' of the students, is not even consistent with sound school administration. Rather, the creation of such a choice only has the result of demoralizing the school system itself, and actually depriving every student of a good education.

"Under a 'free-choice' system, the school board cannot know or estimate the number of students who will want to attend any school, or the identity of those who will eventually get their choice. Consequently,

the board cannot make plans for the transportation of students to schools, plan curricula, or even plan such things as lunch allotments and schedules; moreover, since in no case except by purest coincidence will an appropriate distribution of students result, and each school will have either more or less than the number it is designed to efficiently handle, many students at the end of the free-choice period have to be reassigned to schools other than those of their choice—this time on a strict geographical-proximity basis, see the *Jefferson County* decree, thus burdening the board, in the middle of what should be a period of firming up the system and making final adjustments, with the awesome task of determining which students will have to be transferred and which schools will receive them. Until that final task is completed, neither the board nor any of the students can be sure of which school they will be attending; and many students will in the end be denied the very 'free-choice' the system is supposed to provide them." (Emphasis in original.)

[16] *See* Davis v. Mobile County, *supra*, in which this court required a zone plan for urban areas but left freedom of choice in effect in rural areas. *See also* the dissenting opinion to the denial of en banc hearing in the instant cases, 406 F.2d at 1338–39: "I am not suggesting that freedom of choice should necessarily be abandoned in favor of zoning . . . . There is nothing necessarily unconstitutional about freedom of choice or geographic zoning or a combination of the two."

[From the Morning Advocate, Baton Rouge, La., June 10, 1969]

JUDGE WEST URGES SCHOOLS TO APPEAL INTEGRATION RULE

(By Gerald Moses)

U.S. Dist. Judge E. Gordon West, relaying an appeals court ruling for eight parish school boards to end the "freedom of choice" desegregation plan, Monday urged the school boards to appeal the decision to the U.S. Supreme Court.

"I believe a full review of this entire matter by the Congress and by the Supreme Court of the United States is long past due," Judge West said.

"The issue is clear and serious. The issue is simply whether or not the federal courts, by judicial decree, shall be allowed to continue to substitute their version of what they think the law ought to be or what the legislative branch of the government has decreed it to be."

In an eight-page brief, Judge West entered his sharpest criticism of the 5th U.S. Circuit Court of Appeals on school desegregation matters. He dutifully relayed the appellate court's order to the school boards.

FEDERAL COURT INEPT

"I make these observations because I fear for the very future of the public school system in this country if the federal courts, who have clearly demonstrated their ineptness at running public school systems, persist in their present policy of governing school boards by personal decree rather than simply requiring them to administer the schools in accordance with the clear language of the law as enacted by Congress."

Judge West stressed in his remarks that the 5th Circuit decision to junk the "freedom of choice" desegregation plan is based on neither earlier decisions of the U.S. Supreme Court nor the present civil rights laws as enacted by Congress.

He cited a Supreme Court Ruling (Green vs. School Board of New Kent County) in which the highest court refused to disqualify the "freedom of choice" plan of desegregation.

And he quoted section 401 of the 1964 Civil Rights Act, which states ". . . 'desegregation shall not mean the assignment of students to public schools, in order to overcome racial imbalance," and also the section forbidding the busing of students from one school district to another in order to achieve racial balance.

The 5th Circuit Court of Appeals, Judge West said, cited "no legal authority for their conclusion" that "de facto" segregation is unconstitutional "because they could find none."

DE FACTO PERMISSIBLE

"'De facto' segregation," Judge West continued, "is under the present state of law as enacted by Congress, clearly permissible."

West, who is chief district judge for the Eastern District of Louisiana, also quoted the appellate court as saying:

"If under an existent plan there are no whites or only a small percentage of whites attending formerly all-Negro schools, or only a small percentage of Negroes enrolled in formerly all-white schools, then the plan, as a matter of law, is not working."

"As a matter of what law?" Judge West asked. He said the only law the appellate court could cite "is two of the 5th Circuit's prior decisions."

LAWS COMPLIED WITH

Judge West said all constitutional and statutory laws are complied with "when all students, regardless of race or color, are, in fact, allowed to attend the school of their free choice.

"There has been no showing of any kind that such is not the case in all of the districts involved here," he said.

Judge West's order concerns only the school boards of St. Helena, Iberville, Pointe Coupee, Livingston, West Baton Rouge, West Feliciana and East Feliciana parishes.

The 5th Circuit Court's ruling, however, was a sweeping mandate that 37 school districts in Louisiana must submit new desegregation plans to take effect at the start of the 1969–70 school term.

The ruling sets a new precedent in school desegregation battles from Florida to Texas—the jurisdiction of the 5th Circuit Court of Appeals.

[From the Washington Post, June 22, 1969]

INTEGRATION DROPS THOUSANDS OF NEGRO TEACHERS

(By Bruce Galphin)

ATLANTA.—During a century of segregation, teaching was one of a very few high-status jobs for southern Negroes. In many towns and small cities, teachers and their families were about all there was of a black middle class.

But as the dual school system gradually has been abolished under the pressure of judicial and Congressional mandates, the luster has worn off the teaching profession for Negroes. The one-time security is gone. Integration has cost thousands of Negro teachers their jobs, and it has been particularly rough on black principals.

The biggest upheaval is still to come. This fall, under Justice Department action and HEW guideline enforcement, there will be more new desegregation in the Deep South than in the 14 years since the Supreme Court desegregation decision.

Many small Negro schools will be closed. Others will lose black pupils, and thus black teacher allotments. Still others will gain substantial white enrollment, and along with it, white principals.

No agency has comprehensive figures on the number of Negro teaching personnel facing dismissal or demotion—neither HEW's civil rights office nor the National Education Association nor Negro state teachers' associations nor civil rights organizations like the NAACP.

But a survey made last month in 30 north Georgia counties gives some idea of the dimensions of the problem.

In those 30 counties, chosen because they had made significant progress in eliminating the dual school system, the number of black principals had been cut by more than half in a five-year period (from 54 to 24) and the number of black teachers by more than a quarter (from 734 to 535).

The figures show the total number of schools shrank during that period. In north Georgia, the percentage of Negro population generally is small, and maintaining a dual system always was costly.

School officials complied with HEW guidelines simply by doing what they had known for years was economically sensible: they abolished small, all-black schools.

In sections of the South with heavy Negro populations, compliance patterns vary, but the net result for black principals and teachers is the same. Even if the school remains in operation, it is almost sure to have a white principal if there is any substantial degree of integration.

HEW compliance guidelines require faculty desegregation, but local school boards retain broad authority over principalships and faculty shrinkage.

The situation has aroused the ire and concern of the Georgia Teachers and Education Association, a black organization soon to be merged with the white State Teachers' Association.

GTEA, which made the survey of the north Georgia counties, is trying to raise $400,000 "to combat the elimination of black teachers, principals and supervisors." It is asking 13,000 member teachers for one day's pay to fund the campaign.

GTEA already has filed suit in two school districts: Gainesville. where four Negro teachers have lost their contracts, and Pike County, where dismissal of a Negro principal touched off weeks of black student boycotts, protest marches and confrontations with state troopers.

"The elimination of black educators must be stopped not only for the welfare of the educators themselves, but also because the continued loss of professional positions will discourage black students from aspiring to become teachers and other professionals," said Dr. Horace Tate, GTEA executive director.

With a limited budget and staff, GTEA has no clear idea how widespread the problem is outside the 30 counties it surveyed.

In Washington, the National Education Association runs a computerized service to match jobless teachers with professional opportunities. Although the operation was established in part to help black teachers displaced by integration, officials say they have no breakdown on how many of the job-seekers are victims of the process.

Ruby Hurley, southeastern regional director of the NAACP, was unable to give any estimate either. She said the problem was "accelerating", but that "I was tired of telling my people to file complaints with HEW when they don't get any action."

The Atlanta regional office of HEWs civil rights section has received only 30 complaints of faculty demotion or separation since last fall, but Director Paul Rilling agrees that this probably represents only the tip of the iceberg.

If numbers are uncertain, however, the pattern is not. It was established in the border states in the first few years after the 1954 ruling, and pretty much repeated in the upper South following passage of the 1964 Civil Rights Act.

NEA sponsored a study of the 1965–66 faculty displacement and downgrading problem, and warned that it "will likely continue for several years."

At that time, the NEA found few cases in the Deep South, simply because there was little faculty integration.

But in other states of the region, the study documented 668 displacements between May and September of 1965 and conceded that "quite probably no one will ever know the actual statistic."

Part of the effect is masked by growth and turn-over in urban systems. "Negro teachers simply aren't employed in any great numbers for openings in integrated schools," the study found.

To prove the point, the NEA team surveyed 45 predominantly black colleges in the region and found 1,900 out of 51,000 graduates in teaching had found no jobs.

The nub of the problem is the resistance of whites—both educators and laymen—to the notion of black principals over white teachers or black teachers for white pupils.

Preferential treatment for white teachers frequently is defended on grounds that Negro teachers in general have poorer academic preparation.

"Obviously," the NEA report said, "a double standard has been used heretofore (in segregated schools) in employing Negro and white teachers if the Negroes are not regarded as of sufficiently high quality to teach white children in desegregated schools."

Yet NEA does not deny that the academic gap exists. It is the result of decades of segregated, unequal education, and the study strongly urged institution of "imaginative" post-graduate programs to upgrade skills of underqualified teachers.

Although there have been workshops on the subject at Atlanta University, Florida State University and elsewhere, school officials generally have found it simpler just to dismiss or demote black teachers.

The pressure is about to reach its peak because HEW has made this September the deadline for abolishing the dual school system in most districts, and September, 1970, for the remainder.

Both black and white tempers are mounting. In the most segregationist areas of the South, whites are bitter and alarmed about wide-spread integration. Negroes are resentful of the treatment of black teachers and principals. There are increasing indications that black high school students as well as adults and college students are preparing for protest demonstrations in many cities.

It could be a long, hot autumn.

PAUL E. NEVILLE, EDITOR IN BUFFALO, DIES AT 50

HON. THADDEUS J. DULSKI

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 24, 1969

Mr. DULSKI. Mr. Speaker, my home community of Buffalo, N.Y., was shocked and saddened this past weekend by the fatal illness of the editor of one of our two daily newspapers, Paul E. Neville, 50, executive editor of the Buffalo Evening News.

Mr. Neville was stricken at his desk last Friday as he worked to put out another day's edition of the News. He passed away Sunday.

Although he had been in Buffalo for only a dozen years, called to take a top executive position in the News' editorial department, he had assembled a wide circle of friends and was highly respected both locally and nationally in his profession.

The News family has lost one of its own, our community has lost one of its leaders, the journalistic profession has lost one of its ablest technicians and I have lost a friend.

Mr. Speaker, the News tells the story of Paul Neville in its editorial which appeared in its June 23 edition as follows:

PAUL E. NEVILLE

Suddenly and tragically, in the prime of his career and at the moment of his greatest sense of civic pride and satisfaction, the executive editor of The Buffalo Evening News, Paul E. Neville, was seized with a massive stroke at his desk Friday and today he is dead.

Throughout the entire News family, the loss has caused a numbing shock made worse by its abruptness and by the special sadness of a life of tremendous potential snuffed out long before its potential was achieved.

Paul Neville had just observed his 50th birthday; he had just rounded out his third year as executive editor; he had completed a tour as president of the New York State Society of Newspaper Editors and had been elected by his fellow editors to the board of directors of the American Society of Newspaper Editors.

He was just coming into nationally recognized full flower, in short, as one of the leading metropolitan newspaper editors and executives in America. Through Friday's first editions, he was eagerly on the job, still feeling the glow of civic satisfaction at seeing a campaign on which he had personally worked harder than any other at The News, the struggle to assure construction of a multi-sports domed stadium, brought to fruition. But today he is gone, a brilliant career, a dynamic personality, a perceptive and witty mind suddenly all blanked out.

A thorough professional with a newsman's instincts through and through, Mr. Neville loved nothing more than to be in the middle of a big story. His wide-ranging curiosity and gregarious concept of his editorship caused him to spend as much of his time out in the community as inside the office. A Buffalonian by adoption rather than birth, he undoubtedly had a wider local acquaintanceship in his 12 years here than most newsmen acquire in a lifetime. Generous with his time, talent and energy, he spent himself all too freely, as his untimely death attests.

Forceful and quick in his news and policy judgments, he worked easily and well with people, respected "no-men" as much as "yes-men," valued suggestions, delegated authority well, and nourished a team approach to doing any civic or journalistic job. To most of the staff, he was just Paul or known by the familiar initialed signature of his many memos, "pen." While personally imaginative and receptive to new ideas, one of his greatest if less obvious strengths was a deep regard for continuity and proper form and style—for "doing it right," thinking and acting "first class."

It was this balanced sense of continuity and innovation that particularly marked his three-year editorship at The News, as he introduced many small and gradual changes but shunned large and splashy ones. Yet perhaps his greatest contribution in his whole 12 years as a News executive has been his sharp alertness to and awareness of underlying community trends—this in a time of social and generational upheaval where alertness to swiftly changing undercurrents is indispensable to a successful news-media operation.

Of all the qualities he brought to The News, it could be this instinctive feel for the developing trend beneath the news that will be missed the most. For today, though, it is a sudden absence of the sheer vitality, the brisk plain-talking personality, the down-to-earth good humor of an editor who should still have a whole brilliant career before him that fills The News with a sense of loss and sadness—and of the deepest sympathy for Mrs. Paul E. Neville and the five children in whom their father took such pride.

MINORITY GROUP COMPLETES UNIQUE CONSTRUCTION-ESTIMATING COURSE

HON. FRANK J. BRASCO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 24, 1969

Mr. BRASCO. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following:

MINORITY GROUP COMPLETES UNIQUE CONSTRUCTION-ESTIMATING COURSE: PRATT GRADUATES 13 FROM CLASS TO HELP THEM COMPETE WITH WHITE CONTRACTOR

NEW YORK, June 14.—Thirty-one minority-group students have completed a nine-week course on construction estimating at Pratt Institute to enable them to compete more effectively with white contractors. The course, which ended with the awarding of completion certificates at special ceremonies June 12, was the first of its kind offered anywhere in the nation.

The unique program, for blacks and Puerto Ricans who are carpenters, painters, bricklayers, etc., began April 14 and met for two evening sessions weekly at Pratt's School for Continuing Professional Studies under the direction of Dean Gurth I. Abercrombie.

Instructors were two of the top professionals in the construction engineering and architectural fields: Jay Sam Unger, head of the architectural and planning firm of Jay Sam Unger Associates; and Seymour Berger, vice president of McKee-Berger-Mansueto, Inc., construction consultants and engineers.

Pratt Institute is just outside the 653 blocks of Bedford-Stuyvesant, the nation's second biggest black neighborhood (South Side Chicago is the largest). Poverty and progress exist in this six-square-mile ghetto and the black residents plan to rebuild their own community under the federal government's Model Cities Program, begun in 1966. Among the 12 U.S. cities selected for special government funds was New York's Bedford-Stuyvesant area, for which $29-million was allocated.

"Inexperience in the construction field has been a major problem of minority groups," says Jules Mirel, director of the Pratt School of Continuing Education. "Several residents of Bedford-Stuyvesant approached us for help in learning something about the construction and estimating business, and we promised to do what we could to assist them," he said.

According to Gabriel Prince, organizer of the "United Black Contractors" group, "It does not take any special amount of brains to figure out that many parts of this city, including my own Bedford-Stuyvesant, are going to be built up again, and that black contractors are going to be doing the work. I want to be qualified! The Ford Foundation and the Model Cities Central Policy Committee have had similar courses under consideration for at least 18 months, but all have been slow in starting," said Prince. "Finally, it seemed clear to me that nobody was about to do anything for us in time for it to do any good when the Model Cities funds were distributed in mid-June," Prince said, "so I went to Pratt and asked to be put into the best course in construction estimating."

George M. Raymond, director of Pratt's Center for Community Improvement, a division of Pratt Institute, said he would be interested in helping the Bedford-Stuyvesant area by providing a special course in "The Principles of Construction Estimating." The genesis of the course was this:

David D. Shobe, Government Programs coordinator at Pratt, involved Ron Shiffman, assistant director of the Pratt Center for Community Improvement, who serves under Raymond.

"Financing the program was a primary problem," said Dean Abercrombie. "It would cost $500 per student, and Pratt offered to pay $200 of each enrollees fee, with the hope that the Model Cities Program or the Ford Foundation would pack up the balance. Those enrolling in the course offered to pay as much of it as they could themselves: so far, some have paid as little as $25; others paid as much as $100."

"We were so overwhelmed at these fellows' eagerness to dig into their poverty-ridden pockets to invest their own money in such a course," said Pratt's Jules Mirel, "that we decided to go ahead, without knowing where the balance would come from. We wanted to get the best teachers possible for them, so we approached Sam Unger and Seymour Berger of the Pratt teaching staff. They are two of the top people in the construction and architectural fields," Mirel explained, "and they were eager to help because the whole idea was something they strongly believed in."

"I'm particularly interested in helping these people rebuild their community," said Unger, "because I was born in Bedford-Stuyvesant. My philosophy is this: Don't build a curriculum; give them what they need day to day."

Berger expressed his feelings this way: "Hopefully, the end result of this course, and of future courses, will be black contractors who can compete successfully in the construction industry. They are here to learn estimating methods and procedures in construction management that would normally take years to achieve," he continued. "What is needed are more experienced and knowledgeable construction people to teach, so that this great potential can be developed as quickly as possible for the betterment of all."

The course began with 20 students, and ended with 31. "So enthused were those enrolled that, instead of the first class ending at 8:30, as we had planned, it lasted until after 11 p.m." according to Mirel. "We had 103 per cent attendance throughout the nine-week course, with some students bringing friends and wives to classes."

One of the Bedford-Stuyvesant residents who helped initiate the program was Phil Lewis, a Model Cities associate. Lewis, who will soon take a special course on management at the Harvard Business School, said: "Our main desire is to compete!"

"We're tired of promises not being fulfilled," continued another black ghetto resident. "We want results! We need more people like Senator Waldaba Stewart of the city's 18th Senate District, who has been instrumental in helping to organize the black contractors and their programs."

"The phenomenal success of this course has been very gratifying to us," says Pratt's Dean Abercrombie. "We hope a way can be found to continue helping our neighbors in Bedford-Stuyvesant with another course in the future," he said.

Among the many guest lecturers in the nine-week course were: Harry Carroll, chief plan examiner for the New York City Building Department; Irving Gerber, chief of construction for the New York Housing Authority; Edward Kroop, a specialist in plumbing and heating; and Ralph Friedman, an authority on electrical contracting.

Columbia University sent observers to Pratt's special course, with the hope of starting a similar, but probably more expensive, minority-group course in the construction field at a future date.

REPORT OF THE BROCK CAMPUS TOUR

HON. W. E. (BILL) BROCK

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 24, 1969

Mr. BROCK. Mr. Speaker, I recently had the pleasure of leading a group of 22 colleagues in a volunteer tour of American campuses. Organizing into six regional groups, we visited over 50 universities of all types and sizes and personally met with over a thousand students, as well as many faculty, administrators, and other concerned adults. Our main purpose was to listen, not to lecture, and we came away with a new insight into student outlooks. One important result was the following written report, which we submitted to President Nixon on June 18.

Because of the publicity it has received in the national press, the high level of interest it has achieved, and the numerous requests we have received from fellow Members, I insert the report following my remarks:

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D.C., June 17, 1969.

The PRESIDENT,
The White House
Washington, D.C.

MR. PRESIDENT: We submit to you the following report of campus unrest. The critical urgency of the problem cannot be overstated.

This report reflects our impressions of student attitudes and problems, along with some proposed solutions applicable at local, state and national levels. It represents a general consensus of our 22 man group. However, because each of us undertook this task as individuals, we must reserve the right of members to expand upon, or even disagree with, any specific point.

It is our hope that the findings included in this document will be of use to you in your continued efforts at solving what has become a major national problem.

Respectfully yours,

BILL BROCK, EDWARD BIESTER, GEORGE BUSH, LOU FREY, DONALD RIEGLE, BILL STEIGER, JOHN BUCHANAN, LAWRENCE COUGHLIN, MARVIN ESCH, JAMES HASTINGS, LARRY HOGAN, MANUEL LUJAN, DONALD LUKENS, PETE MCCLOSKEY, JACK MCDONALD, JERRY PETTIS, ALBERT QUIE, TOM RAILSBACK, PHIL RUPPE, GUY VANDER JAGT, LOWELL WEICKER, WILLIAM WHITEHURST.

REPORT OF THE BROCK CAMPUS TOUR

PREFACE

A deep concern about today's problem of unrest among our youth, and the realization that we possessed little reliable information about events on the American campus prompted us to go out to a variety of colleges and universities to talk with students, faculty, administrators, and other officials on their own ground. We had nothing to sell, no speeches to make, and offered only a desire to know and understand the factors which appear to threaten the destruction of many of our most respected institutions and the alienation of many of this nation's finest students.

The problems confronting higher education are so complex that no study or analytic effort yet mounted can really claim to be comprehensive. We recognize the need for continued in-depth research. Nonetheless, we believe we achieved substantial success with respect to our main concern—the acquisition of some degree of personal understanding of the nature of the problem.

We came away from our campus tour both alarmed and encouraged. We were alarmed to discover that this problem is far deeper and far more urgent than most realize, and that it goes far beyond the efforts of organized revolutionaries. By the same token, we were encouraged by the candor, sincerity and basic decency of the vast majority of students we met. Too often, however, we saw their idealism and concern vented in aimless or destructive ways.

If one point is to be emphasized in this report it is that violence in any form, in any measure, under any circumstances, is not a legitimate means of protest or mode of expression—and that it can no more be tolerated in the university community than in the community at large. If there is to be orderly progress and a redress of legitimate student grievances, student violence must be averted.

As Erwin N. Griswold, Solicitor General of the United States, has said:

"The right to disagree—and to manifest disagreement—which the Constitution allows to the individual . . . does not authorize them to carry on their compaign of education and persuasion at the expense of somebody else's liberty. . . ."

It is clear that if violence on our campuses does not end, and if the reaction to it is on the one extreme too lax, or on the other extreme too harsh and indiscriminate, the vast moderate student majority may be forced into the arms of the revolutionaries, and those few who seek to destroy the fabric of higher education will have succeeded.

We agree with the editorial in the June 8 *New York Times:*

"If lasting damage to the independence of the universities is to be avoided, if the society's attention is to be redirected to its larger, more serious problems, violence has to cease and tranquility has to be returned to the campuses."

There is on the campus today a new awareness of potential student power and the emergence of a large group, probably the vast majority of student leaders and a substantial number of intelligent, concerned and perplexed young people, which has genuine concern over what it feels is the difference between the promise and performance of America. While these students have no monolithic leadership or single set of goals, they are fairly united in questioning many of the values of our system. The revolutionaries on campus who desire to destroy our system are few in number. The vast majority of students are not poised on the edge of revolution and have not lost faith in our system. However, many students can be radicalized when violence or confrontation on campus occurs. Also disillusionment in our system by students can grow, even without violence, if we place one label on all students and fail to understand that they raise many areas of legitimate concern.

Perhaps our most important and pressing conclusion is that rash legislative action cutting off funds to entire institutions because of the actions of a minority of students would play directly into the hands of these hard-core revolutionaries. Legislation which treats innocent and guilty alike inadvertently confirms extremist charges that the "establishment" is repressive and indifferent to citizen needs and concerns. We must not put ourselves in the position of aiding the handful of anarchists.

In a period of conflict and turmoil, deep divisions on campus as well as between campus and community are understandable, but

the danger exists that these divisions are polarizing America into two distinct camps. On neither side has there been enough willingness to listen and discuss problems before the fireworks have begun and emotions have been inflamed. Obviously it is time for our traditional American sense of fair play and tolerance to be evidenced by the responsible majority of this nation, young and old. The alternative of students, intolerant and unwilling to reason, and their elders, intolerant and unwilling to reason, constitutes the ingredients of chaos.

To the extent that our universities can foster an environment of trust, participation, involvement and interaction, we believe that the danger of violent confrontation (and the emotional climate which is its prelude) can be reduced. To the extent that this nation can foster an environment of quality, excitement and challenge throughout its total educational system, creative leadership can be developed. In this report we offer proposals aimed at implementing these goals. We can envision no greater tragedy for this nation and the free world than for us to allow our educational system to slowly settle into obsolescence, losing touch with reality and becoming incapable of responding to the needs of students and society.

We also suggest more positive contact between the campus community and the greater community—increased social action programs, volunteer projects and similar activities which provide students with an opportunity to work on pressing human problems side by side with other concerned citizens.

We are convinced that such experiences can be an important supplement to the classroom, acting to restore student faith in the basic soundness of the American system. Additionally, they can demonstrate in positive fashion the sincere good intentions of a significant portion of the adult community—which many students and faculty with whom we met so readily charged with hypocrisy.

Finally, this nation has an enormous stake in preserving our system of higher education. "The task of the university," as Alfred North Whitehead has written, "is the creation of the future as far as rational thought and civilized modes of appreciation can affect the issue." The creation of a better future will indeed be impossible if the free and orderly pursuit of knowledge is jeopardized by the destruction of our colleges and universities either through anarchy, or through a refusal to consider pleas for necessary improvements.

This report, in listing a series of ideas for consideration, is offered not as a panacea, but, hopefully, as a bridge to greater understanding of the problem.

FACTORS IN UNREST

In an effort to most accurately and clearly represent what students were saying and thinking on the campuses we visited, we have listed below areas of concern as they were described to us by the students themselves. In reporting student views, we are in no way passing judgment, but merely trying to convey a better understanding of what the students feel.

Where we have reached conclusions of our own, they have been specifically noted by indentation and italics, so that there can be no confusing the reportorial and analytical portions of this report.

Internal factors

Communication

On campus after campus we found widespread criticism from students who feel unable to communicate with administrators and faculty. They believe that no adequate channel is open to them to make their views known. Channels which do exist provide only limited access to individuals who will take responsibility for major decisions.

In some cases, the university structure itself seems at fault. In these instances the modern university is so large, and decision-making so fragmented, the student often finds it difficult to identify the individual or organization that has the final responsibility for a particular policy.

Operating within a large bureaucracy, administrators find it easy or necessary to avoid definitive answers to student inquiries; they pass the inquiries to the faculty, the regents, or the legislatures. These agencies in turn seem even more isolated from the student point of view and even less open to communication.

An immense frustration is built when the student feels he once again must go through a channel which is not "plugged into" the policy-making power of the university.

Charges of communication gaps are leveled against faculty, administrators, and governing boards alike. In many instances students charge that the actions of the overseeing bodies, i.e., regents, trustees, etc., are determined by outside business and political influences. Such boards are looked upon as keepers of the status quo who make no attempt to consult with students on any decisions, including those decisions which directly affect the students.

Students, in turn, seem unaware of the factors and pressures that the governing board must consider and endure.

Faculties are criticized for time spent on consulting work for the government or for private industry, and for spending too much time researching and publishing. These activities, however worthwhile, are seen as isolating the faculties from the concerns and problems of the students.

In our view the non-teaching activities of some faculty members, particularly in large universities, are excessive. The "publish or perish" phrase is not simply a cliche. In many areas it implies a valid criticism.

Responsiveness

Claims of inadequate channels of communication frequently were linked with complaints about the lack of responsiveness to student demands.

This situation is aggravated where there is a lack of agreement, or of shared perspective, between administration and faculty. Despite protestations to the contrary, such circumstances are hardly unusual. Faculty and administration often are at odds on everything from the way to reply to student requests to the quality, method, and timing of university response to student protests.

When university action is taken, or problems are at least under serious review, students who are not involved in the step-by-step deliberations fail to understand the amount of planning required and the complexity involved in the solutions they propose to the university.

Since many universities do not seem to be geared to initiate or administer either quick or long lasting change, increasing passion mounts on both sides of an issue with resulting polarization and alienation of more moderate students who may or may not sympathize with some of the basic requests.

The students feel that it is the administration and the faculty who decide which students will be accepted as student spokesmen. Even when some students are in positions of consultation with the university, administration and faculty, a majority of students may deny that actual representation or communication occurs. On one large campus, for example, a list of student leaders drawn up by the Dean of Students and a list prepared by the editor of the student newspaper had no names in common.

We feel that these and similar situations can only lead to a conclusion that a lack of real or visible responsiveness has been an ingredient in campus conflict.

Student Intolerance

Although most students would deny it, and many would be genuinely surprised by the charge, the intolerance of a substantial portion of students is a contributing factor to the general unrest. Often insulated from day-to-day social responsibilities and contact with other age groups, some students seldom have the opportunity to see our society solving problems or meeting human needs. In the course of study and discussion, however, they are continually exposed to society's many real failures and seeming inconsistencies. The result for many has been a combination of deep social concern and a disenchantement with traditional institutions and approaches to problems.

Frequently students are strong in framing ideal solutions and weak in analyzing the factors involved in the problem and in its solution. Some demand immediate solutions and failing that, rush into confrontation as the "only alternative course". They may resort to "non-negotiable demands", a technique that is often cited as evidence of student intolerance.

The more militant students insist on acting as a group, feeling that their hope of success lies in refusing to deal with opponents on an individual basis. Refusal to negotiate may indeed indicate merely a desire to disrupt for the sake of disruption but it may also reflect a lack of understanding and a lack of skill and confidence in the bargaining techniques long vitally employed in of democratic society.

Such intolerance contains dangerous seeds of self-destruction. Unchecked, it can only breed a like degree of intolerance on the part of those who have made higher educational opportunity available to more young Americans than any society in history.

It should also be recognized that some of the intolerance displayed is purposeful and perhaps irreversible. The revolutionary is determined to remain unappeased in the hope of prompting administration reaction of a sufficiently excessive or violent nature to "radicalize" the moderate student majority. He must seek this goal because radicalism as a force to destroy can achieve no objectives, can obtain no real results on our campuses today without the tacit or even open support of far more responsible and moderate students who may be captured by the events of the moment. In order to be "radicalized", these students must have their emotions preconditioned by a situation (or series of situations) which would generate an initial expression of sympathy toward the avowed aims of the revolutionaries.

Hyprocrisy

Students complained that the university, like society, fails to practice what it preaches. They point to teaching and the transmission of learning as the center of a university, and contrast this with faculty efforts to reduce teaching loads in order to have more time for research. Many students accused university administrations of applying a double standard in enforcing regulations. They claimed that students who violated rules as part of a politically motivated or anti-institutional protest were more heavily penalized than those who violated the same rules for other reasons. Replying to the university's often expressed concern for social problems in the community, students point to university expansion into ghetto neighborhoods through programs students call "urban removal."

They charge that academic freedom is a myth when the university's purpose and direction is "subverted" by massive infusion of funds for military and industrial research. In response to the effort to educate the disadvantaged, students charge that too few are admitted and that those admitted find the institution unresponsive to individual needs and problems.

Relevance

Underlying specific issues is a fundamental dispute about the structure of the university and its role in society. A vast gulf exists between the views of faculty and administrators and the views of the students.

It is characterized by the recently published statement of a university student:

"Most of them (the faculty) hold to the ideal that the university is a neutral institution, devoted to objective truth. But the people who have power in America have pervaded this institution. The university could never be neutral in our present society—profit making and war making—I'd be skeptical that the university could assume a neutral posture. The university ought to be a partisan of the progressive forces in society."

This student's view is an obvious departure from the generally held public view of a university as an isolated tower that transmits and enlarges knowledge in the process of preparing individuals for careers. This student opinion requires that the university be relevant to our era and its problems, that it be committed to an active role as a progressive force. What is important about this perspective is that it is expounded not by a minority of revolutionaries but by very large numbers of sincere and highly motivated young people.

For the student, a clear definition of this relevancy is very difficult, since its development is in a formative stage and its meaning changes from area to area. On one hand, for the university to be relevant, it is held that it must cease to uphold traditional "establishment" institutions and systems. In this context, many universities have seen demonstrations against campus recruiting by various corporations involved in defense contracts, against the inclusion of ROTC in the curriculum, and against certain research projects. On the other hand, it is suggested that these ties must be replaced with new commitments to support urban improvement, and the extension of civil rights. Clearly many complaints about specific course requirements are closely related to this concern for the university's relevance. The students ask, "What is a university? What should the relationship be between the university and the surrounding community?" They are asking to what extent higher education should be radically altered to prepare graduates to go into society to change things.

They are asking how much of what they learn is "relevant" to today's society. They would like to see a closer relationship between their courses and the problems they see. They are asking for courses which can provide answers to problems of race, poverty, and economic oppression, and they regard present course offerings as noticeably lacking in this relationship. In one notable instance these demands would be satisfied by nothing less than student control of the curriculum, but large numbers of students who do not make such radical demands are nonetheless asking for a more "relevant" education.

Some students appear to be more caught up in contemporary problems rather than in the difficult process of learning needed to toughen and strengthen their minds to achieve workable solutions to unsolved problems. In these students we found an impatience with and a lack of appreciation of method and process, whether it be the intellectual method of abstraction and generalization or the process of practicing democracy as a value in itself.

Over-reaction

The student voices deep concern about methods used to respond to student confrontations. Many feel that the university has over-reacted with excessive force. They point to incidents involving clubbing and gassing demonstrators and bystanders, as examples of an "oppressive system." On numerous occasions moderate leaders of peaceful demonstrations cited the subsequent inability to prevent individual acts of provocation and violence by radical students, thereby permitting a confrontation to erupt into violence. Likewise, students pointed to numerous instances of over-aggressive reaction by individual law officials which had the effect of radicalizing otherwise passive onlookers, turning a relatively small-scale disturbance into a general battle.[1]

Many individual students pointed to the Dartmouth procedure (a court injunction against the occupation of a building, and the peaceful and quiet arrest of demonstrators) as the best approach.

Lack of combined faculty-administration action aggravates a situation, and in some instances, a slow response due to a reluctance to act created further difficulties. In other instances an immediate resort to excessive force exaggerated the problem.

The student frequently complains of double jeopardy—prosecution by civil authorities and then by the university. He maintains that those who violate a university regulation in the more traditional manner, as a prank, are treated more lightly than those who violate the same rule for a political purpose.

Additional stress is borne by the administrator because of his role of buffer between the faculty and the governing board. He is subject to the direction of both and often the approval of neither.

Blacks at Predominantly Black Institutions

There is a depth of bitterness in even the most moderate of black students at black institutions that surpasses anything found among the whites.

The black student expresses bitterness about our system from personal experience. Many white students expressed concern about problems such as discrimination, poverty and hunger, but unlike the black students, most of them stated they had not personally experienced these problems. As more than one black student said—"You have to be black to understand."

A substantial number of black students at predominately black institutions stated that they have lost faith in our political system, which over the years has promised them much, but in their opinion, delivered little. They say there "are political wolves in the South and political foxes in the North." Many of the blacks want desperately to believe in the system, but can see no real progress being made. Their problem is more external than internal. They are concerned about non-college problems which they identify as discrimination, economic oppression, They ask to be respected and desire true loss of identity, poverty, hunger and racism. economic opportunity. Words and promises will no longer suffice.

In many cases the militant blacks at predominately black campuses are looking for a dramatic and, if necessary, violent upheaval in the United States. They would acknowledge our good intentions, but felt that the faster and more complete the failure of moderate programs, the sooner the final and absolute confrontation would occur. When asked how they would change the system, or what changes they would make, they didn't have an answer—but said that problem would take care of itself.

The black feels that the white radical is playing a game, and only need shave his beard and cut his hair in order to melt into the mainstream of the establishment, while the black student cannot.

The main goal of the majority of black students seemed to be service to their "black brothers and sisters". Some said that they would rather die for their people in the streets of the United States than in Vietnam.

The black students in most cases stated that their schools are inferior to white institutions, even when operated by the same authority, such as a state board of regents. In many cases, they also stated that, because of their inferior primary and secondary education, they are unable to compete with the white graduate or in predominately white schools. Many black educators and students felt that the H.E.W. guidelines should be revised until our entire educational system is corrected, to allow for the continued existence of predominately black schools. The rationale offered was that the black schools would allow many blacks to attend college who couldn't get, or stay, in white colleges. Further it would allow the blacks to retain their own pride and identity and find themselves, instead of being submerged in predominantly white schools. The black schools would be able to offer many courses and programs in college which would allow the blacks to "catch up" to their white college counterparts who have received a better primary and secondary education.

The educators and students also suggested more programs, based on the Head Start concept, in the high schools or between high school and college to raise the educational level. They emphasized that the programs would work best if blacks were involved at all levels, i.e., they felt only a black could truly understand the problems faced by another black.

Relative to the relaxation of HEW guidelines, we discovered that the black institutions are making a concerted effort to recruit white students and faculty. While they have been moderately successful as far as faculty are concerned, they say it is extremely difficult to convince white students to attend a predominately black institution.

Non-White Student Issues

The primary concern of minority students is to acquire the kind of education they perceive as essential to being able to return to their communities and better the conditions of their people. They want their education to provide the training they need to deal with the problems of minority groups in America, and they see higher education as the best avenue to their personal development.

A particular example of the demand for relevance has been the widespread support for minority studies programs by blacks and other non-white minorities. Most of the activity in this area has taken place on predominately white campuses, and is often discussed within the framework of the problems of minority group students when they find themselves in a basically all-white environment. The students like to compare their position on a campus where they constitute less than two per cent of the student body, to the problems faced by a white student if he were to attend a university where the student body was 98 per cent black. Both faculty and students said that without thorough preparation of internal college processes and organization, increases in non-white admissions can result in the severe disillusionment of non-white students and a backlash among others on campus. They expressed the feeling that the courses offered by the university do not give adequate coverage to blacks and other minorities in American history and in other subjects dealing with the processes of American society. They feel that such courses are cast in terms and events totally foreign to the experience of most black students. It is claimed that an economics course which fails to present "accurate" views of economic conditions of ghetto life is not relevant, and history courses designed for middle class whites are not relevant for blacks.

The minority groups say that much of the difficulty turns on the inadequacies of the

[1] For a more detailed treatment of this process, see the appendix "Dynamics of a Confrontation."

public school systems in deprived areas, as well as disadvantages which pervaded their early lives. Failure to respond to these concerns, we were told, would threaten to drive the black activists into the ranks of the revolutionaries.

Demands for Black Studies Departments, minority student centers and the admission of large numbers of minority students who often lack adequate preparation are issues not easily resolved. A number of universities are beginning creatively to make the kinds of adjustments needed. Of special interest are the programs now in operation at a few schools to accept students who do not meet normal requirements for entrance, to provide financial aid, special tutoring and courses, and enrollment in a five year program leading to a degree.

It is important to make a clear distinction between the purposes and goals of black militant students and white revolutionaries. Aside from similarities in tactics, there are substantial differences. Without doubt, the alienation and bitterness among some black students is so great that they have completely lost faith in the ability of the nation to remove obstacles to full equality (see preceding section). Many black student activists on predominantly white campuses, however, appear to be seeking to reform the university, to make it better suited to serve their needs and desires, to create the mechanism for training students from minority groups to go back into their communities to deal with major social and economic problems, and not to destroy the university. This is in contrast to the goal of destroying the institution held by some white and black revolutionaries. Thus black student militants have held the white revolutionaries at arm's length—forming alliances when useful but preserving their separate identity and independence. By the same token, the formal involvement of black student groups in issues not directly related to minority student problems has been, in most cases, limited.

Large Versus Small Institutions

An immediate difference appears in the ability of smaller institutions to deal with some problems more readily and with greater acuity than the multi-university. Size affects responsiveness, communications and many other needs. Meeting them at larger schools is more difficult, but it is not impossible, and the effort must be made.

Obviously, there are very good reasons for the tremendous growth of some institutions in recent years. The population explosion, increasing demand for mass education, university financing, and the national reputation of specific institutions have all resulted in the development of a number of very large schools.

The challenge is to find ways to preserve the benefits of size while overcoming its disadvantages. We must seek ways to strengthen the ability of our universities to provide close personal relationships and the experiences available in small group settings. Greater development of community colleges, and even cluster colleges around the large university, can also play an important part in "rehumanizing" the learning process.

External factors

As with the section on internal factors of student unrest, our main concern is to clearly depict what the students themselves told us. All interpretation and analysis by ourselves is included in separate indented, italicized passages.

Students relayed to us deep feelings about "the System", "the Establishment", etc. The word, System, covers a good deal and its components vary from campus to campus. In all we have discerned certain common threads. The System, as they define it, is characterized essentially as follows:

Racism

The student perceives the gulf between the promise and performance of this nation with respect to race relations. He sees inequality of opportunity, failure of the educational system, and he relates these to the country as a whole as well as to the university. For the most part, we found a perceived neglect of human problems to be the single largest motivating force behind the alienation of today's student. Whether in black studies questions, or in the university's relation with its surrounding community, an over-riding concern was the status of minority groups.

Military Industrial Complex

There is considerable student opposition to our formidable Defense budget. Why, they ask, do funds for domestic and educational programs get cut while the Defense budget goes almost unchallenged? They see a close relationship between the academic community and the military. They see university presidents sitting as members of boards of large industrial corporations. They see cuts being made in funds to hire teachers while boards of trustees authorize new buildings and facilities in order to receive greater Federal research funds.

Poverty and Hunger

In this age of affluence the medium of television brings home to people the gap between well-to-do and the poor. There is a growing dissatisfaction on the part of students with the response of the nation to the disadvantaged. They are not willing to wait to overcome decades of poverty and racial intolerance, and they question apparent past inaction. The immediate problems around the college campus often become the focal point for their attention. The failure of many institutions to act with regard for the neighborhood around them has caused the student to take as his own the cause of the Harlem or Woodlawn resident.

Certainly, student involvement in such matters is not new: witness the civil rights marches of the early 1960's. What is new is the intense impatience with change or the apparent lack of change in the lives of many Americans.

Imperialism and the Third World

On a number of campuses a recurring question related to the role of the United States and the problems of what is termed the "Third World" (blacks, Chinese, Puerto Ricans, Mexicans, etc.). The view expressed was that we are the imperialists in Vietnam, in Formosa, in Latin America, and that the emerging nations are a new force with whom we have not yet come to grips. Some feel we are not treating other people in the world fairly, and from the view of the student, we are paying the price of not heeding the views and needs of others. In their view, self-determination, as expressed by the United States, is a pious proclamation which relates only to those with whom we agree.

Police State

The experience of one school more clearly demonstrates this problem than any other. When the students left in the summer of 1968 the campus police wore no weapons. When the students returned in the Fall of 1968 the campus police were equipped with billy clubs, guns, and mace. For a school that had experienced no difficulty, the students questioned why this was done. As violence grows, and as counter-violence escalates, the student views his relationship with both the university and the outside world as increasingly beset by the police and National Guard. Each demonstration brings with it the threat of violence on both sides.

Economic Oppression

The readiness of legislatures and alumni to strike back at campus turbulence seems only to reinforce the student's view that big government and big industry more and more dominate the university and society. What has happened at Peoples Park in Berkeley, on Mifflin Street in Madison, and other places, are examples of a new concern for matters outside the university, yet, in which the university plays a role. Student housing, the increases in rent rates, merchants who charge higher prices to students (as they do to ghetto residents) are examples used by students to justify their claims of oppression.

Remoteness From Power

A very large part of the alienation of students stems from their feeling that they cannot control their own destiny. Institutions are too large, and too remote for the individual to have an opportunity to change that which he does not like. The multiversity concept is often pointed to here, as is the overwhelming size of government, industry, and labor unions.

Misplaced Priorities

Over and over again we heard about priorities and the feeling that these are "out of whack" in the United States. The space program, large farm subsidies, cuts in education, the Defense budget, and more, all were cited as examples of the failure of our society to meet its urgent domestic needs.

Vietnam

It is apparent that Vietnam originally served as one of the major factors in radicalizing students. It is still a major source of alienation and dissatisfaction with our society and our national government. Many consider the war immoral and unjust. An increasing number vow to take any steps necessary to avoid military service.

However, it was repeatedly brought home to us by radicals and moderates alike that an end to the Vietnam war would not mean an end to campus unrest—or even a major, long-range, reduction of tensions.

The Draft

Coupled with Vietnam the operations of the Selective Service System serve as a significant problem among students. The present administration of the draft is viewed as totally unsatisfactory, as being unjust to minority groups particularly, and as a tool of the Federal Government to enforce discipline. Faculty and students alike tend to equate expulsion from the university with compulsory service in Vietnam.

Values: Materialism

As one student put it, "This is a 'thing' culture, and I want it to be a 'people' culture." In the midst of affluence the students see a society in which a high value is placed on material things. There is a longing for a belief, a belief in something other than material things. There is a deep conviction on the part of many students that they want to do something to help others, not only themselves. This is part of a rejection of materialism as viewed by the student. Moreover, there is a questioning of the fundamental values of our society, and our system of government.

Over-reaction

As can be seen from the portion of this report which analyzes confrontation, the efforts to control violence—as well as those steps leading to violence—too often create an over-reaction on the part of all concerned. In our view there has been an over-reaction on the part of students to what they consider to be the unresponsiveness of the institutions to legitimate calls for change.

This compounds what under the best of circumstances is a complex problem. But an excessive reaction from the outside world, aroused and disturbed as it is, does little to help. In a violent situation, students, faculty, administration and the community, are caught in a tangled web of sympathy, fear, reaction and frustration. Obviously then, as the Eisenhower Commission on Violence has said in its most recent report: "Over reaction in response to a violent illegal situation can be very dangerous."

The idea that campus violence comes from only a few is a myth. There are many dedicated, bright students who are concerned

about the problems but who are not yet violent. They have not, however, rejected completely the view that they should resort to violence. Unfortunately, they can point to some campuses where violence has produced results.

Hypocrisy

Through all the external and internal factors runs this thread. Each campus would produce differing examples of this theme, but it is an underlying feeling on the part of the students.

Students believe that our society is hypocritical. They point to the treatment of blacks while contrasting this to the ideal of the Declaration of Independence; they see poverty in the midst of plenty.

The Media

Most of the people we talked with stated the opinion that superficial mass media coverage was contributing to the widening disillusionment and misunderstanding between the public and the nation's campuses. The media, particularly that utilizing the visual impression, concentrates on the dramatic, the sensational, the vivid acts of violence or disorder.

There is altogether too little effort made to thoughtfully explore the underlying issues and problems that concern the vast majority of students and educators who genuinely want to change things for the better. Not only does this distorted coverage inflame the worst fears and stereotypes in the public mind, but it adds to the frustrations of those trying to work for progress and constructive change on campus.

We believe the media can and must become a more powerful forum for bridging the "perception and understanding" gap between the public and our universities.

The very nature of modern communications—visual, instantaneous—plays a role both in determining the tactics of demonstrators and in shaping public opinion about events on a campus. The public focuses on disorders, and these have occurred with sufficient frequency to leave the impression that little else is taking place in higher education.

The point to be made is that the media can offer a mechanism by which misconceptions can be corrected. Although some publications and broadcasting networks have devoted substantial time and effort to excellent indepth studies of the factors discussed in this report, more is required if understanding is to be created.

IDEAS FOR CONSIDERATION

As we learned, there is no single answer, nor any set of answers, to the problems faced by students or our society. The internal and external factors which we have tried to catalogue here lead us, nevertheless, to suggest for your consideration, Mr. President, a series of ideas which we believe merit urgent consideration.

1. No repressive legislation. Any action by the Congress or others which would, for example, penalize innocent and guilty alike by cutting off all aid to any institution which has experienced difficulty would only serve to confirm the cry of the revolutionaries and compound the problem for each university. This holds, also, for any action which would establish mediation or conciliation on the part of the Federal government. In our opinion, the fundamental responsibility for order and conduct on the campus lies with the university community.

2. Establish a Commission on Higher Education. In light of our findings we believe that a Presidential Commission on Higher Education would be a valuable step. Running through our report are examples of problems which students, faculty, and administrators have raised and which deserve further exploration. What is the role of the Federal government in research? What has this contributed to creating priorities within the university? How best can communication be opened and maintained? How well does this report reflect the reality of the American college scene? These and more would be appropriate questions for such a Commission which we believe should include a thoroughly representative selection of students, faculty, and administrators together with the general public. We do not foresee an investigative body but rather one which can help to create understanding among members of the academic community, as well as the general public.

3. Open communication to university community. We have found that many were surprised by our visit and by our willingness to listen and learn. There is a need to expand lines of communication. We urge that Cabinet officers, Members of Congress, the White House staff, and others in the Executive Branch begin an increasing effort for this kind of two-way street of listening, learning and responding. Once our communication has become established it will be important to sustain it. Some of the questions raised by students were truly the kind which deserve and demand answers. Some of the viewpoints expressed by students deserve understanding. And some of the misconceptions of the system of government within which we operate desperately need correction. This can best be done, we believe, through an ongoing program of communication.

4. Lower the voting age. There is no question that the American college student for the most part is better educated and more vially concerned wih contemporary problems in our country than at any previous time in our history. We feel that active involvement in the political process can constructively focus his idealism on the most effective means of change in a free society.

The right to vote will give Young America the chance to become a responsible, participating part of our system. In essence they will have the chance to put their performance where their words are.

Between the time they become eligible for the draft, and the time they presently become eligible to vote, there is a natural tendency to lose interest in politics and government because there is no right to participate. An extension of the franchise to the age of 18 when their interest is high can help engender in our youth (and our future leadership) an awareness of the full meaning of democracy.

5. Draft reform. In line with your own recommendations for reform of the Selective Service System, we believe Congress should move to act promptly on this important issue. It is a matter which affects hundreds of thousands of American young people and it is presently a sword over their heads. This can be improved and positive action on the matter would be significant.

6. Encourage student participation in politics. We found that the overwhelming majority of students with whom we visited hold little regard for either political party. The questioning of our system of government points to a loss of confidence in established institutions and that includes political parties. An increase in this loss of confidence poses a serious danger to the viable functioning of American government. Just as government must be responsive, so must political parties be responsive and open.

7. Expand opportunities for involvement. We found an encouraging desire on the part of many students to do something to help overcome the problems of our society. This dedication or commitment to help others is a hopeful, important area which should be encouraged. Specifically, we recommend establishing a *National Youth Foundation*. We believe this concept should be initiated in order to better utilize the energy and resources of student groups. Models of student-community involvement were found at the University of South Carolina, Radcliff and Michigan State University, among others, and we urge legislation to foster and encourage this opportunity for experience, learning and participation.

We also recommend establishing a *Student Teacher Corps*. Many more students are considering entering the teaching profession and this idea is one which we feel should be encouraged. In concert with the Teacher Corps, the student teacher concept can be a valuable tool to tap student potential and expand the learning opportunities for the disadvantaged.

Further, we recommend *increasing our support of the College Work-Study Program, National Defense Student Loan Program, and the Educational Opportunity Grant Program.* These three Federal programs would be beneficial in meeting the needs of students and the institutions in responding to student concerns. They are budgeted at levels far below the authorization, and we believe they should be increased.

From the community at large, American business, which has played such a large role in financially supporting higher education, must commit human resources as well. Expanded job-opportunity programs, work-studies programs, business men and other community leaders teaching on campus, intern and apprentice efforts, leadership in student-community problem solving, attendance at campus forums, among others, could measurably enhance the experience-learning process.

8. Coordinate youth programs. We think it would be helpful if an effort were made to coordinate all the present youth programs of the Federal government through one central office. At the moment there is considerable proliferation among many agencies as well as duplication of effort. In order to more effectively use the present resources of the Federal government we urge your consideration of a mechanism to coordinate and follow-through the work of our numerous programs and agencies.

9. Perspective. There is a need to mobilize opinion and resources. A sense of perspective is lacking on the part of the students and on the part of the public. What students are saying is, in some cases, the same as what the average American is saying regarding priorities, responsiveness, and humanization. Presidential leadership, governmental concern, and communication are all a part of the necessary work which must be undertaken if we are to replace revolution with reform, and despair with hope. Clearly we have found that violence is no answer, and that violence as a means to achieve an end is counter-productive. The crucial factor in the widening gap between students and others is the student's perception of reality. That must be understood by all who seek solutions. This requires of us comprehension, and of the student, understanding.

10. Balance. Henry Thoreau observed that, "There are a thousand hacking at the branches of evil to one who is striking at the root."

To take an isolated view of our universities as the one weak link in our educational system is to unfairly single out college students, their parents, professors and school administrators.

We must remember that the average college freshman has already undergone a dozen years of formal education before he enters the gates of the university. Obviously, he is going to reflect, at least in some measure, the strengths and weaknesses of the training he has already received. Many of his attitudes and many of the factors which may lead him into difficulties on campus, have already been implanted.

Therefore, a sweeping change in campus conditions alone is no guarantee of a return to orderly progress in our universities. There exist imperfections in our educational sys-

tem from pre-school programs to graduate studies. These flaws in American education deserve the immediate and thorough attention of the nation. The problems which have already surfaced on the college campus exist in various dormant forms in our secondary schools, and the inadequacies which foster them can often be traced back even further. Until consistent, challenging, quality education becomes a reality, the problem will remain.

APPENDIX

Dynamics of Confrontation

Every stage of college confrontation—"before", "during" and "after"—is represented among the Task Force visits, including:

Tranquil campuses: With no history of, and little likelihood of, disruption.

Uneasy campuses: With some of the ingredients of discontent.

Troubled campuses: With various forms of group civil disobedience, e.g. sit-ins, protest rallies, occupation of buildings.

Paralyzed campuses: With civil war and open military siege.

Convalescent campuses: With diverse groups struggling to heal the wounds of confrontation and resolve differences. But the seeds of instability remain and there are conflicting opinions as to whether real progress or continuing instability will result.

Although schools vary widely in region, size, student body profile, structure, governance, and campus issues, there does emerge a common and almost predictable pattern of escalating circumstances through which a university can slide from dissent to open confrontation and chaos. This progressive breakdown is by no means inexorable on every campus, since only a few hundred of the nation's 2500 colleges have experienced disruption.

On many campuses a good mix of conditions, plus cooperation among students, faculty, and administration continues to make it possible to resolve differences without open confrontation and to make progress as a community. These influences toward rational progress are mentioned elsewhere in the report.

The temptation to oversimplify cause and effect relationships should be resisted—keeping in mind that some schools with much trouble have been working hardest, albeit unsuccessfully, to develop progressive change and self-governance.

However, the frequency of confrontation has increased at such an alarming rate over the last year, that it is well to look at the negative conditions which seem to accompany crisis. Once the dynamics of this process start to spiral ahead, the forward momentum and the fragility of any equilibrium lead to an almost inevitable escalation of risk, danger, and lack of coordinated civilized control over events.

Anatomy of conflict

1. The underlying malaise and frustration with both societal and personal issues—coupled with the existence of hardened revolutionaries among students and their sympathizers or even counterparts among the faculty.

2. Identification of an emotional issue which has broader appeal to the target group—non-violent moderates. The issue may be local and narrowly defined, e.g. minority studies, student participation, education reforms—or it may be broader and more symbolic, e.g. the "people's park," military involvement like ROTC or research, reaction to police or military force.

3. In most cases, confrontation comes only after frequent requests for change have failed or gotten bogged down. These attempts may cover several months during which there appears to be little or no action or responsiveness other than perhaps talk or committee wheel spinning. These complaints and/or demands may be legitimate, or they may be a deliberately escalating sequence designed to force confrontation. The reasons for slow action become less important than the absence of results—even though, ironically, the problems are sometimes not within the complete control of the immediate university community. Occasionally, militant radicals may seek violence and confrontation immediately, though this often fails from lack of moderate student support.

4. During this period, faculty and administration are unable to coalesce around initiation of prompt change. This usually results in increased polarization and alienation of more moderate students who sympathize with some of the basic ideas for change.

5. At some time, often almost spontaneously, there is a student-initiated provocation or minor confrontation, which might take the form of a sit-in or rally. Sometimes, incidents such as rock-throwing, yelling obscenities and destruction of property occur. Lack of good, clear, timely communications among faculty, students, and administration begins to exacerbate the crisis. Misinformation becomes more common than good information.

6. This provocation is then often met by excessive and/or indiscriminate rebuff, including the use of out-dated and unenforceable disciplinary procedures or even police in large numbers, weapons, etc. At this point, the moderates, carefully preconditioned to a general feeling of sympathy by events, by fellow students of a more radical orientation, and even by some faculty, and motivated by their lack of confidence and respect for the establishment, as well as by the immediate violation of "their community", join the fray in ever-increasing numbers. It is not difficult to imagine the recruits gained from witnessing a clubbing, tear-gassing, or firing of riot guns. Such an overwhelming situation can readily give the revolutionary cause legitimacy in the eyes of thousands of campus moderates. Thus, it accelerates the process of "radicalizing" a major portion of the student body. In most cases this change is irreversible once made. By this time, the original issue has given way to far broader symbolic implications—and the original core of radicals, whether SDS or some other, have been swept aside by the tide of events. No matter—they have achieved their objective.

7. Positions of all parties become hardened, alternatives narrow as everyone stands on "principle", and virtually no one has full control over events. Finally, because of the excesses on both sides, there usually ensues a period of negotiations where all sides respond to pressures and some sort of compromise is worked out—but only because the pressures are so intense.

8. Relative calm returns, but left behind is an atmosphere of latent crisis. Student attitudes are more embittered and there may be a polarization among faculty, administrators, and most certainly, the surrounding public. To many, there is a general verification of the principle that only the strategy and tactics of confrontation can produce meaningful change, at least in the short run. Others sometimes see a few seeds of progress along with continuing, and perhaps more serious problems.

WHO WILL WEEP FOR AMERICA'S CHILDREN

HON. JOHN R. RARICK

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 24, 1969

Mr. RARICK. Mr. Speaker, activities in the recent days make it more and more apparent that the mothers and fathers of America are not going to permit violation of their children's sexual privacy by schools under some farfetched theory of neoeducation.

Several letters and news clippings follow my remarks:

ROCK ISLAND, ILL.,
May 28, 1969.

Hon. JOHN R. RARICK,
House Office Building,
Washington, D.C.

DEAR SIR: I have read the Congressional Record containing your comments on the monstrous sex education programs designed to devour the moral fibre of American youth. Please accept my gratitude for your courageous attack on the anti-God crusaders promoting this filth. It's too bad that all your colleagues aren't also All American. Too many of them have never bothered to learn that they are supposed to be representing people of a nation founded under God; therefore, have lent their services to any and every anti-American and anti-God movement making the headlines of a controlled press.

Your comments about "Hitler's Children" stirred my memory. (April 16, 1969—E-2796) Years ago, while in my teens, I wept for these children. The movie, "Hitler's Children" should be required viewing for today's young people. Perhaps many of them would do as I did and identify with the teenage girl carted off to a breeding camp and later sterilized because she refused to become sexual community property. Still vivid in my mind are the strong character traits this girl possessed. These were instilled by a school teacher!

Today, via the educational process, our children are being instructed in the technique of coitus; are being told they must decide for themselves whether premarital sexual relationships are moral or immoral; are being given contraceptive information in some schools . . . to spare them the "burden of unwanted children"; and being told the old "thou shalt nots" no longer apply.

Parents who protest this evil animalistic teaching are told they must face the necessity of an ethical-humanistic-religious approach toward sexuality. Those who refuse to swallow this hogwash are vigorously attacked by the NEA, PTA, SIECUS, SHES, Sexology, and all the other organized psycho-sexual gulls. Even U.S. Education Commissioner James E. Allen (according to a UPI report) said, "The biggest problem in sex education is not the children, but the damn parents." The uneducable intelligensia and Humanist devil's angels promoting sexual instruction that degrades, demoralizes and arouses sexual curiosity in public school children, K through 12, have a string of labels for disagreeing citizens. These include those long ago coined by the Communist party . . . "fascist"; 'right-wing extremist"; "sexual hangup"; "illiterate"; "Birchers"; "conservatives"; and lately, apparently the dirtiest name of all, "Christian Crusaders". I almost forgot, these parents and God-fearing Americans are also called "a minority" and there are no laws to protect them.

In the state of Illinois, such parents are excluded from appointment to the Sex Education Advisory Board by a law that reads in part, "The Superintendent of Public Instruction shall appoint 4 persons to the Advisory Board who shall be members of, and shall represent the general public. In making such appointments, the Superintendent shall give due consideration to the recommendations of various religious, professional, civic and educational groups *interested in providing sex education in public schools.*" (emphasis added)

So you see, Sir, by the very law itself, parents who treasure the responsibilities and privileges of parenthood; who not only are willing to but do impart sex education to their children and who do not want the public school system invading this area of personal privacy, are no longer a part of the "general public" in Illinois.

A policy statement from the Illinois Sex Education Advisory Board sets forth the following double talk: ". . . family life and sex education in Illinois should not violate the religious principles of the students or parents." Three paragraphs later this same board states, ". . . We are now moving toward a more ethical-humanistic-religious approach based upon both facts and values."

An ethical-humanistic-religious approach definitely violates Judeo-Christian religious principles. It further violates the principles of any person believing in a Supreme Being because "humanism presupposes man's sole dependence on natural and social resources and acknowledges no supernatural power. Humanists believe that morality is based on the knowledge that men are inter-dependent and, therefore, responsible to one another." (*Gale's Encyclopedia of Associations*, 5th Edition.)

This Humanist pack of anti-God, anti-Christ promoters also plans to "promote ethical educational curricula as an alternative to religious training" in our nation's public schools. Already, their educational suscepts are force-feeding this "ethical educational curricula" and the Humanist religion to American children under the guise of sex education, family life, group dynamics, rational thinking and other equally enticing names.

A sweet little old lady "friend" is flitting around the countryside spouting polly-adlerish advice to boys and girls, even using four-letter words describing sexual activity sans embarrassment. Sexologists with degrees in higher perversion are writing and filming some of the material teens and tots are told to absorb. Computer makers are helping program nothing-is-wrong-with-looking-at-the-genitals-of-the-opposite-sex data into students' minds. Smut peddlers, filth purveyors and sex orgy organizers are drooling over their anticipated financial gains; and the United States of America is indeed almost the "over-ripe fruit" ready for the picking by the beast of Communism.

Without a doubt, Education USA is playing hide and siecus with parent-reared children who have been taught to obey the Ten Commandments. Now HEW plans to use taxpayers' money to give future sexologists a headstart. They plan to protect children of the poor from the corruption of a family environment; save them from a mother's warm and loving arms; and deliver them from the evil joy of affectionately sharing a meager treat with siblings.

Perhaps HEW'ers subscribe to the high calibre publication *Phi Delta Kappan* which circulated an "Early Childhood Education Special Edition" in March, 1969. In this issue, James B. McDonald, professor of education, University of Wisconsin, penned an article entitled "A Proper Curriculum for Young Children." I quote Mr. McDonald: ". . . Much of the rest of a child's 'normal' life holds similarly competing possibilities. Playing with mother's pots and pans will fascinate the very young and is of great interest and value; but if the child were placed in a school setting with blocks and other carefully selected objects for developing perception and dexterity, would this not be a potentially much better environment?"

"For many years many of us have assumed that putting the child in school at an early age takes him out of his natural environment and puts him in a contrived setting. Only recently has our understanding of the ecology of human living and the nature of man's relationship to his technology clearly forced us to realize that the choice for educating young children is not between a contrived and a natural environment, but between a planned and haphazard man-made environment. This new understanding suggests that we should as a society deliberately intervene, as early and as often and for as long a time as possible, to provide the optimum man-made environment for our children . . . (this environment) must have qualities which elicit and shape human potential in an ethically acceptable way. . . ."

Such mousey-tongue philosophy denies the wisdom of Almighty God! He placed His only begotten Son in a family setting for proper rearing! Woe unto them who think themselves wiser than God!

Childhood for those already born is criminal, therefore should be abolished, according to the Communist International Conspiracy (CIC).

Preventing future births is the duty of sex educators? Illinois Sex Education Advisory Board member Howard S. Hoyman has said children are growing up in a society losing its consensus on such issues as abortion, contraception, premarital coitus and masturbation. He also said a new, more permissive sex standard for both sexes is emerging. This educator says, "I now believe that, whether we like it or not, we will have to face up to teaching about contraception in our secondary schools." (*The Educators Digest*, Feb. 1969).

With the Humanist morality and situation ethics "friends" teaching our youngsters how to prevent pregnancy while having coitus; HEW'ers preventing tots from ever hearing the teaching of God's doctrine and rules for moral conduct; parental authority being usurped by the public school system; George Orwell's *1984* will come long before that year. The hammer and sickle wielders predict 1972.

Why are so many parents too blind to see and to apathetic to care that their babies will have the security of slavery?

Yesteryear, America wept for "Hitler's Children". Tomorrow, who will weep for her's?

Sincerely,

FRANCES H. PURCELL.

[From the Washington Evening Star, June 6, 1969]

SEX EDUCATION FOES ASSAILED BY HEAD OF TEACHERS' UNION

(By Marvin Coble)

The president of the Montgomery County Education Association charged yesterday that opponents of sex education are using the issue "as a club to attack public education and representative government itself."

"While it is the responsibility of the school administration to defend the philosophy of the sex education curriculum, the teachers association itself must defend against the thinly disguised political attack which is being made upon public education," said Dr. J. David Eberly.

His comments are contained in a special 16-page report being sent to MCEA's 3,800 members.

CALLS IT 'COVER UP'

Citing a rally held in the county last week by 700 persons opposed to sex education, Eberly said:

"This rally wasn't what it seemed. It was a cover-up for a much larger and much more dangerous motive than to ban sex education programs in the schools. It is a deliberate attempt by forces hostile to the spirit of public education to use an emotional issue to inflame and distort public opinion."

Eberly said the rally was marked by the "communistic plot and devils-are-at-work philosophy" espoused by the John Birch Society, the Christian Crusade, the American Education Lobby, the Liberty Lobby "and the raft of other extremists."

He warned the teachers to fight any attempts by "extremists to take over," warning that they then might seek elective office.

"And what might they do if they were in the educational drivers' seat?" Eberly asked. "Watch out for textbook censorship, firing of teachers who disagree with the 'official line' and the end of funded budgets for the educational programs we've all been fighting for."

Last week's rally, sponsored by the fundamentalist American Council of Christian Churches of Maryland, kicked off a statewide drive for the repeal of Maryland's 1967 education law requiring a sex education program in all grades, starting in kindergarten.

Montgomery now gives sex education in the 8th and 11th grades and conducts a pilot sex education program in 11 elementary schools. Most criticism has been directed at the elementary program, which will be expanded next year to include 15 or 20 additional Montgomery schools.

EXPLAINS PROGRAM

The county's school system has explained its sex education program in a leaflet given to children to take home to their parents.

This leaflet says the "Family Life and Sex Education" curriculum guide being used in the 11 elementary schools contains 216 pages, only 10 of which "deal with what is commonly referred to as 'sex education'."

"The average child, over his seven-year elementary school career, in kindergarten through sixth grade, would devote about 250 hours to family life education," the leaflet says. "At most, six to eight hours, and all of that in the fifth grade, would be devoted to the study of human reproduction."

The school board will hear a report on the school system's sex program at 10:30 a.m. Tuesday. The public is invited to attend.

[From the Baton Rouge (La.) State Times, June 16, 1969]

BLUEPRINT FOR SEX EDUCATION

(By Russell Kirk)

In nearly every state, this year, boards of education, legislatures, public school teachers and parents are involved in controversies about whether public schools should offer instruction in the mysteries of sex—and, if so, how. This controversy has been hottest in California and Louisiana. Your servant attended the final hearings, this spring, of California's State Board of Education on this topic.

The gudelines adopted by California's board ought to be useful elsewhere in this country. I summarize them here. California's constitution prescribes that the public schools work for moral improvement. The board believes that instruction in family life and health education to be a part of that improvement—including prudent instruction in sexual matters. As the board points out, much misunderstanding of the nature and powers of sex exists. What can or should the public schools do about this?

"The primary responsibility for sex education is that of the home," the California Board of Education resolves. "However, the school, along with the church, has a secondary role in supporting and supplementing the home's responsibility."

Instruction concerning sex should be conducted, say the California guidelines, "by a team of qualified instructors, including professionals who have shown an aptitude for working with young people and who have received special training; and utilizing physicians as recommended by local medical societies as consultants, advisers and resource persons."

All materials in such courses should be studied by a citizens' committee, the board recommends—such committees to consist of doctors, nurses, school administrators, representatives of parent groups, clergymen, representatives of police and the like.

Such programs should be voluntary, not mandatory.

There should be no depreciation in such courses of religious beliefs or of parental teachings; moral values and the family should be emphasized.

Instruction about human reproduction should not be presented to children less than nine years old.

Parents should be made acquainted with materials used in the classroom and for instruction at home; they should participate in all evaluation of such materials.

Evaluation of such programs should be continuous, and successful programs should be studied.

Finally, the California Board of Education declares that "sex education" materials from the Sex Information Council of the United States (SIECUS) should be eliminated from public schools.

This last recommendation will be of interest in most states; and this commentator heartily concurs with the California board. SIECUS is a kooky outfit; and despite its imposing name it has no connection whatever with the federal government, nor any subsidy from public funds. For the most part, SIECUS is an offshoot of a little eccentric group called the American Humanist Association—not to be confused with the great humanists of the Renaissance.

So unless you court trouble with parents, dear school administrator, give the SIECUS materials short shrift. SIECUS tries to impart a "new morality" that would be anathema to the great majority of parents and responsible citizens in any community.

DRUGS, SEX, NARCOTICS, PORNOGRAPHY AND THE PHILOSOPHY BEHIND THEM

(By Mary Ann Hamren)

Narcotics is one way to break down morality and sex is another. Which comes first—you can decide. As you will see, the ultimate goal is total degradation of womanhood and the moral breakdown of your youth (boys and girls). Perhaps it will be necessary for women to defend their femininity. The goal of our opposition is to create chaos—it has been successful with the adults and we cannot blame our young people. Adults are confused, too.

Before I start I want to quote "An Open Letter to Man." This was circulated and read on the radio and on television. It carries an excellent message.

"I am a woman. I am your wife, your sweetheart, your mother, your daughter, your sister . . . your friend. I need your help. I was created to give to the world gentleness, understanding, serenity, beauty and love. I am finding it increasingly difficult to fulfill my purpose. Many people in advertising, motion pictures, television and radio have ignored my inner qualities and have repeatedly used me only as a symbol of sex. This humiliates me; it destroys my dignity; it prevents me from being what you want me to be—an example of—beauty, inspiration and love. Love for my children, love for my husband, love of my God and Country. I need your help to restore me to my true position . . . to allow me to fulfill the purpose for which I was created. I know you will find a way." Gentlemen, we do need your help.

I will not elaborate much about what is going on in the schools and SIECUS—others are doing that today. Perhaps this will be a different viewpoint, at least for those of you who are not familiar with what is going on in San Francisco and Berkeley.

On October 16, 1968, the San Francisco Chronicle announced a National Forum on Sex and Drugs. This forum has been given a $20,000 grant for the first year by the Glide Foundation, the Van Ameringen Foundation and the Spectamur Agenda of New York. Two sociologists, Dr. Joel Fort, M.D., Public Health Specialist, sociologist-criminologist and nationally known expert on drug use and abuse, and Rev. Ted McIlvenna, director of operational education for the Glide Urban Center in San Francisco, made the announcement.[1] This forum of sexual instruction will include heterosexuality, homosexuality, abortion and birth control, prostitution, pornography, development of sexual attitudes and behavior and sex laws. The drug part will go into "patterns of use and abuse, treatment, prevention, laws relating to alcohol, tobacco, marijuana, stimulants, sedatives, narcotics, LSD, etc.[2] The forum's board of advisors include Albert Ellis, director of The Institute for Rational Living. (Remember this group—Institute for Rational Living.) Dr. Frederick Meyers, U.C. School of Medicine, is also on the forum's board of advisers.[3] The brochure covering this forum of courses has an introductory course on human sexuality and mind-altering drug use and abuse, sexual sensitivity group for couples, aesthetics of sex. Of further interest is the fact that Joel Fort was (perhaps still is) World Health Organization Consultant on Drugs and United Nations Social Affairs Officer; he has worked with the United Nations in Geneva.

During January of last year (1968), there was a movement for the Dr. Joel Fort legal support fund. This was because of the dismissal of Dr. Fort as director of San Francisco's Center for Special Problems. Two of the issues involved with his dismissal were: (1) Dr. Fort symbolizes the public health and sociologic approach to homosexuals and drug users which radically contrasts with the punitive law enforcement approach. (2) Dr. Fort has been a creative, innovative public health leader. . . . The removal of one innovator from the public sector limits the effectiveness of city government and makes creative change more difficult.[4] (This is what Dr. Fort's supporters believed.)

SIECUS frequently recommends reprints of sexology magazine articles such as those written by Dr. Albert Ellis. Ellis is not a SIECUS Board member, but is one of its "status" resource persons, whose writings are recommended.[5] Dr. Ellis (speaking of pornography) thinks that "Even for youngsters—skiing is much more dangerous." He does not believe that pornography contributes to abnormal sexual behavior.[6] A contrasting opinion to this was made during the Fortas hearings in September 1968 with regard to a case where a young boy had witnessed a stag film. On the way home at an intersection he got into a car, he commandeered the car, he took the girl and raped and killed her. During the congressional hearings, James Clancy, Attorney, stated that "there are two dangers. One is that it will cause criminal conduct." And he says, "We are not so concerned with this. But the second is that it will cause the youth to believe that because it is tolerated in the community, it is an acceptable standard. And this is what we are concerned with." [7]

Another statement worth mentioning which Dr. Ellis made was "A significantly higher percentage of Californians have liberal attitudes towards premarital sex relations, nudism, wife-swapping, homosexuality, and other forms of non-traditional sex behavior." [8] Now we will start to discuss pornography—from the Sunbathing Magazine, Dr. Albert Ellis and Dr. Kirkendall (of SIECUS and Sexology Magazine) both are being quoted, but Dr. Ellis says to the question, "Is a girl's psyche endangered by her having premarital relations? No, her psyche is only endangered if she erroneously believes that she is a horrible person for having such relations." [9] Dr. Ellis' speaking engagements in California include talks at Atascadero State Hospital for sex offenders, Esalen Institute at Big Sur and San Luis Obispo County Mental Health Association.[10] These are the places they send this expert to speak. Note Esalen. In True Magazine—Ellis encourages—indeed, even urges—young Americans to perpetrate almost any sexual act their cunning little minds can devise. In Ellis' view, a man is not only wise to engage in trial marriage but insane if he doesn't. Above all, Ellis preaches against feeling guilty or remorseful. Peace of mind lies in promiscuity, salvation in sin, sanity in education. . . . Doctor Ellis practices what he preaches. . . . Such a man might be labeled immoral and his ideas relegated to the absurd and the pornographic—except that he speaks from a platform of respectability.[11] This was the end of this one quote from True Magazine—and there are a total of four pages.

Back to Joel Fort—in the Berkeley Barb of March 29, 1968, headlined "Pot Meet"—Heads Disappointed by Compromise Stance: While the audience listened to Dr. Joel Fort, the San Francisco psychiatrist, call for the removal of all drug matters from the hands of the police into the hands of the medical profession, no other speaker went even that far . . . Many heads said they were irked by the fact that the participants so carefully avoided any reference to their own use of marijuana, but talked at such great length about patterns of drug use among the young. In the same article, Dr. Fred Myers, Professor of Pharmacology at U.C., and Dr. David Smith of Haight Ashbury Medical Clinic stressed the difficulties of doing adequate research about marijuana under the current laws.[12] I wish I had more time to read this whole article to you—these are the experts.

This brings me to the Journal of Psychedelic Drugs, edited by David E. Smith, M.D. and published by Haight-Ashbury Medical Clinic. There are two volumes, one on drugs and religion and one on drugs and the law. Among the writers are David Smith and Frederick Meyers. This is published by the Medical Center Psychopharmacology Study, Department of Pharmacology, University of California Medical Center—more experts teaching our sons and daughters to be well trained in our medical profession. On page 59 we are referred to the Bible and some kind of a recipe. I shall quote: "The priests are instructed to put it on their garments, on the tabernacle, and on the hangings of the tent. I can guarantee you that if the priests did so, whoever went into that tent for longer than fifteen minutes was turned on, because the ingredients of that oil are a volatile spice, frankincense, and myrrh, the mixture of which will produce a turned-on experience." [13] And so the experts teach about the Bible, and this is in a medical school.

Another platform of respectability would be the California Teachers Association. At the CTA State conference on educational research, held November 14–15, 1968 in San Francisco we find many stimulating speakers. In the Research Résumé of this CTA conference we read about the different sessions which include subjects such as Drug Abuse, Sex and Activist Youth, Race Relations, Alienated Youth, Youth Breaks the Rules, Sexual Freedom in the Schools. We find speakers such as Dr. Eleanore B. Luckey, Dr. Joel Fort, David Smith (Haight-Ashbury), Frederick Meyers (remember the Berkeley Barb), Dr. Ralph Eckert, Dr. Lester Kirkendall, Nathaniel Colley, Ian Grand (Experimental College—S.F. State), Bruce Hartford of SDS and Peace and Freedom Party, and the most famous Paul Cook of the Anaheim Schools. I wonder how the members of the different panels fared with the experts—there were many other names but we will save time by not pursuing this further.

Near the end of the résumé we come to a discussion by George Isaac Brown, "The Esalen-Ford Project for Innovation in Humanistic Education." This is where they utilize, especially when working with disadvantaged students, principles of Gestalt therapy to the classroom. This is where they are selecting approaches that could be adapted for the public school curriculum. Here, too, we include sensitivity training and encounter groups, improvisional therapy games, body awareness techniques, creativity training, etc.[14] Good descriptions, don't you think? Note—we are back to Esalen and we have a Ford Foundation grant on this one.

Another platform of respectability—the same organization, California Teachers Association—the publication is the January 1969

Footnotes at end of article.

Journal. Here we find an article by Eleanore B. Luckey, "Sex Education, Why?" and she refers to the writings of Isadore Rubin. Another story by Joel Fort called Drugs and Sex. Here Dr. Fort says, "The preparation of the teacher, and subsequently of the teacher's students, should include ability to think through the lies, distortions, and glamorizing about sex and drugs by advertising, politicians, and drug police, and to desensationalize and demythologize the subject matter. An ability to be honest and open and to handle controversial material is necessary and the teacher must resist extremist pressures. . . . If a teacher sees nothing undesirable about alcohol or marijuana or indiscriminate sexual intercourse, it would seem best for him not to teach and not to be assigned such a course." [15] Likewise, if he is convinced that masturbation or cigarette-smoking makes a student totally evil, he shouldn't have this responsibility. Extreme sanctions or penalties have been ineffective in eliminating drug or sex "deviance," and have been destructive of hundreds of thousands of young lives. This is the CTA magazine. These are the experts.

I am running short of time—we have not even started with the visual aids. These tie-in SIECUS with pornography. We could talk about the philosophy of "sex, a positive social action, and violence, a negative." Mr. Champlin, Los Angeles Times entertainment editor, said in Sherman Oaks at a PTA meeting in November 1968 that he is more concerned with violence.[16] We read of Dr. Roger S. Johnson stating at the California Hospital Medical Center in November 1968 that "perhaps the more we promote intimacy, the less manifestations of violence we should have." "In sexuality, the growth of intimacy, there may be a possible way of channeling and redirecting these impulses." [17]

We read in the Weekend Jaybird about the Elysium Institute and its members who were arrested. Mr. Stanley Fleishman (attorney) claims that the Los Angeles County ordinance against nudity is unconstitutional. Mr. Lang of Elysium Institute is pleased that the court has recognized the inherent decency of the naked human body. Man was created in God's own image and it's time we admitted that either our belief in a God after whom we have been patterned is wrong—or that our shame at the sight of our bodies is ridiculous. We must admit to the inherent decency of the naked human body.[18]

Now we can see the publication of Elysium Institute. Their address is on Fernwood Avenue in Los Angeles. We find under the Elysium Institute Directory that the Elysium Research and Development Institute is compiling reference material on the growing number of organizations in this country and abroad which are concerned, as is the Institute, with seeking means to enhance man's physical, emotional and intellectual development in an environment of openness, understanding and tolerance. Some of these organizations are:

American Humanist Association, University of Humanism, Institute for Rational Living, Ketros, American Sexual Freedom Movement, Human Betterment Association, American Sunbathing Assn., Castalia Foundation, Round Table, School of Living, SIECUS, Underground Press Syndicate, Pacifica Foundation Institute for Bionergetic Analysis, Human Potentialities Research Project, Institute for the Study of Non-violence, Institute for Social Research, Sexual Freedom League, Social Science Institute, Bridge Mountain Foundation, Esalen Institute, Neo-American Church, Human Resources Development, Topanga Human Development Center, and Society for Human Abortion.

The Elysium signs off by telling readers to write to them: "If you would like to know more about the work being done by any of the above groups, or by others in related fields of endeavor, we may be able to assist you. The Elysium Institute will attempt to provide the most current information on, or referral to, the projects and activities on which inquiry and interest are displayed." [19] Note: SIECUS and Esalen are both here.

Just to show you how far-reaching Esalen is—these charts have been made to show interlocking groups.[20]

Now we will go back to Elysium and more of their "visual aids" and the philosophy—it is a philosophy.

Show: Nude Lark magazine,[21] Nude Living magazine,[22] ANKH magazine.[23]

The symbol of the ANKH which is worn by many members of the hippy culture is used by Elysium Institute on its printed materials and also as the title of its magazine ANKH. This symbol is an ancient Egyptian hieroglyphic for "life," eternal or otherwise.

Just a word about a few other people involved with Esalen. George B. Leonard wrote a story in the December 24, 1968 Look magazine called "The Man and Woman Thing." This key phraseology SIECUS uses—"man and woman." George Leonard is Look senior editor; [24] George Leonard of Look magazine is also Vice President of Esalen.[25]

Also we find Virginia Satir, director of Esalen, who conducts family therapy programs. She was founder of Mental Research Institute.[26] Virginia Satir thinks marriage should be a five-year contract subject to either renewal or cancellation . . . When a marriage is dissolved on one of the five-year renewal dates, any children would be turned over to the substitute parents—specially trained in child rearing "because the significance of blood ties is mostly in our heads." [27]

We find Alan Watts working with Esalen [28] (one of the people who wants to enhance man's physical, emotional and intellectual development in an environment of openness, understanding and tolerance) a popularizer of Zen Buddhism, who is working to unify science, philosophy and religion. He advocates the use of LSD.[29] In October of 1968, according to the Los Angeles Free Press, Mr. Watts was advertising the Topanga Human Development Center and the Forum for Humanistic Psychology.[30]

Gerard Haigh, psychologist now busy in Topanga, working with the Topanga Human Development Center and their Psychomat [31] a Laboratory for Exploration. Dr. Haigh is also working with the Esalen group.[32]

I cannot resist showing you a couple of other magazines which were of interest—but not involved with Elysium, SIECUS—or such:

This is Continental Naturist—and it leads us to UNESCO.[33]

Roulette magazine takes us back to the Hitler era. Note the swastikas as a design and the swastika on the armband of the man torturing the girl.[34]

Jaybird Showcase portrays a clear picture of Devil worship, occult, youth and drugs and nudism added.[35]

An additional thought—Anthony Rose of Western Behavorial Sciences Institute in La Jolla said he would like to see the creation of a center, possibly government run, where people can go to "turn on." [36] Sounds like the Behavioral Science people have "great plans."

And so—we learn just a bit about "who" is going to expand the mind of man and the intertwine of the organizations.

As I close—I want to conclude by saying that "Sin did not start with the apple on the tree, but it actually started with the pair on the ground."

IN 50 WAYS

HON. PETER W. RODINO, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 24, 1969

Mr. RODINO. Mr. Speaker, the following editorial from the Newark Evening News represents, to my mind, a precise and realistic statement regarding a situation that will, sooner or later, become a major issue before the Congress.

While the Department of Transportation conducts its 2-year study of automobile insurance practices in the United States, the frustrations and the inadequacies of the present auto insurance system inexorably build up. In the Department of Transportation's research outline for their study they mention that the "apparent rising tide of dissatisfaction over costs, delays, and access to insurance coverage, the consuming public has been largely unheard from as to what it wants from the system."

I submit that the public is more aware at this moment of the unworkability of the present insurance system than it is of almost any other issue before the American people.

The article follows:

IN 50 WAYS

A committee of the National Association of Insurance Commissioners wants the federal government to leave regulation of auto insurance to the states, which means to the commissioners. It has set forth a program of basic requirements which, in some states, are as likely of realization as a politician's promise. These include ready access to insurance, prompt payment of claims, protection against

arbitrary cancellation, and a full statement of coverage, written in English.

The flaw in the committee's argument is that 50 different regulatory programs mean 50 different levels of interest in the protection of the motorist. Some states are diligent, while others apply virtually no standards. That leaves insurance companies to deal with one commissioner at a time, seeking to make up from one what they cannot get from another. And it allows 50 different ways of appraising experience records, investment of policyholders' funds and other elements that determine what premiums buy.

No one relishes the prospect of more federal intrusion, but until the commissioners do more than talk about establishing minimum, and reasonably strict, uniform requirements on their own, there will be continuing demands that Washington do the job for them.

THE 25TH ANNIVERSARY OF D-DAY

HON. WILLIAM B. SPONG, JR.

OF VIRGINIA

IN THE SENATE OF THE UNITED STATES

Wednesday, June 25, 1969

Mr. SPONG. Mr. President, on June 6 of this year a distinguished group of scholars and military historians gathered at the Eisenhower Library in Abilene, Kans., to commemorate the 25th anniversary of D-Day. Plans for the D-Day celebration and the symposium at Abilene were initiated sometime before General Eisenhower's death, and it was his suggestion that Dr. Forrest C. Pogue deliver the keynote address to set the stage for the conference on the subject of "D-Day, 25 years later."

Dr. Pogue is executive director of the George C. Marshall Research Library at Lexington, Va., on the grounds of the Virginia Military Institute. Some years ago, under a personal directive from General Eisenhower, he wrote the "Supreme Command," an authoritative study of the operations of the Supreme Allied Command in northwest Europe during 1944 and 1945.

I ask unanimous consent that Dr. Pogue's address, entitled "D-Day, 1944," be printed in the Extensions of Remarks.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

D-DAY—1944

(Address by Forrest C. Pogue)

At 0645 on the morning of June 6th off Omaha Beach a young lieutenant of the 1st Division Lt. John M. Spalding of Owensboro, Kentucky, was swimming for his life. His section of 32 men had unloaded from a larger craft into LCVPs some ten miles out nearly four hours earlier and had joined other small boats as they headed in for their appointed beaches. Loading in a very rough sea, many men became seasick immediately and others joined them as they moved in to the shore. Shortly before 0600, they saw the first flashes of fire from shore but were uncertain whether they represented Allied bombardments along the beaches or German artillery. Fifteen or twenty minutes later they caught sight of land, through mist and smoke and dust stirred up by heavy naval fire. At 0630, the boat halted and the skipper ordered the ramp dropped and the men to go ashore. The lieutenant jumped out into water to find himself up to his waist but, assuming that shallower water lay ahead, commanded his section to follow him in. He found, as many others did that morning, that the crews had been fooled by sandbars and that after a short time they were over their heads.

With a strong undercurrent carrying them toward the left, the men were soon floundering and in danger of drowning because of the heavy equipment most of them were carrying. They ended by abandoning most of it in the water or at the water's edge. An 18 foot scaling ladder, a 72 pound flamethrower, a useless walkie-talkie, a mortar and its ammunition, and one of their two bazookas were cast aside.

By amazing good fortune, they made it to the shore without casualties, but at the beach's edge a rifleman was hit in the foot by small arms fire and a few minutes later a BAR man was hit in the shoulder by a shell fragment. The lieutenant was not encouraged to find that he was 1000 yards to the east of his supposed landing place and that men of his company as well as those supposed to be on either side of him were now confused, uncertain of the landmarks, often bunched in areas where they made good targets. His salvation lay in the prompt decision to start off the beaches as soon as possible. Stopped by fire, one of his men with a bangalore blew a hole large enough for them to pass through. Rushing ahead to a demolished building, they took shelter behind it and a nearby pile of rubble, exchanging fire with enemy snipers, until machine gun fire which dotted the wall behind which they hid accounted for the first man of the section killed on D Day.

Looking back at the sea, the lieutenant sought to locate other sections of his company. Instead, he saw boats in flames. They reminded him of the men he had seen struggling in the water, who had escaped from DD tanks which had sunk on their way in to the shore. At last he saw a tank on the beach about 0730 but even that was not reassuring. "After a couple of looks back," he recalled, "we decided we wouldn't look back anymore."

Meanwhile one of his men had found a small defile several hundred yards away, running towards the top of the hill. The lieutenant called his men to come up on the right and they passed upward in the face of small arms fire which, while heavy, cost few casualties. Worried about a machine gun above him, he forgot to watch the path until his sergeant warned, "Watch out for the damned mines." The place was supposed to be infested with a small box type mine, but no one was hit, although the company which followed them a few hours later suffered several casualties. "The Lord was with us and we had an angel on each shoulder on that trip," the lieutenant later explained.

But the luck did not always hold. Trying to take out the troublesome machine gun above them with a bazooka, one of the sergeants was shot in the arm. A PFC was shot next as he tried to fire. Another sergeant who had picked up an automatic rifle was hit in both legs. But one machine gun could not cover them all and other members of the section, who had moved up, charged the position. The one enemy soldier, who turned out to be a former Polish prisoner, now enlisted in the German static defense force, suddenly surrendered.

By dint of luck and leadership, the lieutenant reached the top of the hill between 0900 and 1000. He believed, and later investigation showed that he was probably correct, that his was one of the first units of the 16th to hit the top. Once they reached it, the men had the advantage over the enemy in bunkers or in individual positions now below them towards the sea. Methodically they began to flush the enemy out of bunkers and communications trenches. Throughout that morning and afternoon the lieutenant was conscious of close-in Navy support that helped to silence enemy fire.

Soon other squads and sections came up the same or similar paths and he found at last other elements of his company, most of which had suffered heavily. Directed to go inland towards Colleville, he and his men spent the afternoon and early evening guarding approaches to the town, engaging in occasional fire fights, until they were at last given reinforcements. They spent the night watchfully only a few thousand yards inland from the beach. Of the 32 men the lieutenant had brought ashore, two were dead and ten wounded. For their bravery, five received DSCs, awarded personally by General Eisenhower.

This tiny segment of the D Day story is one of many that newsmen and combat historians, like myself, got from others. While we were involved, because we shared some of the discomforts and a few of the dangers (indeed some were killed or wounded), our D Day story is a composite of the experiences of others. Field Marshal Wavell named an anthology of his favorite poems—*Other Men's Flowers*. We who collected interviews might call them *Other Men's Memories*. One man's story can not tell the whole, but it can give a sampling of a battle which many men—airmen, sailors and soldiers helped make.

The story of other units, fighting their way ashore and then inland, show them often to have done much less well than the one I have described. Although by midnight all regiments of the 1st Division, two regiments of the 29th Division, and the 2d and 5th Rangers had been landed on Omaha Beach the position was precarious.

The factors responsible for D Day difficulties are many: the launching of small boats too far from shore, the heavy seas, landings on wrong beaches, concentration of men in front of exits, the foundering of all but five out of 32 DD tanks which were launched towards Omaha Beach from ships five or six miles out, (most of those sent in by ship arrived), the loss by capsizing of nearly all howitzers in one 105 mm. battery, abnormally high casualties among junior officers, delays in opening the beach exits, the tendency of some men in the first waves to crouch behind the first seawall they reached, exposing themselves to artillery fire and the danger of drowning in the incoming tide, the lack of sufficient gaps in underwater and beach obstacles, the late decision to cancel the bombing of beach fortifications, and the unexpected presence of the 352d Division near the beach.

Amidst all the gloomy summaries, there were many bright spots. On the 116th Infantry front, the assistant division commander, Brigadier General Norman D. Cota, and the regimental commander, Col. C. D. W. Canham, had set to work shortly after coming ashore around 0730 to organize the attack. Shortly afterwards Canham was wounded but he returned to the task after receiving first aid. According to the accounts of the soldiers General Cota was everywhere that morning. His activities in rallying the men and working to clear the exits from the beaches made him a legendary figure. On the 16th Infantry's beaches, Colonel George Taylor, the regimental commander, gained immortality by saying to his officers and men: "The only people on the beach are the dead and those who are going to die—now let's get the hell out of here." He and Colonel Canham were promoted to brigadier general for their D Day work and General Cota a few months later received command of the 28th Division.

Both to the east and west of Omaha Beach, the battle had gone better. The British 6th Airborne Division had landed in the early hours of June 6th to seize bridgeheads east of the Orne; along beaches Sword, Juno, and Gold troop of two British and one Canadian division of the 1 and 30 Corps landed with fewer difficulties than their American neighbors and were pushing in by late morning towards Bayeux. They were helped by a shorter trip in, the landing of

most of their tanks, and the effective use of tank flails, armored bulldozers and other mechanical items which the Americans had declined. Their losses, including the airborne, came to some 3600. On Utah Beach, the battle also went well. Confused by the paratroops of the 82d and 101st Airborne that had landed by glider and parachute on a widely scattered front, the enemy in that area seemed unable to organize a defense. Some pressure, therefore, was taken off the 4th Division which, stoutly supported by naval gunfire and aided by being landed by error on fronts more lightly defended than those on which they were expected to put down, moved swiftly inland with only some 200 casualties. The airborne suffered more heavily, sustaining some 2500 casualties in the two divisions.

For all its difficulties the D Day performance had been tremendously impressive. Some 5000 naval ships and landing craft participated, bombers and fighters made 11,000 sorties, dropping 12,000 tons of bombs, and approximately 125,000 men were put ashore. Heavy losses had been inflicted on the enemy units back of the beaches, the surprised enemy was now in confusion, the Luftwaffe's activities had been held to almost nothing, there was a difference in opinion between the Commander-in-Chief West, Field Marshal Gerd von Rundstedt, and his chief subordinate, Field Marshal Erwin Rommel, as to the proper way to meet the invaders, and Hitler and his staff disagreed with the western commanders on future enemy intentions, withholding permission for the commitment of the armored reserves and the use of troops from the Pas de Calais. Much remained to be done before the Allies could establish the lodgment area, and there would follow weeks of frustrating fighting in the hedgerows and in the narrow lanes of Normandy until the way was opened for the breakout toward Paris. But the lodgment had been won and the end seemed nearer at hand.

There were many D Days in World War II, but only one is understood when the term is mentioned. For the Western Powers at least, it represented the final focus of efforts to win a definite victory over the Axis in Europe. It was the decisive coming to grips with Germany to which the Allies had moved since the British withdrawal from the Continent and the fall of France. Concentrated in the mighty assault across the Channel from the ports of the United Kingdom was the power of the United States and the final surge of greatness of the British armed forces. It marked the finest hour of Anglo-American cooperation.

As there is only one D Day which comes to mind when the term is mentioned, there is one name above others that we associate with it. It is especially fitting that we mark the 25th anniversary of the Normandy landings near the home where that leader, General of the Army Dwight D. Eisenhower, grew to manhood and closer still to the chapel where he was recently laid to rest, a few weeks short of the anniversary of the Cross-Channel assault whose early plans he sketched and whose armies he directed.

Each man in Western Europe and the United States more than ten years of age in 1944 doubtless will remember where he was when the news first came of the landings, even as he can tell you where he first heard of Pearl Harbor or of the death of John F. Kennedy. (A ghastly coincidence reminds us all of the linking of June 6 with another tragedy). So far as my own memories of D Day are concerned, I can not speak firsthand of the storming of the beaches or the fire and shells and moments of terror because I was off the Isle of Wight in an LST, loaded with a company of the 175th Infantry and elements of combat engineers, scheduled for the afternoon follow-up on Omaha Beach. But the plans were disrupted and we were told to wait across the Channel until the exits were fully cleared. As a result it was not until evening that we crossed, getting our first sight of the beaches, as the smoke and haze lifted the following morning. The infantry and engineers aboard our ship were taken off near noon, but a small party of us consisting of War Department observers, liaison officers, and the two combat historians covering Omaha Beach actions. Bill Fox and I, heavily laden with map cases, typewriters, and brief cases, armed only with pistols, were told to stay aboard ship until the following day.

My first knowledge of the fighting came, therefore, from interviews with men wounded in the early fighting who had been brought aboard our craft, one of dozens provided with hospital facilities for handling men brought from the beaches. Although my notes recall the words, my memories are stronger of wounded men being brought over the side and taken down to sick bay, some so badly wounded they soon died, one—a British airman—whose foot was badly mangled but who managed, as he clenched his teeth to keep from crying out, to ask that someone more seriously injured be treated first. And of the interviewees, I recall the artillery liaison officer, shot through both hands, now swathed in bandages, cursing himself for making the elementary mistake of climbing up a tree where he was shot down before he had a chance to view the hedgerow country he had come to see. Or the Texas corporal of the combat engineers, suffering from a hole in his side, but somehow cheerful because the wound was bad enough to send him home to rejoin his wife and the baby he had never seen.

Recently in preparation for this address, I thumbed through the few souvenirs I have of D Day. There were my slender notebooks, which I filled in the days after landing, visiting men in underground CPs or in foxholes to get their stories of that first long day, sometimes sitting under a leaky shelter half as I wrote, the water washing out parts of the paragraphs as it spilled down my helmet. There were bits of enemy and American propaganda, dropped from planes that I found in the hedgerows and the orchards, one an American appeal, written in German, asking for an honorable surrender of the enemy; another a fake American one dollar bill which, when opened, contained in French an anti-Semitic attack on Secretary Morganthau and the merciless Americans who had launched the attack. Elsewhere there is a crumpled and dirty copy of Eisenhower's D Day message which was handed to every man engaged in the landings, and a firing plan, showing ranges at various points on Omaha Beach, which I found southwest of Pointe du Hoc. And there are remnants of a script for a maneuver exercise which I found in a bunker of a unit stationed near Isigny, fishing it out of a pile of papers most gingerly, fearing every moment that it might be wired to explode. It was for a maneuver against an enemy landing in the area of the Port en Bassin. Since the Germans wrote the script it ended happily, the Allied forces being thrown back into the sea after hard fighting.

There are many stories which recall the drama of D Day. But because the day itself has such tremendous interest, we forget all too quickly the long period of preparation which went before and the debt we owe to a number of men whose names are often forgotten when we speak of the great invasion. On this anniversary, we should recall that D Day's achievements were the products of many minds, months of training, massive production of ships and planes and weapons and equipment, skilled planning, the finding of competent leaders, and lessons learned from defeat and blood and death. It was the one moment of the war when the British and American leaders, the soldiers under their command, the civilians who backed them with their labors and their understanding support came together for a brief period, subordinating personal and national interests and narrow ambitions to one great purpose, finding a unity and a dedication to which we can still turn with pride.

Let us turn our minds back to the day when the last British troops had withdrawn from the Continent, leaving from Brittany and Normandy ports as the government of France went through its final agonies, and to the days when remnants of the defeated French forces rallied to General Charles de Gaulle in London. Despite the desperate situation, there was no doubt that the Allied forces would return. For months, the main energies of Britain would be devoted to defense of her shores and the skies overhead, but there was still a desire to plan. But when and how? An early outline, sketched in this period, started hopefully, "Having gotten ashore."

Those words, almost mocking in their nature, were not facetious but prophetic. They pointed up two problems that the western allies had not met in many years of fighting on the Continent: the lack of a hospitable landing place and the lack of proper landing craft. In the wars of the 18th and 19th centuries, the British had been able to find friendly ports for the entry of their troops, so that ordinary transports were enough for their purposes. Even when the great Napoleon had brought most of Europe under the Continental system, it had been possible to find a place in the Low Countries or in the Iberian Peninsula for a landing place.

With the fall of France and the later extension of German power over the whole of that country, with Spain and Portugal neutral in the struggle with Axis troops in firm control of most of western and central Europe and much of Russia, with German airpower dominating the skies of Europe and raining destruction down on Britain, with German submarines endangering Allied ships in the Atlantic, the Mediterranean, and the Channel, it was clear that much must be achieved before the Allies could attain the goal of getting ashore.

Before a realistic plan could be drawn for invasion, an air offensive had to be started which could win the skies over the British Isles and Western Europe, that could cut off the movement of men and supplies to the invasion area, and that could reduce enemy resources to the point that they could be dealt with successfully. There must also be landing craft that could carry ashore men and tanks and artillery. And there must be solid support from the United States.

Not until the end of 1941 was the last condition fulfilled. And the requirements of the Cross-Channel operation had to be measured against those of MacArthur's and Nimitz's first in the Philippines and then in the Southwest, South and Central Pacific, against the appeals of China, and the desperate needs of Russia caught up in a fight to the death on their own soil.

With all that remained ahead, it is interesting to note that early in 1942 the American commanders and planners outlined the Cross-Channel attack that was launched two years later. Brig. Gen. Dwight D. Eisenhower, newly brought to Washington by General George C. Marshall, and more recently made Chief of the War Plans Division, sketched the plan which reflected War Department thinking and won presidential backing for a return to the Continent.

But before the goal could be attained there followed the landings in North Africa, the taking of Sicily, and landings in the south of Italy. Not until December, 1943, when a Supreme Commander was actually selected to head the invasion and an approximate date of May, 1944, given to Marshal Stalin and not until Montgomery was picked by the British

to lead their forces and sent on to the United Kingdom to start final planning did the Cross-Channel attack move from the possible into the likely category. Churchill, to whom the idea of grappling with the enemy on the Continent appealed, still dreaded the possibility of a blood bath comparable to that his generation had suffered in Flanders. "You are fighting the ghosts of the Somme," the Prime Minister's doctor said to Marshall. His dread was such that even into the final months, he seemed to hope for some miracle that would bring German collapse without an invasion. As late as March and April, he continued to say occasionally to American visitors, "I am hardening on this operation," as if even then it might be averted.

And the Americans remained faithful to the concept. Never faltering in their devotion to the Cross-Channel attack were two officials in Washington—Secretary of War Henry L. Stimson and General Marshall. Backing them were the United States Chiefs of Staff and, for the most part, the President. Abroad, General Eisenhower, busy in North Africa and then in the Mediterranean, where he came to favor a later date for Overlord than he had at first suggested, remained loyal to his earlier proposal.

Yet it was Churchill who had helped pave the way for the return to France by his appointment in October, 1941, of Admiral Lord Louis Mountbatten as head of Combined Operations Headquarters. He was told to prepare for raids along the whole of the enemy coastline from North Cape to the Bay of Biscay but his main object was to be the reinvasion of France. He was to develop appurtenances and devices to make the invasion possible, to select and build up bases from which the assault could be made, to create amphibious training centers, and to select the place for attack. Although his attention was to range far from the French coast in the months that followed, Churchill's directive had set into motion a planning group which would lay the groundwork for the later D Day landings—a fact which Churchill and the U.S. and British Chiefs of Staff recognized when they visited the Normandy beaches six days after the landing when they sent a message to Mountbatten, then in the South East Asia Command, that much of the remarkable technique "and therefore the success of this venture had its origin in developments effected by you and your staff of Combined Operations."

Before the United States was brought into the war, representatives of COHQ were discussing with American manufacturers plans for producing landing craft for future operations. After U.S. entry into the war, COHQ poured more proposals into American hands.

Among his duties, Mountbatten acted as adviser to the Combined Commanders in considering a plan for a proposed return to the Continent, drawn up in early 1942. The Commander-in-Chief, Home Forces, General Sir Bernard Paget, the Admiral commanding at Portsmouth and the chiefs of the Fighter and Bomber Commands composed this group.

Paget, an able officer, who would later become commanding general of 21 Army Group, which he relinquished to Montgomery in late December, 1943, had little enthusiasm for the cross-Channel operation with which he was entrusted and was considered to be a defeatist. But he differed especially with Mountbatten and other planners in preferring the Pas de Calais for the landing area. There were paper arguments for his views—from Dover one could see the Calais shore and even shell it, air forces in southeast England could blanket the area, there would be a short turnaround for ships and landing craft, the way to Germany was much shorter than from any beach further to the West. But Mountbatten reasoned differently. There were few ports in the area nearest the Pas de Calais, troops brought from Wales and Cornwall would have a longer voyage to the attack area and would be subject to greater danger from the enemy. Again, the largest ports of the area, Calais and Boulogne, were not sufficient for developing the later attack. Even more important, the Germans would expect an attack there and be prepared to meet it. An advance in that area would expose its flank to German counterattack. It was in this period that the final attack area, the Baie de la Seine, was finally selected. Shortly afterwards, work began on port facilities from which the troops would sail. It would have been difficult in 1944 to have changed the landing area even if Eisenhower had so desired.

The other important planning group which preceded Eisenhower's Supreme Headquarters was the staff known as COSSAC (Chief of Staff to the Supreme Allied Commander) which was set up early in 1943 to start planning a return to the Continent. The British Lt. Gen. Frederick E. Morgan and his American deputy Major General Ray W. Barker were handicapped by the lack of a commander who could demand all that he needed to make a successful return to the Continent and by a restricted number of divisions on which to base the planning. As a result COSSAC's plan was described by nearly all who saw it as insufficiently strong. Although the invasion front was later widened and a number of changes made in the overall plan, much excellent groundwork was laid by COSSAC which was drawn on by later planners.

The important thing is that when the Supreme Headquarters was finally established, it succeeded to a rich harvest. Underway were experiments with and development of landing craft, artificial harbors, DD tanks, tank flails, Pluto, and the like. Also, in progress was the amassing of intelligence material which would be necessary for final planning.

While the planning was in progress, the commander of 21 Army Group—General Paget—was sending his British troops through realistic training to a degree never before utilized in Britain. For this work, Paget was compared with Sir John Moore who helped prepare Wellington's army for its successes in the Napoleonic war. American units were also undergoing training at centers in the United Kingdom, activities that sharply increased in the late fall of 1943 after General Bradley arrived to take command of First Army and to organize a second headquarters which ultimately was known as 12th Army Group.

Although planning and training went forward, the whole affair was somewhat academic until a commander was selected for the invasion. In his frustration, General Morgan at times suspected that he was serving as a front for something that would not take place. As a result when he was invited to the United States in October 1943 by General Marshall, then regarded as the future Supreme Commander, the British officer asked President Roosevelt for the immediate naming of the commander of the Cross-Channel attack. Feeling that he could not let Marshall go at the moment, Roosevelt still temporized. It was not until December at Cairo after he had been pressed by Stalin for the name of the commander that Roosevelt at last made his decision to name General Eisenhower. Shortly afterwards, on the recommendation of Field Marshal Sir Alan Brooke, the Prime Minister placed General Montgomery at the head of the British invasion forces. In turn, Eisenhower entrusted the British general with control of the Allied forces in the assault phases. Before he left North Africa for a brief trip to the United States, Eisenhower had instructed Montgomery—who shared his views—to proceed to London and begin a fight to enlarge the invasion force.

While Eisenhower was in Washington discussing future plans with General Marshall, the Chief of Staff, General Smith, and General Montgomery outlined plans for strengthening the attack. With the confidence born of victories in North Africa and the Mediterranean, Montgomery stirred the COSSAC planners with calls for more of everything. His recommendations, which his Chief of Staff thought were those "of any trained soldier," included more assault forces, a quicker build-up, a larger airlift, and an expanded invasion front. Realizing that many of the resources would have to come from the United States, the British commander insisted that Eisenhower take personal action, asking, "Will you hurl yourself into the contest and what we want, get for us?"

From the time that Eisenhower arrived in London in mid-January until the eve of D Day, he was involved in getting what was needed for victory. In some cases, it required a long battle to convince the U.S. Chiefs of Staff or the American President, in others the acceptance of political decisions displeasing to the British War Cabinet and the Prime Minister, and in still others the attempts to gain cooperation of General de Gaulle. Only an Allied Commander-in-Chief could have won from various governments what a British or American general could scarcely have asked from his own government. In the major political and military decisions of the period. Eisenhower made his authority felt.

Even before Eisenhower left the United States for London, Montgomery and Bedell Smith had concluded that a landing in southern France (ANVIL) scheduled to coincide with the Cross-Channel attack should be cancelled and the landing craft allocated to it sent to the Normandy area. Aware that the President and the U.S. Chiefs of Staff felt committed to the ANVIL operation, Eisenhower assured Washington that he would save the southern France attack if at all possible.

From the beginning the British sensed that Eisenhower was the key to a shift in strategy. Despite growing doubts in London, General Marshall still believed the operation feasible. But if Eisenhower felt he must sacrifice ANVIL to make certain of Overlord then the U.S. Chief of Staff would listen. He wanted nothing to hamper the Supreme Commander's success. For the moment, the decision waited while resources and allotments were reassessed. By early March, Eisenhower recognized that he would have to have the ANVIL landing craft for Overlord. But he waited until the decision was certain. On March 21, he informed the Chief of Staff that "ANVIL as we originally visualized it is no longer a possibility . . ." The U.S. Chiefs of Staff assented provided the British would agree to an ANVIL operation later in the summer. After prolonged debates, the Combined Chiefs of Staff on April 18th accepted a compromise arrangement which left open the final decision on a delayed ANVIL operation.

The other decision required by the broadening of the invasion front was on the proposal that two airborne divisions be dropped in the Cotentin Peninsula to help secure the new beach being added to the west. At once the commanding general of the Tactical Air Expeditionary Force, Air Chief Marshall Sir Trafford Leigh-Mallory, objected that he lacked the requisite airlift for the additional divisions and that he feared heavy losses to glider forces because of unsatisfactory landing fields and possible heavy antiaircraft fire. In view of pressure by Generals Montgomery and Bradley for the airborne drop, Eisenhower continued his advocacy of the plan, a view that Leigh-Mallory persistently opposed until near the time for landing. At length, he declared that it was probable that "at the most 30 per cent of the glider loads will become effective for use against the enemy." Six days before the landings, the Supreme

Command shut off the debate with a reminder that the airborne operation was essential to the success of the plan and "must go on." As a result, he added, "there is nothing for it but for you, the Army Commander and the Troop Carrier Commander to work out to the last detail every single thing that may diminish these hazards." A week later when it was clear that the landings had been achieved with much smaller losses than he had predicted, Leigh-Mallory conceded that the Supreme Commander had been right.

In the control and use of bombers before D Day and in the early phases of the battle for Normandy, General Eisenhower showed himself in his most positive mood. Let no one claim, said Air Chief Marshal Portal later, that anyone pushed Eisenhower around. He had in mind the heated debate over the Supreme Commander's control over strategic air forces in the early phases of operations and the equally sharp arguments over the transportation bombing plan. In both these controversies, Eisenhower had the strong support of General Marshall and of the Deputy Supreme Allied Commander, Air Chief Marshal Tedder, but his own decision and arguments were emphasized.

The command dispute arose from the fear of the bomber chiefs that the long-range bombing program, known as Operation Pointblank, which had been decided on at Casablanca and was yielding excellent returns, would be upset by a diversion to targets dictated by the interests of ground commanders. There was also the belief in some quarters that the bombers could decide the issue itself if the battle could be temporarily postponed.

Eisenhower had discussed the matter of control of strategic air forces with Marshall in late December, pointing out the need of having men in command who were aware of the problems involved in air support of ground troops. "Otherwise," he declared, "a commander is forever fighting with those airmen who, regardless of the ground situation, want to send big bombers on missions that have nothing to do with the critical effort." He brought up the matter personally a few days later with the Chief of Staff in Washington. Marshall needed no convincing. It was his initial view that Allied air superiority would make possible the invasion of northern France without overwhelming ground superiority and that had prompted him to back the Cross-Channel operation so strongly. Naturally, he was in favor of the maximum use of the bomber force to aid Eisenhower forces to get ashore and to stay there. As a result, he indicated that if he had been named as Supreme Commander and had been denied what he required, he would have resigned the command.

Strongly backed by Marshall, Eisenhower insisted that he be given control over those bombing efforts essential to his cross-Channel battle, adding at last that if the British were for anything less than all-out effort for the Cross-Channel attack he would "simply have to go home." To remove British doubts about SHAEF's possible misuse of the bombers, he declared at the end of February that he would exercise such control through Air Chief Marshal Tedder. Impressed by the strong stand on principle being made by Marshall and Eisenhower, the British Chief of Air Staff, Air Chief Marshal Portal, decided that some compromise formula must be devised.

His proposed formula indicated that when the Supreme Commander's plan for the air program in support of the Cross-Channel assault had been approved by Eisenhower and by Portal, "the responsibility for supervision of air operations of England of all the forces engaged in the program, including the United States Strategic Air Force and the British Bomber Command, together with any other air forces that might be made available, should pass to the Supreme Commander." The strategic air forces not used in support of Operation Overlord would be committed in accordance with arrangements made by the Supreme Commander and the Chief of the Air Staff.

This arrangement at once threatened to become unstuck when the U.S. Chiefs of Staff protested that it did not give Eisenhower "command" of the strategic air forces. The Supreme Commander, who had been incined to accept the formula when first presented, now declared that in view of the question which had been raised, he must insist that there be no doubt over his authority and responsibility for controlling air operations of the bomber and tactical forces "during the critical period of Overlord." This point was settled on April 7th when the Combined Chiefs of Staff declared that the U.S. Strategic Air Force and British Bomber Command would "operate under the direction of the Supreme Commander, in conformity with agreements between him and the Chief of the Air Staff as approved by the Combined Chief of Staff."

Equally stormy and drawn out was the debate over the transportation plan set forth by Leigh-Mallory's staff at the beginning of 1944. In an effort to reduce supplies carried by railroad into the invasion area, the planners proposed bombing of railway marshalling yards and repair facilities in key railway centers in Germany, Belgium, and France. The bomber chiefs objected at once to targets in Germany, saying that other targets—such as oil or airplane plants were more remunerative. In addition, there was a strong political objection raised by Churchill, Eden, and other members of the Government. After the war it was noted, the peoples of Eastern Europe and the Balkans would look towards Russia; Great Britain would have to depend for friendship on countries in the West. And there was the danger that heavy casualties inflicted on the civilian population in the attacks on railway centers would alienate them from the countries responsible for the losses—especially Britain.

Convinced that the plan was sound and necessary to success of the invasion, Eisenhower gave it his strongest backing. Leaving to Tedder the task of fighting for the concept in meetings with the bomber chiefs, he worked on the Prime Minister and members of the War Cabinet. As the commander responsible for the assault, Eisenhower was impressed by the arguments of the transportation plan proponents. He agreed fully with Tedder's suggestion in late April that although first priority should be given pointblank attacks deep into Germany which would weaken the German Air Force, the remaining air effort should be used to delay and disorganize ground movement during and after the landings "so as to help the army get ashore and stay ashore." Since the first five or six weeks of Overlord were likely to be the most critical, the Supreme Commander argued, it was essential to insure that the assault forces landed and held their ground. He insisted that it was "only necessary to show that there would be some reduction of German transportation, however small, to justify adopting this plan, provided there was no alternative available."

When the Prime Minister continued to stress political objections, Eisenhower stood firm, saying "I have stuck by my guns because there is no other way in which this tremendous air force can help us, during the preparatory period, to get ashore and stay there." At last Mr. Churchill gave way, but he demanded that casualties be held below 10,000. He kept careful watch on reports of civilian losses in France, saying to Tedder, "I am afraid you are piling up an awful load of hate." He was mollified to an extent by General Smith's report that General Pierre Koenig, head of the French forces in the United Kingdom, had said "We would take twice the anticipated loss to be rid of the Germans."

The necessity of weighing preparations for D Day against political considerations disturbing to Great Britain was particularly marked in Eisenhower's efforts to insure the security of his assault planning. Only a determined officer, able to gain the ear of the Prime Minister, could have turned the trick. This fact was illustrated in three episodes in the spring of 1944.

Reminded by members of his staff that visitors to beach areas and harbors were likely to imperil the secrecy of his operations, Eisenhower asked for an outright ban of civilians from restricted coastal areas in the critical days of final preparations. When the civil ministries objected, General Morgan, now deputy Chief of Staff under Eisenhower, retorted, "If we fail, there won't be any more politics—and certainly no more Lend-Lease." But no final action was taken until the Supreme Commander warned the members of the War Cabinet that it would go hard with their consciences "if we were to feel, in later years, that by neglecting any security precaution we have compromised the success of these vital operations or needlessly squandered men's lives." Four days later the required ban was imposed.

This was followed by censorship of outgoing mail and a ban on leave for members of the armed forces outside the country. A more difficult step was the proposed censorship of diplomatic correspondence. The Foreign Office and War Cabinet were extremely dubious about the proposal. Again the Supreme Commander spoke of what might happen. This source of leakage represented "the gravest risk to the security of our operations and to the lives of our sailors, soldiers, and airmen," he declared on April 9th. Eight days later the War Cabinet announced that foreign diplomatic representatives henceforth would not be permitted to receive or send uncensored communications and their couriers not allowed to leave the United Kingdom. Only the United States and the USSR were exempt from this British decree.

From Algiers, a furious de Gaulle ordered his representative in London, Koenig, to break off discussions then in progress with members of the SHAEF staff on questions relating to D Day. Fortunately, the tempest soon subsided when de Gaulle, who believed that matters would go well between Koenig and Eisenhower because of the latter's "friendly disposition toward France," permitted an arrangement to be worked out. An argeement was reached by which British and U.S. authorities examined French messages before they were dispatched from London and then permitted them to be sent in code on Koenig's assurance that the original texts would not be changed.

The uproar over the diplomatic messages was but a foretaste of the protests that could be expected from de Gaulle in Algiers. Believing that the open support of the French National Committee for the invasion was of great importance to General Eisenhower, he was determined to gain recognition for his Committee as the government of France. This was an old and tiresome question which had long troubled Eisenhower but which he had been unable to solve. In Britain, the Foreign Office at least was favorable to recognizing de Gaulle, but Roosevelt, never friendly to the French general, firmly reminded Eisenhower that he could recognize no government of France until the people of that country had an opportunity to make a choice. He was willing for Eisenhower to discuss matters with the French Committee on a military level, but resolutely opposed to any action politically.

The situation, as Eisenhower reminded the Combined Chiefs of Staff near mid-May, was embarrassing and "potentially dangerous." He suggested a way out of their difficulty by inviting General de Gaulle to London where he could be briefed on the coming operation. Roosevelt agreed if de Gaulle did not return to Algiers until the attack had been launched.

As final plans were being made for the assault, Eisenhower and members of his staff concluded that it was essential to have de Gaulle issue an appeal to the French people to support Allied forces under the Supreme Commander. At a very late hour, little more than 48 hours before the attack, the French General was flown to the United Kingdom and informed of the coming assault. Piqued by the lateness of his briefing, the irate leader reacted strongly when handed a statement which the SHAEF Psychological Warfare Division had prepared for him to read in support of Supreme Headquarters. He flatly refused to cooperate on the ground that nothing was said of the French National Committee.

Through much of the night of June 5th a series of conferences were held involving Foreign Secretary Eden, Sir Robert Bruce Lockhart of the Political Warfare Executive, General R. A. McClure, SHAEF Psychological Warfare head, and de Gaulle. Bedell Smith was inclined to be blunt with him and threaten to cut off grants of aid. Lockhart and McClure took the more diplomatic approach, and reminding de Gaulle that his standing in France would be damaged if it were known that he was in London and did not add his voice to the representatives of other occupied countries. At last in the early morning of June 6th he agreed to make an appeal. But he made it on his own terms.

He did not speak when other representatives of occupied countries made their appeals. He did not call on Frenchmen to put themselves under Eisenhower's orders as the prepared speech had done. Instead he told them to follow the orders of the government of France (his committee) and its chiefs. And he got revenge on Roosevelt by pointedly omitting any mention of American efforts while graciously praising old England's contribution as the last bastion in the west.

His eloquent speech touched the Prime Minister. Churchill, who was easily moved to tears, wept at the tribute. To disguise his feelings, he picked on one of his favorite targets, General Ismay, who was standing nearby, unmoved by the eloquence. Caustically, the Prime Minister demanded, "You great lump of lard have you no finer feelings."

Many of these developments were not then known to me and the other combat historians who were preparing for their own role in the D Day invasion. Several of us had been briefed in Washington that spring and then flown to London in April in time to learn something of the invasion plans before the launching of the June 6th attack.

Various signs signalled the approach of the assault. Nearly every day regular traffic would be stopped in parts of London while great convoys of men and equipment moved eastward and to the south. The British were headed towards the old cities of Dover and Rye, while the Americans moved towards the fields and ports of Devon and of Cornwall. At other times we talked to a pilot or a gunner. Tired, weary, but avid for a change from the excitement they had been experiencing, they would describe the work being done in preparation for the attack. Six missions in a row over Flak Corner on the "Milk Run" was the story of one gunner, who spelled out tales of recklessness, heroism, fatigue and fear. He was sure that things were about to pop because the intensity of the attacks could not be maintained. As yet unbriefed as to the real area of the invasion, we tried to make deductions from the pattern of attacks and troop movements, only to make the same mistake the Germans did.

We learned much about the Allied forces in the briefings in London, the nature of the command organization, the logistical preparations, organization of various combat units, tables of organization and the like, but we still did not know the area of attack or the precise development of the battle. Perhaps the most memorable thing that came from the session was the statement of the Navy officer who summed up the report that we could write in advance on D Day, "confusion reigned on the beaches," a prophecy which proved exact.

Not until we had made a brief visit to General Bradley's headquarters at Bristol—where our historical teams were split up for assignment—and Lt. William J. Fox and I settled down at V Corps Headquarters at Norton Manor near Taunton in Somerset did we finally see the detailed plans. After being bigoted we were shown into a small room filled with paint buckets and brushes used to stencil boxes. In one corner was a wooden cabinet and in it were the broad outlines of the high level plan, sketches of 21 Army Group and First U.S. Army plans, the complete Navy plan, and the detailed V Corps plan and annexes for Omaha Beach.

Feverishly we digested the material. We already knew that under General Eisenhower was General Bernard L. Montgomery's 21 Army Group with general direction of the Allied ground forces for the assault period and that under him Lt. General Omar N. Bradley's First U.S. Army commanded the American effort in the fight. Now we learned of the dispositions on the respective beaches.

The area chosen looked unpromising on the map. From the detailed, yard by yard descriptions, the beaches—once attractive to tourists—seemed unlikely places on which to land, particularly in the V Corps area. The beaches, backed by cliffs, were rimmed by ledges from which antitank guns, mortars, and automatic weapons could bring murderous fire on the attackers. Reports from the French underground, from air photos, and from special landing parties, which had been set ashore to conduct reconnaissance, virtually pin-pointed the defenses, the paths, the winding roads, the stone walls, the length of the beach, the height of shingle. Most important, they listed the location of almost every machine gun, the direction of fire, the rifle pits, the strands of wire, the communications trenches between bunkers, the tank ditches which cut off access to the exits from the beaches, and the awful photographs of underwater barriers. Gate-like "Element C," standing nine feet high, with slanting steel supports, topped by tellermines; hedgehogs, ugly affairs made of crisscrossed steel beams from 5–7 feet in height; log ramps and posts with ragged edges on which other mines were placed to rip and explode the small landing craft as they came in with troops protected the beaches from assault. This devilish collection of pitfalls, which the enemy under Field Marshal Erwin Rommel's stern direction had been installing at a rapid rate in recent weeks, seemed to grow more deadly each day. Because of the obstructions, it was necessary for the planners to arrange for the assault at low tide, so that the first waves could go in while the barriers were exposed, thus avoiding the underwater terror and bringing in demolition teams to clear them away before the later waves of craft and troops came in.

Naturally, the plans were extensive. Besides such matters as naval and air support, supply, operational details, the massive appendices extended to civil government, supply, medical questions, and the like. One list detailed the amounts of cocoa, wheat, meat, and vegetables to be distributed to towns needing food. The quartermaster was given estimates of uniforms, bandages, Purple Hearts, and even Bronze Stars he would be expected to provide. The Medical Section reassured us that there were no poisonous serpents in the area, but failed to note that in a local apple brandy called Calvados, the region had a potent antidote against snakebite. We were even told where the Germans had their chief administrative offices, which local officials had been unduly friendly to the enemy, the location of possible pigeon lofts, and names of prostitutes in some localities who might be able to supply information about the Germans.

On Tuesday, May 23d V Corps began its move from Norton Manor to the marshalling area in Cornwall. Our group was bound for Redruth, not far from Penzance near the southwestward tip of England. The morning was cold when we started, but slowly the chill was dispersed by the sun, and the day at last became one which made us happy to be in England now that spring was here. I remember the peaceful hills and valleys, and the occasional breathless moment when we sat on a hilltip and saw a dozen roads through the valleys below thousands of vehicles, jammed with men and equipment, moving towards the south. I was reminded of a chapter in Conan Doyle's *Sir Nigel* when he spoke of a much earlier setting forth of men for battle in a chapter "How the Comrades Journeyed Down the Old, Old Road." In his case, the men-at-arms travelled towards Dover rather than westward, but he had caught the picture of a crowded highway as he described "the throng which set the old road smoking in a haze of white dust from Winchester to the narrow sea."

The little towns, still filled with century old quaintness, looked out of place as troops streamed through in flood tide to the channel. There were half-concealed airfields, meadows which hid tanks and jeeps, and hedges filled with piles of shells. But we forgot the war momentarily when we passed a simple country house with a scrawled sign, proclaiming "Tea for Sale." The pleasant old lady poured tea in her parlor, where our fighting gear seemed somewhat out of place until we saw on the walls the photographs of her daughter, a WAAF in London, and a son, now a lance corporal in India.

After a half hour stop, we continued on our way, reaching at last the concentration area where our small party of liaison officers and historians were to be attached for rations and quarters to a company of the 175th Infantry of the 29th Division. Our camp was in a number of fields, along a country lane, placed between small hills which hid us from the sea.

At this isolated camp, we felt for the first time the imminence of the invasion. Since we were to be briefed on the time and place of the attack, we were forbidden to leave the area without permission. Guards stood at regular intervals along the road to enforce that regulation, acting also as airplane watchers and carrying specially treated armbands which would indicate the presence of gas.

On Friday the soldiers were briefed. It was fascinating to watch the reactions of the various groups as they were shown silhouettes of the coasts showing how the beaches looked at one half mile, two miles, and five miles out. In other cases, the men gathered around card tables or maps spread on the ground. They listened closely as the story of D Day was unfolded, still not clear as to the overall plan. They were told that under the full support of naval and air bombardment they would go in on beaches cleared of opposition. As the officers and men learned their specific missions, their faces showed the growing grins that one notes when a listener anticipates the ending of a well known joke. "Jesus," one of them remarked, "now we can get started on the way home."

An outsider would not understand the enthusiasm of soldiers facing a deadly assault, but these men had participated in repeated exercises in the U.S., marched up and down England, practiced in assault training centers until it seemed that they would never strike at the target which must be seized before they could turn back to the United States. So without worry about the fact that

the first day of battle might be the last of life, they hailed the announcement that they were going to Normandy.

There was little talk of the enemy; I saw no sign of hatred there. We spoke of this strange attitude, but no one worried. The soldiers were sure that when the shooting started and friends were killed, they would hate the enemy enough. "After all," said one artilleryman, "we don't see the men we kill anyway." There was not even great anxiety about the chance of getting hit. In an effort to keep down fears on this score, the Stars and Stripes, in issues carefully distributed to the troops, explained how shock kept the wounded from feeling much pain and that there were few cases where the hurt persisted long before unconsciousness of morphia gave relief. General Bradley, who proved to be an accurate prophet, struck out against wild estimates of casualties, based on Tarawa percentages, which predicted losses of 50,000 in the first few hours.

The weather on our final Sunday in camp was extremely beautiful. The day was much like any other, until someone announced that there would be services in the mess hall. I half persuaded another chap to go but he said that he would feel like a hypocrite by waiting until this late hour to go to church. Some twenty of us met in the tent, sitting on the rude benches at the wooden mess tables, while a young red-haired chaplain from Virginia led us in a group of songs from which "Onward Christian Soldiers" and "The Son of God Goes Forth to War" were carefully omitted. He preached simply on the text, "Suffer Little Children to Come Unto Me." There was no threat of death nor talk of hate nor smell of battle in that tent, although his helmet, set before him on a table, served as a pulpit and we held our weapons close at hand while we prayed.

We were awakened at the usual time—0700—on June 2d and told to don our gas impregnated clothing. Two hours later, after breakfasting, we started to a rendezvous point where we met a convoy. At noon we were fed at an improvised mess hall along the way. Two hours later we stopped and were fed again as jokesters spoke of the condemned man eating a hearty meal. Occasionally we passed English homes and the dwellers would come out to look curiously at the quiet groups of silent men—going down to the sea. Now and then a mother would hold up her child to see the passing troops, as if she wanted him to be able to say when he was old that he had seen the soldiers march off to attack the distant shore.

Land's end for us was the edge of a small cove near Helston—such an inlet as pirates or smugglers might have used or a place where the Phoenicians might have anchored when they came two thousand years ago to seek Cornish tin. The British had realized that it was such a place as enemy intruders might seek out for entry and they had built machine gun nests and barricades on the hills around. Now at last they could hope that these defenses would soon be no longer needed.

By early evening our party—a company of the 175th Infantry, attached engineer units, and our small party of "parasites"—had been loaded on our LST. Some two hours later we left the cove. As we sailed for Falmouth, we met some of the crew. It added nothing to our sense of well-being to find that most of them, like the LST, were on their first voyage. Many of them had been drafted only six months before. A few had been in Italy, but most of them were still so new that the skipper, normally after giving a nautical command, would immediately translate into the layman's language.

On Sunday, June 4th the weather was foul. Sometime during the day we learned that Eisenhower had postponed the invasion one day and there was griping by the men who feared they would have to go back to port. The plan had indicated that only June 5, 6, and 7 in the first half of June were satisfactory for the assault.

Next morning at 9, we started from Falmouth Harbor, sailing slowly eastwards. By 3 P.M., there were 28 LSTs in sight—at this time in three parallel lanes, later expanding to five or more, while out on the horizon could be seen three or four destroyers, shedding confidence on us as they circled and turned to stay between us and unknown perils. Above were plane escorts and we could see hunderds of planes or hear their motors as bombers flew to targets near the beaches. Two barrage balloons which floated above each LST gave a holiday appearance to the occasion. Behind us we towed a curious raft known as a Rhino ferry. Other vessels pulled along strange contraptions of concrete and steel that were to make up part of an artificial port. Everything was relatively quiet on shipboard. The sky was somewhat overcast, but the sea relatively calm, and the sun came through now and then. "Abandon ship" drill was perfunctory, despite the sobering statement that the next alert we heard would be the real thing.

At noon with our lunch, each man received General Eisenhower's Order of the Day, dated June 6th. It was now certain that D Day was on. Later we were to learn of the dramatic meeting at which the decision was finally given.

Through five months Eisenhower had used a mixture of diplomacy, stubbornness, gentle words and firm persuasion to gain the unity and support he needed for the disparate elements which would make up the Allied team for D Day. In all these he had the backing of one or more strong political or military leaders. But it was on June 5th when he met for a second time with his chief advisers at Southwick House near Portsmouth to decide whether the invasion must again be postponed that he faced one of his most crucial decisions of the war. Writing of it later, Eisenhower's Chief of Staff was struck by "the loneliness and isolation at a time when such a momentous decision was to be taken by him, with full knowledge that success or failure rests on his individual decision."

At 9:30 on the evening of June 4th, General Eisenhower discussed with his advisers whether weather conditions, which had forced him to consent to a one day postponement, earlier that day, now showed sufficient improvement to authorize the assault for the 6th. Much depended on the observations of the weather officer, Captain J. M. Stagg, of the SHAEF staff. One observer was later convinced that the Supreme Commander's decision was aided in the final analysis by the fact that in the days preceding the D Day verdict, he had discussed the factors involved in weather predictions so that he not only had confidence in his meteorological adviser but understood the elements to be considered.

The alternatives were not pleasant ones. Stagg reported that a new weather front gave some hope for improvement throughout June 5th and until the morning of the 6th. The skies were expected to clear sufficiently during the evening of the 5th for heavy bombers to operate during the night and in the early morning at H hour, but it was not certain if favorable conditions would prevail during the assault stages.

Thus there was some hope, but if the weather grew worse after the first wave had landed, what then? Caution favored delay. On the other hand a second delay meant that ships must return to port and the men unloaded. The possibility that the enemy might spot the preparations would be increased. A second postponement might find even worse weather in prospect for the 7th and the need for postponement for two weeks. These delays reduced the period of good weather for fighting and increased the possibility that the V weapons, now known to be readied for attack on British cities and harbors, might be in use (as indeed they were by that time). Worse still, a further wait would hurt troop morale. The men had been brought to a state of readiness. Another delay would make it hard to reach that pitch again.

All these points were in Eisenhower's mind when he pondered his decision. Looking around the room, he polled his advisers. Leigh-Mallory believed that from an air standpoint the attack would be chancey and Tedder agreed. General Montgomery, sticking to his view of the previous day, voted "Go." The decision was now entirely in the Supreme Commander's hands. He pondered it briefly, dropped his head for a moment's thought and decided, "We go."

A final review was slated for the early morning of June 5th. Despite the rain and wind that greeted the Supreme Commander at his final conference, the weather forecasters now thought there might be a break of thirty-six hours. On the basis of this advice, Eisenhower held to earlier decision, informing Washington that "Halcyon plus 5 (June 6) finally and definitely confirmed."

In fact no other decision was possible but it was important for the future of operations in Europe. One of Montgomery's aides said long afterwards the fact that Eisenhower took the responsibility and said "let's go" was a prodigious contribution psychologically in that it took off others the weight of decision. The fact that he had accepted full weight of any reverses that might come was indicated by the Supreme Commander in a memorandum he wrote the day before the landings. Several days later when the success of the assault was complete, he showed it to Commander Butcher. The key sentence read: "The troops, the air and the Navy did all that bravery and devotion to duty could do. If any blame or fault attaches to the attempt it is mine alone." Those words alone make it peculiarly fitting that we associate this Anglo-American action of D Day forever with the name of Ike.

And it is important in this period of strained alliances, of misunderstandings, of loosening ties which once bound us tightly to friends of Western Europe that we recall the day twenty-five years ago when a common effort and a common belief in the things we held most dear produced the D Day miracle. For it was with that rare unity forged in the years of peril and of fear and of defeat that victory was at last attained.

FURTHER DEVELOPMENTS ON PAY TELEVISION

HON. JAMES HARVEY

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 25, 1969

Mr. HARVEY. Mr. Speaker, the mounting interest and serious concern in many circles as to the future impact of subscription or pay television compels me to bring to the attention of my colleagues further developments of paramount importance.

For example, perhaps you missed the brief, but rather potent, article which appeared June 13, 1969—a Friday, incidentally—in the Washington Post. It will follow this statement. Let me quote one paragraph from the story which was entitled "Sports Ready To Collect on Pay-TV." The quote from Dick Bailey, Sr., president of the Hughes Sports Network, sums up the future quite well as far as pay television operators are concerned. Mr. Bailey is quoted as saying:

There is a new era coming and a lot of people will be scrambling to get into it. Free TV will have to worry about losing sports to pay TV.

The article is wrong in one respect. The closing paragraph of the story leaves the impression that it will be 2 years before pay television will be a threat. This is not true.

The Federal Communications Commission has announced its intention to begin licensing pay TV operations 60 days after the disposition of a pending court case. The FCC now is accepting applications from prospective pay television operators.

For over 2 years I have advocated that the question of pay television is a congressional issue and one that Congress should decide—not the FCC. This Congress should determine the role of pay television. For example, it now is being stated that if pay television takes hold in the United States, Americans in the lower income groups will lose free television. They would not be able to watch pay television.

I further understand that the FCC has stated that at least one-third of the families with television sets will not be able to afford pay television.

Another development concerning pay television is covered in an article by Jack Gould, which appeared last Friday, June 20, 1969, in the New York Times. I am also including that article at the end of this statement, as it clearly shows the possible future relationship between pay television and community antenna television—CATV.

In addition, I want to include for the RECORD excerpts from the testimony of Lester W. Lindow, executive director of the Association of Maximum Service Telecasters, Inc., Washington, D.C., before the Subcommittee on Communications and Power, House Committee on Interstate and Foreign Commerce back on October 13, 1967. His comments some 21 months ago remain valid and current on today's pay television developments.

The newspaper articles and Mr. Lindow's statement follow:

[From the Washington (D.C.) Post, June 13, 1969]

SPORTS READY TO COLLECT ON PAY-TV

The prospect of a bountiful new source of revenue for sports came closer to realization following the Federal Communications Commission order yesterday permitting the start of pay television.

There are legal, technical and other obstacles to be overcome before the householder will be asked to pay for his television fare, but Dick Bailey Sr., president of the Hughes Sports Network, said, "It is coming, there is no use fighting it."

Art Modell, president of the National Football League, said, "I believe it is 'way, 'way off for pro football. We're married to free TV, except for a special game or two. I could understand pay TV in an area which has been blacked out of free TV during postseason games."

Harry Markson, director of boxing for Madison Square Garden, said, "We will be most interested in the developments of pay TV."

The Garden recently contracted to show 125 sports events on community antenna television over a one-year period, including all the games of the New York Knickerbockers and New York Rangers.

Baseball Commissioner Bowis Kuhn could not be reached for comment.

Pro football already has made provisions for pay TV in the merger agreement between the two leagues, which takes full effect in 1970.

With most stadiums already playing to capacity crowds and negotiations for regular Sunday game telecasts reaching the choking price, pro football recently went to prime-time Monday night telecasts for 1970 to raise an extra $8 million in revenue.

At the time of the merger between the American and National football leagues, in 1966, owner Ralph Wilson of the Buffalo Bills estimated that pay television of the Super Bowl could mean $25 million to $30 million in revenue for a game that now brings in $2.5 million from free TV.

"Wilson is probably right," president Bailey of the Hughes Sports Network said yesterday. "If I had not sold this network to Howard Hughes. I know I would be going into pay TV now instead of bucking the three conventional networks.

"Only Mr. Hughes can say what we will do now. He makes the decisions."

Bailey revealed that the Hughes network bid on the 13 Monday night telecasts for 1970, which went to the American Broadcasting Co.

"We did not bid lower than ABC," Bailey said "There were other circumstances."

Bailey added, "There is a new era coming and a lot of people will be scrambling to get into it. Free TV will have to worry about losing sports to pay TV."

But not for two years because sports events regularly shown on free TV cannot make the switch to pay TV until that much time has elapsed under the projected regulations.

[From the New York Times, June 20, 1969]

CABLE TV COMPANY TO PROVIDE EXTRA SERVICES AT MONTHLY FEE

(By Jack Gould)

A cable television company operating outside New York City plans to make separate charges for four TV program services, including motion pictures. Cable TV subscribers already pay an average of $5 a month for the relaying over wires of programs televised by regular stations.

Alfred R. Stern, president of the Television Communications Corporation of 630 Fifth Avenue, disclosed yesterday that he had entered negotiations with the major film producers for the showing of films on a cable "theater channel." A charge of $5 a month would be made for the showing of three pictures a week.

The plan, scheduled to be introduced in Winter Haven, Fla., calls for the film producers to receive 40 per cent of the proceeds; the cable system, 50 per cent, and the corporation, 10 per cent.

SCHEDULING OF FILMS

To allay the fears of theater owners over competition from pay TV, Mr. Stern said, no film will be shown until after it has completed its engagements in first-run and neighborhood houses.

Mr. Stern's announcement is expected to add to the general controversy over cable TV because many on-the-air broadcasters and theater owners have regarded cable video as an opening wedge to pay-you-see TV.

In New York City, the Manhattan Cable TV Services and the Teleprompter Manhattan CATV Corporation have carried supplementary services such as athletic and musical events and documentary films. These companies have not made extra charges because of a city ban on any form of pay TV over franchised cable facilities.

SEEN AS MORE POPULAR

Mr. Stern, whose company owns cable systems in smaller communities in 10 states, said he thought the lump monthly fee for motion picture service would be more popular and efficient than trying to charge an individual price for different films.

Another advantage, he said, was that the consumer would have the option of deciding whether he wanted to pay for extra programs without increasing the cost of regular cable relay of presentations on the air.

In addition to the theater channel, which would have no advertising, Mr. Stern's corporation is proposing an informational channel, for films of general interest to youngsters and adults; an instructional channel, for foreign-language courses and other vocational guidance, and a professional channel, for providing up-to-date medical data to registered physicians.

The additional channels would cost $2.50 each, bringing the total for all four channels to $12.50 monthly.

EXCERPT FROM TESTIMONY OF LESTER W. LINDOW

There has been considerable discussion this week about the proposed FCC rules for pay TV as they would affect sports events. Quite understandably, there has been a certain amount of confusion. Let me say, first of all, that the proposed rules regarding sports are quite complex. It is certainly understandable that confusion has been created. I do not blame you one bit for having problems with these things.

However, the proposed FCC Fourth Report and Order does set forth the proposed rules although, as I say, they are somewhat complicated. First of all, it is important to understand that there are two kinds of sports events established by the proposed rules. The first type is what are called specific sports events. These include such features as the World Series, the All Star Game, the various Bowl games, League Championships, and, of course, they extend not only to baseball but other kinds of sports, as well.

The second type is what is described as non-specific sports events. Generally speaking, these include those games played as a part of a regular season, in other words, all the regular games of the Washington Redskins or the Washington Senators.

Within the non-specific type there is a further breakdown of categories, again applying to all types of sports having a regular season. It includes home games, games away from home, pre-season games or exhibition games, or the so-called Games of the Week. These matters are set forth in detail on page 91, paragraph 261 of the proposed FCC Report as well as in paragraph 262 which immediately follows that.

Let us refer back to the type described as specific sports events; the World Series, the All Star Game. The proposed Commission rules would provide that if such an event had been broadcast on free television for two consecutive years in the community, and I emphasize "in the community", where the pay television station is located, not nationwide but in the community, pay television cannot broadcast it. I refer now to page 92 of the proposed Report at paragraph 264.

Let us take the World Series as an example. If the Series were on free TV in that community in October 1965 as well as in October 1966, both years, pay television could not show it in October 1967 on the pay TV station licensed to that community. Here I quote from the Report, "If the Series were on free TV in that community in either October 1965 or 1966 but not in both years it would be viewed as not having been regularly televised there and an STV station could show the Series in October 1967."

This is the rule. Would it prevent siphoning? I don't think that it would. Let us see how this could conceivable work. It could work in several ways. Assume that the Series was broadcast on free television in 1966 and again this year, in 1967. The pay television station operator in Washington, D.C. could

go to the baseball people, offer them a sufficient amount of money if they would refuse to sell the World Series rights for Washington for free television in 1968—they only have to do it in Washington—and agree to make up the difference in income. The following year it could be placed on pay TV and every year thereafter.

Another method to get around this might well be to keep it off free television in 1968 but, through mutually agreeable arrangements, put the Series in 1968 into theater pay television in Washington, in near-by Maryland, Virginia, all through our whole area, with the idea of bringing it on pay TV the following year. Under this method, the baseball people would not stand to lose any revenue and the public could see the Series provided they were able to go to the theater and pay for it for one year.

Now, we do not say that this would necessarily happen on a national basis overnight but it could happen on a selected basis in Market A and B this year, in C and D next year, and, incidentally, Zenith said that they did not expect to go into operation all over the country; they are just talking about a couple of markets at a time; Mr. Wright made that point the other day—they could do this progressively and so on until in a relatively short time, for all practical purposes, the World Series would be taken out of the realm of free television and into a completely pay TV setup.

Certainly there would be outcries from the public. There were outcries from the public when Championship fights were put into the theaters on a pay basis and taken off free television. You have reminded us on several occasions, again this week, that there were very serious outcries from Arizona this spring on this very matter, in the case of the Clay-Foley Championship fight. But the situation still exists. That is part of what we are up here talking about today.

Now let us turn to the second type of sports event set up by the proposed Commission rules, that of the non-specific sports event; the game which is played as a part of a regular season. The proposed Commission rules cover this as well. I refer you now to paragraphs 266 and 267, commencing at the bottom of page 92 of the proposed FCC Report.

If a substantial number of non-specific events, such as home games or away from home games, or the so-called Games of the Week, were televised over free television in the pay TV community and were, and I quote from the proposed FCC Report, "within each of the two years preceding the proposed STV broadcasting thereof," then no games in that category may be presented by pay television in that community.

As the proposed FCC Report states, the standard is to be applied on a category by category basis, and, here I quote again from the Report, "If during one but not both of the two years preceding proposed STV broadcast, a substantial number of events in a category were not televised in a community, the category will be considered not to have been regularly televised therein and STV may show the contests in that category." That means all such contests.

Now, that is the rule that is proposed. Does it prevent siphoning? A pay TV promoter could use his economic leverage to purchase the games in a category of non-specific sport events such as regular season home baseball games, which may not have been broadcast in the community over free television, and present them without any delay. For example, assume that a baseball team plays 80 home games and no games in this category are broadcast on free television in the home community. Pay TV could purchase the television rights to all of the home games in this category the very next season, while the away from home games previously broadcast by television could be withdrawn from free television by the ball club during that season so that they, too, could be made available to pay TV the following year. The same situation could exist if some but not all of the home games were broadcast on free television.

Now, I hope this may help clear up the so-called two-year provision which I think is a snare and a delusion.

TACOMA CELEBRATES ITS 100TH BIRTHDAY

HON. FLOYD V. HICKS

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 25, 1969

Mr. HICKS. Mr. Speaker, the city of Tacoma, which I have the honor to represent, is currently celebrating the 100th anniversary of its birth. Located on beautiful Commencement Bay at the mouth of the Puyallup River in the shadow of Mount Rainier, Tacoma has grown from a family homestead to the third largest city in the State of Washington.

The history of the continuous settlement of the area began when Job Carr selected a piece of land along the shore of the bay in December 1864 in an area called Chebaulip by the Indians, and shortly thereafter constructed a log cabin as a home for his family. The family arrived from Indiana in 1865.

The patented land, about one-quarter of a section, possessed rich soil and excellent location. It was its location, in fact, that made the claim so appealing to Gen. Morton M. McCarver, who arrived in 1868 as the representative of Portland financial interests. McCarver and his associates had concluded that the area round Commencement Bay was a natural location for the western terminus of a transcontinental railroad. The town which served as that terminus would necessarily prosper.

Upon his arrival, McCarver immediately sought out Job Carr and offered to buy his claim. Carr agreed to sell all with the exception of a 5-acre plot on which he continued to reside. Buying additional land in the area, McCarver began to create his new city. Other settlers arrived as a consequence of McCarver's promotion and soon discussion centered around a permanent name for the new community, which tentatively was being referred to as Commencement City. Selection of the name Tacoma was promoted by an eastern Washington resident, Philip Ritz of Ritzville, who arrived in the fall. Ritz had recently read a book about Puget Sound country written several years before by Theodore Winthrop, who had visited the region in 1853. The book, entitled "The Canoe and Saddle," among other things dealt with the original names of mountains now bearing incongruous European names. Mount Rainier, Winthrop claimed, was known to the Indians as Tacoma.

Both the McCarver and Carr families were visited by Ritz, who encouraged adoption of the mountain's Indian name as the name of the city. McCarver was persuaded and when he and his partners completed the temporary plat of the new town, the name Commencement City was stricken and that of Tacoma entered.

During the following year, 1869, many lots in the fledgling community were sold, a number of houses built, and several businesses begun. Population increased to the point that in May the county commissioners created Tacoma precinct and appointed the necessary election officials. It was now time for the formal platting of the townsite.

The plat was completed in August and filed at Olympia, the State capital, in December. It is the anniversary of this formal beginning of Tacoma which is now being celebrated.

Tacoma grew steadily during its first several years but it was the announcement in July 1873 of its selection as the western terminus of the Northern Pacific Railroad which provided the needed basis for expansion. As envisaged by McCarver, hundreds of individuals rushed to Tacoma to take advantage of the opportunities offered by the new railhead.

Then came the closure of J. Cooke & Co., principal financiers of the road; the railroad was nevertheless completed before the end of the year, 1873. But Tacoma, like the rest of the Nation, felt the depression severely. When it finally lifted and especially in the 1880's with the construction of a direct railroad to the east, the city began to flourish.

The population, which was 1,098 in 1880, swelled to over 36,000 in 1890. Again, depression struck the Nation, causing the city to record only a slight population increase during the 1890's. But with the new century the future of the city, as measured by its current growth, was assured.

During the first decade alone, the population substantially more than doubled. The vision of its founders had become reality.

Tacoma is now the State's third largest city with a population in excess of 150,000 and serves a metropolitan area with a population more than double that figure. It possesses in Commencement Bay one of the finest natural harbors in the world, and one of the fastest developing ports in the country.

The value of imports in 168 was three times that handled in the previous year. Imports in 1967 totaled $37 million, and in 1968 they were $108 million.

With plentiful and inexpensive water and electricity and excellent transportation facilities, including in addition to the port, the Seattle-Tacoma International Airport, the new Tacoma Industrial Airport, and serviced by four major railroads, the city is one of the State's leading industrial areas.

Its broad industrial base includes wood products and metallurgy. The Tacoma smelter is the largest combined copper smelter and refinery in the Nation and refines about 10 percent of the country's copper. The city is one of the leading producers of a number of forest products. The 1968 estimated industrial payroll of $390 million was nearly 20-percent larger than that for 1967.

The Tacoma metropolitan area also includes two large defense establishments, Fort Lewis and McChord Air

Force Base, and is only 25 miles from the Bremerton Naval Shipyard to the west and the Boeing Co., to the north. The area has two fine private universities and two community colleges.

Possessed of one of the most equable climates in the world and located in one of the most beautiful and naturally bounteous sections of the Nation, Tacoma is the gateway to the Northwest playground.

The grandeur and beauty of the area are more than adequately symbolized by Mount Rainier. The Tacomans are indeed proud of their centennial city and equally proud of the area which it serves.

And I, Mr. Speaker, am most proud to serve that area. I am looking forward to taking part in the centennial celebration during the Fourth of July congressional recess, and invite any of my colleagues who may be in the area to join me during that time.

THE ESTABLISHMENT—HOW ONE WORKS

HON. JOHN P. SAYLOR

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 25, 1969

Mr. SAYLOR. Mr. Speaker, a few days ago, my good friend and comember of the board of regents of the Mercersburg Academy, Mr. Austin V. McClain, spoke to the student body at our alma mater on the functions and responsibilities of a board of regents.

His talk was a good exposition of how one attempts to bridge the "generation gap" of which we hear so much these days. The purpose of his talk was to explain how the Mercersburg board operates, but more important, how any group of dedicated men and women must operate to provide for an educational institution. In common usage, such an institution is part of "the establishment" and as such, in some schools throughout the country, comes under heavy fire from those who know little and apparently care less whether or not their particular educational institution is to be a viable one.

Mr. McClain pointed out that by-and-large a board of trustees or regents is largely made up of graduates of the school which they serve; that most of such graduates had the same goals and aspirations as students, as the students presently in attendance; that they serve their alma mater with devotion, with personal sacrifice, and with only the best interests of the institution as their goal.

To hear some of the campus radicals today, one would think that the governing bodies of educational institutions were jailers or worse. What these people do not understand and fail to try to understand is that the governing body of any educational institution exists for only one reason, and that is to provide for the continuation of a place for others to receive an education. The role of the governing body is critical to this process and that role should be understood by all—students, faculty, alumni, and the public. Mr. McClain has made a good start toward making some aware of the role of a board of regents, and I hope that with wider circulation, the understanding will grow. To that end, I am inserting this statement to the student body of the Mercersburg Academy at this point in the RECORD.

THE FUNCTION OF THE BOARD OF REGENTS

(By Austin V. McClain)

It has been suggested that we talk together about the way this and other schools and colleges are organized. What I am about to say of the origin and organization of this School applies almost exactly to other educational institutions.

It may not be exciting, but it may help a little in both your understanding and mine. The discussion is particularly pertinent in these times when so many boards are under attack by student groups who I am sure do not really understand the organizational structure.

I wish I could call on your imagination and ask you to think of me as a Mercersburg student. This may be very difficult, because I am two generations beyond you. But I am asking you to imagine a group of 500 students gathered as you are today, and that I am one of them. I ask you to do this because younger people often do not realize we were young and at your age had many of the same thoughts, complaints, worry over examinations and guard that you have. We complained about compulsory rules. And when we got together for bull sessions we talked about the girls and hell raising in general, just as you do.

Our School itself was started by a young man of only 28, and when he was at Exeter I haven't the slightest doubt that he had the same problems. Most of all I emphasize he was a very young man, under 30, to have this dream. On May 1st I had a letter concerning a gift an alumnus has been thinking about. He entered in 1905 and has been one of our most loyal alumni. Quite by coincidence in his letter he had this sentence: "I led the infamous strike in 1910 and did many other things I've always regretted and was a bad student to boot."

So while there may be a generation gap, we *were* Mercersburg students and contrary to what you may think, we have *not* forgotten. Far from forgetting, there is scarcely a day in my life that I do not use some of the information and principles that were taught me here . . . things that at the time did not seem relevant at all.

I will take a moment to tell you how most schools started. The earliest settlers, though they were not themselves educated, wanted their offspring to have an education, so they founded schools almost as soon as they cleared the land. They knew that an educated citizenry could not be subjugated, and their whole purpose in coming here was freedom from unjust governments. The word freedom is most often misused. The constitution guarantees us certain freedoms with respect to the government. It does not intend the word to mean that we have freedom to do anything we want. We are not free to drive any way we wish, nor to hit our neighbor over the head, nor to say just anything that comes into our mind under any and all circumstances.

At any rate, the Pilgrims got here in 1619, and Harvard was started in 1636. As the people went west they continued to found colleges and schools. Yale was founded when a group in New Haven got together and gave $7,000 to get started. Mercersburg was founded as a college when the people of this small village gave $10,000. Woodberry Forest started when Robert Walker in 1889 began teaching his own youngsters in his home. The neighbors asked if their children could attend, and shortly they were raising the funds from gifts of thinking citizens so they could educate more students. My first point is: schools did not just happen. They were founded by generous and thinking people for the education of their families, and others. The most important point is that in no case did those who gave the money expect to get anything out of it. What they did was for the benefit of others.

When a group of people want to work together in any sort of project involving property the procedure is to go to the legislature and ask for a charter. If granted, the charter sets forth the rights, responsibilities and limitations of the group. Our charter granted in 1965 tells how the Board was to be organized, and then grants the Board the right to accept gifts, hold land, build buildings, invest funds, etc.

In another part it gives the Board the right and obligations to name a head of the School, plus a faculty, and specially sets forth that they can be removed for misconduct, etc.

In our system of law, where any property is involved it is given over to the care of Trustees. This is the most common name, but titles such as regents, governors, directors are also used. But "Trustee" describes the group best since the property is in truth *entrusted* to them, including all the funds, current and endowment. And the Trustees are required to protect and preserve these assets, and they are responsible. If they do not protect and preserve them, they can be sued.

There are Trustee functions running all through our system. When a man dies he can turn his money over to Trustees who must manage the "trust" in accordance with the terms of the will. A group of people may form a corporation, and the stockholders turn the corporation over to a board which is similar in its function to Trustees.

My second point is that *any* organization has to have a board of management. You have this in the officers of your organizations here in the School. Some person or group has to give leadership and take responsibility.

In all cases if the boards do not do their duty and handle the property correctly, they can be challenged in the courts and penalized financially if they have done anything that is improper.

Under all these charters the Board then adopts by-laws which in the main describe the organization, what officers there will be, what their duties are, etc.

And in all instances that I know of, the boards then name a manager, or a president, or headmaster to have full-time operation of the institution. Board members of educational institutions are almost never full-time employees, so they have to engage full-time people to manage the School. So a man is named president, principal, or headmaster, and he in turn engages a staff to do the teaching. In practice, he recommends to the Board that a certain individual be named to teach mathematics, etc., and the Board elects, but also in practice the Board would rarely interfere.

After the faculty has been named, the Board then looks to the headmaster and faculty to work out the curriculum and rules for operating the institution. The headmaster and faculty in turn make recommendations to the Board, and nearly always the Board approves their recommendations on the basis that they are closer to the situation, and are in a position to know best.

The school then is made up of four parts:

1. The Student body, which is the whole purpose for the existence of the School.

2. The Headmaster and faculty, who in later life are revered by their students, but are not always appreciated during the school years.

3. The alumni body, 12,000 former students, who all complained while they were here, including me, but who after graduation

give the funds to provide better facilities for the students.

4. The Board of Regents, whose job it is to serve these three groups, and to do the best they can to make it an outstanding institution.

As the School ages, and the young men who have been graduated develop into leaders in their fields, the Board is likely to be made up largely of alumni. So a typical Board is made up of people who themselves have studied at the particular school, and who have reached maturity. They refer to it as "Alma Mater"—beloved mother.

The typical Board is made up of people who care greatly. They have attended the school; their own children have attended the school; and they have attained a modicum of success in their chosen field.

On the Board of Mercersburg we have 30 individuals, plus five honorary members. On the active Board 24 of the 30 are alumni; the others are devoted friends. There are two physicians, four bankers, four accountants, four educators, two clergymen, six attorneys, two legislators and twenty-one corporation executives, i.e., businessmen. There is some duplication, since one attorney is a banker, several accountants are heads of companies, etc. There is very little that can come up in a Board meeting where we do not have someone competent to advise us, though what we usually do is to weigh this advice, and then hire outside experts if this seems indicated.

Now what does the Board do?

This can best be introduced by describing the various committees of the Board. Each of us serves on one or more committees. Listen carefully to the title of each: finance committee, buildings and grounds committee, nominating committee, development committee—that means fund-raising. The heads of each of these committees serve on the executive committee.

The committees describe the work we do. It is mostly business matters. Nowhere have I mentioned a committee on curriculum, athletics, discipline, or student affairs, for these are the responsibility of the Headmaster and faculty.

I have gone back over the minutes of the Board for the past year, and can find our main work was concerned with investments, how we can raise more money to improve the buildings, what the tuition must be to approach a balanced budget, etc.

One of our major jobs is the balancing of the budget. At no school do the students pay the whole cost. I have put in your places a restructured budget for this year. It shows that all fees provide $1,521,000 out of total expense of $1,905,000. Then we list gifts of $349,000 to make up some of the difference, which this year means we will end up about $34,000 in the red. Note that we have to make up $349,000. Divided among 500 students this would require $770 more in tuition than is now charged, but we supply this money rather than charge the higher rate.

We do not ignore the main purpose of the Academy, which is to educate. But our Board, like most boards, cannot become involved with day-to-day class work. So from the beginning the Board has searched for an individual with educational experience, and a faculty to have charge of the day-to-day operations. They decide on the curriculum, discipline, athletic policies, and all the things that touch you directly. When there is to be any change in these areas, Mr. Fowle comes to the Board and says: "The Faculty and I recommend that such and such be done." Since we are not competent to decide whether Latin or some other course should be taught, we normally accept the recommendations. I cannot remember a time when we did not. In fact, we may not always entirely agree. But it is essential to good management to cooperate with the operating head of an organization and let him manage it. If he does well, all right. If he doesn't you get a new manager, but he has to be let alone. I must say that I do not know of any case where there has been a difference of opinion that there has been anything but the best of feelings. You can disagree with your best friend and not be nasty about it. I wish there was more of this sort of feeling abroad on college campuses. Nothing is settled by violence. Violence is infantile. Children throw tantrums when they do not get what they want. Mature people do not act that way.

Now let me say several things about this Board that some people overlook.

1. No one on the Board is paid anything for his service. In fact, it costs him and his company a lot of money for him to serve.

2. Individual members of the Board do not do business with the School, i.e., they do not profit from School business.

3. They do not exert pressure to secure the admission of a prospective student. In fact, on several occasions sons of members have not been able to make it.

4. They travel to four to six meetings a year at their own expense.

5. Since most of the men are in active business, the time taken from that business is costly. I estimate that the per diem cost to our firms for a Board meeting is $12,000 to $15,000 per meeting.

I mentioned that one of our committees is finance and another development. Well in the development field we have in the past ten years raised $7,000,000 in one way or another. Our most recent campaign was to raise $1.5 million to match a challenge gift of $1.5 million. The challenge gift was made by a foundation of which a Board member is president. The way we started out to raise the money was to go first to the Board, and of that $1.5 million the Board gave 41 per cent. Thirty people gave over $600,000, but you could well say that with the challenge gift, the Board gave $2.1 million of the more than $3 million raised.

What happened was that the Headmaster told us one day the students of this School needed a better library and a better gymnasium. We accepted his recommendation, and set about raising the money, spending our time going out to see others to ask for gifts.

The Board is the business and giving arm of the School. In my judgment, this function can best be carried out by a diversified group such as we have. Maybe we could have a better Board, but in general the decisions coming from it would be no better and possibly worse. If you know of anyone who has particular experience in budget-balancing, investments, building construction, and education, and who is also willing to give generously, I urge you to give me his name for a place on the Board of this Academy. But please don't give me any name unless he has already proved he has been successful in managing his own affairs.

What does the Board get out of all of this? What have we gained from making a gift every year, balancing the budget, building buildings? The same satisfaction the pioneers got when they started their schools . . . hopefully better education for their descendants.

Critics of boards all seem to forget that they invest their time, money, and experience, and get absolutely no tangible return.

They do have the satisfaction of having invested in the future of the youth of America. They do it because they have come to appreciate the value of their experience here, and because they want to pass it on to others.

Wrong we may often be, but our every decision has the highest motivation.

SST NEXT LOGICAL STEP IN AIR TRANSPORT GROWTH

HON. GARNER E. SHRIVER

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 25, 1969

Mr. SHRIVER. Mr. Speaker, more than 2 months ago I conveyed to the President my strong support of continued progress in the U.S. supersonic transport program. It is my understanding that the SST program is still under review by the administation, and in recent weeks consideration has been given to alternate plans of financing prototype construction.

I take this opportunity of calling to the attention of Members of the House a recent statement which appeared in Boeing Planetalk, an employee publication, outlining the importance of the United States proceeding with the next phase of the SST program.

According to the article, it will take until the late 1970's before the American SST will be ready for service and the early 1980's before substantial numbers will be in operation. The British-French SST already has been flight tested and made its first public appearance at the recent international air show in Paris.

We are talking about a $20 billion production program, and a program in which the Federal Government's SST investment will be returned by the 300th airplane sale.

Having received permission to extend my remarks in the RECORD, I insert the following article on the SST from Boeing Planetalk:

SST NEXT LOGICAL STEP IN AIR TRANSPORT GROWTH

The impressive growth of world air transportation, together with the advance of technology, make the supersonic transport a logical next major step for the air transport industry. It must be kept in mind that the time required to construct and test prototypes and enter production will make it late in the 1970s before the American SST will be ready for service and early in the '80s before appreciable numbers will be in operation. Market forecasters generally agree that air traffic will continue to grow at a rate averaging at least 8½ percent per year through the 1970s and '80s, as compared with a 15 percent average annual increase during the past 20 years. This growth will result in six times the present passenger-mile volume by 1990.

In the total route pattern, the long intercontinental routes are particularly suited to the SST, because trip times would be shortened dramatically by the 1,800-mile-an-hour speed. These overwater routes also avoid the problem of possible objections to sonic boom effects over populated areas. The SST's share of the traffic on these routes in 1985 will equal today's total free world traffic. The market so described will absorb an estimated 500 American-built SST's by 1990—a $20 billion production program.

Latest studies show the U.S. SST to be highly competitive in the 1980s from an operational economics standpoint. In its early years following introduction, when the demand will be high and SST equipment will still be scarce, high load factors or percentage of seats occupied can be expected to result in high revenue yield, as was the case when

the jet transport was first introduced. Thereafter the SST will gradually gain an advantage over present jet transports in total operating costs as a direct result of its speed, since wage and salary costs that are applicable on an hourly basis will produce three times as many miles of transportation per hour. As these hourly costs continue to increase, the SST will continue to gain in relative operating economy, until in the latter 1980s its total operating cost per seat mile will tend to approximate that of the newest large-body economy jets. Travel at three times the present speed can be accomplished at relatively the same cost per seat mile as for the subsonic equipment. The result will be advantageous economically to the airlines and a considerable boon to the air traveler. Europe will be as close to the East coast by SST as Minneapolis is to New York by subsonic jet.

The program will also be advantageous from the standpoint of the nation's economy as a whole. The U.S. aircraft industry has long held the position of leading supplier of air transport equipment to the airlines of the world and hence has been a leading contributor to our balance of payments. But that position is threatened by the entry of Great Britain, France and the Soviet Union into the SST field. The American SST program will have an estimated $16 billion favorable balance of trade effect, as compared with an opposite situation wherein U.S. airlines would be obliged to buy the equipment from European sources.

A production SST program will provide an estimated 50,000 direct jobs in the plants of prime contractors and principal subcontractors at peak. More than 50 percent of the work will be subcontracted, covering almost all of the 50 states. Considerable national benefit will also accrue from broader application of various technological developments employed in the SST, as well as from secondary employment in support of the SST program itself.

From the first the program has been designed to be self-liquidating. Royalties on production sales will return the government's full prototype investment by the 300th airplane sale and $1 billion in interest by the 500th sale—the present market estimate. In addition, personal and corporate income tax payments by participants in the production program will return an amount to the U.S. Treasury estimated at twice the prototype expenditure.

Delivery positions for a total of 122 SSTs have been reserved by 12 U.S. and 14 non-U.S. airlines. United States airlines have invested $59.5 million in the prototype development program. The Boeing Company estimates its total commitment through completion of prototype construction (including research and development, facilities and other non-reimbursable expenditures) to be approximately $200 million.

The total cost of the prototype program to the government is estimated at $1.2 billion if the program goes forward as originally planned. In recent weeks consideration has been given by the Administration to alternate plans of financing the prototypes such as through the use of government-guaranteed bonds, but as of this writing no determination has been made on such plans.

Research and development work on the SST have now been going on for more than ten years. The program has reached the point where appropriate designs exist. A full range of design alternatives has been wind tunnel tested, resulting in an airplane superior to the present European SSTs in speed (by 400 miles per hour), in combined range and payload, in passenger accommodations and in operating economics. The next step required is the construction of prototypes for actual flight proving and refinement prior to production.

Delay in proceeding with the program could result in European model advances toward the performance capabilities that are counted on to give the U.S. product its market superiority. It would permit the foreign competition to book more orders and thus narrow the remaining SST market.

The management of The Boeing Company feels that the SST program is one highly appropriate to United States capabilities, capitalizing on the technology that has been built up in this country. It fits the requirements of growth in world air transportation, bringing the advantage of increased productivity by providing substantially more seat-miles per hour than present jet equipment. It will bring the air traveler the advantage of significantly greater speed and convenience, which has been the basis of air transportation's growth.

FALSE ECONOMY

HON. EDWARD J. PATTEN

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 25, 1969

Mr. PATTEN. Mr. Speaker, while Newark Bay marine terminal development is best known for its containership and general cargo facilities, channel improvements in the bay and the Hackensack River to the north of Port Newark, must not be overlooked. As part of the overall Newark Bay-Hackensack River improvement project, Congress and the President in 1968 also authorized a deepening of the north reach of Newark Bay channel from its present 32 feet to a new depth of 35 feet, the provision of a maneuvering area 1,300 feet long and 900 feet wide just below the Passaic and Hackensack Rivers, and a deepening of the Hackensack from 30 to 32 feet for about 4 miles, thence from 12 to 15 feet up to about the city of Hackensack.

Located along the northern shore of the bay and lower reaches of the river are industrial terminals which handle waterborne movements of sulfur, chemicals, coal, asphalt and petroleum. Some of the larger industrial-type tonnages handled on Newark Bay in 1966 are as follows—in short tons:

Aluminum ores and concentrates	17,330
Chrome ores and concentrates	57,858
Crude petroleum	49,728
Salt	70,945
Basic chemicals and plastics	366,146
Soap	73,796
Gasoline	1,330,232
Jet fuel	1,143,651
Kerosene	499,509
Fuel oils	1,914,687
Naphtha	73,296
Iron and steel products	366,768
Copper alloys	171,294
Iron and steel scrap	706,210

Mr. Speaker, from these figures, it must be obvious that water commerce on Newark Bay plays a key role in New Jersey's leadership in industry and industrial employment.

Of particular interest is the importance of petroleum, and the fact that in 1966, 410 ocean tanker movements, that is, vessels drawing more than 19 feet of water, handled petroleum products on Newark Bay. Of this, 176 ships upon arrival in Newark Bay drew 29 or more feet of water, which means that these vessels could have navigated the present 32-foot deep north reach only at high tide.

I think it must be clear that the deepening of this reach will prevent costly delays to such vessels awaiting high tide. Accordingly, along with the widening of the lower reaches of Newark Bay, I strongly support the deepening of the northern reaches and the provision of the turning basin recommended by the Corps of Engineers.

Mr. Speaker, I am not against economy, but economy in the above areas would not only be false, but in some instances, dangerous as well. I urge the present administration not to discriminate against the New York-New Jersey ports.

ECONOMICS OF OIL AND GAS OPERATIONS OFFSHORE UNITED STATES

HON. OMAR BURLESON

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 25, 1969

Mr. BURLESON of Texas. Mr. Speaker, Mr. R. C. McCurdy, president of Shell Oil Co., examined the economic factors in offshore oil and gas operations in a recent presentation to a technology conference in Houston. His paper considered the high costs of offshore work and the need for a reasonable expectation of return so the industry can attract the necessary investor capital.

Mr. Speaker, I submit Mr. McCurdy's remarks for inclusion in the RECORD. His remarks have particular significance at this time when efforts are being made to open our borders to a vast flow of foreign oil. His paper examines the enormous return to the public that is generated from offshore activity in the form of bonuses, rentals, production taxes, and royalties to the Federal and State Governments. A valid comparison between the cost of domestic offshore oil and foreign imports cannot be made unless this considerable benefit is made a part of the evaluation.

Mr. Speaker, figures 1 and 2 referred to by Mr. McCurdy are tables and are included in the RECORD. Figures 3 through 7 are charts which present a problem in printing and are therefore not included but will be readily made available to anyone interested.

The material follows:

ECONOMICS OF OIL AND GAS OPERATIONS OFFSHORE, UNITED STATES

(By R. C. McCurdy, Shell Oil Co.)

INTRODUCTION

Offshore oil and gas operations are the first major industrial endeavor to exploit the mineral resources under the oceans. Over a span of 20 years these operations have grown to a position of prominence in the oil industry. In 1968 they accounted for 14 percent of this nation's crude oil and condensate production and about 40 percent of the industry's total domestic exploration and production investment. This growth has dictated the development of a new technology which today permits us to produce in 350 feet of water and drill in water depths in excess of 1,300 feet. These capabilities undoubtedly can be extended several fold.

The potential of the explored areas of the continental shelf is well established. The vast unexplored areas of the shelf and slope offer added potential. However, the ultimate role of the offshore in satisfying future national energy requirements depends on the application of continuing technological advancements within an accepted economic framework.

WHY THE MIGRATION OFFSHORE

The underlying reason for the oil industry's activity in the ocean is this nation's growing demand for hydrocarbons. In the past 20 years domestic consumption of liquid hydrocarbons has more than doubled. Demand is expected to nearly double again in the next two decades. Growth in demand for natural gas has been even more spectacular, increasing fourfold since 1948.

Based on data in a recent U.S. Geological Survey publication there may remain as much as 900 billion barrels[1] of crude oil undiscovered within the terrestrial boundaries of the United States.[2] At present recovery efficiency levels this would represent about 300 billion barrels of recoverable reserves or about 100 times domestic crude production in 1968 and 10 times present proved reserves. In addition an estimated 2,100 billion barrels[3] potentially is available in the form of oil-shale and coal.[4] Why then has the industry ventured into the perilous offshore environment when these vast untapped supplies reportedly exist onshore? The answer is simply that the costs of finding, developing and producing hydrocarbons in water depths of present operations are competitive with the current combined costs of these activities onshore and with current estimates of the costs of manufacturing unconventional supplies as evidenced by the industry's apparent low level of enthusiasm for such ventures.

The movement offshore has not been a headlong plunge. The marine environment was poorly understood, and the industry had—and still has—much to learn about the many factors and risks unique to the seas. Offshore oil operations began in shallow water, near shore in a physical and cost environment not unlike that encountered in adjacent inland waters. However, as the frontiers of ocean technology were pushed forward and operations were gradually extended seaward, the oil industry found itself in a world where the operating and economic rules-of-thumb constantly change. The costs of implementing this technology increase steadily with water depth, and the economic merit of the offshore relative to alternate supply sources is ever narrowing.

The industry has a responsibility to supply energy at minimum cost. It also has a responsibility to provide a fair return on the funds which investors make available for our business. With each step into deeper water industry must weigh these increasing costs against the alternatives available if it is to fulfill these responsibilities.

HOW HAVE INVESTOR AND THE NATION FARED IN THE OFFSHORE TO DATE? [5]

How well has the offshore served the investor and the nation in the competition to supply energy requirements? The answers to these questions should provide a framework of reference for estimating the future role of the offshore in the national energy picture.

Let us begin by reviewing the results of these operations from the point of view of the investor who thru the end of 1968 had made available about $12.9 billion for these operations. These expenditures which are shown in the following table, fall into two major categories.

FIGURE 1.—DOMESTIC OFFSHORE EXPENDITURES

[In billions]

	Cumulative through 1968		
	Investment	Expense	Total
Operational:			
Exploration	$1.5		
Drilling and development	7.3		
Production expense and overhead		$1.7	
Subtotal	8.8	1.7	$10.5
Leasehold:			
Bonus and rental	4.1		
Royalty and production taxes		1.7	
Subtotal	4.1	1.7	5.8
Total	12.9	3.4	16.3

The first category consists of those costs directly related to finding, developing and producing hydrocarbons. These costs are largely controlled by the physical environment—the sea and the geology.

The second category includes those costs that are subject to the direct control of the industry and/or the various governmental bodies that administer these public resources. These costs include lease bonus, rentals, royalties and production taxes.

About two-thirds of the total $16.3 billion expenditure falls into the first category. The major item is the expenditure for drilling, platforms and facilities, which totals $7.3 billion. Exploration costs, including exploration overhead, amount to $1.5 billion, and production expense has been $1.7 billion.

In the second category, bonus is the dominant cost item. Bonus accounts for $3.9 billion out of the total of $4.1 billion for bonus and rental, as compared to $1.7 billion for royalties and production taxes.

The total investment to find and establish production amounts to $12.9 billion. It includes the costs of exploration, bonus, and drilling and facilities. Expenses, which are recovered out of income as they are incurred during the course of production, total $3.4 billion. These include royalties, production expense and overhead.

The rewards of these enormous expenditures are listed below:

FIGURE 2.—DEVELOPED RESERVES (JAN. 1, 1969)

	Oil and condensate (billion barrels)	Natural gas (trillion cubic feet)	Total oil equivalent [1] (billion barrels)
Remaining reserves	4.5	35.5	6.3
Cumulative production	2.2	10.5	2.7
Ultimate recovery	6.7	46.0	9.0

[1] Natural gas converted to oil equivalent on the basis of 20,000 cubic feet per barrel.

The hydrocarbon volumes developed thru the end of 1968 amounted to an estimated 6.7 billion barrels of crude and condensate and 46 trillion cubic feet of gas. Converting the gas to an equivalent volume of oil on the basis of 20,000 cubic feet per barrel gives a total of 9.0 billion equivalent barrels of hydrocarbons. Of this amount 2.7 billion equivalent barrels have been produced to date and 6.3 billion barrels exist as underground reserves.

Figure 1 shows production growth over the years. Liquid production began to accelerate in the mid-1950's and in 1968 reached a level of about 450 million barrels. The extraordinary rate of increase since 1965 is in part due to the crisis in the Middle East and rising allowables in Louisiana. The offshore was probably the most responsive of any area in the country to this emergency.

The growth rate of gas production in recent years has even outpaced that of petroleum liquids. Gas production has increased three fold since 1964, and in 1968 reached an annual level of 2.4 trillion cubic feet.

These production volumes have been translated into dollars on Figure 2. Also shown are cumulative expenditures and net cash flow. The latter represents the difference between expenditures and revenues. Federal income tax is not considered. Gross revenue at the end of 1968 totaled $8.8 billion. Deduction of royalty, production and overhead expenses gives a cumulative cash income of $5.4 billion. As evidenced by the negative slope of the cash flow curve annual expenditures have continually exceeded revenues. At the end of 1968 the oil industry was $7.5 in the hole. However, you will recall that there are developed reserves of 6.3 billion equivalent barrels of hydrocarbons remaining to be produced. After royalty and operating costs, the value of these reserves is estimated to be about $1.75 per barrel for a total of $11.0 billion. This is $3.5 billion dollars in excess of the present deficit. So, there is every indication that the industry will get its money back.

Payout is several years in the future, and based on these data alone anyone familiar with the time value of money recognizes that the overall rate of return will be quite low. However, the cost data are a composite of many different plays at various stages in the exploration, development, and production cycle and many of these have yet to bear fruit. Reserves and production attributable to these exploration expenditures are likely to grow. The ultimate economic outcome depends both on the extent to which this occurs and on the amount of additional capital required to develop and produce these added reserves.

There can be no doubt about the economic outcome from the point of view of the public. They definitely will profit from the venture. It will be recalled that one third of the total expenditure in the offshore has been paid to State and Federal governments in the form of royalty, production taxes, bonus and rentals for the right to exploit these public resources. When future royalties and production taxes on the remaining reserves are included, the total of these payments should grow to about $10.0 billion or $1.10 for each barrel of hydrocarbons developed in the offshore to date. It is recognized that the present bonus expenditures may represent payments for volumes that are as yet undiscovered and yet undeveloped. However, if the ultimate volume related to these expenditures were to increase as much as 50 percent the amount that the industry would return to the public would still approximate $1.00 per barrel. Either way, it is apparent that the net price the consumer public pays for offshore oil is competitive with the price of oil delivered in this country from almost anywhere in the free world.

WHAT ARE THE PROSPECTS FOR THE FUTURE

With the investor economics of past operations still in doubt what are the prospects

[1] The basic data in this publication have been modified to exclude the offshore.

[2] Hendricks, T. A.: "Resources of Oil, Gas, and Natural Gas Liquids in the U.S. and the World", U.S. Geological Survey, (1965).

[3] Based on estimated oil shale resources yielding 25 gallons or more per ton in beds over 10 feet thick, and the use of the coal conversion method developed in "Project Gasoline".

[4] United States Petroleum through 1980", U.S. Department of the Interior, (July 1968).

[5] For purposes of this discussion offshore is defined as the area lying seaward of the Chapman Line in Louisiana and seaward of the Coastline in Texas. Both State and Federal waters are included. On the Pacific Coast the definition follows that of the Conservation Committee of California Oil Producers except that portions of certain fields, which were developed from land locations, have been excluded. Most important of these are portions of the Wilmington and Huntington Beach Fields. The THUMS portion of the Wilmington Field is included.

for the future? Results to date are heavily weighted by operation in relatively shallow water, and as these opportunities diminish operations must move into deeper water if this quest in the ocean is to continue. This movement must take place as it has in the past by careful step-by-step progression lest industry get in over its head.

Much of the technology to permit this movement is already available, and that which isn't can be developed. Industry presently has the capability of exploring in water depths several times as deep as the present maximum water depth of a producing operation. The water-depth capability of seismic operations to locate structural anomalies is virtually unlimited. Conventional evaluative drilling operations have been successfully carried out in 1,300 feet of water.

The primary challenge to our scientists and engineers is in the extractive phase of the business. So far the fixed platform has provided the physical base for development and producing activities, but operations are fast approaching water depths where platforms will no longer be economically practical. Several imaginative floating and underwater systems are now under development, and one or more of these may be needed within a few years.

The key to the future of the offshore is one of cost. The extent to which the volume potential offered by the offshore is translated into developed reserves depends on our ability to implement this technology at costs that are competitive with alternative sources. The cost of exploration are relatively insensitive to water depth. However, this is not true of the costs related to the extractive phase.

Figure 3 (not printed) shows how the cost of a fixed platform increases with water depth in the Gulf of Mexico. The wide cost spread is due to differences in the configuration and size of the structure, number of conductors driven, the time of year it is installed, and soil and current conditions at the location. Looking at the base of this spread note that the minimum cost of a platform in 350 feet of water, which is presently the maximum depth of a producing operation, is about $3.5 million. This is about double the cost in 200 feet of water and the cost is increasing exponentially. Platform costs are substantially higher off the coasts of California and Alaska. The costs of complex underwater or floating systems which must eventually replace the fixed platform will also be high, although they may not be as sensitive to water depth. While some reductions will be achieved as the tools of the trade are improved and experience is assimilated, there is nothing on the horizon that would materially change this capital cost prognosis, reduce operating costs or mitigate environmental hazards.

The only soft spot in the cost picture is the second category of costs—leasehold. If industry is conducting its business in a rational manner, the expenditures for bonus, rental and royalties should be no greater than the difference between the market value of the resource and the costs of physically doing business in the offshore. In the latter we must also include a fair return to the investor on his investment, including leasehold costs, if he is to continue to make funds available for this endeavor. Leasehold costs should thus shrink as other costs increase. It will be recalled that payments for bonus, rentals, production taxes, and royalties constitute about one-third of the total expenditures to date and eventually should amount to something on the order of $1.00 per barrel. Thus the costs of physically doing business in the offshore could increase substantially if the cost for bonus, rentals and royalties are permitted to approach zero. This, of course, assumes that the industry has properly done its arithmetic in the past and that the sum of all costs, including all the money spent on leases which proved to be barren, plus a fair return for the investor actually add up to no more than the market value of the resource. Although at this stage we cannot be certain this is the case, it is apparent that the physical costs of the average offshore operation have not yet reached a level which places them on the threshold of economic extinction. These activities can be expected to continue to expand for some time to come.

None of this is meant to infer an immediate need for the government to take steps to reduce or eliminate these payments. These are public resources and the public's right to fair market value is not questioned. However, as the severity of the environment increases, their value in the undeveloped state will decrease and the bonus an investor can afford to pay is bound to shrink accordingly. Eventually a point may be reached where royalty and rental requirements will also have to be reduced if the maximum volume potential of the offshore is to be realized.

Within the framework of this cost outlook, how much of the potential offered by the offshore will fall within economic reach? The answer to this question depends to a great extent on the distribution of the hydrocarbons. A platform or, in the future, an underwater or floating facility, is required for even the most modest producing operation. Its cost, which in deeper water amounts to several million dollars, dominates the expenditure picture. The economic outcome depends on the hydrocarbon volume that falls within the drainage area of this fixed facility. Despite the advances in directional drilling techniques of recent years, the geographic area that can be reached by directional drilling from a platform still is limited to a few thousand acres, and there is little prospect that this capability will be greatly increased. The area that can be exploited by a platform, floating or underwater facility can be greatly extended by using mobile equipment to drill wells at outlying locations, and then connecting them to the facility with flowlines. However, the capital and operating costs of these wells and the necessary ocean floor completion equipment are much higher than those of a platform well, and the hydrocarbon volume within the drainage area of an individual well, which because of geologic consideration seldom exceeds 100 acres, becomes the overriding constraint.

Figure 4 (not printed) is based on a statistical study of 690 fields in South Louisiana and the adjacent coastal waters. Because of differences in geologic conditions from province to province, these data are not directly applicable to the total offshore or even the remaining unexplored areas in the Louisiana offshore. However, they do serve to illustrate the general pattern of hydrocarbon distribution that has been observed in mature producing provinces. It is not unreasonable to assume that the distribution in the offshore could follow a similar pattern. The ordinate on this chart gives the fraction of the total 690 fields which individually contain a recoverable volume less than the value shown on the abscissa. You will note that half of the fields included in the study contained less than 4.0 million equivalent barrels. In 400 feet of water a single platform may cost more than $5 million. Burdened with this heavy initial expenditure the median size venture would not have a happy economic outcome. This would be true if the entire volume falls within reach of a single platform which will not always be the case in oil fields and is less likely in gas fields. Based on FPC dictated gas prices and assuming a constant reservoir thickness, a gas field will yield about one fourth the gross revenue of an oil field covering an equal area. The number of accumulations that meet the criteria for development in deep water is thus drastically reduced, particularly in the case of gas fields. It is apparent that the offshore will never be exploited as intensively as the terrestrial environments.

However, the volume that the offshore ultimately yields will not necessarily be reduced proportionately because the major portion of the total reserve in a province is usually found in a few larger fields.

Figure 5 (not printed) is based on this same statistical study. The ordinate gives the fraction of the total volume in all 690 fields that is contained in fields which individually contain a volume larger than the value shown on the abscissa. This chart shows that more than 50 percent of the total reserve in all of the fields was in fields which individually contained 75 million barrels or more. Approximately 80 percent was in fields larger than 25 million barrels. Volumes of this magnitude are capable of supporting a substantial expenditure to establish a base for producing operations, and depending on the distribution of the hydrocarbons within the field, much of this potential may be within economic reach.

CONCLUSIONS

The offshore has served the energy market well in the past and will play an important role in the future in satisfying this nation's insatiable thirst for energy. It is also apparent that the oil industry, in the intense competition for new reserves, is playing the offshore game as vigorously as its investors will allow. To successfully play the game at these levels, the competitor must thoroughly understand the game and its rules. Nearly all of the stake is put up many years before the value of the pot is fully known, and success depends on the ability to forecast in advance what this value will be. This is the challenge that our technologists and economists face, and it is indeed a formidable one. The estimation of volume, on which the value of the reward is so heavily dependent, is a hazardous undertaking under the most favorable conditions. Now in the offshore the explorer must also predict its distribution. The engineers must then forecast the costs to develop and produce. These operations often require the use of untried tools or even technology that is yet to be developed.

These risks are an inherent part of the game, and the industry can live with them as long as it can predict the rules of the game that will prevail over the lives of these ventures. This can be accomplished only in an atmosphere of political and economic stability. It is within such an atmosphere that the offshore has grown to its present stature in the energy business, and only within such an atmosphere can it continue to grow.

THE FLAG

HON. BILL NICHOLS

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 25, 1969

Mr. NICHOLS. Mr. Speaker, this is the season for commencement addresses and I have noticed a number of very fine ones in the CONGRESSIONAL RECORD. Recently, I attended the high school exercises in my hometown of Sylacauga, Ala., and the address was given by Dr. William C. Berryman, director of curriculum and instruction for the Sylacauga Board of Education.

I was most impressed by Dr. Berryman's address which accents the positive things about our great country. Most of these commencement addresses, which receive publicity, are those which downgrade America and the system we live under.

Mr. Speaker, I include Mr. Berryman's address in the RECORD at this point:

Rather than speaking *to* the Graduating Class tonight, I wish to speak *for* them. These Graduating Seniors of Sylacauga High School are different from some of the students that we read about today. These students love their country and are proud of it. They are determined to work hard and contribute to its greatness.

At an assembly at Sylacauga High earlier this year we examined together the meaning of an activity—Pledging Allegiance to the Flag—an activity in which these graduates have engaged at the beginning of each assembly program. I know that the words and feelings which follow are their words and feelings. I know because they have told me so—in both words and in their actions.

I therefore am proud to speak for these Graduating Seniors.

They say—

I Pledge Allegiance: I promise loyalty to my country. Surely, if we live in a country whose protection and privileges we enjoy, it is basic that we recognize the benefits we receive by being true to its government and ideals—I promise loyalty.

To the Flag: Our flag means a great many things to us—whether it is being displayed in a building such as our school or being raised on Iwo Jima as is shown in the U.S. Marine Memorial it represents home, justice, honor, safety, greatness, liberty, freedom.

Of the United States of America: The words of the Americans Creed express it so well: "I believe in the United States of America as a government of the people, by the people, for the people; whose just powers are derived from the consent of the governed."

And to the Republic for which it stands: "a democracy in a republic; a sovereign nation of many sovereign states," the republic—where I count—where my voice may be heard—where I may participate in decision making.

One nation: "a perfect union, one and inseparable; established upon those principles of freedom, equality, justice, and humanity for which American patriots sacrificed their lives and fortunes.

I, therefore, believe it is my duty to my country to love it; to support it's Constitution; to obey it's laws; to respect it's flag; and to defend it against all enemies."

Under God indivisible: Recognition of, and love for a supreme being—God is at the heart of what America means—we are free to worship God in any way we choose—this recognition of our universal dependence upon God, combined with our freedom to worship him as we choose, is the source of our nation's strength.

With liberty: Liberty exists for each citizen. The law enforces certain rules that protect the basic rights of individuals to life, liberty, and property. It sees that the will of the majority is carried out when that will does not violate the rights of any citizen. Therefore, liberty, which exists under the law, does not mean that everyone is free to "do as he pleases." Even so, we are much free-er than those citizens of other nations who were not as fortunate as we were—to be born in the United States of America.

And justice for all: Our governmental system rests upon two mighty pillars: the Declaration of Independence and the Constitution of the United States of America. This nation was born with the bold words of the Declaration. It's very heart is in these hallowed lines: "We hold these truths to be self-evident—that all men are created equal; that they are endowed by their Creator with certain unalienable rights; that among these are Life, Liberty, and the pursuit of Happiness."

The Union was created by the lofty phrases of the Constitution. It's very first words are among the most important in all of the document:

"We, the people of the United States, in order to form a more perfect union, establish justice, insure domestic tranquility, provide for the common defense, promote the general welfare, and secure the blessings of liberty to ourselves and our posterity, do ordain and establish the Constitution of the United States of America."

These two passages are brief, yes—and their words are simple. Yet they are of deep and lasting significance. In them is to be found the fundamental expression of the American heritage—a deep and abiding faith in individualism—in freedom—and in equality.

It is this faith that has made us the greatest of nations the world has ever known. Look about you. The things that show our greatness can be seen on every hand. There are huge cities, bustling towns, fertile farms, thriving stores and busy factories. Our roads and highways teem with traffic; railroads and airlines span the continent. There are millions of telephones, radios, and television sets, clothes dryers, dishwashers and many other conveniences. We have harnessed mighty rivers, split the atom and viewed the other side of the moon. The list is well-nigh endless.

But these things are only the *material evidence* of our greatness. They may *show* that we are a great nation; but in themselves they do not *make* us great. We are a great nation and a mighty people because we were born with, and we strive to live by, the faith that is our American Heritage. What is the stuff of which our nation is made? It has been said that our democracy is based on two concepts—Competence and Compassion—competence is necessary in a free enterprise system—the ability to do—to accomplish—to create—to use wisely—to understand—

However, even a casual study of history shows us that competence is not enough—The good citizen has feeling as well as skill—The educated person understands the humanness of human beings. A feeling for people—the ability to interpose evidence, reason, and judgment between impulse and action. A feeling for people as individuals and as nations.

How do we feel about our nation?

A clipping which has been in my files for several years expresses it so well:

"My love for my country affects me in many ways.

"Sometimes it's an emotional thrill when I see our flag used in ceremony or flying from a flagpole in our school yards.

"Sometimes it's a feeling of reverence when I view the majesty of the things that make up this nation—our mountains and plains and lakes and cities.

"Sometimes it's a feeling of pride in our people when they determine to share their bounty with others.

"And sometimes, because love and pride are so great, it's a feeling of disappointment when we fail to live up to our commitment to the worth and dignity of the individual.

"Patriotism is a word with high emotional impact. I don't think one should suppress feelings in the presence of our nation's symbols, but patriotism is more than flagwaving.

"Patriotism needs an intellectual base in the history of this nation's victories over forces which degrade the human spirit.

"Patriotism needs an intellectual base in order to honestly recognize failure and to resolve to correct it."

Perhaps love of country can be compared to my love for my children. I love them now in spite of their faults, but I love them even more for what I dream that they can become and I want to help that dream become reality.

Will America remain a great nation? Will it continue to become, as it has throughout it's history, an even greater one? It will if we—you and I—believe in and live by our heritage. The future of the nation rests with us. That future is secure if we, you and I, dedicate ourselves to the high purpose of carrying that great heritage forward.

These Seniors Pledge Their Allegiance.

SCHOOLS WITHOUT LIBRARIES

HON. CHARLES S. JOELSON

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 25, 1969

Mr. JOELSON. Mr. Speaker, I am deeply concerned about proposed cuts in the funding of title II of the Elementary and Secondary Education Act of 1965. I insert an editorial of June 14, 1969, from the magazine America. I think that it states excellently the need for adequate funding of this useful and important program. The article follows:

SCHOOLS WITHOUT LIBRARIES

Until early June it seemed to some that Marshall McLuhan and the Administration in Washington were of one mind in believing that you can run a school without a library. Dr. McLuhan lately clarified his position, however, in an address to the American Booksellers Assn.'s 69th annual convention. Arguing that "anything which undermines the alphabet undermines the progress of civilization," he insisted that the book is "unique and it will persist." That seems to leave the Administration without an ally in its decision to assign low priorities to books and libraries. Up to this point librarians, educators, editors and publishers had speculated that Washington may have been relying on the McLuhan gospel that the printed word was on its way out.

All of this may be a bit unfair to both Dr. McLuhan and the Administration. The fact remains that the Administration in its budgetary requests for the fiscal year 1970 has evidenced a willingness to cut back on Federal expenditures for school libraries and other educational tools almost to the vanishing point. In some instances, in fact, if Congress goes along with the White House budget recommendations, the result is bound to be annihilation.

Title II of the historic Elementary and Secondary Education Act of 1965, for example, authorized making grants available to the States to acquire school library resources, textbooks and other instructional materials for the use of teachers and pupils in public and private schools.

Originally, $200 million had been authorized for fiscal 1970. President Johnson's recommendations to Congress in January of this year reduced that sum to $42 million. The Nixon budget recommendations of April 16, however, have cut even that truncated item back to absolute zero.

No one can deny the danger posed by inflation. The Administration is quite correct in directing serious efforts to curbing its threat. The fact remains that a danger at least equally grave can result from a fiscal approach that fails to take account of the importance of quality education—translate that into schools, books, libraries and other essential ingredients—for the war against racism and poverty. The cutback on ESEA's Title II is particularly regrettable because one can be certain that its impact will be greatest on those inner city schools, public and private alike, presently serving their youngest victims of our gravest national blights.

MUSICAL COMEDY: "1776"

Hon. PETER H. B. FRELINGHUYSEN

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 25, 1969

Mr. FRELINGHUYSEN. Mr. Speaker, the June issue of the Wilson Library bulletin contains an article describing how the award-winning musical comedy "1776" was written in the public library in Morristown, N.J., in my congressional district.

As a former trustee of the Morristown Library, I am, naturally pleased at the appearance of this article, and feel it will do a great deal to point up the varied and extensive services offered by our libraries.

I should like at this time to insert the article from the library bulletin in the RECORD:

"1776": CREATING THE BEST OF BROADWAY IN A SMALL-TOWN PUBLIC LIBRARY

When the Broadway show "1776" won a Tony this Spring for best musical comedy, it was a triumph not only for originator-composer-lyricist Sherman Edwards, but for: the small-town (17,700) public library in Morristown, New Jersey, that provided him with resources and research headquarters for three yaers; for Library Director Marian R. Gerhart and her staff, who helped guide Mr. Edwards to his pot of gold during their long working relationship with him; and for the concept of the library network, in which a small library can tie in to the resources of larger institutions and, with or without computers, bring the world of knowledge to the reader's desk.

The musical comedy, which has delighted audiences and critics in Washington, D.C., and currently at the 46th Street Theatre in New York, is a portrayal of men, human, afraid, absurd, and noble, who happened to be gathered at the Continental Congress in 1776 to decide upon a document of rebellion. The feeling it imparts that this must be the *real* story behind the Declaration of Independence can perhaps be attributed to Mr. Edwards' fidelity to the spirit of history after an heroic plunge into the facts of same, and to author Peter Stone's talented rewriting of the book.

Mr. Edwards, a songwriter and former history teacher who has just turned fifty, first appeared at the Joint Free Public Library of Morristown and Morris Township in 1962, when he began working on the idea for his first show. He came from his home in nearby Boonton in the historic Morristown area and soon discovered that this local library had a fair collection in American history and an especially helpful reference librarian in Mrs. Gerhart.

As a reference patron, Sherman Edwards was a librarian's dream. He could not have been more motivated, since he was taking off a couple of years from other work at the risk of going broke, and he knew how to use a library. He quickly became inspired by some of the primary sources on hand, and he requested specific authors, titles, and bibliographic aid. He also asked for sophisticated leads for further research, but never considered the library a "take-and-run" operation, where books and short answers are dumped in the arms, and then, good day.

From 1962–65, Mr. Edwards averaged about a full day a week in the Morristown library. He was a tireless reader and a quiet, modest man until he got on the trail of something exciting; then he would become animated and demanding (in the positive sense) of the library staff. He paid little attention to minor library rules and to occasional fines, but, because no two days of reference service to him were the same, he was a pleasure to assist.

The many circumstances that come together to create an eminent success cannot always be isolated, but certainly it was no obstacle to Mr. Edwards' good fortune that he worked with a modern librarian in a modernly-run library. Mrs. Gerhart, B. S. and M. A., also earned a library degree at Columbia University and worked as a college and school librarian before she taught in the Library Education Department of the Pennsylvania State Teachers College in Millersville. Director of the Morristown library since 1967, she came to the library in 1961 and soon after was assisting Mr. Edwards among her duties as reference librarian.

There has been a library of one sort or another in Morristown for more than 200 years, and the beautiful gothic building that houses the present library and its 100,000 volumes is a result of a relatively public and private patronage in the town and township.

"The personal touch is still very important in this library," said Mrs. Gerhart. "That is the chief distinction between our service and that of a larger library. We know our collections, and we're more in tune with our surroundings."

"We're a big little library," she further noted. "We're big enough not to be bashful about approaching other sources, as are some smaller libraries. We don't mind picking up the phone."

As a result, some one-third of Mr. Edwards' sources were borrowed through interlibrary loan from other libraries, especially in New Jersey, where the network concept has been well developed. The libraries of Princeton, Rutgers, Drew, University of Pennsylvania, Farleigh Dickinson, and Franklin and Marshall were all especially helpful, as was the Library of Congress.

Mr. Edwards is now working at the Morristown library on his next show, which will also have an historical theme, but not the revolutionary period. For this work, the library has already borrowed a dissertation from Harvard and items from as far as Colorado. More information here, of course, might give the whole idea away—which ought not to be done even in the name of modern library service.

A BIBLIOGRAPHY FOR A TOP BROADWAY HIT

NOTE.—Highlights of the research materials relating to 1776 in the Morristown library were compiled for WLB by Mrs. Gerhart to reflect the nature of the research done by Mr. Edwards for his musical—and as a guide for other minstrels of American history.

PAUL E. NEVILLE, EDITOR IN BUFFALO, DIES AT 50

HON. THADDEUS J. DULSKI

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 25, 1969

Mr. DULSKI. Mr. Speaker, my home community of Buffalo, N.Y., was shocked and saddened this past weekend by the fatal illness of the editor of one of our two daily newspapers, Paul E. Neville, 50, executive editor of the Buffalo Evening News.

Mr. Neville was stricken at his desk last Friday as he worked to put out another day's editions of the News. He died on Sunday.

Although he had been in Buffalo for only a dozen years, called to take a top executive position in the News' editorial department, he had assembled a wide circle of friends and was highly respected both locally and nationally in his profession.

The News family has lost one of its own, our community has lost one of its leaders, the journalistic profession has lost one of its ablest technicians, and I have lost a friend.

Mr. Speaker, the News tells the story of Paul Neville in its editorial which appeared in its June 23 edition as follows:

PAUL E. NEVILLE

Suddenly and tragically, in the prime of his career and at the moment of his greatest sense of civic pride and satisfaction, the executive editor of The Buffalo Evening News, Paul E. Neville, was seized with a massive stroke at his desk Friday and today he is dead.

Throughout the entire News family, the loss has caused a numbing shock made worse by its abruptness and by the special sadness of a life of tremendous potential snuffed out long before its appointed time.

Paul Neville had just observed his 50th birthday; he had just rounded out his third year as executive editor; he had completed a tour as president of the New York State Society of Newspaper Editors and had been elected by his fellow editors to the board of directors of the American Society of Newspaper Editors.

He was just coming into nationally recognized full flower, in short, as one of the leading metropolitan newspaper editors and executives in America. Through Friday's first editions, he was eagerly on the job, still feeling the glow of civic satisfaction at seeing a campaign on which he had personally worked harder than any other at The News, the struggle to assure construction of a multi-sports domed stadium, brought to fruition. But today he is gone, a brilliant career, a dynamic personality, a perceptive and witty mind suddenly all blanked out.

A thorough professional with a newsman's instincts through and through, Mr. Neville loved nothing more than to be in the middle of a big story. His wide-ranging curiosity and gregarious concept of his editorship caused him to spend as much of his time out in the community as inside the office. A Buffalonian by adoption rather than birth, he undoubtedly had a wider local acquaintanceship in his 12 years here than most newsmen acquire in a lifetime. Generous with his time, talent and energy, he spent himself all too freely, as his untimely death attests.

Forceful and quick in his news and policy judgments, he worked easily and well with people, respected "no-men" as much as "yes-men," valued suggestions, delegated authority well, and nourished a team approach to doing any civic or journalistic job. To most of the staff, he was just Paul or known by the familiar initialed signature of his many memos, "pen." While personally imaginative and receptive to new ideas, one of his greatest if less obvious strengths was a deep regard for continuity and proper form and style—for "doing it right," thinking and acting "first class."

It was this balanced sense of continuity and innovation that particularly marked his three-year editorship at The News, as he introduced many small and gradual changes but shunned large and splashy ones. Yet perhaps his greatest contribution in his whole 12 years as a News executive has been his sharp alertness to and awareness of underlying community trends—this in a time of social and generational upheaval where alertness to swiftly changing undercurrents is indispensable to a successful news-media operation.

Of all the qualities he brought to The News, it could be this instinctive feel for the developing trend beneath the news that will be missed the most. For today, though, it is a sudden absence of the sheer vitality, the brisk plain-talking personality, the down-to-earth good humor of an editor who should still have a whole brilliant career before him that fills The News with a sense of loss and sadness—and of deepest sympathy for Mrs. Paul E. Neville and the five children in whom their father took such pride.

THE NATIONAL KIDNEY DISEASE ACT OF 1969

HON. EDWARD J. PATTEN

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 25, 1969

Mr. PATTEN. Mr. Speaker, I am proud and honored to join several colleagues today in cosponsoring the National Kidney Disease Act of 1969.

For many years, an urgent need has existed for a comprehensive program to combat kidney disease. In my congressional district alone, I personally knew five young persons who died of kidney disease in the past few years. Every one of them found it very hard to receive dialysis—blood-cleansing—treatments, because of insufficient facilities and inadequate technicians to operate the equipment.

I was not only shocked to discover this, I just could not believe it. I still do not believe that in the United States of America—with all our great wealth and deep compassion—young people who had everything to live for, had to die because we do not have the facilities or technicians to help them. I am not only angry about this tragedy; I am ashamed, not because I did not try to help them—God knows I did everything I could—but simply because this happened in America.

I fervently hope that the bill several Members are cosponsoring today will be passed by this Congress in 1969. The longer enactment is delayed, the more people will die—an estimated 5,000 a year, most of them young.

The next time I receive a heartbreaking letter, telegram, or telephone call from a person suffering from chronic kidney disease, I do not want to tell them that there are only a few hospitals in New Jersey that have dialysis equipment and technicians—that they have to die.

I want to be able to tell them that there are facilities and trained technicians who will treat them and that they will live. That is what should be done and I hope will be done this year, not only to help save the 5,000 sufferers of kidney disease, but to enable us to live with a clear conscience.

Mr. Speaker, more research is needed into the nature of diseases of the kidneys and the problems of kidney transplantation; in developing mass testing procedures for the early detection of kidney disease; and for the development of more effective and economical devices for blood purification.

I also want to point out that recently, Gov. Richard J. Hughes, of New Jersey, signed a bill that will provide $250,000 to aid kidney disease patients and to help expand dialysis programs. This assistance will not enable a massive attack against kidney disease, but will provide some help and great hope.

ONLY 30 YEARS TO MATCH 348½ YEARS

HON. JAMES HARVEY

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 25, 1969

Mr. HARVEY. Mr. Speaker, in a recent speech, Daniel M. Fitz-Gerald, the Wickes Corp. board chairman, brought forth an interesting observation that bears repeating at this time. Mr. Fitz-Gerald, a nationally known business leader, told an Austin, Tex., audience, that since December 11, 1620, when the Pilgrims landed at Plymouth Rock, 142 million houses have been built in the United States to this date. Yet, in the next 30 years—just 30 years—it now is estimated that we must build 142 million more. We must double in 30 years what it took us to do in 348½ years to meet housing demands, according to Mr. Fitz-Gerald.

The Wickes Corp. headquartered in Saginaw, Mich., is in the forefront in developing and adopting new building techniques, new materials, and new designs. I would like to include an article from the June 11, 1969, edition of the Saginaw News on Mr. Fitz-Gerald's remarks. The article follows:

FITZ-GERALD TERMS U.S. HOUSING PROBLEM CRITICAL

The Federal Government may well have misread the size, power and scope of what we face in housing, observed Wickes Corp. Board Chairman Daniel M. Fitz-Gerald in a speech today at Austin, Tex.

Fitz-Gerald is in Austin for the dedication of the 200th Wickes Lumber & Building Supply Center.

Suggesting the housing industry would be replaced by the shelter industry, Fitz-Gerald called it America's number one problem and said "the inventory of completed but unoccupied homes has dropped to almost World War II levels . . . Back then we only had 34 million families to shelter. Today we have 51 million and the number is growing."

Calling on the government to reassess its anti-inflation programs and to consider immediate steps to ease the borrowing rate for mortgages, he predicted the shelter industry could explode to $100-billion volume by 1975. He noted it is now running $63 billion.

"Time has run out," said Fitz-Gerald. "It is urgent that the administration's fiscal, economic and credit planners reassess the government's anti-inflation program and consider immediate steps to ease present credit restrictions on home mortgages. The shelter demands have reached the explosive stage.

"To illustrate the magnitude of the problem," he said, "let me cite these figures. It was 348½ years ago—to the day—on Dec. 11, 1620, that the pilgrims landed at Plymouth Rock. Between that date and today about 142 million houses have been built. In the next 30 years, we estimate we will have to build another 142 million. Now we're faced with the

problem of doing a 348½-year job in 30 years. Is it any wonder we are calling for action?

"With the exception of Vietnam," he said, "no other issue before Washington or the nation is more critical. The administration must widen its perspectives and consider the total problem."

He said the shelter problem is not the exclusive domain of the inner cities. "There are those," he said, "who live in Appalachia, those with moderate incomes and even the so-called affluent. They all have shelter problems. They want places to live or better places to live, but, for various and diverse reasons, cannot find them."

Fitz-Gerald also pointed out that the problems the nation faces in the area of manufactured homes are legion. "Just because there is a need, homes will not automatically be built. Mortgage money will not magically become available simply because of demand. Restrictive building and zoning regulations present other difficulties.

"In the traditional area of private home building, there must be new techniques, new materials and new designs. To help builders meet the accelerated demand, there will be greater use of pre-built components and manufactured sections," he said.

Noting that shelter includes conventional homes, mobile homes and offices, mobile schools, travel trailers, camper units and industrial, commercial and agricultural structures, he said, "Wickes has recently become involved in all of these areas."

Fitz-Gerald said the Wickes Corp. last year had sales of $375 million. He said, "The analysts tell us that by 1975 our sales could be well into the $1-billion column. We fully expect to be half-way there by the end of this year."

He concluded, "This 200th center is another milestone in our growth. We have grown 100-fold in the last 27 years."

HON. WILLIAM H. BATES

HON. ALBERT W. JOHNSON

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 23, 1969

Mr. JOHNSON of Pennsylvania. Mr. Speaker, he is a kind man. He is a great man. These are some of the words used during his lifetime in describing BILL BATES. I have never known a finer, more gracious, more dedicated person.

Early in my congressional career, one of the Members that really went out of his way to be helpful and real nice to me was BILL. I am sure that the words that I am here expressing echo the thoughts of others when we remember this fine man.

BILL BATES was meant in his lifetime to be a servant of the people. In 1950, thrust onto the national scene when his father suffered a tragic death, he was ready to be an outstanding Member of Congress. He had completed his college career and had achieved a master's degree in business administration. He had been a brilliant member of the U.S. Navy participating in naval assaults in Iwo Jima and the Japanese mainland, and had been promoted to the rank of lieutenant commander.

He was a happily married man and the father of a daughter.

He was a patriotic, loyal American and knew the problems facing our great Nation, and as a member of the Armed Services Committee and the Joint Atomic Energy Committee gave those two committees the benefit of his training, experience, and wisdom. He was one of the most able Members of Congress, and now as we say farewell to our dear friend and colleague, we extend to his family our deepest sympathy, and to his district and Nation the reminder that we have lost a distinguished and capable Representative.

SOUTH CAROLINA HOUSE RESOLUTION ON INTEREST RATES

HON. STROM THURMOND

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Wednesday, June 25, 1969

Mr. THURMOND. Mr. President, the cost of borrowing money in this country is now at an alltime high. The prime interest rate is 8½ percent and there is no indication that it will be lowered in the near future. In fact, the latest increase from 7½ to 8½ percent shocks many Americans because this jump was unusually large.

Mr. President, this extremely high interest rate is causing economic hardship to millions of Americans. While we all recognize the necessity of curbing inflation and that monetary restraint is one method of accomplishing that, it is still regrettable that the burden of coping with the inflationary spiral is falling so heavily on those who need to borrow money to finance housing and other major purchases.

The House of Representatives of South Carolina recently passed a concurrent resolution memorializing Congress to investigate this recent increase and to enact suitable legislation to control the interest rate.

Mr. President, I ask unanimous consent that this resolution be printed in the Extensions of Remarks.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

A CONCURRENT RESOLUTION

Memorializing Congress to investigate the recent increase in the prime interest rate and to enact suitable legislation to control such interest rate

Whereas, the cost of borrowing money soared to a new high Monday, June 9, 1969, when major banks across the country increased their prime lending rate to eight and one-half per cent; and

Whereas, an increase from the previous seven and one-half per cent high has been expected by some in the banking community but the size of increase surprised and dismayed many; and

Whereas, this increase may possibly cause chaos through the economy of this country; and

Whereas, this increase will probably greatly curtail the building industry as well as many other facets of our economy. Now, therefore,

Be it resolved by the House of Representatives, the Senate concurring:

That Congress be memorialized to investigate the recent increase in the prime interest rate and to enact suitable legislation to control such interest rate.

Be it further resolved that copies of this resolution be forwarded to the President of the United States, to each United States Senator from South Carolina, each member of the House of Representatives of Congress from South Carolina, the Clerk of the Senate of the United States and the Clerk of the House of Representatives of the United States.

State of South Carolina, in the House of Representatives, Columbia, S.C., June 10th, 1969.

I hereby certify that the foregoing is a true and correct copy of a Resolution passed in the House of Representatives and concurred in by the Senate.

INEZ WATSON,
Clerk of the House.

REMARKS AND BENEDICTION AT MARION RESERVOIR DEDICATION BY REV. MARVIN HEIN

HON. GARNER E. SHRIVER

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 25, 1969

Mr. SHRIVER. Mr. Speaker, it recently was my privilege to speak at the dedication of the Marion Dam and Reservoir which is in my congressional district in Kansas. Rev. Marvin Hein, pastor, Hillsboro Mennonite Brethren Church, gave the closing benediction which was prefaced by very appropriate remarks. Reverend Hein's remarks were significant to all Americans who are interested in the conservation and development of our water resources. Under leave to extend my remarks in the RECORD, I include the remarks and benediction by Reverend Hein:

REMARKS AND BENEDICTION AT MARION RESERVOIR DEDICATION BY REV. MARVIN HEIN

Several sentences I read just yesterday almost startled me. This is what they said: "The total amount of moisture on the surface of the earth is fixed, just as are the weight and the chemical composition of the globe. There never will be any more water than there is at this moment, for no water reaches the earth from outer space and no chemical process is in operation which changes elements into water."

If that is true, then the body of water that lies before us becomes an intensely spiritual treasure to be guarded zealously. In the past some of us have looked upon the land that lies underneath these waters as a trust from God; even so the gathering of these waters becomes a spiritual responsibility.

This is not just water. This is not just a reservoir created by government engineers with monies provided by taxpayers. This is a part of the wonderful resources of a God who expects us to exercise good stewardship in using everything He has placed in our care. This is a natural, yet divine, resource for which you and I become responsible. We dare not treat it lightly.

Let us pray: Almighty God, Thou who has gathered the waters of the sea together as a heap, we praise Thee today for Thy unending care over Thy creation. We acknowledge Thee as Lord of all. Give us today and through the years a keen sense of our stewardship of all that has been placed in our care.

When the land below this reservoir is spared from floodwaters, remind us, O God, that the earth is, indeed, the Lord's, and we are caretakers.

When the fish and game are retrieved from this area, remind us that these, too, are provisions of a wonderful God, who asks us to use them with discretion.

As men and women, boys and girls spend their leisure hours and days at this place, remind us that time itself is a gift of God, for which we are accountable.

We dedicate not only this reservoir today, but ourselves as well, as keepers of the earth, both land and water, sea and sky, to the glory of God and our Savior, Jesus Christ, in whose name we pray. Amen!

ANATOMY OF LOYALTY

HON. ROBERT H. MICHEL

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 25, 1969

Mr. MICHEL. Mr. Speaker, I would like to call the attention of my colleagues to a very stimulating and thought-provoking article entitled "Anatomy of Loyalty," written by my good friend, Dr. Stanley W. Niehaus, dean of students at Illinois Central College in East Peoria, Ill.

The article appeared in the January 1969, issue of the Clearing House, a journal for modern junior and senior high schools.

Dr. Niehaus discusses loyalty from a developmental and historical viewpoint and I am sure his words will be of interest to my colleagues and all those who read the CONGRESSIONAL RECORD.

I include the article in the RECORD at this point:

ANATOMY OF LOYALTY

(By Stanley W. Niehaus)

(EDITOR'S NOTE.—In these turbulent times we often are prone to question the seemingly abandonment of some of our most basic beliefs. For example, we become disturbed when loyalty to our country and institutions is flauntingly violated. What has caused this to happen? To seek an answer to this dilemma, the author discusses loyalty from a developmental and historical viewpoint. He is Dean of Student Personnel at Illinois Central College in East Peoria.)

One of the pressing problems of our time is that there is an abundance of many things—many things, that is, but loyalty. In these times of affluence—affluent economy, affluent education, affluent technology, affluent innovation—it would seem that there should be an abundance of basic down-to-earth loyalty.

There are at present more automobiles per capita then ever in the history of this country. Parking lots, not only of colleges but of high schools as well, are so crowded that there is not enough space to fulfill the need. Today's workman, who with an income that is considered to be minimal, has a standard of living that was undreamed of a half century ago.

It is not difficult for many people to recall the period just after World War II when thousands of veterans were being discharged from service. Many of these young people had come onto the occupational market about the time when they went into service. The older ones were referred to as the "depression babies."

They were the ones who completed high school in the depths of the depression. They didn't have the financial substance to pursue further education even if they could have profited from it. Others in this group could not secure jobs for love nor money. Many of them walked the streets until the New Deal era of Franklin Roosevelt and the CCC Camps which saved many of the youth at that time from sociological and economic disaster.

Other youth, through the insight of parents and other dedicated and caring adults, were able to use the facilities available to them through the public domain. There is one man who told of how he came out of high school at an early age (he was a brilliant student) in the depths of the depression. He didn't have money for college. He couldn't get a job; yet, he made the telling statement—"I had a good mother, she set up a study program for me. I spent a year reading in the public library." What came of this ultimately was that the young man eventually secured a toe-hold; the economy began to improve, and through his scholastic ability, he received a college scholarship and completed his education. He eventually completed his doctor's degree.

There was another group at this time which was ultra-conservative, later to be referred to as the "square" generation. Some of this group were crippled by the depression. They emerged from World War II into an economy which, at that time, was just beginning to get off the ground. They were afraid to strike forth and take any kind of chance or to make any kind of forward move. This type of conservatism, resulting from personal insecurity, had a way of limiting these people in their occupational and educational outlook. They had loyalty, but it was a loyalty born or fear. That kind of loyalty is neither rewarding nor productive.

Many of the younger group, those without prior occupational or educational experience, didn't have much idea of economic loyalty; rather, they had the idea that the world was their oyster and that they were something quite exceptional in the occupational market—a market which existed for them, for their convenience, and for their affluence. Unlike their conservative counterparts, they looked upon work as an obligation rather than as a challenge.

It is not unrealistic to suspect that some seeds of disloyalty—perhaps the term "unloyalty" is more appropriate—were sown at this time. This is not a simple concept. The matter of loyalty runs all along the continuum of society—loyalty on the part of parents, children, educators, employees and employers. And most encompassing of all, loyalty on the part of citizens, not only to the immediate community but to the national community.

At the end of World War II, there was particular concern about loyalty on the national level. There was a list of all kinds of organizations that were classified as subversive. Many innocent people were caught up in this network wherein they had given their names to some organization or they had joined some group not knowing what it was. When, several years later, their names turned up on the lists of organizations in which they had never participated and which had sounded quite legitimate at the time, their listed names rose up to smite them.

There must be a concern for national loyalty, but loyalty goes much deeper than this—it begins with personal loyalty. A deeply involved person-to-person loyalty to an immediate cause. It is closer than national causes, for national loyalty is borne of personal loyalty. Such loyalty is close to the person and it expands—like a pebble thrown into the water and which casts a ring which expands and expands and expands—reaching out to national loyalty perimeters.

This kind of loyalty, then, moves on a continuum. It begins first in the home—family loyalty. Parents look up in consternation when children sluff off their associations and connections with their family. And, yet, when it is considered in depth, what have many parents done to contribute to the loyalty pattern of their children? Loyalty begins with parents and in the home. Loyalty to the very home concept, loyalty to the children in the home, loyalty of one spouse to another, loyalty to the senior members of the family—children observe this—they learn it. They learn the loyalty of a church affiliation, of a school and community affiliation. Children acquire their first loyalty patterns from their immediate home situation.

The depressing and bewildering commentary about the "God is Dead" philosophy is very possibly a bitter reflection of frail religious loyalties on the part of parents when their children were young. Children who are dropped off like so many stray kittens for their childhood religious education are more susceptible to a meaningless life philosophy than those children whose parents participate in their children's early religious experiences. Faith begets faith; loyalty begets loyalty.

Unfortunately, some parents are so busy pursuing their own activities that they do not have time for family life. Much of this began during World War II when both parents were so busy earning money (what to them was big money for the first time since the depression) that the family structure began to break down. When family structure breaks down, loyalty has a way of breaking down. Too many children were and are reared in this atmosphere of breakdown in the family, a breakdown of family ties, or a breakdown of immediate group—home loyalty.

In the 1950's during and after the Korean conflict, the national economy was affluent. It was about this time that a depressing and disturbing phenomenon began to be particularly manifest in our society. It probably had been taking shape for quite some time, but it became more apparent then. It was characterized as a generation of people who were afflicted by the cult of self-enhancement, self-indulgence, creature comfort, and probably most disturbing of all, a freedom from involvement.

It was characterized by an avoidance of involvement in anything that could be inconvenient and, by all means, disturbing—the type of involvement which could contribute to betterment of the community and to the betterment of mankind. This period was further characterized by intense competition on many levels of society. (Not that competition isn't healthy if it is used constructively; but if it is used purely for self-acquisition and self-enhancement, then it is harmful.)

This was the time when parents were really competing with each other and probably most disturbing of all, competing with each other through their children. It was the time when parents got into fist fights at Little League games in full view of their children. The children were the hapless pawns in this depressing charade wherein parents used them as status symbols. Unfortunately, this type of child quarterbacking is still indulged in by some status seeking parents who refer to their children with the prim observation, "Jean is our youngest. She is in the gifted program."

Such parents attempted to live vicariously the accomplishments of their children. They were pushing their children to achieve something that they themselves had not been willing or able to achieve. This in itself is an example of a lack of loyalty.

Parents moved their loyalty from their children as persons to a consuming and self-serving concern for what their children could do. These same parents cried out in anguish not too many years later when their children sluffed off the influence of their parents and went their own way, a way which often disturbed the parents.

On the other hand, a child had an exceptional measure of security when he was reared in a home environment with the kind of parents who took an attitude such as: "We love you, we love you very much, not for what you can do, but for who you are, because you are you. We may not always agree with what your ideas may be but we respect your ideas, and even though

we don't agree, it doesn't necessarily mean that you are wrong. After all, we have not always been right, but we will do our best to give you the benefit of the experiences we have had—the decisions that did not turn out well and also those which did turn out well. When we communicate to you this knowledge, then we look to you to make your own decision. We have confidence that you will make decisions which are appropriate and meaningful."

It is an attitude such as this which sows the seeds for loyalty. There has been much said about sowing seeds for disloyalty. It is about time that comment be made about sowing seeds for loyalty.

Which brings us up to the present time. Even now society is beset by the disturbing spectacle of segments of the population which are alienated from society. A group which is perpetually angry. This is not exclusive with youth. There are segments of all ages of society which are perpetually angry and which have been so throughout their lifetime—those who have not given loyalty to any cause or any thing. They have an abundance of criticism but a poverty of constructive ideas.

There is also the paradoxical and depressing phenomenon of the overindulging parents whose children's problems are referred to in grim humor as problems of the overprivileged child—parents who do not discipline their children. Such children contribute to a climate of parental, family, and societal disloyalty . . . a generation hence.

If parents do not exercise a meaningful, understanding, and emphatic kind of discipline, the children are insecure. It has been said that discipline is the other face of love, and truly it is. The child who receives no type of boundary definitions from parents is an insecure child; he has little way of knowing where he stands. His moorings are not tied securely to his base of operation, which at this time should be the parental influence. As he wavers through childhood and on into adolescence, he searches desperately for something to which he can attach his loyalty.

There is a deeply engraved desire in all human beings which propels them toward giving their loyalty to something. If nothing more than a matter of loyalty to a type of rejection, or anger, or rebellion. This is a type of sick loyalty. Society is sorely troubled at this time, with a bitter crop of people which rejects the standards that democratic society was built upon.

For those who cling to and live by a cultural heritage, this group is an enigma and a source of bewildering frustration.

True, some of them are sick, but it would be naive to say that all are the victims of psychological illness. Rather, they are like plants that don't throw deep roots—roots that have no place to go, since there is not a seedbed of stability from which they have sprung. So instead of moving vertically up and down in a loyalty pattern, they move horizontally and grope about blindly and oftentimes tragically for some cause, for some attitude to which to give their loyalty.

An encouraging aspect of this disturbing situation is that the individuals who are afflicted in this way are as yet not great in number, but they are the ones who attract society's attention. They are the ones who receive the most publicity; who create the most disturbance; who make the most noise.

It is unfair that the majority of young people who do have deep-seated and meaningful loyalties do not receive the recognition and publicity that they deserve. This is a depressing aspect of contemporary society. Several generations ago for those individuals who were disturbed, for those who were afflicted, society had a way of exerting a healing influence, a way of closing in around them. Those who achieved or conducted themselves appropriately received recognition.

What to do about it? It is a matter of getting back to the home. For some parents, it never left the home. These are the kinds of parents who exercise care and understanding in rearing their children. Parents who are imbued with a type of exceptional and blessed sanity; parents whose own loyalty concepts are intact; parents who are loyal to one another; who are loyal to their families, who are loyal and contributing members of society—these are the kinds of parents who communicate to their children the profound idea that everyone owes double duty to make up for the sacrifices which others have made in times past.

What about the educational sphere of reference where children come under the influence of teachers? If teachers are well hinged in their loyalty concepts, loyalty to their profession, their community, it is bound to rub off. It is one thing for a teacher to be a questioning intellectual, and it is quite another for a teacher to be a free-floating, continual, and questioning griper—a complainer without any constructive solutions.

Youth looks to the political climate of the community for concepts of loyalty. Interestingly enough, the realm of politics which has often come under attack has a type of basic loyalty from which society might well take a lesson. Contributing members of contemporary society have a responsibility to give something of value to which others can attach their loyalty.

It is the responsibility of the church to provide this loyalty source; it is the responsibility of the educational system; of the community; of the political system. When there is a credibility gap on any level, whether in the neighborhood, the municipality, or on a national level, loyalty is threatened.

Society desperately needs heroes rather than celebrities for loyalty attachments. It is said of Winston Churchill that he had a way of bringing out the hero in every man.

Some adults contend that they feel sorry for youth because contemporary society is too complex. Today's youth is as or better able to cope with the complexities of present day society as the youth of generations past was able to cope with society at that time. There were problems then, the same as there are problems now. Today's problems are simply of a different kind.

There were threats then, just as there are threats now. Now there is the threat of the atomic bomb and the other afflictions which beset contemporary society. Years back there was the threat of disease for which vaccines had not been discovered. The threat of being stricken by a disease for which there was no antidote was very probably as much a threat to the individual as the threats which confront people at the present time.

It isn't a matter of removing threats and frustrations for youth. It wouldn't be possible if it were tried. Neither would it be constructive if it were possible. Strength of character is not predicated by an absence of frustration; rather, it is based on one's ability to cope with frustrations constructively. To relieve youths of patterns to live by and goals to strive toward would deprive them of their rights as individuals.

Existentialist philosophy can contribute to a meaningful philosophy inasmuch as existentialism is characterized by an awareness of what is occurring here and now. It becomes meaningful if it provides the view and understanding of what people are doing here and now and combines it with an understanding of what has come before, and further provides a constructive look and hope to the future. When this thread of continuity is tied together—the past, the present, and the future—the groundwork for loyalty is then being laid.

Many youth are moving in this pattern in this time. There appears to be a type of healthy contagion that seems to be catching on. If this encouraging trend continues, it may well be that there is cause to hope that there will be an abundance of many things, particularly loyalty.

ARTICLE BY TOMMY ELEAZER ENTITLED "TRUE AMERICANS WILL MAKE TOMORROW'S HEADLINES"

HON. STROM THURMOND

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Wednesday, June 25, 1969

Mr. THURMOND. Mr. President, many of us are disturbed by the tendency of some of the news media to give undue publicity and attention to the activities of the violence-prone, leftwing student minority. When young people who are patriotic and peaceful attempt to make news in ways which do not violate the law, all too often the public is not aware of it, because it is not considered newsworthy.

A young journalist in South Carolina has written an excellent column on this subject entitled "True Americans Will Make Tomorrow's Headlines." Tommy Eleazer, in my judgment, is representative of the majority of young people in South Carolina and the Nation. I believe he, and others like him, deserve the support of those of us in public life.

Mr. President, I ask unanimous consent that this article by Tommy Eleazer, which appeared in the May 16 issue of the St. Andrews High School newspaper in Charleston, S.C., be printed in the Extensions of Remarks.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

TRUE AMERICANS WILL MAKE TOMORROW'S HEADLINES

(By Tommy Eleazer)

The young people of South Carolina have recently been left puzzled and disillusioned by the events which resulted—or rather did not result—from the march on the State House sponsored by the South Carolina Association of Student Councils. The march became what is probably the biggest "non-news" event to happen in our area in some time, for it suffered almost a complete snubbing by the news media of the city and state. The movement was the first of its kind in the entire nation, yet while the regiments of flag-burning, yelling, fighting misfits continued to parade across the television screens and newspaper headlines, the march by patriotic, God-fearing Americans was almost completely ignored.

"What's news about being patriotic?" This is the reply given by a local television station employee when asked about why the news of the march had not been reported. It seems that to hate one's country these days is a much more desirable quality than loving it. Carrying the Communist flag is news, but carrying the American flag is not. Singing protest songs is "in," but singing "God Bless America" is "out." Parading signs saying "Down with the U.S." is something to be proud of, but proclaiming "We Love Our Country" is something that should be shamefully hidden from the public's eyes. Is this a sample of the true America's warped sense of values?

Many people did not like the students' march on the State House. Columbia High and the state of South Carolina now have a

black mark in the books of many Communist-inspired and treasonous organizations. The people who would have supported us, namely the majority of Americans, were kept in the dark about our venture, but the people who want to destroy us know all. And if we, the young people, are to carry on as the leaders of our America, then we cannot, we must not, succumb to the promoters of tyranny and subversion.

The students that marched on the Capitol represent, hopefully, the thoughts and ideals of all of South Carolina's young people. They need, however, not only thought, but unfaltering support from everyone. The marchers were neither afraid, ashamed, nor hesitant to say "I love America." They sang the national anthem with a tear in their eye They will perhaps never be great for this; they will never achieve the fame of their more illustrious and "colorful" hippie opponents. Yet, with the support of all young people of our school and state, as well as the undying effort of all true Americans, in the end, the patriots, not the traitors, will be the ones that make the headlines of tomorrow.

A NEW PLAN FOR BLACK ECONOMIC EQUALITY

HON. JOHN CONYERS, JR.

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 25, 1969

Mr. CONYERS. Mr. Speaker, one of the most essential steps to the attainment of full equality by black Americans is the establishment of a sound, black-controlled economic base. Black Americans must no longer be willing to accept the traditional economic role which the broader white society envisions for them. Black people seek to move out of their confinement to the small business area, and envision access to the centers of industrial power which exist within the American corporate structure. Only when this is accomplished will black Americans truly have a meaningful stake in the welfare of this Nation. Mr. Richard F. America in a recent Harvard Business Review article, has proposed a new plan by which blacks would be given access to the industrial community and to the power which might be gained by controlling a substantial share of America's corporate wealth.

Notwithstanding some dangers involved in this plan, I commend Mr. America's article to my colleagues' attention, with the hope that it will help impress upon them the urgent need for the careful consideration of imaginative new ideas and programs in meeting the crisis which is faced by black people in the United States of America.

The article follows:

WHAT DO YOU PEOPLE WANT?

(By Richard F. America, Jr.)

(NOTE.—Housing, health, education, and employment programs are first priorities in our efforts to revitalize our cities, eliminate poverty, and restore social stability. But even when these tasks have been completed, and black per-capita income approaches that of whites, a fundamental cause of social instability will remain, the author says: a lack of institutional power, collective power, in the black community. Black-owned businesses, beginning in their present infant state, probably will not grow fast enough to provide the necessary power position in one generation. Major U.S. business will still be almost entirely white-controlled and white-managed. To avoid that outcome, and to achieve collective commercial and economic parity, the author proposes a systematic program of transferring a portion of our largest corporations to black ownership and operation.

(Mr. America, who is black, has been associated since 1965 with the Stanford Research Institute, where he is a Development Economist in the Urban and Regional Economics Group specializing in urban systems studies. He has also worked for the Boston Redevelopment Authority, doing housing market analyses and development planning. Mr. America received a bachelor's degree in economics from Pennsylvania State University and is a Harvard Business School graduate.)

In its November 19, 1967 issue *The New York Times* printed an editorial with the title "What Do the Negroes Want?" It said in part:

"Dr. Martin Luther King, Jr. . . . refers vaguely to [the Negroes' claim to] 'fulfillment of the rights to share in the ownership of property.' Mr. [James] Farmer declares that the Negro wants not merely jobs but 'jobs that bear his individual stamp and in industries where he commands power and a measure of ownership.' This is a hopelessly utopian claim that the United States has never honored for any other group. Impoverished Negroes, like all other poor Americans, past and present, will have to achieve success on an individual basis and by individual effort.

"American society is likely to accommodate Negro aspirations only as they express themselves in individual terms. It cannot be otherwise in a society that honors personal effort as its highest value and looks toward integration as its goal. Race, unlike poverty or the city, is a cultural or psychological concept, not one that can become a comprehensive basis for law or government policy."

The belief in the myth of rugged individualism; the espousal of black individualism while forgetting the history of public support for whites' special economic interests; the general ignorance of U.S. history—these attitudes, as reflected in the editorial, are widely held by white Americans. Many of them seem to have a weakness for suspending judgment and retreating to such shibboleths when contemplating the changes necessary to sustain the nation's growth and realize its full potential.

What do black people want? Jobs, housing, and education, certainly. But, beyond that, the black community wants a secure economic base. Black people themselves collectively and individually must and can build much of that base, in profit-seeking and nonprofit forms.

Contrary to *The New York Times*, I maintain that race can indeed be made a basis for government economic policy explicitly favorable to black people, as it has long been favorable implicitly to whites. The fundamental inequities are collective and not individual, and must be dealt with collectively.

No program conceived to meet major domestic problems has been adequate. This is so because, among other reasons, none, not even the Freedom Budget and Domestic Marshall Plan, has sought to reallocate corporate power. No one has offered a program bold enough (however unsettling) to get at the fundamental inequities which even the most conservative voter and businessman, though he might deny it, must sense lie at the root of the country's present instability and disunity.

PROGRAM RATIONALE

Now, it will be argued in protest that some steps have been taken, and that is quite true.

The movement to eliminate poverty and substandard health, housing, and education for 15 million black Americans seems destined to succeed if legislation already enacted is fully implemented. But the time elapsed between legislation, appropriation, and implementation of programs to full effect can be as long as a decade. If poverty is largely eliminated by, say, 1980, will the principal economic and political causes of urban unrest and racial conflict have been eliminated? Or are there other, currently secondary, considerations that will then assume primary importance?

There are many persons (Floyd McKissick and Senator Eugene McCarthy, for example) who define the black-white problem in the United States as a colonial problem. The colonial analogy is central and illumines a policy question that may prove even more intractable than the poverty question; indeed, in retrospect, by 1980 the latter may even appear relatively simple by contrast.

The colonial analogy permits perception of the black community as a "nation," systematically deprived of an opportunity to save and invest. It therefore can claim control of very little capital wealth. My basic assumption in this article is that, to treat the economics and politics of the race problem properly, this deficiency must be corrected.

The establishment and nurturing of small businesses, now being undertaken on an increasing scale, does not satisfy the need for significant economic independence and self-determination, which all emerging colonies require in order to prosper. Only large enterprises will satisfy that requirement, and they take a long time to develop.

All large businesses in the United States, with two or three exceptions, are owned and operated by whites. If relative economic parity is to be reached in one generation, some of these must be transferred to blacks. There are two additional elements in the rationale for corporate transfer:

1. *Influence in policy making*—It can be expected that black people will increasingly feel that white people, especially white businessmen, have had a disproportionate influence on the domestic and foreign affairs of this country. White businessmen have simply had too much to say about what goes on in this country. Domestic policy—including policy on problems in which the judgment of blacks is increasingly understood to be relevant, if not primary—is directly related to foreign policy. An example is domestic segregation and South Africa. U.S. foreign policy has always been made by the white establishment.

Black people, with certain exceptions like Senator Edward Brooke, have had no direct line of communication with the decision-making echelon. No black leaders of large businesses have such access, since there are virtually no such leaders. And on many of the critical world issues facing this country, new views are badly needed.

One orderly way to change this situation is to accelerate the belated development of comparably powerful groups of black businessmen whose perspectives on foreign and domestic questions would in all likelihood be somewhat different simply because of the racial difference.

It is reasonable to assume that black corporate leaders will introduce new variables and place new weights on old variables in the decision equations of industry and government. That may strike some white businessmen as a terrible prospect, but thoughtful consideration should lead to the conclusion that the introduction of this new element would be in the pluralistic tradition with which many historians credit the relatively consistent stability of the American economic and political experiment.

In short, black corporate leaders may be able to make a valuable contribution to high policy councils in the last quarter of this

turbulent century. The entire nation would benefit from their presence.

2. *A 'countervailing' force*—The black-white problem in the United States can be framed in terms of John Kenneth Galbraith's concept of countervailing force. It may be necessary and desirable public policy from the white viewpoint, as it is already implicit black "policy," to foster the development of black corporate power as a force against continued mistreatment of blacks by white corporate and labor power, and against the continued political, social, and economic instability which such mistreatment produces.

Massive mutual distrust is a factor between the races. Better economic and social conditions may reduce the level of distrust. But it is dangerous to assume that rising incomes and educational levels alone will be sufficient to dispel historic antipathies. On the contrary, they may just as easily inflame them, for we know that cultural, psychological, and political expectations will rise just as surely as economic expectations. A sense of relative collective political deprivation may persist when individual economic deprivation has been eliminated.

Secure and powerful black economic institutions, rather than simply mass individual affluence, would be the surest safeguard against feelings of collective powerlessness and against manifestations of continued white supremacy. Creating such institutions would be in the public interest.

For these reasons, a workable mechanism is required for the transfer of some major national corporations to black control.

PRECEDENTS FOR THE PROPOSAL

U.S. history does not lack for examples of the use of public resources in support of private activities when the results were expected to be in the public interest. There are ample precedents of public encouragement leading to private wealth.

Construction of the Western railroads, for example, was deemed so important to the development of both the Western region and the nation that private citizens were given extraordinary incentives to build the roads. Land was practically given away.

Examples of the transfer of technology from public to private hands are of course equally common. The development of commercial aviation benefited from publicly sponsored research and development. Currently, the government's aerospace research program is creating products and techniques for private exploitation, and the public is providing a substantial windfall to corporations in the process.

In each of these activities the public treasury has directly supported the development of large private enterprise; and, in the last two cases, the government has removed much of the development risk by turning over to corporations proven products and protected markets. The private benefits accrued after public subsidy of the substantial early costs.

The case of the aluminum industry is also pertinent. After World War II, the federal government concluded that the Aluminum Company of America was too big according to certain objective and subjective criteria. The federal approach, simply stated, was to force Alcoa to divest itself of some of its holdings or face direct competition from a corporation to be founded by the government. Alcoa chose to divest. The important point here is that the government considered the public interest to be sufficiently threatened by the monopolistic situation that it was determined to commit public resources to restore a measure of competition in the industry.

The white monopoly represented by *Fortune's* 500 largest companies might be similarly viewed. The total absence of any large black corporations in the United States is, to some extent, due to a kind of restraint of trade and "collusive" behavior over the years by almost all white institutions, including the government and the legal system. This has resulted in a situation contrary to the public interest.

Urban renewal: Perhaps the most relevant precedent for a transfer mechanism exists in the federal urban renewal program. The power of eminent domain has been relied on to secure land for restoration of certain areas and for essential public projects. A series of court tests has established that eminent domain may further be used to change a land use while title to the property passes from one private party, through the government, to another. The courts have ruled that such changing uses are sufficiently in the public interest to justify the exercise of eminent domain.

The process normally proceeds after extensive public hearings and with numerous safeguards and checks against abuse, although abuses are not unknown. The mechanism essentially consists of three elements:

1. The owner is compensated at full appraised fair market value for his property. This payment is made from the public treasury.

2. The property thus acquired is prepared for transfer. The preparation in the case of a new use for the land usually consists of clearance of structures, preparation of the ground for new construction, and placement of infrastructure, such as utility lines, street realignments, and curbing.

3. The property is sold to the developer, who ordinarily agrees to certain tenure, use, and design controls which are imposed by the developing authority.

The total cost of acquisition and preparation usually greatly exceeds the final sale price to the developer; indeed, it is not uncommon for property to be disposed of for as little as 5% of that total cost. This price, of course, is an even smaller percentage of what a developer might have had to pay to assemble the parcels in the open market without benefit of the public intermediary, assuming that the assembly could have been accomplished at all. The "net project costs" amount to roughly the difference between total acquisition and the disposition price. The public treasury absorbs the net project cost.

I propose that a variation on the mechanism used in urban renewal be employed to accomplish the transfer of major corporations or portions of them from white to black management and control.

ALTERNATIVE APPROACHES

It might be argued that a better, or at least a somewhat less bureaucratic, approach to developing large black industrial institutions should be developed.

Why not, for example, simply give the full purchase price to a group of black capitalists and let them proceed on their own toward acquisition? The problems of developing safeguards with that approach might be overwhelming. Or why not let the government directly set up large corporations in selected industries and turn them over to a black management group? The problems of altering industry structures and distorting existing competitive situations would be formidable.

While both approaches, or others, might be made operable, my proposed solution appears to be applicable with the least departure from precedent and the minimum disruption of normal financial and production arrangements for all parties directly or indirectly concerned.

It might be argued that black control could be achieved simply by bringing in black managers and accelerating their movement to the top, without disturbing ownership. This approach would probably not work. It is unlikely that the relationship between black management and a board of directors representing white interests would remain as harmonious as that between black management and a black-dominated board. Normal conflicts between management and the board would over time become exacerbated in the former case, in which racially based conflicts of interest, policy differences, and social objectives would be always potentially present, to the probable eventual detriment of the enterprise.

In transferring ownership of corporations, eminent domain, while not confiscatory, would not be a preferred method even if legal objections could be overcome. The process would require a congenial atmosphere and a high level of cooperation on the part of the original white owners and managers. The potential for obstruction or even sabotage is obvious, so proper incentives, indeed very attractive incentives, must be provided.

A brief aside is in order here. The process of black community development has two facets, one internal and the other external. If the external aspect were completely satisfactory—that is, if the white community moved to reform itself and initiate the needed programs—much of the benefit would be lost unless the black community were unified and able to carry out its part in the process.

For black people, then, the solution of certain internal problems is crucial. One of them is the degree of separatism which they should practice. Few in the black community would dispute that black people—not the white world, governmental or corporate—have the responsibility for internal planning. But the proposal in this article will be viewed as a much too conservative, perhaps even dangerous, step by some significant black analysts and activists who are separatists.

The converse of my statement about internal and external facets is not so. If internal problems are resolved and a high degree of unification is achieved, much white resistance will be effectively countered and eventually overcome. Black progress will not end if my proposal, or even others less far-reaching, is not put into action. Black self-help will accelerate and succeed; it will not be allowed to depend on white approbation.

TRANSFER MECHANISM

The process of corporate transfer should, if possible, be initiated by the candidate. An agency of the federal government created to facilitate such conveyances would issue a standing invitation to divest. Let's call it ACT (Agency for Corporate Transfer). It could be established in the Department of Commerce or the Office of the President.

The program should begin with a trial run, with perhaps three large companies transferred, one a year for three years. After the last transfer, two years of demonstration operations would be undertaken. At the end of the five-year test period it should be clear what program modifications would be required to improve the chances of success with subsequent transfers.

Two assumptions are implicit here: (1) there is a sufficient number of black capitalists with access to $1 million to $10 million to accomplish the program; and (2) there is a sufficient quantity of black managerial talent to run the transferred concerns. These assumptions are sound, in my view; the money could be found, and the experience of personnel and management recruiting firms in the past five years suggests the existence of a sizable pool of unrecognized talent, particularly in government, education, and the military.

In each *Fortune* industry category (the 500 largest industrials, plus the 50 largest banks, utilities, and life insurance, merchandising, and transportation companies) might be set an ultimate target of 10% to come under black ownership and control by 1990. Adding 10% to the next 500 largest industrials makes a total of 125 companies to be transferred.

If there were no takers despite very attractive tax and other financial inducements, then, theoretically at least, criteria could be developed for identifying candidates for

acquisition. Conglomerates, for example, might be approached to determine their interest in selling off portions. In the event of such an impasse, the initiative for opening discussions would fall to the government.

A climate in which no corporations would be interested in voluntary divestiture for purposes of simple liquidation or to take advantage of very attractive financial inducements would be a negative climate in any case. With such a total lack of interest prevailing, the necessary legislation for this program obviously never would be enacted in the first place.

So, discussion of a program requiring government initiative leads to a dead end for all practical purposes. Corporate transfer requires that the white business community understand its advantages, accept its premises, and concur in its objective. Otherwise, the program is dead. But in that direction, as I have tried to suggest, lies severe uncertainty and social instability.

CORPORATE CANDIDATES

A difficulty might arise if the only offers of transfer come from marginal corporations or those whose prospects are dimming. It might be very tempting for a community with top management problems, or severe and chronic financial or labor problems, or obsolescent plant and equipment, or grim marketing problems to seize the opportunity to unload, perhaps even at a premium price. If offers from such companies are abundant in the early rounds, negotiations on selling price could be difficult.

Rejection of a few companies because of unsoundness or low potential, however, would cause them considerable embarrassment and would probably discourage offers from seriously troubled companies.

In seeking to develop black industry, the problem of competitiveness will be primary. There is little point in accomplishing the transfer of corporations whose activities are in no-growth or declining areas. On the other hand, companies on the technological frontiers like aerospace, ocean exploitation, and nuclear energy are unlikely to offer themselves. The first rounds of negotiations with manufacturers therefore are likely to involve stable, moderate-growth producers of consumer and industrial goods.

ACT might want to concentrate on industries at both ends of the competitive spectrum. An industry that is relatively "competitive," such as paper products or petroleum, will suffer less dislocation from a transfer of one or two of its major companies. Similarly, utilities and other monopolies should be readily transferable, since they are already heavily regulated and not in such delicate competitive balance as more oligopolistic industries, like autos and aircraft.

The opportunity of acquiring large businesses, incidentally, should certainly be extended to other groups in the United States whose situation vis-à-vis the white business world is similar to that of blacks: Puerto Ricans, Mexican-Americans, American Indians, and, to a lesser extent, Orientals. The government would have to have assurance first that the associates seeking transfer are qualified and would put the corporation to good use. This is the same as my suggested procedure with black groups, which I take up next.

BIDDING PROCEDURE

ACT would acquire a divesting corporation by paying a negotiated price for 51% of the common stock, after acceptance of a tender offer, with monies from the public treasury.

The availability of the corporation would then be made known to all interested parties through public media, and offers would be invited. In the case of a large manufacturer in which controlling interest could be purchased by ACT for $100 million, an offer of $1 million to $5 million should be sufficient to acquire that interest.

The net acquisition cost—the difference between what ACT paid for the 51% interest and the purchasing group's offer—would be absorbed by the government. The portion of the majority interest not held by these entrepreneurs would be assigned by ACT to a nonprofit organization, which I shall describe later.

Initially, the competition from groups of eager entrepreneurs would be keen, but as bidding continued, the field could be expected to dwindle. When a small number of bidders, say three, remained, a set of rigorous criteria would be applied to determine the winner.

The principal criterion would be the ability of the bidding group to produce a management cadre with the potential for successful management of the company. The groups would be required to put together a team of black businessmen with the requisite training, background, general and specialized experience, and potential to fill the key management positions within a reasonable period of time, say 5 to 10 years. This would mean a team of 20 to 100 men with expertise in functional areas including marketing, finance, production, personnel, and so on. A typical team might average 35 years of age, with 10 years of business or noncommercial experience per man.

Objective tests of the team's capacity to enter the divesting company and industry and to learn the business within ten years would be required. Perhaps more difficult, some subjective analysis would be necessary so that the interpersonal dynamics between the divesting management group and the acquiring group's managers could be anticipated.

Obviously, the introduction of a group of black "fair-haired boys," taking over from white managers during a period of years, has the potential for triggering a variety of generally bad vibrations. The organizational behavior specialists would have their work cut out for them. It must be assumed, however, that in this situation—with a willing buyer, a willing seller, and competent managers, both black and white—these problems can be overcome.

Administrative and legal safeguards of a high order of effectiveness would be required because of the very large sums of money involved. Particularly important is a procedure for restraining the level of bidding. It might be tempting for competing bidders to seek outside capital in support of their 1% to 5% bids. In the case of a corporation in which controlling interest can be acquired for $100 million, white entrepreneurs might find it worthwhile to provide $50 million, $75 million, or even more to a black bidding group. In short, the price could be driven up to a level near the market price.

In that event, the black capitalists would become hardly more than a front for the whites, which would defeat the purpose of the program. A technique for certifying the source of all money must be employed, and full disclosure would be essential.

TRANSFER SAFEGUARDS

The mechanism will also have to protect the legitimate interests of minority stockholders who want to dispose of shares. ACT should stand ready to purchase their shares at the market price immediately before the announcement of the sale. On announcement, the stock market would probably discount the company's future earnings to take account of general uncertainty, the incoming and relatively inexperienced management, and similar factors. Small stockholders should not be penalized in this situation.

After the winning bidder has been selected, the stock would be immediately transferred. At this point, or perhaps even earlier, disgruntled minor stockholders might behave in such a way as to upset the management and the market. The government, through the Securities and Exchange Commission, would have to act to protect the corporation's securities from malevolent operators. Suspension of trading in case of panic selling or other abnormal market activities should be left to the judgment of the boards of the exchanges and the SEC.

The market's reassessment of the company's prospects is to be expected. Within a short time, if earnings hold up and operations continue normally, the market price should reflect the diminished uncertainty, and recovery should be complete.

RESTRICTIONS ON THE BUYERS

The purpose of this program is to contribute to the achievement of economic and political parity, not transform certain black capitalists into instant multimillionares at public expense. But the purchase of, say, $100 million in stock for $1 million to $5 million would appear to have that effect. So the transfer mechanism must take care of that problem.

The safeguard likely to be most effective would take this form: members of the purchasing group would personally hold only that portion of stock which could have been acquired in the marketplace with the same amount of money as they actually expended. They would receive dividends only on those shares. The balance of the stock purchased by the government would reside in a nonprofit corporation with a community base, similar to the kind envisioned in several recent proposals advanced by black community groups, black spokesmen, and many politicians. It is commonly called a community development corporation (CDC)[1]

Dividends, if any, on these shares would be paid to that corporation and could be used to fund a variety of public benefit projects in housing, health, recreation, and so forth—much as The Ford Foundation does with its Ford Motor Company dividends. If, however, in management's judgment the interests of the corporation would be best served by retention of earnings, that judgment should not be subordinated to the CDC's desire for cash; funding local public projects must remain secondary to the goal of sustaining competitive businesses.

The location of these nonprofit corporations and the communities to be benefited would be jointly determined by the new controlling group, by expressions of interest and capacity from local organizations, and by relevant government departments, such as OEO, Commerce, HEW, and HUD. As the controlling group desired, it would be free to purchase stock from the CDC within certain limits designed to prevent abuse or price manipulation.

Some provision would have to be devised either to make this large block of stock nonvoting for a period, to prevent interference from that quarter, or otherwise to restrict direct participation by the CDC in the direction of the company until a transitional period, perhaps two of three years, has been completed.

The entrepreneurial group should be allowed to exercise effective control through its shares at least until the success of the transfer is assured—probably five years in most cases. But the nonprofit corporation should have some representation on the company's board of directors at an early date.

It would be undesirable, however, to protect the directors of the corporation from any of their shareholders for any great length of time. Two or three years of nonvoting status might be suitable; but the CDC should be permitted to express its wishes prudently on some proportionate basis after that tran-

[1] For one view of CDCs, see Frederick D. Sturdivant, "The Limits of Black Capitalism," HBR January-February 1969, p. 122.

sitional period. Mutual respect between company and community corporation should ensure that no harm comes to the company's commercial interests from the CDC's pursuit of its noncommercial objectives. It can be predicted that the community group would not interfere unduly with the company's operations if interference threatened to harm its investment and dividend position.

Members of the acquiring group might be tempted to take advantage of market opportunities and withdraw at an early time. They should be permitted to do so, but since the overriding purpose of the program is social, it seems reasonable to impose some limits on their freedom to trade their shares. Perhaps a moratorium of three years would be sufficient to prevent any manipulations.

OPERATIONAL QUESTIONS

So far as the company's operations are concerned, the period of accomplishing the transfer could run, as suggested earlier, five to ten years. The transition will introduce numerous uncertainty factors for the old management, for original board members who are phasing out, and for minority stockholders. Some means of reducing this uncertainty must be provided.

It will be necessary to allow the company to maintain normal operations while the old management is training the new. So the government should guarantee a minimum rate of return for the corporation and some negotiated level of sales and net income. This can be done through a government offer to purchase some quantity of the company's product (if it is a manufacturer) or through tax concessions.

The former approach is similar in intent to agricultural price supports, which are designed to maintain and protect certain economic activities in the belief that their continuation is in the public interest. Guaranteed markets or returns are also an element in U.S. government attempts to stimulate industrial development or investment in developing countries.

Tax concessions have been suggested recently by almost every nationally prominent politician as a means of inducing the participation of white private corporations in the solution of urban racial problems. Such a policy is undesirable because it would perpetuate the power imbalances that are at the root of these problems. Some kind of tax concessions are probably unavoidable, however, since private industry does have a role to play in treating physical and economic deterioration.

Tax incentives, if used at all, should be applied at least as extensively to the power problem as to the poverty or material deprivation problem. Indeed, the use of tax or other economic incentives to provide only housing, jobs, and so on, without using them to transfer corporate power, rewards white corporations for their past and current economic exploitation.

BLACK AND WHITE MANAGERS

The terms of transfer will provide for the recruitment and employment of a potential senior management cadre of blacks. I do not envision that the important lower- and middle-management levels would be entirely black. Even if that were desirable, it would be virtually impossible in a complex, multidivision corporation. But the recruitment of management trainees and young accountants, engineers, and technicians should focus on black candidates having the potential for quick development. Many will be found in MBA programs at black and white universities.

Young whites should also be recruited. They would, of course, have to be men and women, with special social orientations, but such persons are increasing in number.[2] They of course would have to understand that, for good reason, the presidency and most other top management jobs would be filled by blacks after five to ten years and for the foreseeable future beyond that. This is not unlike the unspoken understanding that black MBAs and engineers have when entering large white corporations, and with less justification.

The problem with recruiting is not likely to be the absence of good white candidates. On the contrary, the problem is likely to be the attraction of droves of candidates with strong social motivations who anticipate an exciting five or ten years in an unusual, and therefore more interesting, industrial situation before making their normal career moves. Some screening out of young candidates with missionary motives may be necessary. There may be more of a problem with headhunting for white middle managers, because of their perceptions of risk; but, again, at this early conceptual stage we must rely on the organizational behavior specialists to work that problem out.

Since the program is designed to produce large corporations that are black-controlled and led, some whites (perhaps many) will find these circumstances uncongenial and leave. The effort will be better off without them. The policy of the program, however, must be that whites are welcome to participate in the operation of black economic institutions.

SOURCES OF OPPOSITION

Employee relations will obviously be a delicate area, but success here could make the companies models of innovative human relations programs. And, as I mentioned previously, passage of the enabling legislation presupposes a national climate favorable to the transfer program. Resistance in the white business and labor communities would be assumed to be moderate.

Even so, the first corporations transferred are likely to encounter displays of displeasure by employees, by the general public, or in the market. Boycotts, work slowdowns, strikes, even sabotage are possible.

Negotiations with unions and with all employees in candidate companies should precede transfer, and these groups should have a voice in the decision to transfer. The same should be true for other affected parties, such as financial counselors and bankers, manufacturers' representatives, dealers, suppliers, and principal customers. The involvement of all relevant groups would reduce the risk of direct resistance everywhere, except perhaps in the marketplace.

For this reason, it may be prudent to select, as the first companies transferred, manufacturers of producers' goods with relatively few customers and those with heavy government contracts.

After five or six years of experience beyond the demonstration stage, and with 25 or 30 large companies in the transfer pipeline, a manufacturer of cars, soaps and cosmetics, or household appliances might be chosen. When the housewife is ready to choose Brand X (Brand Black or Brand White) on its merits (or for whatever reasons housewives make those decisions), then the entire program may be considered to be a success.

Opposition from organized labor, particularly from craft unions, might pose serious problems if the transfer process were allowed to look like an attempt to break union power. A number of craft unions have been targets recently of black displeasure because of union resistance to entrance and upgrading of blacks. General union reaction would probably depend largely on which industries appeared to offer the earliest opportunities for corporate transfer.

CONCLUSION

After about eight corporations have been transferred to black control each year for 15 years, the procedure would be discontinued, since by then blacks will have achieved economic parity roughly equivalent to their proportion of the population.

At an average purchase price of $100 million each, the total annual cost of the program, including administration and profit supports, should not run above $2 billion. In some years, however, it would exceed $2.5 billion if a giant or two should be transferred. A program with an annual cost of $2 billion that has the potential to contribute greatly to economic and social equality and stability is an effective program indeed.

Quantifiable benefits would presumably include most of those usually cited in assessing traditional social programs in housing, welfare, transportation, education, employment, and so forth. Such benefits are often realized from savings in public and private expenditures, and such savings might be realized from this program in a variety of ways.

But when the budget analysts have concluded with the cost-benefit arguments, the value of the program should rest on the political judgment that social progress depends on a reallocation of existing institutions—hence a redistribution of power—not merely on reallocation of resources in the form of educational dollars, or guaranteed income checks, or even job opportunities.

Only in this way can anything approaching economic parity be achieved in a satisfactory time—that is, in one generation. All other approaches are based implicitly on a policy of gradualism, which has been rejected by black people. Such a policy includes efforts of private enterprise to stimulate the growth of small, black-owned businesses in the black communities, which President Nixon (it appears at this time of writing) intends to concentrate on.

Would conservative and liberal politicians today support a plan going beyond the limited objectives of legislation promoting self-development, and designed to provide a measure of countervailing power to the black community? The answer is probably *no*, but in time the wisdom of such a course will, I think, become clear.

Meanwhile, the search for low-cost, supposedly nonthreatening solutions will continue with the implicit hope that somehow white economic supremacy can be maintained and no one will notice that the gross power imbalance remains despite the proliferation of new, small, black-controlled businesses.

A recent report by the Institute for Social Research at the University of Michigan contained the finding (according to a newspaper editorial) that "most black Americans are seeking reform, not revolution," and the "changes they have in mind are essentially conservative in nature."[3] It may be true that the changes most black people seek are conservative in principle.

But from the point of view of apprehensive white taxpayers and business leaders, the changes sought apparently are seen as very radical. Initially, the corporate transfer proposal may also be regarded as too radical by some, but its fundamentally conservative thrust should be obvious in light of the strong precedents.

In the 1930's much of the white business leadership, following the basically conservative direction of Franklin D. Roosevelt, supported stabilizing public and private policies that yielded a measure of power and wealth to labor. Though the circumstances are fundamentally different now (race rather than class being the basis of conflict), with enlightened conservation a measure of institutional power will be yielded in order to secure for the nation the benefits of continuity and stability.

THE SPACE FRONTIER

HON. OLIN E. TEAGUE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 25, 1969

Mr. TEAGUE of Texas. Mr. Speaker, the Atlanta Constitution of May 21, 1969, discusses the question of national priorities and the place of our national space program among the pressing requirements of our Nation. This is a question of concern to all of us today. The analysis contained in this editorial is of importance to all Americans and I commend this editorial to my colleagues and to the public:

THE SPACE FRONTIER

Sen. Edward Kennedy has raised a question of national priorities involving our space program. His comment came this week, even as Apollo 10 was on its way to the moon.

The senator suggested that some "substantial" portion of our space budget can be diverted to pressing problems on earth as soon as the current projects for "lunar landing and exploration" are complete. Plans call for Apollo 11 to land on the moon this summer. And, funds have already been allocated for three more manned Apollo flights this year if that landing succeeds.

The moon landing and exploration will complete one major phase of space exploration, so it is appropriate to begin discussing the future of the space program—and the relation of that program to other national needs.

The senator said, in suggesting that space program funds be diverted to problems of poverty and hunger and pollution:

"I am for the space program. But I want to see it in its right priority. One which will let it continue into the future and not have to be cut back or abandoned because the nation that supports it is hobbled by internal disorder."

Kennedy said he favored an "orderly programmed exploration of outer space," but added that in his view we no longer need an "accelerated" program.

We disgree with the good senator.

He raises valid questions of national priorities—and it is clear that this nation must face domestic problems of poverty and hunger and housing and pollution. It must face the question, literally, in order to survive.

But we do not think this necessarily means a pulling back from the space program, a program which today is exploring the frontiers of knowledge for all mankind. Who can predict what mysteries lie just beyond the limits of our present knowledge of the universe?

This summer may see men land on the moon and return. That in itself is a centuries-old dream, considered the stuff of science fiction only a brief time ago. But the moon is only the beginning. We may well see in our lifetime men land on most of the planets in our solar system. Some of us may live to see the first efforts of this earth-based human race to travel to other suns and other planets.

If these things seem incredible, more fiction than fact, they are no more incredible than a prediction in, say, 1949 that 20 years later we would view color pictures of the entire earth being made from a spacecraft traveling at high speed toward the moon.

We have no argument with Sen. Kennedy in his concern for facing up to our problems here on earth. It must be done. As one perceptive social critic noted, history will not deal kindly with a fabulously wealthy nation (and we are) which refuses to tax itself in order to deal with its own internal problems.

But, for one thing, the space program involves only a relatively small percent of the total national budget. Perhaps, in light of domestic concerns, this is not the time to pour new funds into the program. But we do not agree the program should be cut back.

WHERE IS THE ADMINISTRATION'S INDIAN PROGRAM?

HON. DONALD M. FRASER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 25, 1969

Mr. FRASER. Mr. Speaker, it is too easy to forget about the American Indians. They are a small group, only 600,000 in all, and many of them live away from our large population centers. Their problems—poverty, disease, despair—are not dramatic and do not make headlines. After centuries of persecution and exploitation, too many of them have inherited only a legacy of hopelessness.

Despite this grim picture, there are hopeful new efforts underway to create a better life for Indians on and off the reservations. Indian groups throughout the country are developing their own housing, education, and job training programs. What is needed to support these local self-help efforts is a new national Indian policy which places primary emphasis on Indian self-determination.

In a speech to the National Congress of American Indians just prior to his election, President Nixon outlined an excellent policy statement that emphasized this need for self-determination. During the first 6 months of the new administration, however, not much progress has been made in implementing the NCAI policy statement. In the following letter to the President, I have indicated my concern about the need for White House initiatives in the area of Indian affairs:

HOUSE OF REPRESENTATIVES,
Washington, D.C., June 20, 1969.

The PRESIDENT,
The White House,
Washington, D.C.

DEAR MR. PRESIDENT: I am convinced that the federal government must make a major new commitment to deal with the problems of the American Indian. The deplorable situation facing Indians, both on and off reservations, attests to the fact that our past Indian policies have not been successful. After 150 years of federal efforts intended to aid the Indian people, it is a national disgrace when Indian unemployment rates are still ten times the national average and when school dropout rates among Indian youth are as high as 80%. As you, yourself, so effectively said in a September 1968 speech to the National Congress of American Indians (NCAI), "The sad plight of the Indian people is a stain on the honor of the American people."

In view of the need for new and more effective efforts, I am concerned by your administration's slow pace in developing an Indian program. Action in the following areas is particularly important:

1. *Appointment of a Commissioner of the Bureau of Indian Affairs:*

The BIA Commissioner is only one of a handful of sub-cabinet positions that has not yet been filled by your administration. Until a Commissioner is selected, there is no spokesman for Indian interests at the executive level government. I understand that several people are being actively considered for this post, and I hope that there are no further delays in the announcement of an appointment.

2. *Reorganization of federal Indian program:*

In your speech to the NCAI in September, prior to your election, you indicated that your administration would give particular attention to the development of more desirable ways of administering Indian affairs and to the elimination of needless levels of government which insulate decision-making from the Indian people.

You followed up this commitment, after the election, by commissioning a study of the Bureau of Indian Affairs. The study, made by Alvin Josephy, was submitted to the White House in February. The Josephy Study outlined several alternative reorganization plans including transferring the BIA from the Interior Department to the Executive Office of the President. As yet, your administration has not commented substantively on the Josephy Study, however, and no plans have been announced for improving the operation of Indian agencies.

3. *Activation of the National Council on Indian Opportunity:*

One of the Johnson Administration's most significant actions in the area of Indian affairs was the creation by Executive Order of the National Council on Indian Opportunity. The Council was charged with the responsibility for coordinating Indian programs in the various federal agencies and with recommending new programs that reflect the needs and desires of the Indian people. One of the Council's early projects was an investigation of the condition of urban Indians, a group whose special needs have been ignored by most government agencies and private organizations.

In your September NCAI speech you said that you would fully support the National Council. However, the Council has not been convened by its chairman, Vice President Agnew, since you took office.

I hope that the lack of progress in these areas during the last six months is not an indication that Indian affairs will be a low priority item for your administration.

Historically, unfair federal policies and demeaning paternalism have reduced the Indian people to powerless wards of the federal government—as you, yourself, have said. But if we are to correct these past mistakes, strong leadership from the White House will be necessary.

I urge you to take the lead in transforming federal policies and programs into an instrument which will effectively aid the Indian people in their efforts to solve their own problems and determine their own destiny.

Sincerely,

DONALD M. FRASER.

CONGRESSMAN WILLIAM BATES, AN OUTSTANDING STATESMAN

HON. CHARLES E. BENNETT

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 23, 1969

Mr. BENNETT. Mr. Speaker, the tragic passing of our deeply beloved colleague WILLIAM BATES has shocked us all. His life of dedicated service to his country will be an inspiration to generations yet unborn. A statesman of the very highest quality and effectiveness, he was a warm and delightful person, superior in intellect and character, yet humble, understanding and loving in all his associations. Our deepest sympathy goes from each of us to his beloved wife and family.

THE 1968 DEMOCRATIC PLATFORM

HON. JONATHAN B. BINGHAM

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 25, 1969

Mr. BINGHAM. Mr. Speaker. It has been said by some commentators that the Democratic Party in the 91st Congress has no legislative program. This is not true. Such a program does exist and is embodied in the Democratic platform adopted last year.

The deplorable events surrounding the National Convention in Chicago last year, plus the fact that a large minority of delegates were unhappy about the majority's Vietnam plank, have tended to obscure the fact that a forward-looking platform was drawn up by the resolutions committee, under the chairmanship of our distinguished majority whip, the gentleman from Louisiana (Mr. BOGGS), and adopted by the convention, under the chairmanship of our distinguished majority leader, the gentleman from Oklahoma (Mr. ALBERT).

Copies of the platform have become hard to obtain. In order that my colleagues and other readers of the RECORD may have ready access to it, I insert it herewith under unanimous consent, together with the minority plank on Vietnam which was supported by 40 percent of the convention delegates:

THE 1968 DEMOCRATIC PLATFORM

(NOTE.—Following is the complete official text of the 1968 platform adopted by the Democratic National Convention on August 28, 1968. Headings and emphasis are from the original text.)

THE TERMS OF OUR DUTY

America belongs to the people who inhabit it. The source of the nation's strength is the people's freedom to be the source of the laws governing them. To uphold this truth, when Thomas Jefferson and James Madison brought the Democratic party to birth 175 years ago, they bound it to serve the people and their government as a united whole.

Today, in our 175th anniversary year, the Democratic Party in national convention assembled, again renews the covenant of our birth. We reaffirm the binding force of our inherited duty to serve the people and their government. We here, therefore, account for what we have done in the Democratic years since 1961. We here state what we will do when our party is again called to lead the nation.

In America and in the world over, strong forces for change are on the move. Systems of thought have been jarred, ways of life have been uprooted, institutions are under siege. The governed challenge those who govern.

We are summoned, therefore, to a fateful task—to ensure that the turmoil of change will prove to be the turmoil of birth instead of decay. We cannot stand still until we are overtaken by events. We dare not entrust our lives to the blind play of accident and force. By reflection and choice, we must make the impulse for change the agent of orderly progress.

There is no alternative.

In the world around us, people have patiently lived with hopes long deferred, with grievances long endured. They are now impatient with patience. Their demands for change must not only be heard, they must be answered.

This is the reality the world as a whole faces.

In America itself, *now*, and not later, is the right time to strengthen the fabric of our society by making justice and equity the cornerstones of order. *Now*, and not later, is the right time to uphold the rule of law by securing to all the people the natural rights that belong to them by virtue of their being human. *Now*, and not later, is the right time to unfurl again the flag of human patriotism and rededicate ourselves under it, to the cause of peace among nations. *Now*, and not later, is the right time to reclaim the strength spent in quarrels over the past and to apply that strength to America's future. *Now* is the right time to proceed with the work of orderly progress that will make the future become what we want it to be.

It has always been the object of the Democratic Party to march at the head of events instead of waiting for them to happen. It is our resolve to do that in the years ahead—just as we did in the Democratic years since 1961 when the nation was led by two Democratic Presidents and four Democratic Congresses.

THIS WE HAVE DONE

Our pride in the achievements of these Democratic years in no way blinds us to the large unfinished tasks which still lie ahead. Just as we know where we have succeeded, we know where our efforts still fall short of our own and the nation's hopes. And we candidly recognize that the cost of trying the untried of ploughing new ground, is bound to be occasional error. In the future, as in the past, we will confront and correct such errors as we carry our program forward.

In this, we are persuaded that the Almighty judges in a different scale who err in warmly striving to promote the common good, and those who are free from error because they risked nothing at all and were icily indifferent to good and evil alike. We are also persuaded of something else. What we have achieved with the means at hand—the social inventions we have made since 1961 in all areas of our internal life, and the initiatives we have pressed along a broad front in the world arena—gives us a clear title of right to claim that we know how to move the nation forward toward the attainment of its highest goals in a world of change.

THE ECONOMY

In presenting first the record of what we have achieved in the economic life of the American people, we do not view the economy as being just dollar signs divorced from the flesh and blood concerns of the people. Economics, like politics, involves people and it means people. It means for them the difference between what they don't want and what they do want. It means the difference between justice or injustice, health or sickness, better education or ignorance, a good place to live or a rat infested hovel, a good job or corrosive worry.

In the Democratic years since 1961, under the leadership of Presidents Kennedy and Johnson, we managed the national economy in ways that kept the best aspirations of people in clear view, and brought them closer to fulfillment.

The case was different in the 1950's when the Republicans held the trust of national leadership. In those years, the American economy creaked and groaned from recurrent recessions. One wasteful recession came in 1954, another in 1958, and a third in 1960. The loss in national production from all three recessions and from a sluggish rate of growth—a loss that can fairly be called the GOP-gap—was a staggering $175 billion, computed in today's prices.

The Democratic Party, seeing the Republican inertia and the dangers it led to, promised to get America moving again. President Kennedy first made that promise for us, and we kept it. We brought an end to recurring recessions, each one of which had followed closer on the heels of the last. Full cooperation between our government officials and all sectors of American life led to new public policies which unlocked the creative power of America's free enterprise system. The magnificent response of all the people comprising that system made the world stand in awe of the results.

Since 1961, we have seen:

A 90-month period of recession-free prosperity, the longest and strongest period of sustained economic growth in American history;

A slash in the unemployment rate from 7 to under 4 percent;

An increase of nearly 40 percent in real wages and salaries and nearly one-third in the average person's real income;

And, on the eight year average, a reduction in the rate levels of the individual income tax.

America's private enterprise system flourished as never before in these years of Democratic leadership. Compared with the preceding eight Republican years, private enterprise in the Democratic 1960's grew twice as fast, profits increased twice as rapidly, four times as many jobs were created, and thirteen million Americans—or one-third of those in poverty in 1960—have today escaped its bondage.

Democrats, however, were not satisfied. We saw—and were the first to see—that even sustained prosperity does not eliminate hard-core unemployment. We were the first to see that millions of Americans would never share in America's abundance unless the people as a whole, through their government, acted to supplement what the free enterprise could do.

So, under the leadership of President Johnson, this nation declared war on poverty—a war in which the government is again working in close cooperation with leaders of the free enterprise system.

It would compromise the integrity of words to claim that the war on poverty and for equal opportunity has been won. Democrats are the first to insist that it has only begun—while 82 percent of the House Republicans and 69 percent of the Senate Republicans voted against even beginning it at all. Democrats know that much more remains to be done. What we have done thus far is to test a series of pilot projects before making them bigger, and we have found that they DO work.

Thus:

The *new* pre-school program known as Head Start has proven its effectiveness in widening the horizons of over two million poor children and their parents.

The *new* programs known as the Job Corps and the Neighborhood Youth Corps, entailing close cooperation between the government and private enterpirse, have helped nearly two million unskilled boys and girls—most of them dropouts from school—get work in the community and in industry.

The *new* program known as Upward Bound has helped thousands of poor but talented young men and women prepare themselves for college.

The *new* structure of neighborhood centers brings modern community services directly to the people who need them the most.

THE PEOPLE

We emphasize that the coldly stated statistics of gains made in the war on poverty must be translated to mean people, in all their yearnings for personal fulfillment. That is true as well of all other things in the great outpouring of constructive legislation that surpassed even the landmark years of the early New Deal.

Education is one example. From the beginning of our Party history, Democrats argued that liberty and learning must find in each other the surest ground for mutual support. The inherited convictions provided the motive force behind the educational legislation of the 1960's that we enacted:

Because of the Elementary and Secondary Education Act of 1965, local education has been enriched to the benefit of over 13 million young Americans;

Because of the Higher Education Act of

1965, new college classrooms, laboratories and libraries have been built to assure that higher education will not be the monopoly of the few but the right of the many;

Because of federal assistance to students, the doors to college have been opened for over a million young men and women coming from families with modest means—so that about one out of every five college students is now pursuing his higher education with some kind of federal help;

Because Democrats are convinced that the best of all investments is in the human resources represented by the youth of America, we brought about a four-fold increase in the federal investment in education since 1960. The level now approaches $12 billion annually.

As it promoted better education, so did Democratic leadership promote better health for all.

The program of mercy and justice known as health care for the aged, which President Truman originally proposed and Presidents Kennedy and Johnson fought for, finally became law in the summer of 1965. Because of it, more than seven million older citizens each year are now receiving modern medical care in dignity—no longer forced to depend on charity, no longer a burden on relatives, no longer in physical pain because they cannot afford to pay for the healing power of modern medicine. Virtually all older Americans, the well and the sick alike, are now protected, their lives more secure, their afflictions eased.

To deal with other aspects of the nation's health needs, measures were enacted in the Democratic years representing an almost four-fold increase in the government's investment in health. Programs were enacted to cope with the killing diseases of heart, cancer and stroke; to combat mental retardation and mental illness; to increase the manpower supply of trained medical technicians; to speed the construction of new hospitals.

Democrats in the Presidency and in the Congress have led the fight to erase the stain of racial discrimination that tarnished America's proudly announced proposition that all men are created equal.

We knew that racial discrimination was present in every section of the country. We knew that the enforcement of civil rights and general laws are indivisible. In this conviction, Democrats took the initiative to guarantee the rights to safety and security of the person, the right to all privileges of citizenship, the right to equality of opportunity in employment, and the right to public services and accommodations and housing. For example:

Because of the Civil Rights Act of 1964, all men born equal in the eyes of their Creator are by law declared to be equal when they apply for a job, or seek a night's lodging or a good meal;

Because of the Voting Rights Act of 1965, the right to the ballot box—the right on which all other rights depend—has been reinforced by law;

Because of the Civil Rights Act of 1968, all families will have an equal right to live where they wish.

THE NATION

The frontier on which most Americans live is the vertical frontier of the city. It is a frontier whose urgent needs hold a place of very high priority on the national agenda—and on the agenda of the Democratic Party.

Democrats recognize that the race to save our cities is a race against the absolute of time itself. The blight that threatens their future takes many forms. It is the physical decay of homes and neighborhoods. It is poverty and unemployment. It is broken homes and social disintegration. It is crime. It is congestion and pollution. The Democratic program attacked all of these forms of blight—and all at once.

Since we know that the cities can be saved only by the people who live there, Democrats have invigorated local effort through federal leadership and assistance. In almost every city, a community action agency has mounted a many-sided assault on poverty. Through varied neighborhood organizations, the poor themselves are tackling their own problems and devising their own programs of self-help. Under Model Cities legislation, enacted in 1966, seventy-five cities are now launching the most comprehensive programs of economic, physical, and social development ever undertaken—and the number of participating cities will be doubled soon. In this effort, the residents of the areas selected to become the model neighborhoods are participating fully in planning their future and deciding what it will be.

In the series of housing acts beginning in 1961, Democrats have found ways to encourage private enterprise to provide modern, decent housing for low-income and moderate-income families. The Housing and Urban Development Act of 1968 is the most far-reaching housing legislation in America's history. Under its terms, the genius of American business will combine with the productivity of American labor to meet a 10-year goal of 26 million new housing units—6 million of them for the poor. The objective is to enable the poor to own their own homes, to rebuild entire neighborhoods, to spur the pace of urban renewal, and to deal more humanely with the problems of displaced people.

To give our cities a spokesman of Cabinet rank, Democrats in 1965 took the lead in creating a Department of Housing and Urban Development.

Democratic Presidents and Congresses have moved with equal vigor to help the people of America's vast hinterland outside the metropolitan centers to join the march of economic progress. Of the 101 major areas classified as "depressed areas" when the Democrats assumed office in 1961, 90 have now solved their problems of excessive unemployment and the others are on their way. The Area Redevelopment Act, the expansion of resource development programs, and the massive effort to restore Appalachia and other lagging regions to economic health assisted the people of these areas in their remarkable progress.

In these legislative undertakings of primary concern to people—American people—it is to the credit of some Republicans that they joined the Democratic majority in a common effort. Unfortunately, however, most Republicans sat passively by while Democrats wrote the legislation the nation's needs demanded. Worse, and more often, Republicans did what they could to obstruct and defeat the measures that were approved by Democrats in defiance of hostile Republican votes. Thus:

In the case of the Elementary and Secondary Education Act, 73 percent of the Republicans in the House voted to kill it.

In the case of medical care for the aged, 93 percent of the Republicans in the House and 64 percent in the Senate voted to kill it.

In the case of the Model Cities program, 88 percent of the Republicans in the House voted to kill it.

In the case of the program to help Appalachia, 81 percent of Republicans in the House and 58 percent of Senate Republicans voted to kill it, and 75 percent of the House Republicans voted to kill corresponding programs of aid for other depressed regions of the country.

The same negative attitude was present among Republicans in the 1950's, and one of the results was a crisis in the farm sector of the economy—which the Democrats inherited in the 1960's. In the late Republican 1950's, the glut of farm surpluses amounted to over $8 billion, and the taxpayers were forced to pay $1 billion every year in interest and storage charges alone. Democrats, however, set out resolutely to reverse the picture. Democratic farm programs supported farm income, expanded farm exports and domestic consumption, helped farmers adjust their production to the size of the expanded markets, and reduce farm surpluses and storage costs to the lowest level since 1952.

Democrats have also acted vigorously to assure that American science and technology shall continue to lead the world.

In atomic energy, in space exploration, in communications, in medicine, in oceanology, in fundamental and applied research in many fields, we have provided leadership and financial aid to the nation's scientists and engineers. Their genius has, in turn, powered our national economic growth.

Other measures affected all Americans everywhere.

Under our constitutional system of federalism, the primary responsibility for law enforcement rests with elected local officials and with governors, but the federal government can and should play a constructive role in support of State and local authorities.

In this conviction, Democratic leadership secured the enactment of a law which extend financial assistance to modernize local police departments, to train law enforcement personnel, and to develop modern police technology. The effect of these provisions is already visible in an improved quality of law enforcement throughout the land.

Under Democratic leadership, furthermore, the Juvenile Delinquency Prevention and Control Act was passed to aid states and communities to plan and carry out comprehensive programs to prevent and combat youth crime. We have added more personnel to strengthen the Federal Bureau of Investigation and the enforcement of narcotics laws, and have intensified the campaign against organized crime. The federal government has come swiftly to the aid of cities needing help to bring major disturbances under control, and Democratic leadership secured the enactment of a new gun control law as a step toward putting the weapons of wanton violence beyond the reach of criminal and irresponsible hands.

To purify the air we breathe and the water we drink, Democrats led the way to the enactment of landmark antipollution legislation.

To bring order into the administration of transportation programs and to coordinate transportation policy, Democrats in 1966 established a new Cabinet-level Department of Transportation.

For the consumer, new standards of protection were enacted—truth-in-lending and truth-in-packaging, the Child Safety Act, the Pipeline Safety Act, the Wholesome Meat and Wholesome Poultry Acts.

For America's 100 million automobile drivers, auto and highway safety legislation provided protection not previously known.

For every American family, unparalleled achievements in conservation meant the development of balanced outdoor recreation programs—involving magnificent new national parks, seashores, and lakeshores—all within an afternoon's drive of 110 million Americans. For the first time, we are beating the bulldozer to the nation's remaining open spaces.

For the sake of all living Americans, and for their posterity, the Wilderness Preservation Act of 1964 placed in perpetual trust millions of acres of primitive and wilderness areas.

For America's sons who manned the nation's defenses, a new G.I. bill with greatly enlarged equitable benefits was enacted gratefully and proudly.

America's senior citizens enjoyed the largest increase in social security since the system was inaugurated during the Democratic Presidency of Franklin D. Roosevelt.

For the hungry, our food distribution programs were expanded to provide more than $1 billion worth of food a year for domestic use, giving millions of children, for the first time, enough to eat.

A new minimum wage law raised paychecks and standards of living for millions, while a new network of training programs enabled

more than a million Americans to learn new skills and become productive workers in the labor force.

A new Immigration Act removed the harsh injustice of the national origins quota system and opened our shores without discrimination to those who can contribute to the growth and strength of America.

Many more measures enacted under Democratic leadership could be added to this recital of achievements in our internal life since 1961. But what we could list shares the character of what we have listed. All the measures alike are a witness to our desire to serve the people as a united whole, to chart the way for their orderly progress, to possess their confidence—by striving through our conduct to deserve to possess it.

THE WORLD

The conscience of the entire world has been shocked by the brutal and unprovoked Soviet aggression against Czechoslovakia. By this act, Moscow has confessed that it is still the prisoner of its fear of freedom. And the Czechoslovakian people have shown that the love of freedom, in their land and throughout Eastern Europe, can never be crushed.

This severe blow to freedom and self-determination reinforces our commitment to the unending quest for peace and security in the world. These dark days should not obscure the solid achievements of the past eight years. Nuclear war has been avoided. West Berlin and Western Europe are still free.

The blend of American power and restraint, so dramatically demonstrated in the Cuban missile crisis, earned the respect of the world and prepared the way for a series of arms control agreements with the Soviet Union. Long and patient negotiation by Presidents Kennedy and Johnson resulted in the Nuclear Test Ban, Nuclear Non-Proliferation, and Space treaties and the "hot line." These hard-won agreements provide the base for pursuing other measures to reduce the risk of nuclear war.

The unprecedented expansion of the American economy has invigorated the whole free world. Many once skeptical nations, including some communist states, now regard American economic techniques and institutions as a model.

In Asia the tragic Vietnam war has often blinded us to the quiet and constructive developments which affect directly the lives of over a billion people and the prospects for peace everywhere.

An economically strong and democratic Japan has assumed a more active role in the development of the region. Indonesia has a nationalist, non-Communist government seeking to live at peace with its neighbors. Thailand, Taiwan, Singapore, Malaysia, and the Republic of Korea have more stable governments and steadily growing economies. They have been aided by American economic assistance and by the American military presence in the Pacific. They have also been encouraged by a confidence reflecting successive Presidential decisions to assist nations to live in peace and freedom.

Elsewhere in the developing world, there has been hopeful political and economic progress. Though Castro's Cuba is still a source of subversion, the other Latin American states are moving ahead under the Alliance for Progress. In Africa, many of the new states have chosen moderate leaders committed to peaceful nation-building. They are beginning to cooperate with their neighbors in regional agencies of their own design. And like developing countries on other continents, they are for the first time giving serious attention to agricultural development. This new emphasis on food will buy time to launch effective programs of population control.

In all these constructive changes America, under Democratic leadership has played a significant role. But we Democrats do not believe in resting on past achievements. We view any success as a down payment on the hard tasks that lie ahead. There is still much to be done at home and abroad and we accept with confidence the challenge of the future.

THIS WE WILL DO TOWARD A PEACEFUL WORLD

In the pursuit of our national objectives and in the exercise of American power in the world, we assert that the United States should:

Continue to accept its world responsibilities—not turn inward and isolate ourselves from the cares and aspirations of mankind;

Seek a world of diversity and peaceful change, where men can choose their own governments and where each nation can determine its own destiny without external interference;

Resist the temptation to try to mold the world, or any part of it, in our own image, or to become the self-appointed policeman of the world;

Call on other nations, great and small, to contribute a fair share of effort and resources to world peace and development;

Honor our treaty obligations to our allies;

Seek always to strengthen and improve the United Nations and other international peacekeeping arrangements and meet breaches or threatened breaches of the peace according to our carefully assessed interests and resources.

In pursuing these objectives, we will insure that our policies will be subject to constant review so they reflect our true national interests in a changing world.

National defense

The tragic events in Czechoslovakia are a shocking reminder that we live in a dangerous and unpredictable world. The Soviet attack on and invasion of a small country that only yesterday was Moscow's peaceful ally, is an ominous reversal of the slow trend toward greater freedom and independence in Eastern Europe. The reimposition of Soviet tyranny raises the spectre of the darkest days of the Stalin era and increases the risk of war in Central Europe, a war that could become a nuclear holocaust.

Against this somber backdrop, whose full portent cannot now be seen, other recent Soviet military moves take on even greater significance. Though we have a significant lead in military strength and in all vital areas of military technology, Moscow has steadily increased its strategic nuclear arsenal, its missile-firing nuclear submarine fleet, and its anti-missile defenses. Communist China is providing political and military support for so-called wars of national liberation. A growing nuclear power, Peking has disdained all arms control efforts.

We must and will maintain a strong and balanced defense establishment adequate to the task of security and peace. There must be no doubt about our strategic nuclear capability, our capacity to meet limited challenges, and our willingness to act when our vital interests are threatened.

To this end, we pledge a vigorous research and development effort. We will also continue to pursue the highly successful efforts initiated by Democratic administrations to save tax dollars by eliminating waste and duplication.

We face difficult and trying times in Asia and in Europe. We have responsibilities and commitments we cannot escape with honor. But we are not alone. We have friends and allies around the world. We will consult with them and ask them to accept a fair share of the burdens of peace and security.

North Atlantic Community

The North Atlantic Community is strong and free. We must further strengthen our ties and be constantly alert to new challenges and opportunities. We support a substantially larger European contribution to NATO.

Soviet troops have never stepped across the border of a NATO country. By harassment and threat the Kremlin has repeatedly attempted to push the West out of Berlin. But West Berlin is still free. Western Europe is still free. This is a living tribute to the strength and validity of the NATO alliance.

The political differences we have had with some of our allies from time to time should not divert us from our common task of building a secure and prosperous Atlantic community based on the principles: of mutual respect and mutual dependence. The NATO alliance has demonstrated that free nations can build a common shield without sacrificing their identity and independence.

Arms control

We must recognize that vigilance calls for the twin disciplines of defense and arms control. Defense measures and arms control measures must go hand in hand, each serving national security and the larger interests of peace.

We must also recognize that the Soviet Union and the United States still have a common interest in avoiding nuclear war and preventing the spread of nuclear weapons. We also share a common interest in reducing the cost of national defense. We must continue to work together. We will press for further arms control agreements, insisting on collective safeguards against violations.

For almost a quarter of a century America's pre-eminent military strength, combined with our political restraint, has deterred nuclear war. This great accomplishment has confounded the prophets of doom.

Eight years ago the Democratic Party pledged new efforts to control nuclear weapons. We have fulfilled that pledge. The new Arms Control and Disarmament Agency has undertaken and coordinated important research. The sustained initiatives of President Kennedy and President Johnson have resulted in the "hot line" between the White House and the Kremlin, the limited Nuclear Test Ban Treaty, the Non-Proliferation Treaty, and the treaty barring the orbiting of weapons of mass destruction.

Even in the present tense atmosphere, we strongly support President Johnson's effort to secure an agreement with the Soviet Union under which both states would refrain from deploying anti-missile systems. Such a treaty would result in the saving of billions of dollars and would create a climate for further arms control measures. We support concurrent efforts to freeze the present level of strategic weapons and delivery systems, and to achieve a balanced and verified reduction of all nuclear and conventional arms.

The Middle East

The Middle East remains a powder keg. We must do all in our power to prevent a recurrence of war in this area. A large Soviet fleet has been deployed to the Mediterranean. Preferring short-term political advantage to long-range stability and peace, the Soviet Union has rushed arms to certain Arab states to replace those lost in the Arab-Israel War of 1967. As long as Israel is threatened by hostile and well-armed neighbors, we will assist her with essential military equipment needed for her defense, including the most advanced types of combat aircraft.

Lasting peace in the Middle East depends upon agreed and secured frontiers, respect for the territorial integrity of all states, the guaranteed right of innocent passage through all international waterways, a humane resettlement of the Arab refugees, and the establishment of a non-provocative military balance. To achieve these objectives, we support negotiations among the concerned parties. We strongly support efforts to achieve an agreement among states in the area and those states supplying arms to limit the flow of military equipment to the Middle East.

We support efforts to raise the living standards throughout the area, including desalinization and regional irrigation projects which cut across state frontiers.

Vietnam and Asia

Our most urgent task in Southeast Asia is to end the war in Vietnam by an honorable and lasting settlement which respects the rights of all the people of Vietnam. In our pursuit of peace and stability in the vital area of Southeast Asia we have borne a heavy burden in helping South Vietnam to counter aggression and subversion from the North.

We reject as unacceptable a unilateral withdrawal of our forces which would allow that aggression and subversion to succeed. We have never demanded, and do not now demand, unconditional surrender by the Communists.

We strongly support the Paris talks and applaud the initiative of President Johnson which brought North Vietnam to the peace table. We hope that Hanoi will respond positively to this act of statesmanship.

In the quest for peace no solutions are free of risk. But calculated risks are consistent with the responsibility of a great nation to seek a peace of reconciliation.

Recognizing that events in Vietnam and the negotiations in Paris may affect the timing and the actions we recommend, we would support our Government in the following steps:

Bombing.—Stop all bombing of North Vietnam when this action would not endanger the lives of our troops in the field; this action should take into account the response from Hanoi.

Troop Withdrawal.—Negotiate with Hanoi an immediate end or limitation of hostilities and the withdrawal from South Vietnam of all foreign forces—both United States and allied forces, and forces infiltrated from North Vietnam.

Election of Postwar Government.—Encourage all parties and interests to agree that the choice of the postwar government of South Vietnam should be determined by fair and safeguarded elections, open to all major political factions and parties prepared to accept peaceful political processes. We would favor an effective international presence to facilitate the transition from war to peace and to assure the protection of minorities against reprisal.

Interim Defense and Development Measures.—Until the fighting stops, accelerate our efforts to train and equip the South Vietnamese army so that it can defend its own country and carry out cutbacks of U.S. military involvement as the South Vietnamese forces are able to take over their larger responsibilities. We should simultaneously do all in our power to support and encourage further economic, political and social development and reform in South Vietnam, including an extensive land reform program. We support President Johnson's repeated offer to provide a substantial U.S. contribution to the postwar reconstruction of South Vietnam as well as to the economic development of the entire region, including North Vietnam. Japan and the European industrial states should be urged to join in this postwar effort.

For the future, we will make it clear that U.S. military and economic assistance in Asia will be selective. In addition to considerations of our vital interests and our resources, we will take into account the determination of the nations that request our help to help themselves and their willingness to help each other through regional and multilateral cooperation.

We want no bases in South Vietnam; no continued military presence and no political role in Vietnamese affairs. If and when the Communists understand our basic commitment and limited goals and are willing to take their chances, as we are, on letting the choice of the postwar government of South Vietnam be determined freely and peacefully by all of the South Vietnamese people, then the bloodshed and the tragedy can stop.

Japan, India, Indonesia, and most of the smaller Asian nations are understandably apprehensive about Red China because of its nuclear weapons, its support of subversive efforts abroad, and its militant rhetoric. They have been appalled by the barbaric behavior of the Red Guards toward the Chinese people, their callous disregard for human life and their mistreatment of foreign diplomats.

The immediate prospect that China will emerge from its self-imposed isolation are dim. But both Asians and Americans will have to coexist with the 750 million Chinese on the mainland. We shall continue to make it clear that we are prepared to cooperate with China whenever it is ready to become a responsible member of the international community. We would actively encourage economic, social and cultural exchange with mainland China as a means of freeing that nation and her people from their narrow isolation.

We support continued assistance to help maintain the independence and peaceful development of India and Pakistan.

Recognizing the growing importance of Asia and the Pacific, we will encourage increased cultural and educational efforts, such as those undertaken in multi-racial Hawaii, to facilitate a better understanding of the problems and opportunities of this vast area.

The developing world

The American people share the aspirations for a better life in the developing world. But we are committed to peaceful change. We believe basic political rights in most states can be more effectively achieved and maintained by peaceful action than by violence.

In their struggle for political and economic development, most Asian, African, and Latin American states are confronted by grinding poverty, illiteracy and a stubborn resistance to constructive change. The aspirations and frustrations of the people are frequently exploited by self-serving revolutionaries who employ illegal and violent means.

Since World War II, America's unprecedented program of foreign economic assistance for reconstruction and development has made a profound contribution to peace, security, and a better life for millions of people everywhere. Many nations formerly dependent upon American aid are now viable and stable as a result of this aid.

We support strengthened U.S. and U.N. development aid programs that are responsive to changing circumstances and based on the recognition, as President Johnson put it, that "self-help is the life-blood of economic development." Grant aid and government loans for long-term projects are part of a larger transfer of resources between the developed and under-developed states, which includes international trade and private capital investment as important components.

Like the burden of keeping the peace, the responsibility for assisting the developing world must be shared by Japan and the Western European states, once recipients of U.S. aid and now donor states.

Development aid should be coordinated among both donors and recipients. The World Bank and other international and regional agencies for investment and development should be fully utilized. We should encourage regional cooperation by the recipients for the most efficient use of resources and markets.

We should press for additional international agreements that will stimulate mutually beneficial trade and encourage a growing volume of private investment in the developing states. World-wide commodity agreements that stabilize prices for particular products and other devices to stabilize export earnings will also spur development.

We believe priority attention should be given to agricultural production and population control. Technical assistance which emphasizes manpower training is also of paramount importance. We support the Peace Corps which has sent thousands of ambassadors of good will to three continents.

Cultural and historic ties and a common quest for peace with freedom and justice have made Latin America an area of special concern and interest to the United States. We support a vigorous Alliance for Progress program based upon the Charter of Punta del Este which affirms that "free men working through the institutions for representative democracy can best satisfy man's aspirations."

We support the objective of Latin American economic integration endorsed by the presidents of the American Republics in April 1967, and urge further efforts in the areas of tax reform, land reform, educational reform, and economic development to fulfill the promise of Punta del Este.

United Nations

Since the birth of the United Nations, the United States has pursued the quest for peace, security and human dignity through United Nations channels more vigorously than any other member state. Our dedication to its purpose and its work remains undiminished.

The United Nations contributed to dampening the fires of conflict in Kashmir, the Middle East, Cyprus and the Congo. The agencies of the United Nations have made a significant contribution to health, education and economic well-being in Asia, Africa and Latin America. These efforts deserve continued and expanded support. We pledge that support.

Since we recognize that the United Nations can be only as effective as the support of its members, we call upon other states to join with us in a renewed commitment to use its facilities in the great tasks of economic development, the non-military use of atomic energy, arms control and peacekeeping. It is only with member nations working together that the organization can make its full contribution to the growth of a world community of peace under law, rather than by threat or use of military force.

We are profoundly concerned about the continued repression of Jews and other minorities in the Soviet Union and elsewhere, and look forward to the day when the full light of liberty and freedom shall be extended to all countries and all peoples.

Foreign trade and financial policy

World trade is essential to economic stability. The growing interdependence of nations, particularly in economic affairs, is an established fact of contemporary life. It also spells an opportunity for constructive international cooperation that will bring greater well-being for all and improve the prospects for international peace and security.

We shall build upon the Trade Expansion Act of 1962 and the Kennedy round of trade negotiations, in order to achieve greater trade cooperation and progress toward freer international trade. In future negotiations, which will require careful preparation, we shall: (1) seek continued reciprocal reduction and elimination of tariff barriers, based on the most-favored-nation principle; (2) negotiate the reciprocal removal of non-tariff barriers to international trade on all products, including agriculture; (3) give special attention to the needs of the developing countries for increased export earnings; and (4) develop and improve the rules governing fair international competition affecting both foreign commerce and investment.

To lessen the hardships suffered by industries and workers as the result of trade liberalization, we support improvements in the adjustment assistance provisions of present law. Provision of law to remedy un-

fair and destructive import competition should be reviewed and strengthened, and negotiated international agreements to achieve this purpose should be employed where appropriate.

The United States has experienced balance-of-payments deficits for over a decade, mainly because of our security obligations in the free world. Faced with these deficits, we have behaved responsibly by avoiding both economic deflation at home and severe and unilateral restrictive measures on international transactions, which would have weakened the international economy and international cooperation.

We shall continue to take the path of constructive measures by relying on steps to increase our exports and by the development of further cooperative arrangements with the other countries. We intend, as soon as possible, to dismantle the restrictions placed on foreign investment and finance, so that American free enterprise can play its full part as the agent of economic development. We will continue to encourage persons from other lands to visit America.

Steps of historical importance have already been taken to improve the functioning of the international monetary system, most notably the new special drawing rights under the international monetary fund. We shall continue to work for the further improvement of the international monetary system so as to reduce its vulnerability to monetary crises.

ECONOMIC GROWTH AND STABILITY

The Democratic policies that more than doubled the nation's rate of economic expansion in the past eight years can double and redouble our national income by the end of this century. Such a rate of economic growth will enable us to win total victory in our wars on ignorance, poverty, and the misery of the ghettos.

But victory will not come automatically. To realize our full economic potential will require effective, businesslike planning and cooperation between government and all elements of the private economy. The Democratic Party pledges itself to achieve that purpose in many ways.

Fiscal and monetary policy

Taxes were lowered in 1962, 1964, and 1965 to encourage more private spending and reach full employment; they were raised in 1966 and 1968 to help prevent inflation, but with a net reduction in the eight Democratic years. We will continue to use tax policy to maintain steady economic growth by helping through tax reduction to stimulate the economy when it is sluggish and through temporary tax increases to restrain inflation. To promote this objective, methods must be devised to permit prompt, temporary changes in tax rates within prescribed limits with full participation of the Congress in the decisions.

The goals of our national tax policy must be to distribute the burden of government equitably among our citizens and to promote economic efficiency and stability. We have placed major reliance on progressive taxes, which are based on the democratic principle of ability to pay. We pledge ourselves to continue to rely on such taxes, and to continue to improve the way they are levied and collected so that every American contributes to government in proportion to his ability to pay.

A thorough revamping of our federal taxes has been long overdue to make them more equitable as between rich and poor and as among people with the same income and family responsibilities. All corporation and individual preferences that do not serve the national interest should be removed. Tax preferences, like expenditures, must be rigorously evaluated to assure that the benefit to the nation is worth the cost.

We support a proposal for a minimum income tax for persons of high income based on an individual's total income regardless of source, in order that wealthy persons will be required to make some kind of income tax contribution, no matter how many tax shelters they use to protect their incomes. We also support a reduction of the tax burden on the poor by lowering the income tax rates at the bottom of the tax scale and increasing the minimum standard deduction. No person or family below the poverty level should be required to pay federal income taxes.

Our goal is a balanced budget in a balanced economy. We favor distinguishing current operating expenditures from long-term capital outlays and repayable loans, which should be amortized consistent with sound accounting principles. All government expenditures should be subject to firm tests of efficiency and essentiality.

An effective policy for growth and stability requires careful coordination of fiscal and monetary policies. Changes in taxes, budgets, interest rates, and money supply must be carefully blended and flexibly adjusted to assure:

Adaptation to changing economic conditions;

Adequate supplies of money and credit for the expansion of industry, commerce, and housing;

Maintenance of the lowest possible interest rates;

Avoidance of needless hardships on groups that depend heavily on credit.

Cooperation between fiscal and monetary authorities was greatly strengthened in the past eight years, and we pledge ourselves to continue to perfect this cooperation.

Price stability with growth

Price stability continues to be an essential goal of expansive economic policy. Price inflation hurts most of the weak among us and could interfere with the continued social gains we are determined to achieve in the immediate years ahead.

The answer to rising prices will never be sought, under Democratic administrations, in unemployment and idle plant facilities. We are firmly committed to the twin objectives of full employment and price stability.

To promote price stability in a dynamic and growing economy, we will:

Pursue flexible fiscal and monetary policies designed to keep total private and public demand in line with the economy's rising productive capacity.

Work effectively with business, labor, and the public in formulating principles for price and wage policies that are equitable and sound for consumers as well as for workers and investors.

Strictly enforce antitrust and trade practice laws to combat administered pricing, supply limitations and other restrictive practices.

Strengthen competition by keeping the doors of world trade open and resisting the protectionism of captive markets.

Stimulate plant modernization, upgrade labor skills, and speed technological advance to step up productivity.

Agriculture

Twice in this century the Republican Party has brought disaster to the American farmer—in the thirties and in the fifties. Each time the American farmer was rescued by the Democratic Party, but this prosperity has not yet been fully restored.

Farmers must continue to be heard in the councils of government where decisions affecting agriculture are taken. The productivity of our farmers—already the world's most productive—must continue to rise, making American agriculture more competitive abroad and more prosperous at home.

A strong agriculture requires fair income to farmers for an expanding output. Family farmers must be protected from the squeeze between rising production costs and low prices for their products. Farm income should grow with productivity just as industrial wages rise with productivity. At the same time, market prices should continue to reflect supply and demand conditions and American farm products must continue to compete effectively in world markets. In this way, markets at home and abroad will continue to expand beyond the record high levels of recent years.

To these ends, we shall:

Take positive action to raise farm income to full parity level in order to preserve the efficient, full-time family farm. This can be done through present farm programs when these programs are properly funded, but these programs will be constantly scrutinized with a view to improvement.

Actively seek out and develop foreign commercial markets, since international trade in agricultural products is a major favorable factor in the nation's balance of payments. In expanding our trade, we shall strive to ensure that farmers get adequate compensation for their production going into export.

Expand our food assistance programs to America's poor and our Food for Peace program to help feed the world's hungry.

Establish a Strategic Food and Feed Reserve Plan whereby essential commodities such as wheat, corn and other feed grains, soybeans, storable meat and other products will be stockpiled as a safeguard against crop failures, to assist our nation and other nations in time of famine or disaster, and to ensure adequate supplies for export markets, as well as to protect our own farm industry. This reserve should be insulated from the market.

Support the right of farmers to bargain collectively in the market place on a commodity-by-commodity basis. Labor and industry have long enjoyed this right to bargain collectively under existing legislation. Protective legislation for bargaining should be extended to agriculture.

Continue to support and encourage agricultural co-operatives by expanded and liberal credit, and to protect them from punitive taxation.

Support private or public credit on reasonable terms to young farmers to enable them to purchase farms on long-term, low-interest loans.

Support the federal crop insurance program.

Reaffirm our support of the rural electrification program, recognizing that rural America connot be revitalized without adequate low-cost electric power. We pledge continued support of programs to assure supplemental financing to meet the growing generating and distributing power needs of rural areas. We support the rural telephone program.

Support a thorough study of the effect of unlimited payments to farmers. If necessary, we suggest graduated open-end limitations of payments to extremely large corporate farms that participate in government programs.

Take a positive approach to the public interest in the issue of health and tobacco at all levels of the tobacco economy. We recommend a cooperative effort in health and tobacco research by government, industry and qualified scientific bodies, to ascertain relationships between human health and tobacco growth, curing, storage and manufacturing techniques, as well as specific medical aspects of tobacco smoke constituents.

Small business

Small business plays a vital role in a dynamic, competitive economy; it helps maintain a strong social fabric in communities across the land; it builds concerned community leadership deriving from ownership of small enterprises; and it maintains the challenge and competition essential to a free enterprise system.

To assure a continuing healthy environment for small business, the Democratic Party pledges to:

Assure adequate credit at reasonable costs;

Assure small business a fair share of government contracts and procurement;

Encourage investment in research and development of special benefit to small enterprise;

Assist small business in taking advantage of technological innovations;

Provide centers of information on government procurement needs and foreign sales opportunities.

The Democratic Party is pledged to develop programs that will enable members of minority groups to obtain the financing and technical management assistance needed to succeed in launching and operating new enterprises.

Labor-management relations

Private collective bargaining and a strong and independent labor movement are essential to our system of free enterprise and economic democracy. Their development has been fostered under each Democratic administration in this century.

We will thoroughly review and update the National Labor Relations Act to assure an effective opportunity to all workers to exercise the right to organize and to bargain collectively, including such amendments as:

Repeal of the provision permitting states to enact compulsory open shop laws;

Extension of the Act's protection to farm workers, employees of private non-profit organizations, and other employees not now covered;

Removal of unreasonable restrictions upon the right of peaceful picketing, including situs picketing;

Speedier decisions in unfair labor practice cases and representation proceedings;

Greater equality between the remedies available under the Act to labor and those available to management;

Effective opportunities for unions as well as employers to communicate with employees, without coercion by either side or by anyone acting in their behalf.

The Federal Government will continue to set an example as an employer to private business and to state and local governments. The Government will not do business with firms that repeatedly violate Federal statutes prohibiting discrimination against employees who are union members or refuse to bargain with duly authorized union representatives.

By all these means, we will sustain the right of workers to organize in unions of their own choosing and will foster truly effective collective bargaining to provide the maximum opportunity for just and fair agreements between management and labor.

Consumer protection

Rising incomes have brought new vigor to the market place. But the march of technology which has brought unparalleled abundance and opportunity to the consumer has also exposed him to new hazards and new complexities. In providing economic justice for consumers, we shall strengthen business and industry and improve the quality of life for all 200 million Americans.

We commend the Democratic Congress for passing the landmark legislation of the past several years which has ushered in a new era of consumer protection—truth-in-lending, truth-in-packaging, wholesome meat and poultry, auto and highway safety, child safety, and protection against interstate land swindles.

We shall take steps, including necessary legislation, to minimize the likelihood of massive electric power failures, to improve the safety of medical devices and drugs, to penalize deceptive sales practices, and to provide consumer access to product information now being compiled in the Federal Government.

We will help the states to establish consumer fraud and information bureaus, and to update consumer credit laws.

A major objective of all consumer programs, at all levels, must be the education of the buying public, particularly the poor who are the special targets of unscrupulous and high-pressure salesmanship.

We will make the consumer's voice increasingly heard in the councils of government. We will strengthen consumer education and enforcement programs by consolidation of functions now dispersed among various agencies, through the establishment of an Office of Consumer Affairs to represent consumer interests within the government and before courts and regulatory agencies.

Housing

For the first time in history, a nation is able to rebuild or replace all of its substandard housing, even while providing housing for millions of new families.

This means rebuilding or replacing 4.5 million dwelling units in our urban areas and 3.9 million in rural areas, most in conditions of such dilapidation that they are too often dens of despair for millions of Americans.

Yet this performance is possible in the next decade because of goals and programs fashioned by Democratic Presidents and Democratic Congresses in close partnership with private business.

The goal is clear and pressing—"a decent home and a suitable living environment for every American family," as set forth in the 1949 Housing Act by a Democratic Congress and Administration.

To achieve this goal in the next ten years:

We will assist private enterprise to double its volume of homebuilding, to an annual rate of 2.6 million units a year—a ten-year total of 26 million units. This is the specific target of the historymaking Housing and Urban Development Act of 1968.

We will give the highest priority to Federally assisted homebuilding for low-income families, with special attention given to ghetto dwellers, the elderly, the physically handicapped, and families in neglected areas of rural America, Indian reservations, territories of the United States and migratory worker camps. All federal subsidy programs—whether in the form of public housing, interest rates at 1%, rent supplements, or direct loans—will be administered to favor these disadvantaged families, with full participation by the neighborhood residents themselves.

We will cooperate with private home builders to experiment boldly with new production technology, with financial institutions to marshal capital for housing where it is most needed, and with unions to expand the labor force needed for a doubling of production.

Above all, we will work toward the greatest possible freedom of choice—the opportunity for every family, regardless of race, color, religion, or income, to choose home ownership or rental, high-rise or low-rise, cooperatives or condominimums, detached or town house, and city, suburban or country living.

We urge local governments to shape their own zoning laws and building codes to favor consumers and hold down costs.

Rigid enforcement of State and local health and building codes is imperative to alleviate conditions of squalor and despair in deteriorating neighborhoods.

Democrats are proud of their housing record. But we are also painfully aware of how much more needs to be done to reach the final goal of decent shelter for all Americans and we pledge a steadfast pursuit of that goal.

Transportation

America is a nation on the move. To meet the challenge of transportation, we propose a dynamic partnership between industry and government at all levels.

Of utmost urgency is the need to solve congestion in air traffic, especially in airports and between major metropolitan centers. We pledge intensified efforts to devise equitable methods of financing new and improved airport and airway facilities.

Urban and inter-urban transportation facilities are heavily overburdened. We support expanded programs of assistance to mass transit in order to avoid unnecessary congestion in air traffic, especially at air-link residential and work areas.

Despite the tremendous progress of our interstate highway program, still more super-highways are needed for safe and rapid motor transport. We need to establish local road networks to meet regional requirements.

The efficiency of our railroads has improved greatly but there is need for further strengthening of the nation's railroads so that they can contribute more fully to the nation's transport requirements. In particular, we will press forward with the effort to develop high-speed passenger trains to serve major urban areas.

To assume our proper place as a leading maritime nation, we must launch an aggressive and balanced program to replace and augment our obsolete merchant ships with modern vessels built in American shipyards. We will assist U.S. flag operators to overcome the competitive disparity between American and foreign costs.

We will continue to foster development of harbors, ports, and inland waterways, particularly regional waterways systems, and the St. Lawrence Seaway, to accommodate our expanded water-borne commerce. We support modernization of the Panama Canal.

We pledge a greater investment in transportation research and development to enhance safety and increase speed and economy; to implement the acts that have been passed to control noxious vehicle exhausts; and to reduce aircraft noise.

The expansion of our transportation must not be carried out at the expense of the environment through which it moves. We applaud the leadership provided by the First Lady to enhance the highway environment and initiate a national beautification program.

Communications

America has the most efficient and comprehensive communications system in the world. But a healthy society depends more on the quality of what is communicated than either the volume or form of communication.

Public broadcasting has already proven that it can be a valuable supplement to formal education and a direct medium for nonformal education. We pledge our continuing support for the prompt enactment of a long-range financing plan that will help ensure the vigor and independence of this potentially vital but still underdeveloped new force in American life.

We deplore the all too frequent exploitation of violence as entertainment in all media.

In 1962 the Democratic Party sensed the great potential of space communication and quickly translated this awareness into the Communications Satellite Act. In a creative partnership between government and business, this revolutionary idea soon became a living reality. Six years later we helped establish a consortium of 61 nations devoted to the development of a global satellite network.

We will continue to develop new technology and utilize communications to promote world-wide understanding as an essential pre-condition of world peace. But, in view of rapidly changing technology, the entire federal regulatory system dealing with telecommunication should be thoroughly reappraised.

Science and technology

We lead the world in science and technology. This has produced a dramatic effect on the daily lives of all of us. To maintain our undisputed national leadership in science and further its manifold applications for the betterment of mankind, the Federal

Government has a clear obligation to foster and support creative men and women in the research community, both public and private.

Our pioneering space program has helped mankind on earth in countless ways. The benefits from improved weather forecasting which can soon be available thanks to satellite observations and communications will by themselves make the space efforts worthwhile.

Observation by satellite of crops and other major earth resources will for the first time enable men to see all that is available to him on earth, and therefore to take maximum advantage of it. High-endurance metals developed for spacecraft help make commercial planes safer; similarly, micro-electronics are now found in consumer appliances. Novel space food-preservation techniques are employed in the tropical climates of underdeveloped countries. We will move ahead in aerospace research and development for their unimagined promise for man on earth as well as their vital importance to national defense.

We shall continue to work for our goal of leadership in space. To this end we will maximize the effectiveness and efficiency of our space programs through utilization of the best program, planning and budgeting systems.

To maintain our leadership in the application of energy, we will push forward with research and development to assure a balanced program for the supply of energy for electric power, both public and private. This effort should go hand in hand with the development of "breeder" reactors and large-scale nuclear desalting plants that can provide pure water economically from the sea for domestic use and agricultural and industrial development in arid regions, and with broadened medical and biological applications of atomic energy.

In addition to the physical sciences, the social sciences will be encouraged and assisted to identify and deal with the problem areas of society.

OPPORTUNITY FOR ALL

We of the Democratic Party believe that a nation wealthy beyond the dreams of most of mankind—a nation with a twentieth of the world's population, possessing half the world's manufactured goods—has the capacity and the duty to assure to all its citizens the opportunity to enjoy the full measure of the blessings of American life.

For the first time in the history of the world, it is within the power of a nation to eradicate from within its borders the age-old curse of poverty.

Our generation of Americans has now made those commitments. It remains to implement and adequately fund the host of practical measures that demonstrate their effectiveness and to continue to devise new approaches.

We are guided by the recommendations of the National Advisory Commission on Civil Disorders concerning jobs, housing, urban renewal, and education on a scale commensurate with the needs of the urban ghettos. We are guided by the report of the Commission on Rural Poverty in tackling the equally compelling problems of the rural slums.

Economic growth is our first antipoverty programs. The best avenue to an independent, confident citizenry is a dynamic, full-employment economy. Beyond that lie the measures necessary to assure that every American, of every race, in every region, truly shares in the benefits of economic progress.

Those measures include rehabilitation of the victims of poverty, elimination of the urban and rural slums where poverty is bred, and changes throughout the system of institutions that affect the lives of the poor.

In this endeavor, the resources of private enterprise—not only its economic power but its leadership and ingenuity—must be mobilized. We must marshal the power that comes from people working together in communities—the neighborhood communities of the poor and the larger communities of the city, the town, the village, the region.

We support community action agencies and their programs, such as Head Start, that will prevent the children of the poor from becoming the poor of the next generation. We support the extension of neighborhood centers. We are committed to the principle of meaningful participation of the poor in policy-making and administration of community action and related programs.

Since organizations of many kinds are joined in the war on poverty, problems of coordination inevitably arise. We pledge ourselves to review current antipoverty efforts to assess how responsibility should be distributed among levels of government, among private and public agencies, and between the permanent agencies of the Federal Government and an independent antipoverty agency.

Toward a single society

We acknowledge with concern the findings of the report of the bi-partisan National Advisory Commission on Civil Disorders and we commit ourselves to implement its recommendations and to wipe out, once and for all, the stain of racial and other discrimination from our national life.

"The major goal," the Commission wrote, "is the creation of a true union—a single society and a single American identity." A single society, however, does not mean social or cultural uniformity. We are a nation of many social, ethnic and national groups. Each has brought richness and strength to America.

The Civil Rights Acts of 1964 and 1968 and the Voting Rights Act of 1965, all adopted under the vigorous leadership of President Johnson, are basic to America's long march toward full equality under the law.

We will not permit these great gains to be chipped away by opponents or eroded by administrative neglect. We pledge effective and impartial enforcement of these laws. If they prove inadequate, or if their compliance provisions fail to serve their purposes, we will propose new laws. In particular, the enforcement provisions of the legislation prohibiting discrimination in employment should be strengthened. This will be done as a matter of first priority.

We have also come to recognize that freedom and equality require more than the ending of repression and prejudice. The victims of past discrimination must be encouraged and assisted to take full advantage of opportunities that are now opening to them.

We must recognize that for too long we have neglected the abilities and aspirations of Spanish-speaking Americans to participate fully in American life. We promise to fund and implement the Bilingual Education Act and expand recruitment and training of bilingual federal and state employees.

The American Indian has the oldest claim on our national conscience. We must continue and increase federal help in the Indian's battle against poverty, unemployment, illiteracy, ill health and poor housing. To this end, we pledge a new and equal federal-Indian partnership that will enable Indian communities to provide for themselves many services now furnished by the federal government and federal sponsorship of industrial development programs, owned, managed and run by Indians. We support a quick and fair settlement of land claims of Indians, Eskimo and Aleut-citizens of Alaska.

The inner city

In the decaying slums of our larger cities, where so many of our poor are concentrated, the attack on poverty must embrace many interrelated aspects of development—economic development, the rehabilitation or replacement of dilapidated and unsafe housing, job training and placement, and the improvement of education, health, recreation, crime control, welfare, and other public services.

As the framework of such an effort, we will continue to support the Model Cities program under which communities themselves are planning and carrying out the most comprehensive plans ever put together for converting their worst slum areas into model neighborhoods—with full participation and leadership by the neighborhood residents themselves. The Model Cities program will be steadily extended to more cities and more neighborhoods and adequately financed.

The resources and leadership of private enterprise must be marshalled in the attack on slums and poverty, and such incentives as may be essential for that purpose we will develop and enact.

Some of the most urgent jobs in the revival of the inner city remain undone because the hazards are too great and the rewards too limited to attract sufficient private capital. To meet this problem, we will charter a new federal banking structure to provide capital and investment guarantees for urban projects planned and implemented through local initiative—neighborhood development corporations, minority programs for self-employment, housing development corporations, and other urban construction and planning operations. We will also enact legislation providing tax incentives for new business and industrial enterprises in the inner city. Our experience with aid to small business demonstrates the importance of increased local ownership of business enterprises in the inner city.

We shall aid the universities to concentrate their resources more fully upon the problems of the cities and facilitate their cooperation with municipal agencies and local organizations in finding solutions to urban problems.

Rural development

Balanced growth is essential for America. To achieve that balanced growth, we must greatly increase the growth of the rural nonfarm economy. One-third of our people live in rural areas, but only one rural family in 10 derives its principal income from farming. Almost 30 percent of the Nation's poor are nonfarm people in rural areas.

The problem of rural poverty and the problem of migration of poor people from rural areas to urban ghettos are mainly nonfarm problems. The creation of productive jobs in small cities and towns can be the best and least costly solution of these problems.

To revitalize rural and small-town America and assure equal opportunity for all Americans wherever they live, we pledge to:

Create jobs by offering inducements to new enterprises—using tax and other incentives—to locate in small towns and rural areas;

Administer existing Federal programs and design new programs where necessary to overcome the disparity between rural and urban areas in opportunities for education, for health services, for low-income housing, for employment and job training, and for public services of all kinds;

Encourage the development of new towns and new growth centers;

Encourage the creation of comprehensive planning and development agencies to provide additional leadership in nonmetropolitan areas, and assist them financially.

The experience of the Appalachian and other regional commissions indicates that municipalities, counties, and State and Federal agencies can work together in a common development effort.

Jobs and training

Every American in need of work should have opportunity not only for meaningful employment, but also for the education, training, counselling, and other services that enable him to take advantage of available jobs.

To the maximum possible extent, our na-

tional goal of full employment should be realized through creation of jobs in the private economy, where six of every seven Americans now work. We will continue the Job Opportunities in the Business Sector (JOBS) program, which for the first time has mobilized the energies of business and industry on a nationwide scale to provide training and employment to the hardcore unemployed. We will develop whatever additional incentives may be necessary to maximize the opportunities in the private sector for hardcore unemployed.

We will continue also to finance the operation by local communities of a wide range of training programs for youth and retraining for older workers whose skills have become obsolete, coupled with related services necessary to enable people to undertake training and accept jobs—including improved recruitment and placement services, day-care centers, and transportation between work and home.

For those who can work but cannot find jobs, we pledge to expand public job and job-training programs, including the Neighborhood Youth Corps, to provide meaningful employment in state and local government and nonprofit institutions.

For those who cannot obtain other employment, the federal government will be the employer of last resort, either through federal assistance to state and local projects or through federally sponsored projects.

Employment standards

American workers are entitled to more than the right to a job. They have the right to fair and safe working conditions and to adequate protection in periods of unemployment or disability.

In the last 30 years Democratic administrations and Congresses have enacted, extended and improved a series of measures to provide safeguards against exploitation and distress. We pledge to continue these efforts.

The minimum standards covering terms and conditions of employment must be improved—

By increasing the minimum wage guarantee to assure those at the bottom of the economic scale a fairer share in rising living standards;

By extending the minimum wage and overtime provision of the Fair Labor Standards Act to all workers;

By enacting occupational health and safety legislation to assure the material reduction of the present occupational death rate of 14,500 men and women each year, and the disabling accident rate of over 2 million per year;

By assuring that the "green card" worker does not depress wages and conditions of employment for American workers;

By updating of the benefit provisions of the Longshoremen and Harbor Workers Act.

The unemployment compensation program should be modernized by national minimum standards for level and duration of benefits, eligibility, and universal coverage.

Older citizens

A lifetime of work and effort deserves a secure and satisfying retirement.

Benefits, especially minimum benefits, under Old Age Survivors, and Disability Insurance, should be raised to overcome present inadequacies and thereafter should be adjusted automatically to reflect increases in living costs.

Medical care for the aged should be expanded to include the costs of prescription drugs.

The minimum age for public assistance should be lowered to correspond to the requirements for social security.

America's self-employed citizens should be encouraged by tax incentive legislation to supplement social security benefits for themselves and their employees to the same extent that employees of corporations are encouraged.

In addition to improving social security, we must develop in each community a wide variety of activities to enrich the lives of our older citizens, to enable them to continue to contribute to our society and to permit them to live in dignity. The aged must have access to better housing and opportunities for regular or part-time employment, community volunteer service, and cultural and recreational activities.

People in need

Every American family whose income is not sufficient to enable its members to live in decency should receive assistance free of the indignities and uncertainties that still too often mar our present programs. To support family incomes of the working poor a number of new program proposals have recently been developed. A thorough evaluation of the relative advantages of such proposals deserves the highest priority attention by the next Administration. This we pledge to do.

Income payments and eligibility standards for the aged, the blind, the disabled and dependent children should be determined and financed on a federal basis—in place of the present inequitable, under-financed hodge-podge state plans. This would, among other things, assure the eligibility in all states of needy children of unemployed parents who are now denied assistance in more than half the states as long as the father remains in the home.

Assistance payments should not only be brought to adequate levels but they should be kept adequate by providing for automatic adjustment to reflect increases in living costs.

Congress has temporarily suspended the restrictive amendment of 1967 that placed an arbitrary limit on the number of dependent children who can be aided in each state. We favor permanent repeal of that restriction and of the provision requiring mothers of young children to work.

The new federal-state program we propose should provide for financial incentives and needed services to enable and encourage adults on welfare to seek employment to the extent they are able to do so.

The time has come when we should make a national commitment that no American should have to go hungry or undernourished. The Democratic Party here and now does make that commitment. We will move rapidly to implement it through continued improvement and expansion of our food programs.

The Democratic Congress this year has already enacted legislation to expand and improve the school lunch and commodity distribution programs, and shortly will complete action on legislation now pending to expand the food stamp program. We will enact further legislation and appropriations to assure on a permanent basis that the school lunch program provides free and reduced-price meals to all needy school children.

Health

The best of modern medical care should be made available to every American. We support efforts to overcome the remaining barriers of distance, poverty, ignorance, and discrimination that separate persons from adequate medical services.

During the last eight years of Democratic administrations, this nation has taken giant steps forward in assuring life and health for its citizens. In the years ahead, we Democrats are determined to take those final steps that are necessary to make certain that every American, regardless of economic status, shall live out his years without fear of the high costs of sickness.

Through a partnership of government and private enterprise we must develop new coordinated approaches to stem the rise in medical and drug costs without lowering the quality or availability of medical care. Out-of-hospital care, comprehensive group practice arrangements, increased availability of neighborhood health centers, and the greater use of sub-professional aides can all contribute to the lowering of medical costs.

We will raise the level of research in all fields of health, with special programs for development of the artificial heart and the heart transplant technique, development of drugs to treat and prevent the recurrence of heart diseases, expansion of current task forces in cancer research and the creation of new ones inluding caner of the lung, determination of the factors in mental retardation and reduction of infant mortality, development of drugs to reduce the incidence of suicide and construction of health research facilities and hospitals.

We must build new medical, dental and medical service schools, and increase the capacity of existing ones, to train more doctors. dentists, nurses, and medical technicians.

Medical care should be extended to disabled beneficiaries under the Old Age, Survivors and Disability Insurance Act to the same extent and under the same system that such care is available to the aged.

Thousands of children die, or are handicapped for life, because their mothers did not receive proper pre-natal medical attention or because the infants were unattended in the critical first days of life. Maternal and child health centers, located and designed to serve the needs of the poor, and voluntary family planning information centers should be established throughout the country. Medicaid programs administered by the state should have uniform standards so that no mother or child is denied necessary health services. Finally, we urge consideration of a program comparable to medicare to finance pre-natal care for mothers and post-natal care for children during the first year of life.

Veterans

American veterans deserve our enduring gratitude for their distinguished service to the nation.

In 1968 some 750,000 returning servicemen will continue their education with increased benefits under the new G.I. Bill passed by an education-minded Democratic Congress. Two million disabled veterans and survivors of those killed in action are receiving larger pensions and higher disability payments.

Guided by the Report of the Veterans Advisory Commission, established by the Democratic Administration, we will:

Continue a strong one-stop agency vested with sole responsibility for all veterans programs;

Sustain and upgrade veteran medical services, expand medical training in VA hospitals;

Maintain compensation for disabled veterans and for widows and dependents of veterans who die of service-connected causes, in line with the rise in earnings and living standards;

Assure every veteran the right of burial in a national cemetery;

Provide incentives for veterans to aid their communities by serving in police, fire departments, educational systems and other public endeavors;

Make veterans and their widows eligible for pension benefits at the same age at which Social Security beneficiaries may receive old age benefits.

We recommend the establishment of a standing Committee on Veterans Affairs in the Senate.

Education

Education is the chief instrument for making good the American promise. It is indispensable to every man's chance to achieve his full potential. We will seek to open education to all Americans.

We will assure equal opportunity to education and equal access to high-quality education. Our aim is to maintain state-local control over the nation's educational system, with federal financial assistance and help in stimulating changes through demonstration and technical assistance. New concepts of

education and training employing new communications technology must be developed to educate children and adults.

Every citizen has a basic right to as much education and training as he desires and can master—from preschool through graduate studies—even if his family cannot pay for this education.

We will marshal our national resources to help develop and finance new and effective methods of dealing with the educationally disadvantaged—including expanded preschool programs to prepare all young children for full participation in formal education, improved teacher recruitment and training programs for inner city and rural schools, the Teacher Corps, assistance to community controlled schools to encourage pursuit of innovative practices, university participation in research and operation of school programs, a vocational education system that will provide imaginative new ties between school and the world of work, and improved and more widespread adult education programs.

We will fully fund Title I of the Elementary and Secondary Education Act of 1965, which provides federal funds for improving education in schools serving large numbers of students from low income families.

The financial burden of education continues to grow as enrollments spiral and costs increase. The home owner's property tax burden must be eased by increased levels of financial aid by both the states and the Federal government.

Our rapidly expanding educational frontiers require a redoubling of efforts to insure the vitality of a diverse higher education system—public and private, large and small, community and junior colleges and great universities. We also pledge support for high quality graduate and medical education.

We will enlarge the federal scholarship program to remove the remaining financial barriers to post-secondary education for low income youths, and increase assistance to students in the form of repayable loans out of future income.

We will encourage support for the arts and the humanities, through the national foundations established by a Democratic Congress to provide incentives for those endowed with extraordinary talent, enhance the quality of our life, and make productive leisure available to all our people.

We recommend greater stress on the arts and humanities in elementary and secondary curricula to ensure a proper educational balance.

Youth

For generations, the Democratic Party has renewed its vitality with young people and new ideas. Today, young people are bringing new vigor and a deep concern for social justice into the political process, yet many feel excluded from full participation.

We of the Democratic Party welcome the bold thinking and exciting ideas of youth. We recognize, with deep satisfaction, that their healthy desire for participation in the democratic system must lead to a series of reforms in the direction of a greater democracy and a more open America.

The Democratic Party takes pride in the fact that so many of today's youth have channeled their interests and energies into our Party. To them, and to all young Americans we pledge the fullest opportunity to participate in the affairs of our Party at the local, state, and national levels. We call for special efforts to recruit young people as candidates for public office.

We will support a constitutional amendment lowering the voting age to 18.

We favor an increase in youth representation on state delegations in future Democratic conventions.

Steps should be taken to include youth advisors on all government studies, commissions, and hearings which are relevant to their lives. We will establish a youth commission involving young people between 18 and 26.

Every young person should have an opportunity to contribute to the social health of his community or to humanitarian service abroad. The extraordinary experience of the Teacher Corps, VISTA, and the Peace Corps points the way for broadening the opportunities for such voluntary service. Hundreds of thousands of America's youth have sought to enlist in these programs, but only tens of thousands have been able to serve. We will expand these opportunities.

The lives of millions of young men are deeply affected by the requirement for military service. The present system leaves them in uncertainty through much of their early manhood. Until our manpower needs can be fully met by voluntary enlistment, the Democratic Party will insist upon the most equitable and just selection system that can be devised. We support a random system of selection which will reduce the period of eligibility to one year, guarantee fair selection, and remove uncertainty.

We urge review of draft board memberships to make them more representative of the communities they serve.

ENVIRONMENT, CONSERVATION AND NATURAL RESOURCES

These United States have undergone 200 years of continuous change and dramatic development resulting in the most technologically advanced nation in the World. But with rapid industrialization, the nation's air and water resources have been degraded, the public health and welfare endangered, the landscape scarred and littered, and the very quality of our national life jeopardized.

We must assure the availability of a decent environment for living, working, and relaxation.

To this end, we pledge our efforts:

To accelerate programs for the enhancement of the quality of the nation's waters for the protection of all legitimate water uses, with special emphasis on public water supplies, recreation, fish and wildlife;

To extend the national emission control program to all moving sources of air pollution;

To work for programs for the effective disposal of wastes of our modern industrial society;

To support the efforts on national, state, and local levels to preserve the historic monuments and sites of our heritage;

To assist in planning energy production and transportation to fit into the landscape, to assure safety, and to avoid interference with more desirable uses of land for recreation and other public purposes;

To continue to work toward abating the visual pollution that plagues our land;

To focus on the outdoor recreation needs of those who live in congested metropolitan areas;

To continue to work toward strong measures for the reclamation of mined and depleted lands and the conservation of soil.

Public domain

We pledge continued support of the Public Land Law Review Commission, which is reviewing public land laws and policies to assure maximum opportunity for all beneficial uses of the public lands, including lands under the sea, and to develop a comprehensive land use policy.

We support sustained yield management of our forests, and expanded research for control of forest insects, disease, and fires.

We plan to examine the productivity of the public lands in goods, services, and local community prosperity, with a view to increasing such productivity.

We shall enforce existing federal statutes governing federal timber.

We support the orderly use and development of mineral resources on federal lands.

Recreation

We will continue the vigorous expansion of the public recreational domain to meet tomorrow's increasing needs. We will add national parks, recreation areas and seashores, and create national systems of scenic and wild rivers and of trails and scenic roads. We will support a growing wilderness preservation system, preservation of our redwood forests, and conservation of marshland and estuarine areas.

Recognizing that the bulk of the task of acquisition and development must be accomplished at the state and local levels, we shall foster federal assistance to encourage such action, as well as recreational expansion by the private sector. To this end, we shall build upon the landmark Land and Water Conservation Fund Act, which has assured a foundation of a recreational heritage for future generations. We will assist communities to rehabilitate and expand inadequate and deteriorating urban park systems, and develop open space, waterways, and waterfront renovation facilities.

Resources of the oceans

In and beneath the seas are resources of untold dimension for the benefit of mankind. Recognizing and protecting the paramount public interest in the seas, Congress, under democratic leadership, enacted the Sea Grant College Act of 1965 and the Marine Resources and Engineering Development Act of 1966, which established for the first time a comprehensive long-range policy and program for the marine sciences. We pledge to pursue vigorously the goals of that Act. Specifically, we will:

Foster marine application of new technology—spacecraft, buoys, data networks, and advanced navigation systems—and develop an engineering capability to work on and under the sea at any depth;

Encourage development of underseas resources by intensified research and better weather forecastng, with recognition to the coastal, insular and other littoral states of their unique interest and responsibility;

Foster an extensive program of oceanologic research and development, financed by a portion of the mineral-royalty receipts from the outer continental shelf;

Accelerate public and private programs for the development of food and other marine resources to meet world-wide malnutrition, to create new industries, and to utilize underemployed manpower living near the waterfront;

Promote our fisheries by providing incentives for private investment enforcing our 12-mile fishing zone, and discouraging other nations from excessive territorial and fishery claims;

Conclude an appropriate Ocean Space Treaty to secure rules and agreements that will facilitate public and private investment, guarantee security of investment and encourage efficient and orderly development of the seas' resources.

THE GOVERNMENT

In the coming four years, the Democratic President and Democratic Congress will give priority to simplfying and streamlining the processes of government, particularly in the management of the great innovative programs enacted in the 1960's.

The Executive branch of the Federal Government is the largest and most complicated enterprise in the world, with programs distributed among 150 separate departments, agencies, bureaus, and boards. This massive operation contributes to and often results in duplication, administrative confusion, and delay.

We will seek to streamline this machinery by improving coordination and management of federal programs.

We realize that government must develop the capacity to anticipate problems. We support a thorough study of agency operations to determine priorities for governmental action and spending, for examination of the

structure of these agencies, and for establishing more systematic means of attacking our nation's problems.

We recognize that citizen participation in government is most meaningful at the levels of government closest to the people. For that reason, we recognize the necessity of developing a true partnership between state, local, and Federal governments, with each carrying its share of the financial and administrative load. We acknowledge the tremendous strides made by President Johnson in strengthening Federal-State relations through open communication with the governors and local officials, and we pledge to continue and expand on this significant effort.

The complexities of Federal-state-local relationships must be simplified, so that states and local communities receiving federal aid will have maximum freedom to initiate and carry out programs suited to their own particular needs. To give states and communities greater flexibility in their programs, we will combine individual grant programs into broader categories.

As the economy grows, it is the federal revenue system that responds most quickly, yet it may be the states and local governments whose responsibilities mount most rapidly. To help states and cities meet their fiscal challenges, we must seek new methods for states and local governments to share in federal revenues while retaining responsibility for establishing their own priorities and for operating their own programs. To this end, we will seek out new and innovative approaches to government to assure that our Federal system does, in fact, deliver to the people the services for which they are paying.

Public employees

The Democratic administration has moved vigorously in the past eight years—particularly with regard to pay scalest—o improve the conditions of public service.

We support:

A federal service that rewards new ideas and leadership;

Continued emphasis on education and training programs for public employees, before and during their service;

Parity of government salaries with private industry;

A proper respect for the privacy and independence of federal employees;

Equal opportunities for career advancement;

Continued application of the principles of collective bargaining to federal employment;

Encouragement to state and local governments to continue to upgrade their personnel systems in terms of pay scales and training;

Interchange of employees between federal and state government.

Elections

We are alarmed at the growing costs of political participation in our country and the consequent reliance of political parties and candidates on large contributors, and we want to assure full public information on campaign expenditures. To encourage citizen participation we urge that limited campaign contributions be made deductible as credit from the federal income tax.

We fully recognize the principle of one man, one vote in all elections. We urge that due consideration be given to the question of Presidential primaries throughout the nation. We urge reform of the electoral college and election procedures to assure that the votes of the people are fully reflected.

We urge all levels of our Party to assume leadership in removing all remaining barriers to voter registration.

We will also seek to eliminate disenfranchisement of voters who change residence during an election year.

The District of Columbia

With the reorganization of the government of the District of Columbia, the nation's capital has for the first time in nearly a century the strong leadership provided by a mayor-council form of government. This, however, is no substitute for an independent and fiscally autonomous District government. We support a Federally funded Charter Commission—controlled by D.C. residents—to determine the most appropriate form of government for the District, and the prompt implementation of the Commission's recommendation.

The Democratic Party supports full citizenship for residents of the District of Columbia and a Constitutional Amendment to grant such citizenship through voting representation in Congress. Until this can be done we propose non-voting representation.

Puerto Rico

In accordance with the Democratic principle of self-determination, the people of Puerto Rico have expressed their will to continue in permanent union with the U.S. through Commonwealth status. We pledge our continued support to the growth of the Commonwealth status which the people of Puerto Rico overwhelmingly approved last year.

Virgin Islands and Guam

We favor an elected governor and a non-voting delegate in the House of Representatives for the Virgin Islands and Guam, and will consider methods by which American citizens residing in American territories can participate in Presidential elections.

JUSTICE AND LAW

We are firm in our commitment that equal justice under law shall be denied to no one. The duty of government at evey level is the safety and security of its people. Yet the fact and fear of crime are uppermost in the minds of Americans today. The entire nation is united in its concern over crime, in all forms and wherever it occurs. America must move aggressively to reduce crime and its causes.

Democratic Presidents, governors and local government officials are dedicated to the principle that equal justice under law shall remain the American creed. Those who take the law into their own hands undermine that creed. Anyone who breaks the law must be held accountable. Organized crime cannot be accepted as a way of life, nor can individual crime or acts of violence be permitted.

As stated in the Report of the National Advisory Commission on Civil Disorders, the two fundamental questions confronting the American people are:

"How can we as a people end the resort to violence while we build a better society?

"How can the nation realize the promise of a single society—one nation indivisible—which yet remains unfulfilled?"

This platform commits the Democratic Party to seek resolution of these questions.

We pledge a vigorous and sustained campaign against lawlessness in all its forms—organized crime, white collar crime, rioting, and other violations of the rights and liberties of others. We will further this campaign by attack on the root causes of crime and disorder.

Under the recent enactments of a Democratic Congress we will continue and increase federal financial support and technical assistance to the states and their local governments to:

Increase the numbers, raise the pay, and improve the training of local police officers;

Reduce delays and congestion in our criminal courts;

Rehabilitate and supervise convicted offenders, to return offenders to useful, decent lives, and to protect the public against habitual criminals;

Develop and deploy the most advanced and effective techniques and equipment for the public safety;

Assure the availability in every metropolitan area of quick, balanced, coordinated control forces, with ample manpower, thoroughly trained and properly equipped to suppress rioting;

Encourage responsible and competent civic associations, and business and labor groups to cooperate with the law enforcement agencies in new efforts to combat organized crime, build community support for police work, and assist in rehabilitating convicted offenders—and for the attainment of these ends, encourage our police to cooperate with any such groups and to establish links of communication with every element of the public they serve, building confidence and respect;

Establish and maintain open and responsive channels of communication between the public and the police through creative police-community relations programs;

Develop innovative programs to reduce the incidence of juvenile delinquency;

Promote the passage and enforcement of effective federal, state and local gun control legislation.

In all these efforts, our aim is to strengthen state and local law enforcement agencies so that they can do their jobs. In addition, the federal government has a clear responsibility for national action. We have accepted that responsibility and will continue to accept it with these specific objectives:

Prompt and effective federal support, upon request of appropriate authorities, to suppress rioting: improvement of the capabilities of all agencies of law enforcement and justice—the police, the military, the courts—to handle more effectively problems attending riots;

A concentrated campaign by the Federal government to wipe out organized crime: by employment of additional Federal investigators and prosecutors, by computerizing the present system of collecting information, by enlarging the program of technical assistance teams to work with the states and local governments that request assistance in this fight, by launching a nationwide program for the country's business and labor leaders to alert them to the problems of organized crime;

Intensified enforcement, research, and education to protect the public from narcotics and other damaging drugs: by review of federal narcotics laws for loopholes and difficulties of enforcement; by increased surveillance of the entire drug traffic; through negotiations with those foreign nations which grow and manufacture the bulk of drug derivatives;

Vigorous federal leadership to assist and coordinate state and local enforcement efforts, and to ensure that all communities benefit from the resources and knowledge essential to the fight on crime;

Further implementation of the recommendations of the President's crime commission.

Creation in the District of Columbia of a model system of criminal justice.

Federal research and development to bring to the problems of law enforcement and the administration of justice the full potential of the scientific revolution.

In fighting crime we must not foster injustice. Lawlessness cannot be ended by curtailing the hard-won liberties of all Americans. The right of privacy must be safeguarded. Court procedures must be expedited. Justice delayed is justice denied.

A respect for civil peace requires also a proper respect for the legitimate means of expressing dissent. A democratic society welcomes criticism within the limits of the law. Freedom of speech, press, assembly and association, together with free exercise of the franchise, are among the legitimate means to achieve change in a democratic society. But when the dissenter resorts to violence, he erodes the institutions and values which are the underpinnings of our democratic society. We must not and will not tolerate violence.

As President Johnson has stated, "Our

test is to rise above the debate between the rights of the individual and the rights of society by securing the rights of both."

We freely admit that the years we live in are years of turbulence. But the wisdom of history has something hopeful to say about times like these. It tells us that the giant American nation, on the move with giant strides, has never moved—and can never move—in silence.

We are an acting, doing, feeling people. We are a people whose deepest emotions are the source of the creative noise we make—precisely because of our ardent desire for unity, our wish for peace, our longing for concord, our demand for justice, our hope for material well being, our impulse to move always toward a more perfect union.

In that never-ending quest, we are all partners together—the industrialist and the banker, the workman and the storekeeper, the farmer and the scientist, the celrk and the engineer, the teacher and the student, the clergyman and the writer, the men of all colors and of all the different generations.

The American dream is not the exclusive property of any political party. But we submit that the Democratic Party has been the chief instrument of orderly progress in our time. As heirs to the longest tradition of any political party on earth, we Democrats have been trained over the generations to be a party of builders. And that experience has taught us that America builds best when it is called upon to build greatly.

We sound that call anew. With the active consent of the American people, we will prove anew that freedom is best secured by a government that is responsive and compassionate and committed to justice and the rule of law.

MINORITY REPORT ON HOW TO END THE WAR IN VIETNAM

Nearly 200,000 American men have been casualties in Vietnam and 25,000 have died. The United States has spent more than one hundred billion dollars. This war has cost us heavily in human life and in all the resources we so badly need to rebuild our cities, improve the quality of life for all Americans and to meet our other obligations around the world. Discarding judgment about the wisdom of the past, we must now act to secure and enrich our own future by bringing the war in Vietnam to a swift conclusion. It is to this cause of early peace that the Democratic Party now commits itself.

Nor can we be content with the vague and ambiguous statements which mark the platform of the Republican Party. For a meaningful pledge of peace also demands the courage to make commitments to those concrete and specific acts most likely to hasten the end of the conflict and destruction. We have taken so many risks for war; we must now take some for peace.

That war must be ended now. It will not be ended by a military victory, surrender, or unilateral withdrawal by either side: it cannot be ended by further U.S. escalation, either increasing our troops, introducing nuclear weapons, or extending the conflict geographically. It must therefore be ended by a fair and realistic compromise settlement.

Although the war in Vietnam is complex, the steps towards peace can be simply stated.

First, an unconditional end to all bombing of North Vietnam, while continuing to provide, in the South, all necessary air and other support for American troops.

Second, we will then negotiate a mutual withdrawal of all United States forces and all North Vietnamese troops from South Vietnam. This should be a phased withdrawal over a relatively short period of time.

Third, we will encourage our South Vietnamese allies to negotiate a political reconciliation with the National Liberation Front looking toward a government which is broadly representative of these and all elements in South Vietnamese society. The specific shape of this reconciliation will be a matter for decision by the South Vietnamese, spurred to action by the certain knowledge that the prop of American military support will soon be gone. In addition, the South Vietnamese will assume increasing responsibility for the resolution of the conflict, and full responsibility for determining their own political destiny. We will, of course, extend economic and other assistance to help rebuild in peace the society which has been ravaged by war.

Fourth, to reduce American casualties and the suffering of Vietnamese civilians we will lower the level of violence by reducing offensive operations in the Vietnamese countryside, thus enabling an early withdrawal of a significant number of our troops. We will, of course, at all times continue to provide all necessary military support in the South for American troops confronted by hostile forces.

In this way we can eliminate all foreign forces from South Vietnam. Our troops will leave and those of North Vietnam will also depart. It will be up to the South Vietnamese to achieve a political and social reconciliation among their warring peoples. We will also seek to enlist the participation of international authority to guarantee troop withdrawals and the granting of asylum to political refugees. Thus we can reasonably anticipate that as we leave, the Vietnamese will be well on their way to a solution of their own problems, and a government in which all can have a share of power and responsibility.

We are also resolved to have no more Vietnams. We accept as basic each nation's right to choose its political, economic and social system. Our deep concern for the welfare of human beings everywhere will be expressed through economic and technical assistance, predominately under international auspices. We shall neither assume the role of the world's policeman, nor lend our support to corrupt oppressive regimes unwilling to work for essential reforms and lacking the consent of the governed. Above all, we shall avoid the unilateral use of military means where the issues are political in nature and our national security is not involved.

FINEST GARDENER IN WORLD

HON. WM. JENNINGS BRYAN DORN

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 25, 1969

Mr. DORN. Mr. Speaker, earlier this year, I sent out a newsletter entitled, "Are You Hungry." In it I stated that no one need be hungry this summer or winter. I emphasize the need of planting a garden.

In Japan, I have seen the people gather sand and dirt from the streets and place it in hollow rocks and boxes and have strawberries as large as apples.

I received hundreds of letters requesting agriculture bulletins on growing vegetables and flowers. Several requests came from those living in our larger cities asking about planting small roof gardens. The Agriculture Department does have bulletins on growing vegetables indoors and on rooftops.

The other day a splendid article was called to my attention which appeared in the Charlotte Observer on Monday, June 16th. It deserves the attention of every Members of the Congress and the American people.

The article follows:

FINEST GARDENER IN WORLD

If one wants a garden badly enough, he can beg or borrow enough soil to have one, a retired Charlotte resident says.

"I just couldn't sit down and do nothing for the rest of my life," says S. Edwin Richardson of 1313 Effingham Dr., a former employee of Associated Transport.

"And I didn't have any yard at all for a garden."

He went begging. An alley running behind the south side of Elon Street had a long strip of grass and weeds between it and home fences. A couple of homes had yards in which there were fair-sized plots of brambles and weeds.

He visited each homeowner on that side of Elon and ask if he could plant the areas that weren't being used for grass or other things.

One woman gave him permission to plant an area about 30 feet by 30 feet all the way to the alley ditch behind her home.

A neighbor says, "We think he must be about the finest gardener in the world. He's taken some real eyesore places back there (along the alley) and made them beautiful and productive. All of us on the block think he deserves some recognition."

He has squash, green beans already being picked and eaten, potatoes, butterbeans, half runner beans, beets, onions, carrots, tomatoes, and okra.

He and neighbors have been digging and eating some of the new potatoes.

"My system for planting potatoes is a simple one," says Richardson. "I fertilize the bed, hill it up as I set the seed potatoes, and then cover the entire bed with three or four inches of leaves.

"This mulch holds moisture and keeps down weeds. The potatoes really thrive."

Richardson, whose home is about one and one half blocks from his garden, gives what he grows to his neighbors.

"The object of the garden is to give me food and keep me busy. It isn't to make money with."

Sometimes someone will make a donation. This goes into the fertilizer and spraying fund, he said.

A POLITICIAN'S BEQUEST

HON. MARTIN B. McKNEALLY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 25, 1969

Mr. McKNEALLY. Mr. Speaker, under leave to extend my remarks in the RECORD, I am pleased to insert the following excellent editorial which appeared in the Times Herald Record of Middletown, N.Y., on June 24, 1969, with reference to the remarks made shortly before his death by the former distinguished mayor of Middletown, John N. Botens, on the subject of political activity.

A POLITICIAN'S BEQUEST

The late John N. Botens was a politician, and he gloried in the label.

Just a few weeks before his untimely death, the former mayor of Middletown turned to his colleague in Port Jervis, Jack C. Harford, and urged him to insert a few paragraphs into a speech Mr. Harford was to deliver throughout the area in his capacity of district governor of Kiwanis.

Mr. Harford took down the words Mr. Botens offered, and is fulfilling his promise by including them in the speech he has been giving to local Kiwanis clubs.

We think the Botens credo deserves wider circulation. We offer it as today's editorial thought with respect for the author and in admiration of his philosophy.

"It has become the fashion in too many quarters to consider partisan politics or political activity as degrading. The very word 'politician' is widely used as a derogatory term, connoting a person of little fixed principle, small appetite for hard work, and a basic lack of honesty.

"In my opinion, not only are these views wrong, but their prevalence is desperately dangerous to our democratic process. Democratic government is essentially an articulated consensus of the majority of its citizens.

"Considering all this to be true, it is distressing to contemplate the low estate in which political activity is held by many people. Nor is indifference or apathy any better. It all amounts to an abdication by people of their own rights and also of their own interests.

"Those who do not participate in their own governing affairs have little grounds to complain about the efforts of those who are trying. Those who are trying are aware that the willingness of the people to spend time and exert effort for public purposes determines the success of democracy."

CAUTION REGARDING ANDERSON-COHELAN MIRV RESOLUTIONS

HON. CRAIG HOSMER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 25, 1969

Mr. HOSMER. Mr. Speaker, I have today dispatched to the Members of this body the following letter:

HOUSE OF REPRESENTATIVES,
Washington, D.C., June 25, 1969.

Re Anderson-Cohelan MIRV moratorium resolutions.

DEAR COLLEAGUE: With due respect to the authors of the above captioned resolutions in which you have been asked to join, I wish to caution as follows:

(1) The President has not requested them and already has authority to engage in a moratorium if it would (a) be provident to do so, and (b) expedite negotiations.

(2) Past experience with arms control moratoria has been bad. The extended nuclear test moratorium indulged in during Limited Test Ban Treaty negotiations *failed* to expedite the talks, *succeeded* in seriously hampering U.S. weapons progress, and *failed* to halt Soviet progress. The Soviets used the moratorium as a screen behind which to prepare for extensive testing and renounced it when ready to test.

(3) MIRV is no strange new terror weapon or unbalancing shocker bursting on the scene. Rather, it is an expected and anticipated progression in missilery of surprise to no one familiar with defense of nuclear strategy. Nor is it a first-strike weapon. A first-strike posture is not achievable by any single weapons system. Rather, it is a factor of the overall strategic balance between nations.

(4) Both the U.S. and the USSR have tested MIRV and no one can say without good results. Deployment might be made without further tests. A moratorium on MIRV *testing* could be futile. A moratorium on MIRV *deployment* could not be policed because neither side can see *inside* the other's ICBMs. Under the circumstances about the only moratorium that makes sense would be on further deployment of ICBMs, which, to an extent, is subject to surveillance. Nobody is suggesting the latter. It would be meaningful as to both *sides*. Therefore, one would not accept it. That is the reason nobody is suggesting it.

Respectfully,

CRAIG HOSMER,
Member of Congress.

NEW EMPHASIS ON VOCATIONAL EDUCATION NEEDED FOR TRILLION DOLLAR ECONOMY

HON. ROMAN C. PUCINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 25, 1969

Mr. PUCINSKI. Mr. Speaker, recently I had occasion to address the New England Distributive Education Conference which was held at the University of Massachusetts.

Miss Jean E. Swantee, of the Wakefield Daily Item, carried an excellent report of this meeting and I call it to the attention of my colleagues today.

Mr. Frank Cyr, coordinator of the distributive education project, deserves the highest tribute for arranging this informative assembly and the University of Massachusetts has performed a notable service by making its facilities available for the conference.

The article follows:

NEW EMPHASIS ON VOCATIONAL EDUCATION NEEDED FOR TRILLION DOLLAR ECONOMY

(By Jean E. Swantee)

"The United States must place a whole new emphasis on vocational education if we are to have the manpower to sustain a trillion-dollar economy by mid-1971," Cong. Roman C. Pucinski of Illinois told educators assembled in Amherst last night.

U.S. Rep. Pucinski, a member of the House of Representatives for nearly 12 years and chairman of the General Subcommittee on Education, made this statement in opening his keynote address to the second annual New England Distributive Education Conference being held at the University of Massachusetts June 5, 6 and 7.

The Congressman, in an exclusive interview, said that vocational education has come close to assuming the proportions of a crusade with him because of his belief that the one real danger to our economy lies in the lack of properly trained personnel.

He said, too, that if American education is to be saved, this salvation rests in the hands of the vocational educators.

U.S. Rep. Pucinski told the assembled group of new, prospective or currently active distributive education teachers that the U.S. economy has already exceeded the $920 billion mark and that D.E. is "the most important of all vocational education disciplines because it must train the millions of Americans who move the goods to keep the economy going."

"Millions of Americans who produced goods in this country," he stressed, "are totally reliant on those in distributive education who devise the means and techniques for moving the finished product from factory to consumer."

Throughout his address, Rep. Pucinski emphasized the need for more meaningful education for young people today as the answer to the unrest on college campuses and in high schools.

He warned that "unless we give vocational educators the funds to make education meaningful, we will continue to see an increase in the turmoil in American Schools."

"Both the Johnson and Nixon administrations have recommended half a billion dollars less for vocational education than Congress authorized for 1970, he pointed out. "Congress last year authorized $766 million of federal aid to vocational education and both administrations are recommending that only $279 million be appropriated."

"This short changing of vocational education is an invitation to disaster in American education," he warned. "Millions of young people are graduating from (or dropping out of) high school, totally unprepared for the world of work . . . most don't even know how to apply for a job."

As chairman of the General Subcommittee on Education, which started hearings on the unrest in the nation's high schools Wednesday, Mr. Pucinski is well aware of the educational crises facing the country.

He cited a recent study which showed that 60 percent of the high schools in America have experienced some form of disorder to a greater or lesser degree, in the last year and said that the people at this conference held "the key to making education meaningful and reducing the cause of this unrest."

If these educators failed in this task, the whole nation would fail, he warned, predicting somberly that "we can expect even more serious upheaval on American college campuses when the present group of high school graduates arrive next fall because, to a great extent, these young people have been disillusioned with the quality of the education they have received at the high school level."

"All over the country," he said, "taxpayers are rejecting school bond issues because they are disenchanted with the kind of education youngsters are getting. Only by developing occupational training courses to give education more relevancy to the world of work can we hope to reverse this downward trend."

Rep. Pucinski also noted that one obstacle to this reversal is the insistence of the traditional academicians on teaching all youngsters college preparatory courses when only 20 percent of high school graduates today actually complete college.

Of those who do complete college, a large percentage have been exposed to vocational education training during their high school careers, he said, reiterating his belief that much of the problem which exists in education is that there is no connection between school curriculums and the working wrold.

Fred Rockett, distributive education coordinator for Wakefield High School, who is attending the conference, said that Cong. Pucinski received a standing ovation from the educators who had listened appreciatively to his dynamic and perceptive presentation.

PATRIOTISM—THE VOICE OF THE AMERICAN PEOPLE

HON. JOHN R. RARICK

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 25, 1969

Mr. RARICK. Mr. Speaker, at a time when we hear daily from a motley collection of leftists, pacifists, do-gooders, and assorted bleeding hearts about the inhumanity of asking young men to serve in our Armed Forces, it is good to hear the views of mature men who have served our flag in combat in the far corners of the earth. These are men who know, and who have earned the right to speak.

For the benefit of our colleagues, I include a resolution from the Gen. Douglas MacArthur Post No. 1507, Veterans of Foreign Wars, Broomall, Pa., following my remarks:

RESOLUTION

Whereas the Union of Soviet Socialist Republics has, since its inception, strived for the downfall of our capitalistic system and

Whereas the USSR has, without abatement, conducted espionage activities in the highest echelons of our government and

Whereas despite findings by duly constituted congressional committees and sub-

committees as to the activities of persons in governmental employ, both in the civilian and military, elected and appointed, no definitive remedial course of action has been undertaken and

Whereas despite Soviet aid to the Viet Cong enemy in military hardware and related supplies, our government continues to grovel before the USSR and seeks a furtherance of trade, aid and social contact with citizens of that dictatorship even while our servicemen are being killed and maimed by said war materiel and

Whereas our government's "appropriate response" to increased acts of terror by the Viet Cong enemy includes free and unfettered use of the major port of Haiphong thereby permitting the enemy war machine to be nurtured and replenished; and

Whereas the USSR Trawler "fishing" fleet consistently encroaches upon our territorial limits and conducts electronic surveillance by so doing and, from time to time, purposely harasses our merchant and naval vessels; and

Whereas there exists no hard evidence that we have so much as hurled a spit ball in defiance of this arrogance on the part of the USSR trawler "fishing" fleet;

Be it hereby resolved that a message of congratulations be sent to the Captain and crew of the tankship U.S.S. *Esso Honduras* for ramming and sinking one of the USSR Trawler "fishing" fleet.

It is understood by the membership of this Post that said ramming and sinking of the Trawler may well have been accidental and that the management of the Standard Oil Company of New Jersey undoubtedly took a very dim view of the deed since the membership is aware of the Rockefeller tie in with Cyrus Eaton in commercial ventures said to include increased trade with the Soviet enemy, but notwithstanding the displeasure of the management of said Captain's employer corporation, we feel that at long last and for once, accidently or not, a well deserved blow for liberty has been effectuated and that congratulations for the fait accompli are in order.

This resolution was voted upon and passed at a regularly stated monthly meeting of said VFW Post 1507, of Broomall, Pennsylvania, on Monday the 24th day of March in the year of our Lord One Thousand Nineteen Hundred and Sixty Nine and the Post Adjutant was duly authorized and directed to send a copy of this Resolution to the Captain and noble crew of the U.S.S. *Esso Honduras* and others.

GEORGE F. JOHNSON,
Senior Vice Commander.

CAN THE INFANTS SURVIVE?

HON. JOSEPH M. GAYDOS

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 25, 1969

Mr. GAYDOS. Mr. Speaker, a little more than 25 years ago, we were on the threshold of a monumental scientific breakthrough. The atomic bomb was about to be born. Little did we realize at that time the multitude and magnitude of the problems that were to be born with it.

Today, after years of developing bigger and more powerful bombs along with the means of accurately delivering them to any spot in the world, we are now seeking means of protecting ourselves from the awesome destructive power unleashed a quarter of a century ago.

In the current ABM controversy little if any mention is made of the problem of radiation effects on succeeding generations, even if the ABM worked perfectly and there was no physical destruction after an all-out nuclear exchange.

I have recently received a letter from Prof. E. J. Sternglass, a member of the department of radiology, University of Pittsburgh, along with a computer analysis which shows remarkable correlation of excess infant mortality in the United States with the average content of radioactive strontium-90 in milk. This suggests an emphasis on the development of a defensive system with nonnuclear interceptors rather than deployment of the proposed Safeguard ABM which is designed to disarm incoming missiles by detonation of a nuclear device.

I submit for the RECORD and for the edification of my colleagues, Professor Sternglass' letter and his article, "Can the Infants Survive," from the June 1969 Bulletin of Atomic Scientists.

The letter and article follow:

JUNE 12, 1969.

Hon. JOSEPH M. GAYDOS,
Federal Building,
Pittsburgh, Pa.

DEAR MR. GAYDOS: In response to the request of Mr. Zajicek of your staff, I am glad to send you the enclosed background material relating to the problem of radiation effects from nuclear weapons, and its implications for the decision on whether or not to deploy an Anti-Ballistic-Missile System.

The particular aspect of the whole problem of the growing stockpiles of nuclear weapons, which has concerned me for many years, is the little discussed but potentially extremely serious question of unanticipatedly severe effects of fallout on the developing human embryo and infant.

From a computer analysis of infant mortality in the United States involving every state in the union except Alaska from 1935 to 1966, our group in the Radiation Health Department at the University of Pittsburgh has found that there eixsts a state-by-state and year-by-year correlation of excesses in the normally expected infant mortality rates with the average content of radioactive Strontium-90 in the milk, the teeth and the bones of the infants during the preceding 4 years.

As shown in the enclosed computer-printed maps of the United States, the excess infant mortality reached a maximum value of 72% above normal for the U.S. as a whole by 1966, corresponding to almost 1 out of every 2 babies that died before reaching age one.

The highest excess mortality in the Continental U.S. was found to occur in the District of Columbia, where it reached 158% above normal, or close to 2 out of 3 babies that died in 1966 between the ages 0 and 1 while the least deviation from expected rates occurred for New Mexico (−11%) due to its very low rainfall and location southeast of the Nevada test-site. For Pennsylvania, the computer print-out shows a 56% increase above normal, corresponding to more than 1 out of 3 infants that died. Hawaii showed the highest excess of any state, 204%, probably due to its very high rainfall of 140 inches per year that brings down almost three times as much radioactivity as in the Eastern U.S., where typical annual rainfalls are 40 to 50 inches.

As described in my paper presented last month before the International Symposium on the Radiobiology of the Fetal and Juvenile Mammal at the Hanford Laboratories of the Atomic Energy Commission, these totally unexpected effects are probably due to Strontium-90 going not only to the bones, but also to the male and female reproductive cells, leading to genetic damage some 100 times more serious than had been anticipated by all past calculations.

The fact that this direct correlation cannot be explained solely by such other possible causes as urban slum problems, air-pollution, DDT or cigarette smoking follows from the evidence that the first marked increases in infant mortality took place in those states directly underneath the known path of the passing cloud of radioactive dust from the first atomic bomb explosion at Alamogordo, New Mexico, July 1945. This is shown by our computer-plotted maps of excess infant mortality for the years 1946 and 1950, which indicate that a change towards excess rates took place only in the states of Texas, Alabama, Arkansas, Louisiana, Mississippi, Georgia, South Carolina, North Carolina and Virginia but nowhere else in the entire United States. (See Figure 23 of the Hanford Paper).

The implications for the ABM question may be summarized briefly as follows. If, as seems difficult to explain in any other way, the release of 200 megatons of fission products during peacetime testing led to the death of about 1 extra infant out of every 100 born, then the release of the fission products from some 6,000 or so ABM warheads each containing 2 to 4 megatons, or a total of some 12,000 to 24,000 megatons, in an attempt to destroy some 1500 incoming Russian warheads, then essentially no infants would survive to maturity either in the U.S., or any other country in the world.

Thus, it now seems clear that if at any time the deterrent should ever fail, and even if the ABM should work perfectly and save all our cities from physical destruction, the survivors would only be condemned to watch their newborn children die before they could give birth to another generation.

In the light of this evidence and its far reaching implications for the survival of our nation and, in fact, the entire human race, every effort must clearly be made to avoid this new and fearsome upward turn of the nuclear arms race if at all humanly possible.

Furthermore, before such fateful decisions as to the number of nuclear weapons designed to protect us are to be taken, Congress has a right to demand that the Public Health Service first undertake a major effort to check whether Strontium-90 is indeed the causative factor responsible for our excess infant mortality, or whether there exists any other explanation that will better account for the ominous facts uncovered so far. Not until this is done under conditions as independent as possible from the pressures of the Defense Department and other interested government agencies could any responsible Congressman be expected to vote for the approval of what may well turn out to be the final spiral in the mad race towards the extinction of human life on this planet.

Sincerely yours,

ERNEST J. STERNGLASS,
Professor of Radiology and Director of Radiation Physics.

CAN THE INFANTS SURVIVE?

(By Ernest J. Sternglass)

(NOTE.—Discussion of chances of recovery from a major nuclear war becomes meaningless, charges physicist Ernest Sternglass, when the children of the nation that launched the strike would die before reaching maturity. Dr. Sternglass's comment is based on data he presented in the April "Bulletin." Dr. Sternglass is a member of the Department of Radiology and Division of Radiation Health, University of Pittsburgh.)

F. J. Dyson's "Case for Missile Defense" (April "Bulletin"), although obviously based on a deeply felt moral revulsion against nuclear war and a sincere desire to minimize its apocalyptic consequences, nevertheless rests on a fundamental fallacy as to the nature of nuclear weapons which has until now been widely accepted in the absence of any serious evidence to the contrary.

This basic fallacy, which vitiates all four of the points in favor of defensive missiles

made by Dyson, is to regard nuclear weapons as basically nothing more than large explosive devices or fire-bombs accompanied by a flash of radiation, whose effect may be more or less judged by the local destruction they produce on the targets at which they are aimed, with relatively minor long-range radiation effects on distant populations or succeeding generations that pale in comparison with the immediate effects.

However, the mounting evidence for unexpectedly serious biological effects produced by low dose-rate fallout radiation on the reproductive system and the developing human embryo outlined in the April "Bulletin" makes it clear that the more important aspect of the large-scale use of nuclear weapons in warfare as far as mankind as a whole is concerned would be their action as a subtle new form of biological poison that could lead to the extinction of nations through their action on the genetic material.

The reproductive cells and the developing early embryo can apparently be seriously damaged by ingested or inhaled quantities of Sr-90 some tens to hundreds of times smaller than those needed to produce leukemia or bone cancer in the mature adult. Thus the situation can arise whereby many cities and their existing populations might survive a nuclear war as a result of ABM systems combined with shelters, only to have the society come to an end as the infants born to the survivors die in their first year of life.

We find ourselves confronted with the utterly new situation in which, contrary to all our past thinking, even targets that are either not attacked, or are protected by an anti-ballistic missile system, can be destroyed if these "targets" are people. Dyson's point that "if you are sitting in a city which is not attacked, the defense has worked" therefore becomes specious: the population might indeed have been saved, only to see the end of the very society which they sought to preserve as the newborns die one by one before reaching maturity as a result of the inhaled and ingested radioactive fallout quickly distributed throughout the atmosphere.

It is therefore clear that in the light of the long-range worldwide biological effect of nuclear weapons, all past calculations as to casualties, "loss-exchange ratios" and chances of recovery from a major nuclear war in the presence or absence of anti-missile systems or shelters become utterly and completely meaningless. In fact, even the threat of a massive first strike by one major power against another loses all credibility when the resulting release of fission products into the world's atmosphere would be sufficient to insure that the children of the nation that launched this strike would die before reaching maturity.

And yet this is precisely what the existing data on infant mortality as a result of the very limited peace-time testing of nuclear weapons show: The U.S. infant mortality reached about twice the normally expected value by the time the test-ban came into effect in 1963, in a manner directly correlated with the amount of Strontium-90 in the milk and infant bone. This means that close to one out of 100 children born died before reaching age one as a result of the release of some 200 megatons' worth of fission energy or some 20 million curies of Strontium-90 in remote test-sites and at high altitudes above the atmosphere. Since a first strike, in order to have any chance at all of being effective, would have to involve some tens of thousands of megatons, detonated close to the ground, probably in the form of biologically more effective small multiple warheads carried by MIRVs (multiple independent re-entry vehicles), it is clear what the effect of such a massive release of long-lived fission products into the circulating air-currents of the atmosphere would be, regardless of where the bombs were aimed or where on the ground or above the atmosphere they would detonate.

And since ABM systems, whether effective or not, force an escalation of the number of offensive warheads, not to speak of the additional multimegaton warheads in the three-to-five antimissiles needed for each incoming warhead to achieve interception, the net result of their installation would be to seal the doom of mankind ever so much more firmly if the now unstabilized deterrent should ever fail.

The ethical and moral considerations that moved Dr. Dyson to opt for more defensive rather than offensive missiles must therefore be extended to the broader question: Does any nation have the right to destroy the lives of innocent children in countries throughout the world in a vain effort to insure the survival of its own particular ideology and way of life, by weapons that release an indiscriminately-acting, long-lasting biological poison into the world's atmosphere?

RESIST FREEZE IN BROADCAST LICENSES

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 25, 1969

Mr. CELLER. Mr. Speaker, I am greatly disturbed by pending legislative proposals which would seriously undercut the right of the people to be assured that the radio and television frequencies are licensed, and periodically relicensed, in the public interest. In a letter presumably addressed to all Members of the House I have been importuned by the broadcasting lobby to support a measure that would go far in turning the present 3-year license of broadcasters into a perpetual easement, with little or no chance of change.

This anticompetitive legislation is ill advised and should be rejected. It makes a mockery of the policy that the airways are licensed by the people and for the people and for prescribed periods only.

In order that the Members may appraise this issue I am placing in the RECORD a letter addressed to me by Mr. Theodore H. Walworth, Jr., vice president and general manager of WNBC–TV and my letter of reply.

The letter and my reply follow:

JUNE 11, 1969.

Hon. EMANUEL CELLER,
U.S. House of Representatives
Washington, D.C.

DEAR MR. CELLER: Presently pending before the House Committee on Interstate and Foreign Commerce are more than fifty bills entitled, "A Bill to amend the Communications Act of 1934 to establish orderly procedures for the consideration of applications for renewal of broadcast licenses." This is perhaps the most important piece of broadcast legislation to have been offered in many years, and one that vitally affects the entire broadcast industry, including broadcasters who serve your district. The need for legislation of this type is so urgent that I want to bring it to your attention.

As you perhaps know, radio and television broadcasters are licensed by the Federal Communications Commission to serve the public interest, convenience and necessity. Licenses are issued for a three-year period and are renewed at this interval, if, in the opinion of the Commission, the broadcaster has appropriately served the needs and interests of his local audience. Thus, every three years all licensees report to the Commission on their stewardship of their broadcast franchise.

Under present law, anyone may challenge, with a competing application, the renewal of a license, and the Commission has no choice in such cases but to schedule a full evidentiary hearing on the two competing applications. Such hearings may take as long as three years to complete and are costly and time consuming to all parties, including the Commission.

Not only does the present procedure cost hundreds of thousands of dollars to all concerned, including the Government, but many individuals and groups feel that recent Commission decisions have the effect of favoring new applicants over incumbent broadcasters in such competitive hearings. As a result, there has been a sharp increase in the filing of new applications at renewal time. The new applicants submit grandiose predictions of their proposed program service and attack the ownership structure of present broadcasters, especially when the incumbents are owners of other stations or have interests in other media. In weighing the respective applications, there is a real danger that the existing license holder's many years of pioneering and past broadcast performance may be disregarded in considering the relative proposals of both parties.

The bills that have been filed in the House of Representatives would, as at present, permit FCC review of the broadcaster's performance every three years at license renewal time to assure that he has continued to serve the public interest. But, one very important new provision is added to the present law. Under this proposal, new applicants would not be permitted to contest a renewal application until after the Commission had first made a determination that a renewal of the incumbent's license would not serve the public interest. In other words, a broadcaster's record of performance would be judged against his own promises and not against the blue-sky proposals of a newcomer. If the Commission found the record of the incumbent to be a good one, the license would be renewed and that would end the matter. On the other hand, if the Commission, after a hearing determined that the license should not be renewed, then it would accept applications from others for the frequency in question.

If the new Bill is enacted, licensees will avoid the harrassment and uncertainties which threaten to destroy the industry, but the interests of the public will continue to be protected. A copy of the language of a typical bill is attached for your convenience and review.

I urge you to consider filing or co-sponsoring a similar bill. I further urge you to request an early hearing and quick action on this proposal. It is vital to all radio and television stations serving your district, as well as throughout the country, that legislation of this kind be enacted as soon as possible.

Thank you for your thoughtful attention and consideration.

Sincerely,

THEODORE H. WALWORTH, Jr.

JUNE 24, 1969.

Mr. THEODORE H. WALWORTH, Jr.,
Vice President and General Manager,
WNBC–TV,
New York, N.Y.

DEAR MR. WALWORTH: This replies to your letter of June 11 requesting my support for legislation that would amend the present communications law by providing that new applicants for broadcast licenses would not be permitted to contest a renewal application until after the Federal Communications Commission had first made a determination that a renewal of the incumbent's license would not serve the public interest.

I must advise you that I oppose the point of view expressed in your letter and oppose enactment of the proposed legislation. It seems to me that the measure completely loses sight of the principle, engrafted in the Communications Act and basic to the juris-

diction of the FCC, that the radio and television waves—the frequencies—comprise a finite and precious national resource and are to be managed and licensed only for the benefit of the public and only in the public interest.

In this view, with which I doubt many would disagree, a frequency is licensed consistently with the public interest only when the best qualified broadcaster offering the best available programming is awarded the license. Anything less than the best available service is patently not in the public interest.

Your proposal to restrict new applicants to situations in which the Commission has already determined that renewal to the incumbent would not serve the public interest effectively prevents the Commission from ascertaining what the public interest requires. In other words, if the job being done by the incumbent is not so grossly inadequate in the Commission's view as to require that his petition for renewal be denied, then the Commission may never know and would be precluded from finding out whether a superior prospective licensee exists. The effect of such a rule requires little elaboration. Mediocrity would be firmly entrenched; potentially superior service would be ruled out. What is needed, in my opinion, is more rather than less competition for the privilege of providing radio and television programming to the public.

I am not unmindful of the possibility that irresponsible applications may be filed in bad faith by applicants who have neither the intention nor the ability to back up their promises. The cure for this is to devise rules by which such applications can be sifted out and rejected, not to freeze existing license relationships forever.

Sincerely yours,

EMANUEL CELLER, *Chairman.*

JOE McCAFFREY, 25 YEARS AS A CORRESPONDENT ON CAPITOL HILL

HON. MELVIN PRICE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 25, 1969

Mr. PRICE of Illinois. Mr. Speaker, this month marks the 25th anniversary of Joe McCaffrey's career as a press, radio, and television correspondent on Capitol Hill. One of the Capitol's favorite people, Joe McCaffrey effectively conveys his solid grasp of the essence and feel of Congress in his perceptive radio and television commentaries to the public.

It has been my great pleasure to have been able to follow Joe's quarter of a century work in covering congressional activities. I not only have enjoyed listening to his evening reports over radio and television through those years, but I have treasured the fact that through this long period I have had the opportunity to have the frequent association with him.

As a former newspaper reporter and as one who has been in Congress during the same period Joe McCaffrey has been on the Hill, I think I am qualified to judge his record. Joe approaches his work with an objective point of view, always stressing the necessity of accuracy in reporting the news he relays to his listeners. He has always been impartial and fairminded in his treatment of the news.

Joe McCaffrey has always respected the trust and confidence Capitol Hill has placed in him. He has always respected the obligations and responsibilities of being a reporter and commentator. He is proud of his profession and he has brought additional honors to it.

Joe McCaffrey would be a valuable man to our educational systems throughout the country in teaching students about the legislative process, its people and its institutions. No one is more expert in the field. I have always been impressed with his intimate working knowledge of Congress and his thorough understanding of the substantive issues involved—issues that he must know so well to properly serve the people who daily wait for his reports. No commentator recognizes more than Joe McCaffrey does, the heavy responsibility that falls on him in keeping the people informed through objective, unslanted reporting of the news.

I am proud to join Joe McCaffrey's legion of friends in saluting him on his 25 years of great reporting as a Washington correspondent.

CHIEF JUSTICE WARREN

HON. JOHN V. TUNNEY

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 25, 1969

Mr. TUNNEY. Mr. Speaker, few men, robed with such high office, have shown the common touch, the spark of simple humanity, which marked the tenure of Earl Warren as Chief Justice of the United States. Not since John Marshall has there been a Chief Justice who has made such an important contribution to the development of constitutional law. His 16 years on the High Court spanned a difficult time in our history. From the very start he met difficult questions squarely, with the decision on school desegregation in Brown v. Board of Education. His overriding concern for equal rights was reexpressed, again and again in decisions on voting, legislative reapportionment and criminal due process. Always motivated by a strong belief in the sacred value of the individual, he consistently showed a responsiveness to the needs of our changing society, with a courage, integrity and humility, a warmth and gentleness and a wisdom that commands our respect. He was not a doctrinaire or arbitrary man. He bore the weight of bitter criticism silently and with dignity. At the end there were even some who accused him of being antagonistic to the great traditions which he himself helped to establish. He always remained above such partisan controversy, and ruled as he felt commonsense and justice dictated whether the result would please the liberal or the conservative faction. His departure brings the loss to the Supreme Court of a great statesman. Although he leaves public life, may his wisdom continue to guide us.

HOUSE OF REPRESENTATIVES—*Thursday, June 26, 1969*

The House met at 12 o'clock noon.

Rev. Jack P. Lowndes, Memorial Baptist Church, Arlington, Va., offered the following prayer:

But we have this treasure in earthen vessels, to show that the transcendent power belongs to God and not to us.—II Corinthians 4: 7.

O God of everywhere and always, be unto us the God of here and now. We are grateful for our Nation and the people of our Nation, treasures in earthen vessels. Realizing that Thy presence and will are made known through men, let us not forget that we should be instruments of Thy purpose and that as a people we find our meaning in Thee. Help us especially to be instruments of Thy peace.

So guide us by Thy spirit that we may perceive in the events of our day Thy presence and Thy transcendent power. In Thy name we pray. Amen.

THE JOURNAL

The Journal of the proceedings of yesterday was read and approved.

MEDICARE COVERAGE

(Mr. MONAGAN asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. MONAGAN. Mr. Speaker, I am filing legislation today which authorizes the Secretary of Health, Education, and Welfare to enter into agreement with a State to provide coverage under the hospital insurance program for the aged—popularly known as medicare—for annuitants of teacher retirement systems, and other public employee retirement systems. The bill permits States to take the initiative in negotiating with the Secretary for Health, Education, and Welfare for coverage of such employees, and it provides that States entering into such agreements shall reimburse the Federal hospital insurance trust fund for payments made to annuitants under such agreements and for the administrative expenses incurred by the Department of Health, Education, and Welfare in carrying out such agreements.

The bill requires no appropriation—neither at present nor in the future. The bill explicitly authorizes the Secretary to terminate any agreement once he ascertains that a State has failed to provide for full compliance with the agreement. Thus it will be up to the States to pay the cost of the program. It will not cost the Federal hospital insurance trust fund a cent. A State which elects to participate will reimburse the social security medicare trust fund for all benefits paid out plus all administrative expenses. My own State of Connecticut, for example, has already passed such a law and now only awaits congressional authorization

so that its public employees and public school teachers can get the benefit of participation in the Federal medicare program but at no expense to the Federal medicare trust fund. Favorable congressional action, therefore, will serve to cut redtape, strengthen the social security system, and bring the benefits of medicare to an important portion of our population. Nothing could be fairer or more progressive than that.

Public school teachers in 12 States are presently covered by teacher retirement funds which are excellent in every respect except that they exclude the teachers from medicare hospital insurance. The 12 States are California, Colorado, Connecticut, Florida, Illinois, Louisiana, Maine, Massachusetts, Missouri, Nevada, Rhode Island, and Texas. The number of public school teachers involved nationwide is approximately 750,000. The number of public school teachers involved in Connecticut is 34,221. This will allow the States to bring these teachers under the protection of medicare.

A large number of State and local government employees are also excluded from the medicare program by virtue of their membership in public employee retirement systems rather than the social security system. Under this bill the States and localities will be able to make sure that all persons under a State or local government retirement system and their qualified dependents will have hospital insurance protection by purchasing this protection on a coverage group basis.

I introduced legislation of this nature in 1967. This revised bill includes even tighter provisions against the possibility of any State defaulting. I urge the passage of this amendment to our social security system. The Nation's public school teachers and the public employees of State and local governments have every right to enjoy the benefits and the security of medicare hospital insurance protection. The States will be able under this legislation to purchase this protection. Congress should endorse this reasonable, just, and progressive measure.

PERMISSION FOR COMMITTEE ON THE JUDICIARY TO SIT DURING GENERAL DEBATE TODAY

Mr. ALBERT. Mr. Speaker, I ask unanimous consent that the Committee on the Judiciary may sit during general debate today.

The SPEAKER. Is there objection to the request of the gentleman from Oklahoma?

There was no objection.

ADDITION TO LEGISLATIVE PROGRAM

(Mr. ALBERT asked and was given permission to address the House for 1 minute.)

Mr. ALBERT. Mr. Speaker, I take this time for the purpose of announcing an addition to the program for tomorrow.

Mr. Speaker, the gentleman from Texas (Mr. PATMAN) has advised that he will file a report on the bill extending the Export Control Act today, and plans to bring it up under unanimous consent tomorrow.

OMNIBUS CIVIL RIGHTS ACT OF 1969

(Mr. PODELL asked and was given permission to extend his remarks at this point in the RECORD.)

Mr. PODELL. Mr. Speaker, the task of securing fundamental civil rights for all American citizens has not been fully met. Programs initiated over the past 15 years now require new strength, expanded application, and full funding. We must complete the work we started.

We have built solid foundations with the 1964 Civil Rights Act and the 1965 Voting Rights Act which even now are jeopardized because of the twin threats of nonrenewal and nonenforcement. These were only beginnings. Upon such foundations were to be constructed more comprehensive and broader programs guaranteeing full civil, legal, and human rights for each American. President Johnson in 1966 offered a far-reaching program to secure fair housing practices, Federal and State jury reform, protection from violence for persons exercising their civil rights, prohibition of segregation in schools and public facilities, and extension of the Civil Rights Commission. Despite House support, the Senate failed to secure passage.

Again in the 90th Congress, an attempt was made to enact this vital program, but a threat of extended debate was too great. Results were disastrous. The Civil Rights Commission was weakened and funds restricted. The only meaningful legislation enacted was a watered-down Fair Housing Act, and an act protecting from violence those exercising civil rights.

A strong Civil Right Commission is a prerequisite for effective enforcement of our civil rights. Strict enforcement procedures and expansion of the Equal Employment Opportunities Commission are essential to fair employment practices. Need for nondiscriminatory procedures in jury selection is as vital for fair trials as a competent judge.

Mr. Speaker, I am introducing the Omnibus Civil Rights Act of 1969, companion to that introduced in the other body by Senator HART. This act would provide improved machinery for selection of juries, promote equal employment opportunities by providing enforcement powers for the EEOC, authorize appropriations for the Civil Rights Commission, and extend the Voting Rights Act concerning discriminatory use of tests and devices.

The act contains five titles with the following provisions. Title I provides the same guarantee under law to litigants of State courts that those of Federal courts receive. It guarantees that juries be selected without discrimination as to race, color, creed, sex, national origin, or economic status. The jury must be selected from a true cross section of the communities' population.

Title II provides the Equal Employment Opportunity Commission with authority to issue cease-and-desist orders judicially. This is authority enjoyed by most governmental agencies in order to enforce their findings. It would give to the Commission adequate enforcement authority to carry out its enormous assigned tasks of insuring nondiscriminatory employment practices.

Title III would authorize funds for the Commission on Civil Rights, which was created by the 1957 Civil Rights Act. Restrictions were recently placed upon the Commission, greatly curbing possibilities for further effective activity. This title would remove restrictions permitting full funding.

Title IV would extend for 10 years the Voting Rights Act of 1965. Under the present act, it will terminate in 1970, allowing restoration of restrictive local voting practices greatly reducing the number of persons who could actually vote. Many previously suppressed groups of people have finally been given an opportunity to elect truly representative people to public office. We cannot now turn against them by failing to act on this extension.

Title V provides that if any part of this act be determined by the courts to be invalid, the other parts would remain in effect.

Mr. Speaker, the low regard some national protectors of civil rights have for those same civil rights is becoming increasingly evident. Just recently it was reported that the Justice Department favors abandonment of the enforcement machinery of the Voting Rights Act. This act has doubled Negro voter participation in the South. Weakening it in this manner would eliminate the Federal Government's power to send voting examiners to voting trouble spots around the country.

We cannot afford to remove this Federal authority. This Congress was elected under an expanded franchise the Voting Rights Act provided to all our constituents. New ground has been broken. Old evils have been attacked. Should we now restrict voters from access to their right to express themselves democratically?

Our responsibility to support and strengthen the civil rights of all our constituents is clear.

DESEGREGATION GUIDELINES

(Mr. CLAY asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. CLAY. Mr. Speaker, it is my understanding that this administration will announce in the near future its intent to slow down the integration of schools across the Nation. Reports are that desegregation guidelines by which school systems have been guided toward equal educational opportunity for all children are to be altered. In fact, desegregation guidelines are to be "weakened," according to the terminology of most reports reaching me. I am deeply disturbed by this turn in events.

Mr. Speaker, it should be pointed out to the Secretary of Health, Education, and Welfare, to the Attorney General of the United States—and, indeed, to the President of this country—that the Supreme Court ruled in 1954, some 15 years ago, that the racially segregated dual school system is unconstitutional. Almost 5 years ago, Congress enacted the Civil Rights Act of 1964 with title VI prohibiting discrimination on the basis of race, color, or national origin. And only this year, the Office for Civil Rights in

the Department of Health, Education, and Welfare reported that the desegregation figure in the 11 Southern States has reached just over 20 percent. In the school districts desegregating under title VI, the figure was about 25 percent.

Based on these statistics, there is no reason for this administration's move to slow down the effort. The progress of desegregation even under firm and strong guidelines has achieved only 20 percent to 25 percent completion in almost 15 years. Surely, this administration can see that desegregation of the schools is moving slowly—not speedily. They do, apparently, believe that it is moving faster than political promises to the South allow.

Recent weeks and months have brought a continuous flow of evidence that black people have reason to fear for the very fundamental rights to jobs and education guaranteed, reiterated, and pursued by past Presidents in the 1960's. Others share my concern.

Yesterday, I joined my black colleagues in the House of Representatives in a letter to President Nixon protesting any interference with the strong pursuit of desegregated schools. I insert it at this point in my remarks so that other interested Members of this body may be apprised of our views:

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D.C., June 25, 1969.

HON. RICHARD M. NIXON,
President of the United States,
The White House,
Washington, D.C.

DEAR MR. PRESIDENT: Reports that the school desegregation guidelines are to be weakened disturb us greatly. A generation of black children has suffered segregation and unequal education in southern schools since the Supreme Court decided Brown vs. Board of Education.

There are black people on the farms of the South, in hamlets, and in towns, who believe in their Federal government. On the basis of that faith and their desires to see their children educated, black fathers and mothers have braved vicious attacks of retaliation for choosing to send their children to so-called "white" schools.

Any departure from the present school desegregation guidelines, any weakening of the Federal intent to see an end to segregated schools this September—will be a betrayal of these black people. Any weakening of guidelines would reward white school officials and politicians who have resisted the law of the land.

Mr. President, you have been sworn to uphold the Constitution. The Constitution clearly requires an immediate end to segregated schools. If the leader of this Nation compromises the law and sells the birthright of black children for political considerations, what example of lawfulness will have been set for the people?

To abandon your responsibilities to carry out simple demands of the Constitution will be the clearest possible sign that there is little hope for lawful change. Your promises will be worthless rhetoric coming from a President who refused to protect the basic right to equal education.

Sincerely,

WILLIAM L. CLAY,
JOHN CONYERS,
AUGUSTUS F. HAWKINS,
ADAM C. POWELL,
SHIRLEY CHISHOLM,
ROBERT N. C. NIX,
CHARLES C. DIGGS,
LOUIS STOKES,
Members of Congress.

FREEDOM FOR RADIO AND TV

(Mr. DORN asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. DORN. Mr. Speaker, the broadcasting industry, both TV and radio, are in constant danger of being overregulated. There is a tendency here in Washington to harass, pry into, and snoop on the activities of this great industry. Time and again proposals are made which are reminiscent of the totalitarian, socialistic regimes of other countries.

I firmly believe that the future of our country depends upon freedom of speech and freedom to program and the right to editorialize, as manifested by our broadcasting industry. This is as basic, elemental, and fundamental to our freedom as the first amendment to the Constitution. The broadcasting industry is performing unsurpassed public service. Editorial programs, cultural programs, news and weather broadcasts are a great public service to our people. The broadcasting business in America today requires great capital, planning, investment, and risk. Competition is keen. This year many stations will be up for renewal of their licenses before the Federal Communications Commission.

Mr. Speaker, today I am introducing legislation which would amend section 309(a) of the Communications Act of 1934 that the Commission, in acting upon any application for renewal of license filed under section 308, may not consider the application of any other person for the facilities for which renewal is sought. If the Commission finds that the public interest, convenience, and necessity would be served thereby, it shall grant the renewal application. If the Commission determines after hearing that a grant of the application of a renewal applicant would not be in the public interest, convenience, and necessity, it may deny such application, and applications for construction permits by other parties may then be accepted, pursuant to section 308, for the broadcast service previously licensed to the renewal applicant whose renewal was denied.

I hope the Committee on Interstate and Foreign Commerce will favorably report this bill at an early date. The broadcasting industry needs assurance now that for responsible service rendered, they may continue to operate and serve our people.

NATIONAL COMMISSION ON PESTICIDES

(Mr. COHELAN asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. COHELAN. Mr. Speaker, I am today introducing a bill to establish a National Commission on Pesticides.

There has been increasing concern of late about the potential damage to fish and wildlife, and even to human beings, of residually persistent agents in pesticides.

In California, the State department of agriculture has just announced that starting January 1, 1970, the use of DDT and DDD will be sharply curtailed, because of their potential hazards. Scientists had reported that because of the persistence of chlorinated hydrocarbons, such as DDT, residues were accumulating in the bodies of birds along the California coast, apparently threatening their existence.

Recently, too, the Food and Drug Administration confiscated coho salmon in Lake Michigan because of increased concentrations of DDT; under the guideline established by the FDA, if residues of DDT of more than five parts per million are found in fish, they will not be allowed to be marketed in interstate commerce. In the fish confiscated, residues ranged from 13 to 19 parts per million.

The State legislatures in Michigan and Arizona have banned the use of DDT, and investigations have just been conducted in Wisconsin with a view to similar action; a moratorium on its use has been put in effect in Sweden and in Hungary.

My review of these actions convinces me that it is urgent that we understand as fully as possible what hazards—to fish, wildlife, and man—are involved in the use of all pesticides.

But I want to stress, too, that it is important for us to keep in mind the great benefits we have reaped from the use of pesticides—and especially from the use of DDT.

Pests which for centuries have plagued mankind, carriers of the lethal diseases of malaria, yellow fever, typhus fever, plague, and many other scourges have been eradicated, to the relief of millions of persons throughout the world. Animals, wild and domestic, have been freed of parasitic insects, too.

So it is well that in our review of the benefits and hazards of pesticides—to man, to birds, to animals, and to our environment—we secure all the facts, that they be carefully analyzed, that we weigh potential dangers and possible benefits, and that the use of pesticides be prudently regulated to protect the public health and safety.

My bill also provides for research that will help us modify and perfect our fight against harmful pests, enabling us to be increasingly selective as we fight damage to crops and seek to eradicate disease-bearing insects.

Mr. Speaker, my bill is a companion to that introduced in the other body by Senator NELSON, who has for many years counseled more careful monitoring of our entire pesticide program. I hope that it will be the pleasure of the House to give the measure its careful review and approval.

ENFORCING THE RULES OF THE HOUSE OF REPRESENTATIVES

(Mr. DUNCAN asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. DUNCAN. Mr. Speaker, I would like to call to the attention of my colleagues title 2, United States Code, section 39, which provides that the Sergeant at Arms of the House shall "deduct from the monthly payments of each Member or delegate the amount of his salary for each day he has been absent

from the House unless such Member assigns as the reason for such absence the sickness of himself or of some member of his family."

This provision also is to be found as a part of rule VIII, section 656, of the Rules of the House of Representatives.

At this point it should be noted that excuses for absence are distinguishable from leave of absence.

This provision of law actually has been enforced in the past. In the second session of the 63d Congress, the House agreed to a resolution directing the Sergeant at Arms to notify absent Members that their presence was required and directing him to enforce title 2, United States Code, section 39. The Speaker held that the Sergeant at Arms was required to carry out the statute and he, the Speaker, could issue no instructions to the Sergeant at Arms in respect thereto.

In this instance funds had already been withheld from Members' salaries, and reimbursement to Members whose salaries had been docked was denied.

It is common knowledge in the case of Representative ADAM CLAYTON POWELL, of New York, that he has absented himself from the 91st Congress for a long period of time. Records of the House indicate that he has not requested a leave of absence or offered any type of excuse during the session of Congress.

He was duly sworn into the 91st Congress on or about January 3, 1969, and has received salary payments each month since that time. He has, however, had certain sums deducted each month by the Sergeant at Arms to pay a monetary penalty previously decreed by the House.

It is my opinion that, based upon the statute and the rules of the House of Representatives, Mr. POWELL is not entitled to receive salary payments until he complies with the applicable statutes and rules of the House.

I am, therefore, this day by letter to the Sergeant at Arms requesting that he comply with the law by refusing to pay the salary of Mr. POWELL pending Mr. POWELL'S compliance with the law.

There may be other Members of the House who are not complying and do not comply with this rule and statute. Compliance, of course, should be required of all Members.

THE LATE HONORABLE WILLIAM HENRY BATES

(Mr. SMITH of New York asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. SMITH of New York. Mr. Speaker, on this, the day of his funeral, I join all of the colleagues of Representative William Henry Bates, of Massachusetts, and his host of friends in expressing sorrow at the untimely death of our friend. He was a man of intelligence and learning and compassion, a man of great loyalties to his friends, his constituents and his country, a man upon whom to depend—in short, a fine friend and a fine Representative. We are all richer for knowing him and for his service in the House of Representatives, and we are all poorer for his untimely leaving this life.

We shall all miss him.

VIETNAM

(Mr. DON H. CLAUSEN asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. DON H. CLAUSEN. Mr. Speaker, I want to address myself today to the President's news conference last week in which he was questioned by reporters about statements made by former Secretary of Defense Clark Clifford relative to phasing out troops from Vietnam.

Since that news conference, many people have suggested that President Nixon misread Mr. Clifford's real intent. While none of us has any way of knowing whether or not this is the case, I am compelled to suggest that, in my judgment, the real point here has been apparently lost by what appears to be an attempt by some people to try to "drive a wedge" between the President and others who, in all good faith, are attempting to advance helpful and responsible suggestions on resolving the conflict in Vietnam.

In all candor, I doubt that either Mr. Clifford or President Nixon was knowingly attacking the other, nor can I accept that this was their intent. The fact is—the point should be stressed at this critical jucture in our Nation's history—that both of these men, in analyzing the situation over the years, have arrived at the same basic alternative solution for resolving America's overinvolvement in the war in Vietnam.

Therefore, I believe the President and Mr. Clifford are on the same wavelength in their thinking, and that even the question of how many troops can and should be withdrawn and the so-called timetable for phasing out is a moot point, in light of the fact that both men are in complete agreement on the question of phasing out. The real question is the method of implementation of the concept.

I submit, therefore, that this so-called controversy in many ways is parallel to and indicative of the dissention that has been generated in this country over the past few years on the question of the Vietnam war. And I deeply regret that, now that a program has been set in motion to bring about a solution, some still see fit to look for loopholes.

Who will disagree that both President Nixon and Mr. Clifford are doing the very best they can under the extreme pressures that surround each of them. Mr. Clifford, in the final months of his tenure as Secretary of Defense, had the foresight and courage to advance his thinking on the need to reduce the size and burden of the American commitment in Vietnam. President Nixon recognized and advanced the basic "phase-in/phase-out" concept before the Republican platform committee in Miami last year—before he was elected to the Presidency.

As most of the Members know, I have advocated, presented, and discussed this concept with both of these gentlemen during the past 3 years.

In the final analysis, neither man was compelled or boxed in to accept this alternative to the Vietnam stalemate that both inherited, and I believe the time is long overdue when men in responsible positions of leadership be supported and encouraged when they agree—especially when those two men represent different administrations and different political parties.

Quite frankly, I welcome the constructive suggestions and recommendations of former Secretary Clifford or any other responsible person who is motivated by a genuine desire to make a contribution toward resolving the Vietnam war. And, in this regard, it seems worth recalling that President Nixon said exactly the same thing in responding to questions relative to Secretary Clifford's comments.

Today, a divided and war-weary America stands at the crossroads.

We can either continue this incessant bickering over details or—we can join together, as a nation, and give our leaders and those in a position to advise them, the opportunity they must have to get this country back on the track again.

Surely, there is much to be gained from joining hands and joining forces at this particular point in time—such things as an end to the killing in Vietnam, the future well-being of our Nation, and peace in the world.

CAREER POSTAL EMPLOYEES PASSED OVER

(Mr. GROSS asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. GROSS. Mr. Speaker, top officials of the Post Office Department, including Postmaster General Blount, during the past 5 months have frequently praised career postal employees as highly competent, able, and dedicated public servants.

Spoken and written commendations are all well and good, but now comes the Department hierarchy with a disappointing vote of no confidence in our more than 700,000 career postal employees.

I refer to the announcement on Tuesday, June 24, of the appointment of the regional directors for the Post Office Department. Of the 15 appointees, I was shocked to learn that only three have had any postal experience, and even those three cannot be considered in the strict classification as career postal employees.

If, as we have been led to believe, the postal service is composed of competent, experienced, and dedicated Government employees, it defies the imagination that the Postmaster General would look outside the postal service for most of his 15 regional directors.

I have firsthand knowledge of the high caliber, experience, and dedication of many of the postal workers in Iowa, and I am particularly disturbed by the fact that the Postmaster General's appointee as director of the St. Louis regional office, which includes the State of Iowa, comes not from the postal service and has no practical experience related to the postal service. He is Harold S. Wagner, who is described as a former senior vice president of the Grocery Products Division of the Pet Milk Co.

It is significant to note that Wagner comes from Missouri, which is the State from which Postmaster General Blount

selected his Washington, D.C., director of regional administration. Can this be a use of the old "buddy system" or cronyism in building the hierarchy of the Post Office Department?

Under the criteria set up by the Postmaster General, I suppose it would be unfair to even suggest that there was a single experienced postal official in Iowa capable of serving as regional director.

Mr. Speaker, the selections just made should lay at rest for all time the professions of those who sponsor a corporate operation of the Post Office Department that it will rely heavily for its operation on able, dedicated, and experienced career postal employees.

THE CAPITOL STEPS

(Mr. SYMINGTON asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. SYMINGTON. Mr. Speaker, yesterday's RECORD contains the opinion of General Sessions Chief Judge Harold Greene upholding the right of peaceful demonstration on the Capitol Grounds. Parenthetically, I know Judge Greene as a friend, lawyer, and distinguished jurist. Perhaps his conclusion was inescapable given the current apparently inadequate administrative guidelines. Certainly the opinion is written with that felicity of expression which one associates with the loftiest sentiments of higher courts—courts which I hope would not follow it in every respect.

Passing the question whether current rules require clarification or amendment, and I think they do, or whether some area within the Capitol Grounds might prove convenient for the stated purpose, this case was decided with reference to the Capitol steps, and we are dutybound to question whether the steps themselves or other areas contiguous to the Capitol entrances are an appropriate locus—permanent or temporary—for the ad hoc expression of political views by any citizen or group of citizens.

The question must be considered with due sensitivity to the right to assemble, speak, and petition. As the body which must be most responsive to the exercise of this right and whose deliberations stand most to be affected by the described activities, we would hope our collective judgment in the matter might merit some consideration in the court of public opinion as well as any other courts that might be called upon to weigh the issues involved.

The Greene opinion would make the orderliness of the participants the only test of permissibility. Reading it and the supporting comments of some Members leads me to believe the definition of "orderliness" in the instant case is infused with a certain implicit acknowledgement, if not admiration, for the bona fides and traditions of the Quaker sect. We must recognize, however, that this decision, were it to become permanently controlling, would give access to the Capitol steps for the purpose of reading the names of our Vietnam dead—as well as for any other peaceful reading—to groups which do not enjoy such wide sympathy. The American Nazi Party might wish to assemble and quietly read the same names to point up their contribution to the struggle against communism, or post a few sentries to stand permanent vigil on the steps just to remind us of their general program for America. With respect to the Quaker protest, counterreadings of this kind could be expected from such dedicated and widely supported groups as the American Legion and VFW, to say nothing of large numbers of parents themselves who may organize to object to the reading of names of sons who they may feel died believing in their cause, yet who must silently acquiesce to this negative interpretation of their sacrifice.

One sees also that the cumulative "orderliness" of thousands must perforce become in itself disorderly. If we are forced to accept the Capitol steps as a forum for peaceful protest, we can be sure none other will do. A protest will not be a protest until it has been recorded on those steps. The doorsteps of the Capitol will be a mecca for the malcontent. We would need to appoint a protest registrar to assign, in a highly competitive atmosphere, numbers, dates, and times. His regulations would win no greater acceptance than those of any other bureaucracy. Protest groups and individuals dissatisfied with their treatment, and deeming their administrative remedies exhausted, would tend to refer questions of justice in implementation to the same courts which approved the justice of the principle. For this reason, among others, one would hope the judicial branch would find it possible to forbear from interfering with reasonable housekeeping regulations of the legislative branch which relate to the control of those particular public properties the daily exploitation of which cannot fail to disturb its deliberations to an unnecessary degree. I say "unnecessary" because we must acknowledge a wide variety of irritants to be necessary and useful stimulants to a healthy and responsive legislative process. We are surrounded by them already.

It is argued that assembling on the Capitol steps is a way to get the attention of Congress. Indeed it is. But is it an essential way? The Quaker point of view, for example, could easily gain congressional attention by suitably large formations on the Mall or other nearby areas. Indeed, it seems the "attention gap" is continuously closed by citizen mail and media alike, as well as frequent personal observation of the Nation's ills. Newspapers, radio, and television have certainly brought to the attention of every Congressman the cries and agonies of a divided and disturbed Nation and a troubled world. Our mail is full of it. Visitors to our offices carry the message. A logical extension of the "attention" argument, given the awkward option of circumventing the Capitol steps, would be to permit peaceful representations in the gallery and corridors, to guarantee the attention of Congress.

One thing is clear, the Capitol steps offer a convenient locus for the participation of sympathetic Members of Congress in the protest of the day. But no one argues the need to so accommodate protesting Congressmen. Presumably, this Hall is a suitable place for that. I cannot conceive that daily rump sessions on the steps contribute as much to the substance of the legislative process as they cost it in appearance.

Admittedly, there is no perfect solitude for the orderly work of Congress itself. It is an imperfect atmosphere—made so in part by the mere friendly interruption of curious citizens from all over the country. To deny access to the visitor and tourist would be too high a price to pay for normal working conditions. But to reject even the most orderly of frankly political behavior would not seem to be. In addition, to require the Nation's people, especially the young, who come in thousands, to run a daily gauntlet of silent or murmured protest, is to distort their understanding, I should think, of the processes by which Congress meets, and ought to meet, its responsibility to the 200 million citizens who could not be here, but who entrust their hopes to us.

A Hyde Park-type area within reach of interested Congressmen and public media might answer the purpose. Reasonable and understandable regulations are a necessity. But the management of the Capitol Grounds, at least where such management is not arbitrary or capricious given the overall responsibility of Congress, would be better left, I believe, to House rules subject to modification from time to time by the membership, rather than the dictates of any other branch of Government.

THE NEW YORK DAILY NEWS—TITAN OF THE TABLOIDS

(Mr. MURPHY of New York asked and was given permission to extend his remarks at this point in the RECORD, and to include extraneous matter.)

Mr. MURPHY of New York. Mr. Speaker, in the highly competitive field of American journalism, one newspaper leads the pack—in circulation, in eye-catching makeup and photography, in the development of breezy, informative, terse stories, in rousing editorials and exclusives and in public service. That newspaper is the titan of the tabloids, the New York Daily News, which today—June 26—is celebrating its 50th anniversary. It has the largest circulation of any newspaper in America—2,092,142 daily and 3,176,962 Sunday—and uses more than 350,000 tons of newsprint annually. Among hundreds of other awards, it has won Pulitzer Prizes for editorial writing, editorial cartoon, distinguished international reporting, and news photography. It has an information and travel bureau which answers 1,288,000 questions every year and a reference library with 7 million newspaper clippings, 3,500,000 photographs, 700,000 negatives, and microfilms of every edition going all the way back to the first in 1919. The News makes history, as well as records it.

Mr. Speaker, under leave to extend my remarks in the RECORD, it is indeed an honor to pay tribute to New York's picture newspaper on its golden anniversary by including Warren Hall's sprightly and informative history of the News:

WOULD IT LAST? YOU BET IT DID—50 YEARS AGO, WHEN THE NEWS WAS BORN, THE ODDS WERE STRONGLY AGAINST ITS SURVIVAL

(By Warren Hall)

There were a lot of good bets you could make in New York in 1919. You could bet

that prohibition wasn't going to stop you from getting a drink. You could bet prices were about to soar; some places were already charging 20 cents for a hamburger. You could bet stocks were going up; the Dow Jones averages had hit a new high.

But for the sure-thing bettor, the guy who was willing to lay odds that Monday was the day after Sunday, there was a real jimdandy. Five would get you fifty or a hundred or even more that the Illustrated Daily News, that funny-looking sheet that first appeared on June 26, wouldn't even last out the year.

Why should it? Seventeen English-language papers were being published in New York and every one of them looked a lot more like a newspaper than that silly little thing with 16 pages, each of them only 14 inches deep and four columns wide. "Illustrated" ought to mean something, but the first page of the first edition, for heaven's sake, was a picture of the Prince of Wales on a horse with a lot of fancy old-fashioned curlicues around it. And news? Hardly enough to last one stop on a subway. Mostly features like "Our Daily Pattern," "How to Keep Well," "Real Love Stories" and "Bright Sayings of Children." Call that a newspaper?

But there was more than that going against it. The masthead on page 5 said the publishers were R. R. McCormick and J. M. Patterson, who were easily identifiable as grandsons of the founder of the Chicago Tribune, playboy types, probably; the general manager was William H. Field, who had been business manager of the Chicago Tribune; the business manager was George Utassy, an old Hearst man; and the managing editor was Arthur L. Clarke.

Utassy and Clarke were the only ones who knew anything about New York; the rest of the staff were either casual pick-ups or had been drafted from the Tribune. And the word was that McCormick was interested only in the Tribune while the New York baby was being run—by remote control from Chicago—by Patterson.

Last the year out? Another couple of bucks, Spike, and you can make it Thanksgiving.

But even sure-thing bets can go wrong. As anybody who wants to look at a calendar or count on his fingers can easily determine, the News this year is celebrating its fiftieth birthday. It was a close thing, though, for a while. The first day's 150,000 copies were grabbed up quickly but interest soon lagged and there was one black day in August when only about 11,000 were sold.

Even Max Annenberg, the big-shot circulation manager from the Chicago Tribune, who had insisted on starting the paper off with a beauty contest (first prize, $10,000) and had spent $42,000 advertising it, was ready to give up. "Boss, we're licked," he told the general manager. "We better pick up the marbles and go home." But the paper held on. And then came the limerick contest.

It was a simple thing. Four lines of a limerick were published each day and $100 was offered for the best fifth line to be supplied by a reader. The excitement it engendered was unbelievable. The first limerick brought 10,497 entries. People at parties would produce a News and the rest of the evening would be spent composing last lines. It was fun, and a lot of people got acquainted with the News that way. And most of them liked what they saw.

Presumably conceived during a wartime meeting in France between Patterson and McCormick, both Army officers, the News (the "Illustrated" was abandoned after a few months) started on the raggediest type of shoestring. Office space was rented from another newspaper, the Evening Mail, at 25 City Hall Pl. for $166.67 a month with an arrangement to use the Mail's composing room and press room after that paper had finished its own operations for the day. It was an almost impossible situation and general manager Field began to look for some other arrangement. "Don't worry," Patterson said, "if we reach 100,000 by the end of the year, we'll find our own place." Thanks mainly to the limerick contest, that goal was reached.

Advertising was so scarce, however, that one prized early ad was shifted by a Mail compositor to his own paper because he was sure the News didn't bother with such stuff.

The quarters into which the News finally moved in April, 1921—after 11 months of alterations—was almost a travesty. It had a frontage of 58 feet at 25 Park Place, ran through 128 feet to Murray St., was five stories high and about 40 years old. Basement and sub-basement had to be entirely rebuilt to accommodate the weight of the presses and most of the rest of the structure had to be drastically improved. And yet 25 Park Place was woefully inadequate by the time the building was occupied. Nobody could have foreseen the amazingly rapid strides taken by the newcomer. To be brief, in its fourth year the News attained the largest daily circulation of any newspaper in the country; by the seventh year the largest Sunday. For many years it has had more than twice the daily circulation of any U.S. paper.

The Sunday News was started two weeks after moving into Park Place and had 250,000 circulation in a month. The Evening Mail presses were still used for a time and by 1925 the Evening Telegram's presses had to be rented on nights when the press run was extra heavy. There had never been anything like it before and, the communications industry being what it is today, there probably never will be again.

Even though the News seemed to be, after a few changes, just what New Yorkers wanted, there were other fortunate factors. In other cities new papers were hotly fought by their rivals but the funny little newcomer to New York was blandly ignored at first. In fact, it was welcomed to the newspaper truck delivery system only because it shared the expense (until it developed its own delivery system, which was much more efficacious).

(For a time there seemed to be an unusual number of false fire alarms on Murray St. about the time the trucks were starting out with News deliveries but if they were efforts to hold up distribution of the paper they were too little and too late.)

Let no one get the idea that making the News what it is today was any kind of a lead-pipe cinch. The struggle to convince advertisers to use "The Stenographers' Gazette" was colossal and seemingly interminable. Paper supply was a constant problem—would there be enough rolls for the next week? Development of a staff that could turn out breezy, informative, terse stories was a city editor's nightmare. And then there was the problem of pictures.

A half dozen photographers were hired but they had to work with awkward equipment and in inadequate darkrooms. Events of importance were happening all over the world but getting pictures of them to New York seemingly took forever. For a while the News and the Chicago Tribune ran their own picture agency, Pacific and Atlantic photos, with men stationed in many parts of the globe and their deeds of derring-do to outrace rivals made the pony express resemble a canter through the park.

The News helped develop two methods of "telegraphing" pictures and then the Associated Press came along with its remarkably clear wirephotos which the News had exclusively in New York for five years.

Meanwhile, gradually, the paper was developing its own Pulitizer-prize winning photographic staff, now numbering half a hundred, who collect awards unceasingly and probably, as a group, are without rivals. At the same time the News was pioneering in color pictures for gravure reproduction.

J. M. Patterson, who really did control the paper from Chicago for a while, moved to New York in the mid-20s and guided its destinies with a sureness that many rival publishers haven't hesitated to call genius. The editorials he created by mental osmosis or thought transference were read even by those who turned first to the comic strips, most of which he also originated. He died in 1946.

So, when the News moved in 1930 to its big new building at 220 E. 42nd St., the paper was a unique editorial edifice so impressive in achievement that it matched its new home as an architectural masterpiece.

One lesson the sure-thing bettor must have learned after half a century—sometimes dark horses can sprout wings.

FIRSTS AND OTHER FACTS EXCLUSIVE TO THE NEWS

The News was the first New York City newspaper to grant editorial and commercial employes a five-day, 35-hour work week.

The first to give its employees a non-contributory pension and welfare plan.

The first to start a company blood bank in cooperation with the Red Cross.

Pioneered and perfected the Specta-Color process which permits inclusion of pre-printed, four-color gravure inserts in the daily paper. (Our front and back pages on the Apollo 10 moon mission last month were examples.)

Started "A Friend in Need" department, now in its 50th year of service to New Yorkers.

Devised the split-run technique of production ("your ad in every other copy").

Has America's largest circulation—Daily 2,092,143 and Sunday 3,176,962 (latest annual averages).

Among hundreds of other awards, has won Pulitzer Prizes for editorial writing, editorial cartoon, distinguished international reporting, and news photography (in 1956, the first time the honor went to a newspaper's entire staff instead of a single cameraman.)

Uses more than 350,000 tons of newsprint annually. (Two huge newsprint mills at Baie Comeau, Canada, are owned by the Chicago Tribune-New York News Syndicate Inc.)

Has an information and Travel Bureau which answers 1,288,000 questions every year.

Has a reference library with 7,000,000 newspaper clippings, 3,500,000 photographs, 700,000 negatives, and microfilms of every edition of The News going all the way back to the first, June 26, 1919.

Has a fleet of 11 radio cars to speed reporters and photographers to the scene of stories. Owns and operates two airplanes for photos.

With a view toward further expansion, has acquired a 23-acre site zoned for industrial development in Long Island City, Queens.

GRAND OPENING—NEW PIER 21

(Mr. MURPHY of New York asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. MURPHY of New York. Mr. Speaker, on June 25, 1969, the Pouch Terminal, Clifton, Staten Island, N.Y., opened a new pier No. 21 which was the first new pier facility in the Port of New York opened by a private operator in my memory.

The pier structure is 830 feet long and 160 feet wide with a 131,750-square-foot area. It contains the most modern equipment, including 30-foot-wide stringpieces for handling containers as well as palletized and general cargo. The shed itself features loading platforms, truck levelers, automatic door and sprinkler systems, powered ventilation and many more new features. The pier also features a heliport which is located at the sea end. It is the only steamship pier in the Port of New York with a heliport.

The piers at this terminal are the closest in the port to the sea, and are virtually on the deep water channel. Cargo vessels are afforded the shortest possible

turnaround time. With the Verrazano-Narrows Bridge, the longest of its kind in the world, and the Clove Lakes Expressway, the terminal is easily accessible to all major highways and expressways.

In my remarks at the opening I complimented the Staten Island International Longshoremen's Association for their great productivity rate which is the highest in the port, and which also has a minimum of work stoppages—a clear understanding that good labor-management relations are necessary for success in business.

My congratulations to Mr. A. T. Pouch, Jr., president of Pouch Terminal; the Pittston Stevedoring Corp.; and the Barber Steamship Lines whose action today will insure the continuance of Staten Island as a necessary and expanding part of the port facilities in New York.

THE FEDERAL ROLE IN AIR RIGHTS HOUSING

The SPEAKER. Under a previous order of the House, the gentleman from New York (Mr. FARBSTEIN) is recognized for 30 minutes.

Mr. FARBSTEIN. Mr. Speaker, one of the major obstacles to the construction of low- and moderate-income housing in our central cities is the excessively high cost of land. One new tool which we in New York City have been experimenting with for the last several years to overcome this obstacle is the use of air space over public buildings for low- and moderate-income housing.

I personally have been involved in the fight for air rights housing since 1963, when the Post Office Department announced its intention of expanding the present Morgan Street Post Office into the adjoining block and thereby displacing a last number of low- and moderate-income families from their perfectly sound housing. At the time, the idea of building low- and moderate-income housing above the air rights of the new postal facility was put forth as a means of permitting those displaced from their homes to relocate in the same neighborhood.

This idea seemed an extremely logical and commonsense idea, one of those ideas which when someone proposes it, you wonder why you didn't think of it first. And most importantly, the community was excited about the idea. I was able to get the Post Office Department to "seriously consider" the proposal to construct the Nation's first combination postal building with an apartment development rising above it, and the then Secretary of Housing and Urban Development, Robert C. Weaver, to undertake discussions with the New York City Housing Authority on this question. Secretary Weaver indicated to me that he "was intrigued with the idea as an interesting approach." The task force Postmaster General Blount has engaged to review this project has similarly expressed to me an interest in the concept.

Another example of the utilization of the concept of air rights housing comes in connection with the proposed construction of middle-income apartments over the Food Trades High School, located on 10th Avenue between 50th and 51st Streets in my district. The board of education recently agreed to include such housing in its plan, and the plan was accepted by the zoning board.

These and other experiences with this concept suggest that it can serve as an extremely useful tool in making more low- and moderate-income housing available in central cities. The Federal Government, as a major builder in many central cities, can do much to encourage the development of this concept by vigorously encouraging its implementation in connection with new Federal construction, where it is feasible. The Fed-Government, as the operator of numerous low- and moderate-income housing programs, can similarly encourage this concept by putting mortgage guarantees and other programs at the disposal of air rights housing projects constructed over Federal air rights.

To eliminate the one possible legal obstacle to the active envolvement of the Federal Government in this field, I have today joined in cosponsoring H.R. 12462, legislation to eliminate the requirement imposed by 40 U.S.C. 484(e)(3)(G) that the Federal Government must receive fair market value on surplus property disposed of through noncompetitive bidding. In certain cases, this requirement might make it economically difficult to develop low-income housing over Federal air rights.

However, in most cases, even with this requirement in effect, it is economically feasible. All that is needed is the active encouragement and support of the Federal Government. To this end I recently wrote the Secretary of the Department of Housing and Urban Development, the Honorable George Romney, and the Administrator of the General Services Administration, urging them to establish as Federal policy the utilization of air rights over Federal buildings, where appropriate, for low- and moderate-income housing.

We need not wait for passage of H.R. 12462. There is much that can be done now by administrative action. Indeed, executive initiative in this area is imperative, for even if H.R. 12462 were passed today, it would be meaningless unless the executive acted vigorously to encourage air rights housing.

My letter to Secretary Romney follows:

JUNE 24, 1969.

Hon. GEORGE W. ROMNEY,
Secretary of Housing and Urban Development, Department of Housing and Urban Development, Washington, D.C.

DEAR MR. SECRETARY: One of the major obstacles to the construction of enough low and moderate income housing to meet the demands of our central cities is the excessively high cost of land.

There is a simple course of action which the Federal government can take to overcome a part of this problem, which is suggested by the experience of New York City. This is the utilization of air rights over public buildings for low and moderate income housing.

The construction of public facilities in the central city frequently imposes a severe hardship on those living in the site to be taken over. The hardship is particularly great since the land most frequently taken is in low and moderate income communities. Relocation causes tremendous problems to those forced from their homes. The facilities constructed hurt all, however, by eliminating potentially available residential housing. This contributes to the rising cost of the remaining units.

I have been advocating for more than the last six years, the utilization of air rights over public buildings in my District as a means of permitting those displaced from their homes to relocate in the same neighborhood. The New York City Board of Education has agreed to construct middle income apartments on the air rights over the proposed Park West High School located on 10th Avenue between 50th and 51st Streets. This comes after more than two years of efforts on my part. The high school is located in the Chelsea community in New York City, which is in desperate need of new housing. Land costs per dwelling unit in the area vary between $4,590 and $7,920. This makes the development sites solely for low or moderate income housing extremely difficult. This approach represents a common sense way of meeting the communities need for residential and educational facilities.

There is also the example of the proposed Morgan Post Office extension, to be located on 28th and 29th Streets between 9th and 10th Avenues. This facility has displaced a large number of families from low and moderate income housing. Since 1963, I have been advocating utilization of the air rights over the proposed postal facility for low and moderate income housing. As far back as March 1965, the Post Office Department indicated it was seriously considering my proposal. Your predecessor, Robert Weaver, indicated that he was intrigued by my idea. When I again requested the consulting firm hired by Postmaster General Blount to investigate the future development of the Morgan facility, it, too, saw it as an approach deserving of serious consideration.

I am writing to urge you to take advantage of this concept and to establish as Federal policy, this common sense approach. The air rights over new Federal facilities, where feasible, should be used for the construction of low and moderate income housing. I have been in communication with your predecessor on this subject as aforementioned, however, I never received a definite answer. I would greatly appreciate a clear statement on this question from you and from the Administrator of the General Services Administration, to whom I have also sent a copy of this letter. Only by the full use of available facilities by the Federal government as well as other sectors of our society, can the goals set forth by Congress in the 1968 Housing Act to bring decent housing to all be accomplished. This is an added tool to accomplish what I know you seek as I do.

With kind regards, I am,

Sincerely yours,

LEONARD FARBSTEIN,
Member of Congress.

HUNGER AND FARM PAYMENTS

The SPEAKER. Under a previous order of the House, the gentleman from Illinois (Mr. FINDLEY) is recognized for 30 minutes.

Mr. FINDLEY. Mr. Speaker, in the last few days, two documents have been released which, when set side by side, show dramatically the existence of widespread hunger and malnutrition in many counties in which food production is deliberately curbed at high cost to the taxpayer.

The first document is a table produced by the U.S. Department of Agriculture entitled "Food Assistance Programs, Percent of Persons Participating in County and City Administrative Units." This table lists more than 2,500 counties in the country which have either a commodity distribution or food stamp program. The sad fact is that in the aver-

age county in the United States, less than 20 percent of the families with incomes of under $3,000 annually are receiving food benefits under either program.

The second document recently released is a 5-pound, 2-inch-thick book listing by name, address, and amount received, over 100,000 farmers in the United States, each of whom collected more than $5,000 last year for not growing crops. This list of names shows that farmers in some of the counties with the worst records of feeding their poor received hundreds of thousands of dollars in Federal payments not to produce food.

After research with the Department of Agriculture, Office of Economic Opportunity, Bureau of the Census, and Library of Congress Legislative Reference Service, I am convinced that these documents present the most accurate information presently available. Admittedly, it does suffer from certain limitations. It should be pointed out that the number of poor in each county has been derived from the 1960 census, the most recent year for which statistics are available. In the intervening years, the number of poor families have undoubtedly declined, and in addition many of these families may have changed their residences from one county to another.

Nevertheless, making adjustments for such limitations, these statistics disclose shocking facts.

These facts have special significance at this time because the Congress is now considering the imposition of a $20,000 annual limitation on total payments any farmer may receive and a substantial expansion and reform of Federal programs of food aid to the poor. An official study completed last fall in the U.S. Department of Agriculture concluded that such a payment limitation on Federal farm payments could effect budget savings as high as $300 million per year. President Nixon has recently asked for an additional $270 million to expand and reform the existing food-aid program. Therefore, it is apparent that the savings to be derived from placing a $20,000 ceiling on payments to wealthy farmers could be used to fund an expanded program to feed the poor.

Here are the grim facts:

First. Relatively few poor families are served by Federal food-aid programs. According to the Senate Select Committee on Nutrition and Human Needs, the average county with a food stamp program reaches only 10 percent of its poor families; the average county with a commodity distribution program reaches only 18 percent.

Second. The low percentage of poor families served is especially shocking in some of the leading food-producing States in the Nation, such as Illinois, Indiana, Iowa, Kansas, Michigan, Minnesota, Missouri, Ohio, and Wisconsin.

Third. In these very States where the poor go hungry, the number of farmers receiving over $5,000 and the total amounts received last year skyrocketed—in one case by as much as five times that of the previous year. The following table sets this out clearly for these nine States:

Participation in median food program	Percent	Farm payments over $5,000: Number of payees 1967	Number of payees 1968	Total amount paid (in millions) 1967	Total amount paid (in millions) 1968
Illinois	8	1,305	4,248	$10.0	$34.8
Indiana	7	829	2,881	6.6	24.3
Iowa	10	1,179	6,047	8.8	46.1
Kansas	7	7,598	8,806	63.5	75.2
Michigan	22	428	745	3.1	5.7
Minnesota	11	1,087	2,394	8.3	17.6
Missouri	18	2,546	3,906	24.3	35.7
Ohio	11	527	1,429	3.9	11.5
Wisconsin	13	194	518	1.5	4.2

Fourth. Total payments nationally under the various farm programs have risen steadily since 1966, the year for which this data was first made public. According to the Department of Agriculture, it may be expected to increase still further this year if Congress does not step in and bring this situation under control by enacting a limitation on farm payments.

Farm payments over $5,000—total figures

Number of payees	Total amount paid
87,527 (1966)	$1,018,676,430
91,887 (1967)	1,114,617,466
107,745 (1968)	1,330,633,218

In recent years, total payments in excess of $5,000 to farmers have increased annually by $100 to $150 million.

Fifth. In certain counties where participation in Federal food-aid programs was abysmally low, payments to farmers for non-production was unconscionably high. The following counties fed fewer than 1 percent of their poor families, yet wealthy farmers in those counties received large farm payments from the Government:

Counties with less than 1 percent participation in food-aid programs	Farm payments over $5,000: Number of payees	Total amount paid
Illinois:		
Bureau	102	$797,041

Nodaway	67	552,226
Perry	7	138,105
Schuyler	8	52,260
Virginia: Mecklenburg	1	6,279

The data I am placing in the RECORD today makes it apparent that simply having a food-aid program in a county is often little better than having no program at all. A program which feeds as few hungry families as is presently true in the average food-aid program in the United States is worse than a failure. It is a cruel joke, falling woefully short of serving the needs of the hungry and the poor, and at the same time deceiving every thoughtful American citizen who has a conscience. It masquerades under an undeserved label, pretending to be something that it is not.

This data raises a serious moral question and a serious question of priorities. There is something very wrong when a nation fails to feed its hungry, yet at the same time pays its farmers not to produce food. After I placed in the May 12th RECORD the list of the 425 counties without any food-aid program whatsoever, I received many requests for copies of that list from concerned citizens all over the Nation. Often those writings expressed shock and surprise that their own counties failed to provide food for the hungry. Yet each wanted to do something about this deplorable situation.

I am encouraged when this is the response of concerned citizens. I am hopeful that this will also be the response of a concerned Congress.

The statistical data on hunger and farm payments follows. In preparing the table from which the percentage figures are taken, the Consumer and Marketing Service of the U.S. Department of Agriculture stated that its computation was based on program participation as of February 1969, and information from the 1960 census on families with incomes under $3,000. The data on farm payments is from part 3, Senate hearings on Agriculture and related agencies appropriations for fiscal 1970.

THE TRAVESTY IN RHODESIA

The SPEAKER. Under a previous order of the House, the gentleman from Michigan (Mr. DIGGS) is recognized for 15 minutes.

Mr. DIGGS. Mr. Speaker, it would be recalled that on Friday, June 20, 1969, the world witnessed yet another display of desperate courage by the Ian Smith regime in Rhodesia in the conduct of a referendum by which the people of that territory are said to have decisively voted to turn that colony into an independent Republic. By that act, the Smith government has severed all remaining links with Britain. And as we sit here today, it is very likely that a new constitutional bill is being placed before the Parliament of Rhodesia to give "legality" to the results of that referendum.

Our State Department has correctly labeled this referendum a "travesty." Commenting on the referendum, a State Department spokesman stated:

> The United States deplores the fact that constitutional proposals clearly designed to intensify and institutionalize political control by the small white minority are now about to be given effect as a result of the referendum.

He also indicated that the closing of the U.S. consulate in Salisbury accredited to the British Governor was under study.

The Rhodesian problem and its related facts have been well-known to us all since UDI in 1965. Opinions, for and against, have been expressed by many in this House and elsewhere. The protagonists of the drama have adopted several disingenuous devices to circumvent the basic issue that has given rise to the crisis, namely; the creation of conditions which should lead to ultimate independence of that country with majority rule.

Today, there is rejoicing in certain quarters that the destiny of 4.8 million Africans in Rhodesia should perpetually be subjected to the whims and caprices of a white-settler minority of some 228,000 people. There is joy over the fact that out of that huge population, only a little over 9,000 Africans are eligible to exercise their political right under an electoral system which would, for the rest of the 20th century—if not forever—make it absolutely impossible for the Africans to take effective and meaningful part in the Government of their own land.

What is even more disquieting is the fact that some people who pride themselves in the knowledge, principles, and practice of democracy should find nothing obnoxious about the Rhodesian situation, nor incongruous with those principles they so admirably espouse. It appears our so-called free men do cherish freedom and recognize the sanctity of freedom for themselves and their kith and kin but not for others.

It is equally disheartening to note that by adopting half-hearted and ineffective measures, the British Government, which has primary responsibility for the colony, has woefully failed to end the Smith rebellion. No doubt, the weakness displayed by the British Government and its pleasant idleness have emboldened Mr. Smith and his followers to pursue with matchless effrontery a policy which does not safeguard the rights of the majority of the people of Rhodesia and is completely insensitive to intelligent and just world opinion about the political and social conditions in that territory.

Strangely, by the intransigence of the Smith regime and its reactionary supporters, some are tempted to draw parallels least appropriate between the Rhodesian situation and that of the 13 American Colonies in 1776. I submit that these parallels are not only inappropriate because of the differing circumstances of the two cases but that they seem to be a dishonest evasion of historical truths of the American revolution and show scant regard for political realities of our day, in general, and especially of Africa.

It might here be recalled that the chief immediate cause for the 1776 rebellion was the continued imposition of taxation by Britain on the Colonies when those Colonies were not represented in the legislature that ruled over them. However, the Rhodesian situation is one in which the African majority do pay taxes commensurate with their meager earnings but they are practically not represented in the government that rules over them.

In other words, while the Thirteen American Colonies in the 18th century considered their interest uncatered for in the British Parliament that governed them from some 6,000 miles away, the interests of the Rhodesian-Africans are neglected by the Government which is supposed to be their National Government while those of the white settler minority are jealously guarded. Hence the conflict in the former was primarily one between the mother country and the colony whereas the latter is an instance of gross violation of the rights of the majority by the minority within the borders of one territory. It is this one fundamental issue which has sparked off the protracted debate between the British Government and the Smith regime.

Again, the times have changed and while colonialism is no longer fashionable, the practice of minority rule over the vast majority is considered grossly unjust and most unacceptable. These are the basic differences between the American Revolution and the Rhodesian rebellion.

The present political picture of Rhodesia is full of repelling prospects and the white settlers and their supporters would do well to note that they are embarked upon a long and hazardous political adventure. If they are really keen on reading and learning from history, one would hope that in due course when the indigenous people of Zimbabwe and Africans more effectively assert themselves in that territory, Mr. Smith and his group would have the opportunity to draw the appropriate historical lessons about the measures for dealing with oppressive and unpopular regimes. Then, and only then, would they realize that they had attempted to live in a dreamland and pretended to be riding the surf while in effect they swam perilously against strong currents.

Meanwhile, I would like to urge that the U.S. consulate be withdrawn immediately. It is clear that the prospect of a settlement between the illegal white regime in Rhodesia and the British Government is no longer possible. We should move decisively by withdrawing our representative.

Second, I would urge that our Government support action in the United Nations which would lead to the blockading of the sanction-breaking ports in the Portuguese-held territory of Mozambique and the minority-ruled country of South Africa. If a minority white regime is a travesty in Rhodesia, so are the same kind of regimes also a travesty in Mozambique and South Africa. We should support U.N. action against these countries which have aided and abetted the violation of the mandatory sanctions voted by the U.N.

Third, I would urge that our Government use all its diplomatic resources to protest the violation of sanctions by those states which are not upholding the sanctions on Rhodesia voted by the U.N. These states include not only South Africa and Portugal, but France, Switzerland, West Germany, and Japan.

These steps are the minimal measures which the United States can take to show its support for majority rule and nonracialism in southern Africa.

AID TO FAMILIES WITH DEPENDENT CHILDREN—CONFERENCE REPORT

Mr. MILLS submitted the following conference report and statement on the bill (H.R. 8644) to make permanent the existing temporary suspension of duty on crude chicory roots, and for other purposes:

CONFERENCE REPORT (H. REPT. No. 91-330)

The committee of conference on the disagreeing votes of the two Houses on the amendments of the Senate to the bill (H.R. 8644) to make permanent the existing temporary suspension of duty on crude chicory roots, having met, after full and free conference, have agreed to recommend and do recommend to their respective Houses as follows:

That the House recede from its disagreement to the amendments of the Senate numbered 1 and 2 and agree to the same.

W. D. MILLS,
HALE BOGGS,
JOHN C. WATTS,
JOHN W. BYRNES,
JAMES B. UTT,
Managers on the Part of the House.

RUSSELL B. LONG,
CLINTON P. ANDERSON,
ALBERT GORE,
FRED HARRIS,
JOHN J. WILLIAMS,
WALLACE BENNETT,
CARL T. CURTIS,
Managers on the Part of the Senate.

STATEMENT

The managers on the part of the House at the conference on the disagreeing votes of the two Houses on the amendments of the Senate to the bill (H.R. 8644) to make permanent the existing temporary suspension of duty on crude chicory roots, submit the following statement in explanation of the effect of the action agreed upon by the conferees and recommended in the accompanying conference report:

Amendment No. 1: The Senate amendment No. 1 repeals section 403(d) of the Social Security Act. This section imposed (for any quarter after June 1969) certain limitations on the number of dependent children under 18 who, because of a parent's absence, may receive AFDC with Federal financial participation. The limitations are relaxed for certain States which, in compliance with a judicial decision, effectuated a policy of providing AFDC to persons not otherwise eligible for such aid.

The House recedes.

Amendment No. 2: Under section 1113 of the Social Security Act the Secretary of Health, Education, and Welfare is authorized to provide temporary assistance to certain citizens of the United States and to dependents of citizens of the United States. Subsection (d) of such section provides that no temporary assistance may be provided under section 1113 after June 30, 1969. Senate amendment No. 2 extends the period through June 30, 1971.

The House recedes.

W. D. MILLS,
HALE BOGGS,
JOHN C. WATTS,
JOHN W. BYRNES,
JAMES B. UTT,
Managers on the Part of the House.

LEAVE OF ABSENCE

By unanimous consent, leave of absence was granted as follows:

To Mr. PODELL, for Friday, June 27, 1969, on account of official business.

SPECIAL ORDERS GRANTED

By unanimous consent, permission to address the House, following the legislative program and any special orders heretofore entered, was granted to:

Mr. FINDLEY, for 30 minutes, today; to revise and extend his remarks and include extraneous matter.

(The following Members (at the request of Mr. CLAY); to revise and extend their remarks and to include extraneous matter:)

Mr. DIGGS, for 15 minutes, today.

Mr. CULVER, for 10 minutes, today.

Mr. CHAMBERLAIN (at the request of Mr. SEBELIUS), for 30 minutes, on June 27; to revise and extend his remarks and include extraneous matter.

EXTENSION OF REMARKS

By unanimous consent, permission to revise and extend remarks was granted to:

(The following Members (at the request of Mr. SEBELIUS) and to include extraneous matter:)

Mr. PETTIS.

Mr. MINSHALL.

Mr. CHAMBERLAIN.

Mr. MCKNEALLY.

Mr. LANDGREBE.

Mr. SKUBITZ in two instances.

Mr. MILLER of Ohio.

Mr. BROTZMAN.

Mr. RHODES in five instances.

(The following Members (at the request of Mr. CLAY) and to include extraneous matter:)

Mr. MANN in six instances.

Mr. BIAGGI.

Mr. MURPHY of New York in two instances.

Mr. FRASER.

Mr. JACOBS.

Mr. CORMAN in two instances.

Mr. GONZALEZ in two instances.

Mr. PATMAN in three instances.

ADJOURNMENT

Mr. CLAY. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 12 o'clock and 21 minutes p.m.), under its previous order, the House adjourned until tomorrow, Friday, June 27, 1969, at 11 o'clock a.m.

EXECUTIVE COMMUNICATIONS, ETC.

Under clause 2 rule XXIV, executive communications were taken from the Speaker's table and referred as follows:

890. A letter from the Comptroller General of the United States, transmitting a report on the effectiveness and administration of the Cispus Job Corps Civilian Conservation Center, Randle, Wash., operated by the Forest Service, Department of Agriculture, under an interdepartmental agreement with the Office of Economic Opportunity, pursuant to the Economic Opportunity Act of 1964; to the Committee on Education and Labor.

891. A letter from the Assistant Administrator for Program and Policy, Agency for International Development, Department of State, transmitting a report on the programing and obligation of contingency funds for the third quarter of fiscal year 1969, pursuant to the provisions of section 451(b) of the Foreign Assistance Act of 1961, as amended; to the Committee on Foreign Affairs.

892. A letter from the Chairman, U.S. Civil Service Commission, transmitting a draft of proposed legislation to amend title 5, United States Code, to establish a visiting scientist and scholar program in the Federal Government; to the Committee on Post Office and Civil Service.

REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS

Under clause 2 of rule XIII, reports of committees were delivered to the Clerk for printing and reference to the proper calendar, as follows:

Mr. TAYLOR: Committee on Interior and Insular Affairs. House Joint Resolution 247. Joint resolution relating to the administration of the national park system; with amendment (Rept. No. 91-329). Referred to the Committee of the Whole House on the State of the Union.

Mr. MILLS: Committee of conference. Conference report on H.R. 8644 (Rept. No. 91-330). Ordered to be printed.

PUBLIC BILLS AND RESOLUTIONS

Under clause 4 of rule XXII, public bills and resolutions were introduced and severally referred as follows:

By Mr. BRASCO:

H.R. 12451. A bill to amend chapter 83, title 5, United States Code, to eliminate the reduction in the annuities of employees or Members who elected reduced annuities in order to provide a survivor annuity if predeceased by the person name as survivor and permit a retired employee or Member to designate a new spouse as survivor if predeceased by the person named as survivor at the time of retirement; to the Committee on Post Office and Civil Service.

H.R. 12452. A bill to provide increased annuities under the Civil Service Retirement Act; to the Committee on Post Office and Civil Service.

H.R. 12453. A bill to amend the Internal Revenue Code of 1954 to provide that the first $5,000 received as civil service retirement annuity from the United States or any agency thereof shall be excluded from gross income; to the Committee on Ways and Means.

H.R. 12454. A bill to amend the Internal Revenue Code of 1954 to restore to individuals who have attained the age of 65 the right to deduct all expenses for their medical care, and for other purposes; to the Committee on Ways and Means.

By Mr. COHELAN:

H.R. 12455. A bill to establish a National Commission on Pesticides, and to provide for a program of investigation, basic research, and development to improve the effectiveness of pesticides and to eliminate their hazards to the environment, fish and wildlife, and man; to the Committee on Agriculture.

By Mr. DINGELL:

H.R. 12456. A bill to amend the Solid Waste Disposal Act too require an investigation and study of the decomposability and destructibility of materials; to the Committee on Interstate and Foreign Commerce.

By Mr. DORN:

H.R. 12457. A bill to amend the Communications Act of 1934 to establish orderly procedures for the consideration of applications for renewal of broadcast licenses; to the Committee on Interstate and Foreign Commerce.

By Mr. EDWARDS of California:

H.R. 12458. A bill to amend the Food Stamp Act of 1964, and other acts, to provide adequate food and nutrition among low-income households, and for other purposes; to the Committee on Agriculture.

By Mr. FARBSTEIN:

H.R. 12459. A bill to amend the Communications Act of 1934 to prohibit the granting of authority by the Federal Communications Commission for the broadcast of pay television programs; to the Committee on Interstate and Foreign Commerce.

By Mr. GIAIMO:

H.R. 12460. A bill to permit State agreements for coverage under the hospital insurance program for the aged; to the Committee on Ways and Means.

By Mr. HALPERN:

H.R. 12461. A bill to amend chapters 31, 34, and 35 of title 38, United States Code, in order to increase the rates of vocational rehabilitation, educational assistance, and special training allowances paid to eligible veterans and persons under such chapters; to the Committee on Veterans' Affairs.

By Mr. KOCH (for himself, Mr. ADDABBO, Mr. BIAGGI, Mr. BINGHAM, Mr. BRASCO, Mr. CAREY, Mrs. CHISHOLM, Mr. FARBSTEIN, Mr. GILBERT, Mr. LOWENSTEIN, Mr. MURPHY of New York, Mr. PODELL, Mr. POWELL, Mr. ROSENTHAL, and Mr. RYAN):

H.R. 12462. A bill to authorize the Administrator of General Services to transfer certain airspace for use for housing purposes; to the Committee on Public Works.

By Mr. MCMILLAN:

H.R. 12463. A bill to amend title II of the Social Security Act so as to liberalize the conditions governing eligibility of blind per-

sons to receive disability insurance benefits thereunder; to the Committee on Ways and Means.

By Mr. MILLS (for himself, Mr. ALEXANDER, Mr. BELCHER, Mr. CAMP, Mr. EDMONDSON, Mr. HAMMERSCHMIDT, Mr. JARMAN, Mr. PRYOR of Arkansas, and Mr. STEED):

H.R. 12464. A bill to provide that U.S. district courts shall have jurisdiction of certain cases involving interstate compacts relating to the apportionment of the waters of interstate river systems; to the Committee on the Judiciary.

By Mr. MONAGAN:

H.R. 12465. A bill to permit State agreements for coverage under the hospital insurance program for the aged; to the Committee on Ways and Means.

By Mr. ROBISON:

H.R. 12466. A bill to provide for orderly trade in footwear; to the Committee on Ways and Means.

By Mr. STOKES:

H.R. 12467. A bill relating to withholding, for purposes of the income tax imposed by certain cities, on the compensation of Federal employees; to the Committee on Ways and Means.

By Mr. KOCH (for himself, Mr. BROWN of California, Mr. BINGHAM, Mr. FRASER, Mr. HALPERN, Mr. MIKVA, Mr. MOORHEAD, Mr. MOSHER, Mr. PEPPER, Mr. PODELL, Mr. ROSENTHAL, Mr. RYAN, Mr. SCHEUER, and Mr. CHARLES H. WILSON):

H.J. Res. 798. Joint resolution to establish a Joint Commission of the United States, the Republic of South Vietnam, and the International Commission for Supervision and Control in Vietnam to study the ecological effects of chemical warfare in Vietnam; to the Committee on Foreign Affairs.

By Mr. McCARTHY (for himself, Mr. ANDERSON of California, Mr. ASHLEY, Mr. CAREY, Mr. COHELAN, Mr. DULSKI, Mr. FARBSTEIN, Mr. GILBERT, Mr. HORTON, Mr. HOWARD, Mr. HUNGATE, Mr. JOELSON, Mr. LEGGETT, Mr. MACDONALD of Massachusetts, Mr. MATSUNAGA, Mr. MORSE, Mr. MOSHER, Mr. OBEY, Mr. OLSEN, Mr. POWELL, Mr. PREYER of North Carolina, Mr. RIEGLE, Mr. THOMPSON of New Jersey, and Mr. TUNNEY):

H. Res. 457. Resolution urging the President to resubmit for ratification the Geneva Protocol of 1925 banning the first use of gas and bacteriological warfare; to the Committee on Foreign Affairs.

MEMORIALS

Under clause 4 of rule XXII,

230. The SPEAKER presented a memorial of the Legislature of the State of Connecticut, relative to welfare assistance, which was referred to the Committee on Ways and Means.

SENATE—*Thursday, June 26, 1969*

The Senate met at 12 o'clock noon and was called to order by the Vice President.

The Chaplain, the Reverend Edward L. R. Elson, D.D., offered the following prayer:

O Lord, who knowest how busy we must be this day, if we forget Thee, do not forget us. Enable us to walk and talk and work mindful of Him who under heavy burdens and in the midst of controversy kept a tranquil heart. When the evening comes, and we pillow our heads and sleep, nature's great restorer, comes over us, may we hear Thy gentle voice saying, "Well done, good and faithful servant." Amen.

MESSAGES FROM THE PRESIDENT

Messages in writing from the President of the United States submitting nominations were communicated to the Senate by Mr. Leonard, one of his secretaries.

EXECUTIVE MESSAGES REFERRED

As in executive session,

The VICE PRESIDENT laid before the Senate messages from the President of the United States submitting sundry nominations, which were referred to the appropriate committees.

(For nominations this day received, see the end of Senate proceedings.)

MESSAGE FROM THE HOUSE— ENROLLED JOINT RESOLUTION SIGNED

A message from the House of Representatives by Mr. Hackney, one of its reading clerks, announced that the Speaker had affixed his signature to the enrolled joint resolution (H.J. Res. 790) making continuing appropriations for the fiscal year 1970, and for other purposes, and it was signed by the Vice President.

THE JOURNAL

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the reading of the Journal of the proceedings of Wednesday, June 25, 1969, be dispensed with.

The VICE PRESIDENT. Without objection, it is so ordered.

TRANSACTION OF ROUTINE MORNING BUSINESS

Mr. MANSFIELD. Mr. President, I ask unanimous consent that statements in relation to the transaction of routine morning business be limited to 3 minutes.

The VICE PRESIDENT. Without objection, it is so ordered.

COMMITTEE MEETINGS DURING SENATE SESSION

Mr. MANSFIELD. Mr. President, I ask unanimous consent that all committees be authorized to meet during the session of the Senate today.

The VICE PRESIDENT. Without objection, it is so ordered.

EXECUTIVE SESSION

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the Senate go into executive session to consider the nominations on the executive calendar.

There being no objection, the Senate proceeded to consider executive business.

DEPARTMENT OF THE INTERIOR

The bill clerk read the nomination of Charles H. Meacham, of Alaska, to be Commissioner of Fish and Wildlife, Department of the Interior.

Mr. STEVENS. Mr. President, Charles H. Meacham is 43 years old, married and has two sons. He is an Alaskan and has been nominated to be Commissioner of Fish and Wildlife in the Department of the Interior.

The Commerce Committee has reported favorably on his nomination and he now awaits the action of this body.

Chuck Meacham is uniquely qualified for this important Federal position. Raised in the Sierra Nevada Mountains, he is a former marine raider in the South Pacific theater. He will bring to this position 19 years of varied experience in fish, wildlife, research, and management, both in California and Alaska. He has served as the Alaska Director of International Fisheries, and is an adviser to the Commissioners of the International North Pacific Fisheries Commission, a member of the U.S. Fishing Industry Advisory Committee of the U.S. State Department and Alaska's senior member of the Alaska-Japan Fisheries Panel Joint Research Venture.

Mr. President, the fact that we are acting on this nomination is an historical accident. When the Division of Fish and Wildlife was elevated to the secretarial level, and the position of Assistant Secretary for Fish and Wildlife was created, the position of Commissioner of Fish and Wildlife still remained subject to confirmation.

This fact does not diminish the duty we have. I mention this only to indicate that Mr. Meacham's major duties will be in the area of international conferences, and that he has demonstrated his ability in this area to an unquestionable degree.

An objection was raised prior to the hearings on Chuck Meacham. The objection is based on his role during an incident on the Kuskokwim River.

Mr. President, approximately 1 year ago a group of fishermen in the Bethel area formed a cooperative and invited a Japanese freezer ship to the area to purchase and process their catch. The Japanese said they would come to Alaska if the Governor approved. The Governor of Alaska, Walter Hickel, after considering the long-range aspects of the North Pacific Treaty arrangements with Japan, and after consultation with his director of international fisheries, Stanton Patty, did not consent to the proposed transaction.

Mr. Meacham was sent to the area to carry out the Governor's directions. He made no policy. His sole role was that of an able junior officer responding to his superior's orders.

The Kuskokwim incident had two

sides. On one hand were the members of the cooperative, who wanted the highest price their fish could bring and the processing of those fish before they spoiled. On the other hand was the work force of on-shore canneries. The entire history of the background to the North Pacific Treaty was also involved. Feelings were running high, as indicated by the following telegrams received by Governor Hickel during this period of time:

In general meeting of Kuskokwim Fishermen Association June 2, 1968, 108 members in attendance at Napakiak, Alaska, it was the expression of the group that under no circumstances should the Japanese freezer ship be allowed to come into the Kuskokwim River to purchase and process salmon.

That was signed by the business agent and by the Secretary. At the same time this petition signed by over 100 fishermen was sent to the Secretary:

DEAR GOVERNOR: In order to clarify the false reports that all the fishermen on the Kuskokwim River are in favor of the Japanese processing ship coming to Bethel, we the following fishermen would like to state that we are not in favor of this and take this opportunity to thank you for taking the stand you have on this controversial issue.

That was signed by 100 fishermen.

At the same time the Democratic State senator from that area, Ray Christianson, sent a telegram to Governor Hickel as follows:

On June 9th a meeting of fishermen was held at Napakiak, Alaska, with a delegation from all villages of the Lower Kuskokwim represented. The selling of fish to the Japanese freezer ship was discussed. The delegation unanimously voted against selling to the Japanese freezer ship. I ask you to support them in their decision.

I would point out, Mr. President, it said, "unanimously voted against selling to the Japanese freezer ship."

The point then is that Meacham went to Kuskokwim to carry out a policy already decided. The hearings held by the Commerce Committee showed that while he was at Bethel he did everything he could to prevent fish from spoiling, including the pledge of $900 of his own money for tubs to be used by the cooperative to store the fish. Only 450 out of 160,000 fish taken that year spoiled.

It is my opinion that this body should not concern itself with the correctness of the decision made by Governor Hickel. This incident is over, but the controversy still exists, as evidenced by a telegram recently received which states in pertinent part:

The action of the Secretary and Mr. Meacham in preventing the Japanese from purchasing unprocessed fish here, met and still meets with the approval of over 95 percent of the 600 Commercial Eskimo Fishermen. I think it is about time that someone be told how the people feel and not what the imported poverty worker thinks they should feel concerning the Japanese and the Kuskokwim River. Andy Edge Business Representative Association of Kuskokwim Fishermen.

Stanton Patty, who served as Alaska director of international fisheries, prior to Meacham, has written that:

It appears that the main "beef" against Chuck is his involvement in the Kuskokwim fisheries affair last year . . . I made the recommendation for that action . . . Chuck at that time was a State of Alaska Department of Fish and Game employee in Anchorage. I designated him to lead our team to Bethel, with the Governor's approval, and either gave him or directed to him all instructions he carried out. What I'm saying is that Chuck did what we told him. I don't know how he felt about the matter, but he did the job we told him to do. He had no part in the policy-making end of it.

I had to return to the Seattle Times staff last July 1 when my leave expired. Chuck then succeeded me in Alaska as Director of International Fisheries. I think he has done an excellent job.

Mr. President, since the nomination of Chuck has been announced, the reaction I have received has been all favorable. I have not received one unfavorable piece of mail regarding Meacham.

On March 20, 1969, I received the following telegram from Gov. Keith Miller, of Alaska:

I have today signed S.J.R. 29 titled-recommending the confirmation of Charles Meacham as Commissioner of the Fish and Wildlife Service, Department of the Interior. The 19 years of over-all experience in National and International Fisheries matters has proved that Mr. Meacham is more than qualified to represent all the Fisheries of the United States. This resolution passed both the Senate and the House without a dissenting vote from either side of the aisle. I personally recommend his confirmation by the U.S. Senate. Keith H. Miller, Governor.

Mr. President, I ask unanimous consent that Senate Joint Resolution 29 and related communications be included in full at the conclusion of my remarks.

The VICE PRESIDENT. There being no objection the material is ordered to be printed in the RECORD.

(See exhibit 1.)

Mr. STEVENS. Mr. President, I think that the above, as well as the hearings so ably conducted by Chairman MAGNUSON, clearly show that the sole concern of this body is whether or not Chuck Meacham has the ability, character, and integrity to fill the position for which he has been nominated. To determine this, we need look to his accomplishments already set forth in the hearing record, and the opinion others hold of him.

The support for Meacham has not been solely from Alaska. Communications have been received from other States, from individuals who know and admire him.

Edward and Leilemi Keough, of Alexandria, Va., telegramed me the following message:

Have worked with Meacham and know him as a man of integrity with proven leadership and administrative ability.

The response has come from biologists, conservationists, fishermen, Congressmen, and businessmen.

On May 27, 1969, the executive committee of the Pacific Marine Fisheries Commission unanimously endorsed the confirmation of Charles Meacham as Commissioner of Fish and Wildlife.

A fishery biologist from Cordova, Alaska, wired the following message:

Charges against Meacham's integrity by political opponents completely unfounded. Comments by professional co-workers unsolicited statement of facts concerning Meacham's ability and performance as Administrator Professional career biologist. Have known Meacham for 22 years as friend and co-worker. Integrity professional ability unquestionable. Past records of performance demonstrate ability. Ralph B. Pirtle, Fishery Biologist.

Robert Rausch, of Fairbanks, Alaska, has written that:

I am a professional conservationist who has had the pleasure and privilege of working with Mr. Meacham for nearly 15 years, though not in the same division of the Fish and Game Department. His ability and integrity is widely known and respected among professional conservationists.

Congressman HOWARD POLLOCK, the Congressman for Alaska, has written:

Mr. Meacham is extremely well qualified by training and experience in both national and international fishery matters to represent the United States as Commissioner of Fish and Wildlife Service. In my view, his integrity and professional competence are above reproach. It is my earnest hope and fervent wish that the appointment of Charles Meacham as Commissioner of Fish and Wildlife Service in the Department of Interior will receive overwhelming endorsement in the Commerce Committee and almost unanimous confirmation in the United States Senate.

Twenty-five employees of the State's fish and game department wired:

March 13, 1969—Strongly support appointment of C. H. Meacham as Commissioner of Fish and Wildlife Service. Meacham widely recognized as outstanding administrator with exceptional leadership ability by professional association with Alaska and International Fisheries. Meacham was regional supervisor for commercial and subsistence fisheries, management and research, in an area larger than the combined areas of Washington, Oregon, California and Idaho, which produces a major share of Alaska's fishery products. Average annual value of this region's commercial fisheries is $42 million, and these fisheries have been administered with an annual budget of less than $1 million. Criticism of Meacham's role in the Kuskokwim incident is unjustified as issue and policy was largely developed before his appointment to the Director of International Fisheries for the State. Signed by 25 State Fish and Game employees.

State Senator Ray Christiansen, the representative of the Bethel area wired:

March 14, 1969—I should like to be on record as unequivocably endorsing the appointment of Charles Meacham to be Commissioner of Fish and Wildlife service for the U.S. Department of Interior. As a member of Alaska legislature for nine years, as a member of the Kuskokwim Valley Native Association and as as a citizen with a vital interest in the fisheries of our State and Nation. I have known Mr. Meacham for eight years and have been intimately acquainted with his professional accomplishments. From this acquaintance I feel personally confident that he is well suited to the position and urge your efforts on behalf of his appointment.

RAY CHRISTIANSEN.

Editorials have appeared in several of my State's newspapers concerning this nomination. The Kodiak Mirror strongly endorsed Meacham. The Fairbanks Daily News-Miner wrote that:

It is important for Alaska and Alaskans to have a United States Commissioner of Fish and Wildlife in office who understands Alaska's problems, and not inconsistent with our national best interests because such a large portion of our national wildlife resources are encompassed within Alaska. We were of the opinion, shared, we believe, by most Alaskans,

that the appointment of Mr. Meacham, a veteran of our Alaska Fish and Game program, was consistent with both Alaska and National best interests.

The Chamber of Commerce of Petersburg, Alaska, a community in which Chuck lived and worked for several years has unanimously endorsed him. The deputy commissioner of the State department of revenue has written in his support.

Mr. President, the litany of spontaneous, unsolicited support for Chuck Meacham is virtually endless. He is a good and decent man. His education and experience in the field of fish and wildlife and his experience and ability in international treaty negotiations are assets which should greatly benefit the people of our Nation. He has responded to the challenge posed by the naked grandeur of my State. He has responded to the challenge of war in the South Pacific theater, he has responded to the challenge of every position he has held, and in the process has ably demonstrated his administrative talents, and more importantly his honesty and integrity.

I support Chuck Meacham without qualification. On the basis of the record before this body, I urge that my colleagues join in this support, and confirm Chuck Meacham, so that the people of our Nation will have the benefit of his talents as soon as possible.

EXHIBIT 1

SENATE JOINT RESOLUTION 29

Recommending the confirmation of Charles Meacham as Commissioner of the Fish and Wildlife Service, Department of the Interior

Whereas Charles Meacham has been nominated by Secretary of Interior Walter J. Hickel to be Commissioner of the Fish and Wildlife Service of the United States; and

Whereas this office involves responsibility for the care and management of all fish and wildlife under joint or exclusive United States control; and

Whereas Charles Meacham has previously served in the Alaska Department of Fish and Game which manages one of the largest fisheries in the United States; and

Whereas the State of Alaska has more fish and game resources than any other state in the United States; and

Whereas Charles Meacham has been connected with the management of those resources as an employee of the Territory and then the State of Alaska for 12 years; and

Whereas Charles Meacham has been active in International Fisheries negotiations since 1960, and since 1968 has served as the Advisor to the Governor of Alaska on International Fisheries matters; and

Whereas Charles Meacham has 19 years of over-all experience in the field of fish and game management;

Be it resolved that the Legislature of the State of Alaska commends Secretary of Interior Walter J. Hickel for his nomination of Charles Meacham as Commissioner of the Fish and Wildlife Service, and respectfully urges the Interior and Insular Affairs Committee of the United States Senate and the Senate as a whole to approve the nomination of Charles Meacham.

Copies of this Resolution shall be sent to the Honorable Walter J. Hickel, Secretary of the Department of the Interior; the Honorable Richard B. Russell, President Pro Tempore of the Senate; the Honorable Henry M. Jackson, Chairman of the Interior and Insular Affairs Committee; and to the Honorable Ted Stevens and the Honorable Mike Gravel, U.S. Senators, and the Honorable Howard W. Pollock, U.S. Representative, members of the Alaska delegation in Congress.

PORTLAND, OREG.,
May 27, 1969.

HON. THEODORE STEVENS,
U.S. Senate,
Washington, D.C.

PMFC executive committee from Alaska, California, Idaho, Oregon, Washington, unanimously favors confirmation Charles Meacham Commissioner Fish and Wild Life.

LEON A. VERHOEVEN,
Pacific Marine Fisheries Commission.

PETERSBURG, ALASKA,
March 18, 1969.

HON. WARREN G. MAGNUSON,
Chairman, Commerce Committee,
U.S. Senate,
Washington, D.C.

DEAR SENATOR MAGNUSON: Our members unanimously endorse the appointment of Charles H. Meacham as Commissioner of Fish and Wildlife.

We therefore respectfully urge your support of confirmation of Mr. Hickel's appointment. Thank you.

Sincerely,

LARS EIDE,
President,
Petersburg Chamber of Commerce.

The VICE PRESIDENT. Without objection, the nomination is considered and confirmed.

DEPARTMENT OF JUSTICE

The bill clerk proceeded to read sundry nominations in the Department of Justice.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the nominations in the Department of Justice be considered en bloc.

The VICE PRESIDENT. Without objection, the nominations in the Department of Justice are considered and confirmed en bloc.

Mr. MANSFIELD. Mr. President, I ask that the President be notified of the confirmation of the nominations.

The VICE PRESIDENT. Without objection, it is so ordered.

LEGISLATIVE SESSION

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the Senate resume the consideration of legislative business.

There being no objection, the Senate resumed the consideration of legislative business.

THE CALENDAR

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the Senate proceed to the consideration of Calendar 260, S. 1790; Calendar 261, S. 1076; and Calendar 266, Senate Joint Resolution 122.

The VICE PRESIDENT. Without objection, it is so ordered.

GREAT PLAINS CONSERVATION PROGRAM

The Senate proceeded to consider the bill (S. 1790) to amend the act of August 7, 1956 (70 Stat. 1115), as amended, providing for a Great Plains conservation program which had been reported from the Committee on Agriculture and Forestry, with amendments, on page 1, line 3, after the word "That" strike out "the Act of August 7, 1956 (70 Stat. 1115), as amended, is hereby further amended as follows:

"Subparagraph (b)(1) of said Act is amended to read:" and insert "section 16(b)(1) of the Soil Conservation and Domestic Allotment Act, as amended, is amended to read as follows:"; on page 2, at the beginning of line 1, strike out "thereof" and insert "therefor,"; in line 4, after the word "needed" strike out "for the contract period"; in line 5, after the word "thereby", insert a semicolon and "but such contracts shall be entered into with respect to lands, other than farms or ranches, only where erosion is so serious as to make such contracts necessary for the protection of farm or ranch lands."; in line 19, after the date "1981," strike out "on" and insert "with respect to"; on page 3, line 12, after the word "measures," strike out "for" and insert "for (a)"; in line 13, after the word "resources," strike out "for" and insert "(b)"; in line 14, after the word "and" strike out "for" and insert "(c)"; in line 15, after the word "related" strike out "pollutants harmful to soil and water resources' and insert "pollution. Inclusion in the farm plan of these practices shall be the exclusive decision of the land owner or operator."; on page 4, line 9, after the word "Secretary," insert "after considering the recommendations of the soil and water conservation district board,"; on page 5, line 17, after "SEC. 2." strike out "Subparagraph (b)(2)" and insert "Section 16(b)(2) of said Act"; on page 6, line 6, after "SEC. 3." strike out "Subparagraph (b)(7)" and insert "Section 16(b)(7)"; at the beginning of line 11, insert "(A) during the period ending December 31, 1971, (i)"; in line 13, after the word "exceed" strike out "$300,000,000, and" and insert "$150,000,000, and (ii)"; and in line 15, after the figure "$25,000,000", insert a semicolon and "and (B) during the period beginning January 1, 1972, (i) the total cost of the program (including administrative costs) shall not exceed $250,000,000, and (ii) the cost of the program for any year (including administrative costs) shall not exceed $25,000,000."; so as to make the bill read:

S. 1790

A bill to amend the Act of August 7, 1956 (70 Stat. 1115), as amended, providing for a Great Plains conservation program

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section 16(b)(1) of the Soil Conservation and Domestic Allotment Act, as amended, is amended to read as follows:

"(1) the Secretary is authorized, within the amounts of such appropriations as may be provided therefor, to enter into contracts of not to exceed ten years with owners and operators of land in the Great Plains area having such control as the Secretary determines to be needed of the farms, ranches, or other lands covered thereby; but such contracts shall be entered into with respect to lands, other than farms or ranches, only where erosion is so serious as to make such contracts necessary for the protection of farm or ranch lands. Such contracts shall be designed to assist farm, ranch, or other land

owners or operators to make, in orderly progression over a period of years, changes in their cropping systems or land uses which are needed to conserve, develop, protect, and utilize the soil and water resources of their farms, ranches, and other lands and to install the soil and water conservation measures and carry out the practices needed under such changed systems and uses. Such contracts may be entered into during the period ending not later than December 31, 1981, with respect to farms, ranches, and other lands in counties in the Great Plains area of the States of Colorado, Kansas, Montana, Nebraska, New Mexico, North Dakota, Oklahoma, South Dakota, Texas, and Wyoming, designated by the Secretary as susceptible to serious wind erosion by reason of their soil types, terrain, and climatic and other factors. The land owner or operator shall furnish to the Secretary a plan of farming operations or land use which incorporates such soil and water conservation practices and principles as may be determined by him to be practicable for maximum mitigation of climatic hazards of the area in which such land is located, and which outlines a schedule of proposed changes in cropping systems or land use and of the conservation measures which are to be carried out on the farm, ranch, or other land during the contract period to protect the farm, ranch, or other land from erosion and deterioration by natural causes. Such plan may also include practices and measures for (a) enhancing fish and wildlife and recreation resources, (b) promoting the economic use of land, and (c) reducing or controlling agricultural related pollution. Inclusion in the farm plan of these practices shall be the exclusive decision of the land owner or operator. Approved conservation plans of land owners and operators developed in cooperation with the soil and water conservation district in which their lands are situated shall form a basis for contracts. Under the contract the land owner or operator shall agree—

"(i) to effectuate the plan for his farm, ranch, or other land substantially in accordance with the schedule outlined therein unless any requirement thereof is waived or modified by the Secretary pursuant to paragraph (3) of this subsection;

"(ii) to forfeit all rights to further payments or grants under the contract and refund to the United States all payments or grants received thereunder upon his violation of the contract at any stage during the time he has control of the land if the Secretary, after considering the recommendations of the soil and water conservation district board, determines that such violation is of such a nature as to warrant termination of the contract, or to make refunds or accept such payment adjustments as the Secretary may deem appropriate if he determines that the violation by the owner or operator does not warrant termination of the contract;

"(iii) upon transfer of his right and interest in the farm, ranch, or other land during the contract period to forfeit all rights, to further payments or grants under the contract and refund to the United States all payments or grants received thereunder unless the transferee of any such land agrees with the Secretary to assume all obligations of the contract;

"(iv) not to adopt any practice specified by the Secretary in the contract as a practice which would tend to defeat the purposes of the contract;

"(v) to such additional provisions as the Secretary determines are desirable and includes in the contract to effectuate the purposes of the program or to facilitate the practical administration of the program.

In return for such agreement by the landowner or operator the Secretary shall agree to share the cost of carrying out those conservation practices and measures set forth in the contract for which he determines that cost sharing is appropriate and in the public interest. The portion of such cost (including labor) to be shared shall be that part which the Secretary determines is necessary and appropriate to effectuate the physical installation of the conservation practices and measures under the contract."

SEC. 2. Section 16(b)(2) of said Act is amended to read:

"(2) the Secretary may terminate any contract with a landowner or operator by mutual agreement with the owner or operator if the Secretary determines that such termination would be in the public interest, and may agree to such modification of contracts previously entered into as he may determine to be desirable to carry out the purposes of the program or facilitate the practical administration thereof or to accomplish equitable treatment with respect to other similar conservation, land use, or commodity programs administered by the Secretary."

SEC. 3. Section 16(b)(7) of said Act is amended to read:

"(7) there is hereby authorized to be appropriated without fiscal year limitations, such sums as may be necessary to carry out this subsection: *Provided*, That (A) during the period ending December 31, 1971, (i) the total cost of the program (excluding administrative costs) shall not exceed $150,000,000, and (ii) for any program year payments shall not exceed $25,000,000; and (B) during the period beginning January 1, 1972, (i) the total cost of the program (including administrative costs) shall not exceed $250,000,000, and (ii) the cost of the program for any year (including administrative costs) shall not exceed $25,000,000. The funds made available for the program under this subsection may be expended without regard to the maximum payment limitation and small payment increases required under section 8(e) of this Act, and may be distributed among States without regard to distribution of funds formulas of section 15 of this Act. The program authorized under this subsection shall be in addition to, and not in substitution of, other programs in such area authorized by this or any other Act."

Mr. PEARSON. Mr. President, at the request of the Senator from North Dakota (Mr. YOUNG), I ask unanimous consent that the names of the Senator from New Mexico (Mr. ANDERSON), the Senator from North Dakota (Mr. BURDICK), the Senator from Oklahoma (Mr. HARRIS), the Senator from Wyoming (Mr. MCGEE), the Senator from Montana (Mr. MANSFIELD), the Senator from Montana (Mr. METCALF), the Senator from New Mexico (Mr. MONTOYA), and the Senator from Wisconsin (Mr. NELSON) be added as cosponsors of the bill.

The VICE PRESIDENT. Without objection, it is so ordered.

Mr. YOUNG of North Dakota. Mr. President, this bill would extend the time within which the Great Plains conservation program contracts can be entered into for 10 years; that is, until December 31, 1981. Since the contracts may run as long as 10 years, this would permit some contracts to continue until December 31, 1991.

The program has been a very necessary and successful one. It applies only to those counties in the Great Plains which are susceptible to wind erosion; and its purpose is to provide conservation measures to hold the soil down and keep it from blowing away. The purpose is to keep this area a great productive reservoir and prevent it from ever returning to the dust bowl conditions of the thirties.

The cost of the program during the period of the extension would be limited to $250 million, and the cost for any year would be limited to $25 million.

The bill makes a number of improvements in the program. These would, first, permit contracts covering nonagricultural land where necessary to prevent the soil from blowing onto neighboring agricultural land; second, permit contracts covering lands under annual lease where control of the land appears adequate for contract purposes; third, provide for assistance in enhancing fish and wildlife, recreation, and other resources, and in pollution control, and fourth, provide for broader contract amendment authority and a greater voice for the local soil and water conservation districts.

The Committee on Agriculture and Forestry was unanimous in its approval of the bill.

Mr. MANSFIELD. Mr. President, I ask unanimous consent to have printed in the RECORD an excerpt from the report (No. 91–269), explaining the purposes of the bill.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

SHORT EXPLANATION

This bill would extend the Great Plains conservation program for 10 years and enlarge its scope in a number of minor respects.

The program is one under which the Secretary enters into conservation cost sharing contracts of up to 10 years with producers in counties susceptible to wind erosion in the States of Colorado, Kansas, Montana, Nebraska, New Mexico, North Dakota, Oklahoma, South Dakota, Texas, and Wyoming.

DETAILS

The bill would—

(1) extend the time within which new Great Plains program contracts could be entered into to December 31, 1981 (now December 31, 1971).

(2) limit the total cost of the program (including administrative costs) during the 10 year period covered by the extension to $250 million.

(3) limit the annual cost of the program (including administrative expenses) during the period of the extension to $25 million.

(4) extend the program to nonfarm lands to the extent necessary to protect farm or ranch lands and to owners and operators who are not producers.

(5) give the Secretary of Agriculture discretion to determine whether the landowner or operator has the necessary amount of control of the land, instead of requiring absolute control for the contract period. This would make possible, where conditions warrant, contracts on operating units where customary control is through annual leasing arrangements.

(6) provide for Federal assistance, at the exclusive decision of the landowner or operator, in measures to—

(*a*) enhance fish and wildlife and recreation resources,

(*b*) promote economic use of the land, and

(*c*) reduce or control agricultural related pollution;

(7) Provide that conservation plans must be developed in cooperation with the appropriate soil and water conservation district in order to form the basis for contracts.

(8) Permit modification of contracts by mutual agreement to "accomplish equitable treatment with respect to other similar conservation, land use, or commodity program."

(9) require the Secretary to consider recommendations of the soil and water conservation district board before requiring a contract forfeiture.

COMMITTEE AMENDMENTS

The committee amendments are of a minor and generally technical nature. They would—

(1) Correct references to the statute being amended,

(2) Correct a typographical error,

(3) Make it clear that contracts can be entered into with persons in possession under circumstances which provide adequate but not absolute assurance that they will control the land for the contract period.

(4) Restrict contracts on lands, other than farm or ranch lands, to cases where erosion is so serious as to make such contracts necessary for the protection of farm or ranch lands,

(5) Make it clear that contracts are to be entered into "with respect to", rather than "on", farms,

(6) conform the provisions of the bill dealing with (i) fish and wildlife, economic use, and anti-pollution practices, and (ii) soil and water conservation district board contract forfeiture recommendations, to those adopted by the House of Representatives in H.R. 10595, and

(7) keep the present limits on program expenditures through December 31, 1972, and impose a limit of $250 million on total program costs and a limit of $25 million on annual program costs (including administrative expenses in each case) for the period beginning January 1, 1972.

With the foregoing amendments the bill will be substantially identical to H.R. 10595, as passed by the House of Representatives. The only substantive difference (not counting those intended to require that the bill be carried out in accordance with intentions expressed in the House report, and the report of the Department of Agriculture) is the fund limitation described in item (7) above.

NEED FOR THE LEGISLATION

The Great Plains region is a vast, productive, agricultural region which has problems peculiar to its environment. This area, commonly referred to as the "Dust Bowl" in the 1930's, can, through programs such as the one under consideration, continue to be a great productive reservoir if its productive capacity is safeguarded. The potential of the Great Plains area as a supplier of our Nation's foodstuffs can only be fully realized by putting into effect those practices and procedures which will more completely control the effects of weather hazards. Drought, destructive winds, floods, and other natural disasters cannot be prevented, but their damaging effects can be minimized. The Great Plains conservation program is an integral key to this need.

The region is subject to severe climatic variations that periodically bring wide suffering and serious economic losses. Because of the character of some soils in the region, and the normal low rainfall pattern, continuous cultivation of the entire area creates serious problems of wind erosion and resultant economic distress occur and recur.

In the 10-State area covered by the program there are approximately 110,500,000 acres of cropland and 215 million acres of range and pastureland. About 43 million acres of cropland and 91 million acres of range and pastureland now have treatment adequate to meet the conservation needs of the land. Thus, more than half the cropland, range, and pastureland still need conservation treatment. These acreages include about 5,500,000 acres of cropland that are not suited for sustained cropland production and should be converted to permanent vegetation, and about 12,500,000 acres of range and pastureland that need reestablishment of vegetative cover.

Conservation treatment of cropland, rangeland, and pastures produces substantial community and national benefits. Proper land use and treatment materially reduce the sediment polluting our Nation's streams and reduces soil dust in the air. Dust contamination of the air causes, among other things, serious respiratory ailments.

The fact that contracts covering less than one-half of the acreage in the designated counties have been executed is in itself conclusive evidence that much remains to be done under the program. The most recent report of the Soil Conservation Service of wind erosion damage, covering the calendar quarter ending on February 28, 1969, starkly reveals the continuing severity of the problem.

ACRES OF LAND DAMAGED

BACKGROUND

A. Developments culminating in passage of the 1956 legislation

In early 1956 the Great Plains Agricultural Council with assistance from the U.S. Department of Agriculture recommended a program for the Great Plains which was transmitted to the Congress by President Eisenhower. Public Law 84–1021 establishing the Great Plains conservation program was enacted in August of that year.

U.S. Department of Agriculture agency representatives at State levels, along with directors of extension and experiment stations, State agricultural agencies, governing bodies of soil and water conservation districts, and other agricultural leaders jointly reviewed the hazardous wind erosion areas in each of the 10 States. They made recommendations to the Secretary of Agriculture as to the boundaries that should be established for program participation and recommended the initial counties in each State to be eligible to participate. After the initial designation, other counties within the area were required to request designation by the Secretary, based on criteria established for program participation.

The recommendations for action, along with testimony during the hearings, made clear that a strong effort must be made to stabilize the resources of the Plains. In addition to the critical need to establish protective cover on large acreages of unstable land, the program was designed to achieve a more stable agriculture, more dependable source of income, and a more satisfactory livelihood for the people of the region.

It was recognized that emergency treatment measures would not bring about this stability. A program to obtain complete conservation treatment on entire operating units as rapidly as possible was needed. The program, as developed under Public Law 84–1021, provides for technical as well as long-term cost-sharing assistance to help farmers and ranchers who are willing to install and maintain complete conservation on their units. Cost-share contracts range from not less than 3 years to not more than 10.

B. Operation of the program to date

In establishing the operating policies of the program, it was determined that priority should be given to those farmers and ranchers who desired to change the use of their land in an effort to minimize the hazards of wind and water erosion. A plan of operations, including a time schedule of treatment installation, is a prerequisite for program participation. Conservation plans, developed in cooperation with soil and water conservation districts, serve adequately as a basis for contracts.

The Great Plains conservation program is not a land retirement program. No rental payments are included. It is aimed at obtaining shifts and improvement in land use based on the varying capability of land, rather than crop reduction. This permits the units under contract to continue operation as viable farms and ranches contributing to the economic stability of rural communities. The program provides opportunities for participants to stabilize their operations by insuring carryover feed for livestock to avoid untimely sales during drought or other emergencies. Through application of needed conservation treatment, more dependable production and more stable income is assured.

In order to allow as many farmers and ranchers as possible to get started on complete conservation plans, a limit of $25,000 for any one unit was established. Experience has shown that contracts average about $3,500 in Federal cost sharing spread over about 5½ years. This means about $630 a year in Federal cost sharing is used by individuals on the average in carrying his conservation plan through to completion.

As of June 30, 1968, a total of 31,122 contracts covering 56,601,700 acres had been executed. The effect of the program in bringing about needed land-use adjustments is evidenced by the fact that producers have contracted to convert about 21 percent of their cropland to permanent cover. Nearly 15 percent of the cumulative cost-share payments paid to producers through June 30, 1968, was for the establishment of permanent grass on land previously used for cropland, and about 22 percent was for practices connected with the reestablishment of vegetative cover on range and pasturelands.

The average contract executed in fiscal year 1968 covered 1,604 acres with an average Federal cost-share obligation of $3,471, as depicted on the following table:

PROGRESS REPORT OF THE GREAT PLAINS CONSERVATION PROGRAM, FISCAL YEAR 1968 AND CUMULATIVE TO JUNE 30, 1968

State	Number of designated counties	Great Plains contracts signed: Number		Great Plains contracts signed: Acres		Total, cost-share obligations		Unserviced application
		Fiscal year	To date	Fiscal year	To date	Fiscal year	To date	
Colorado	36	263	2,198	519,008	6,831,684	$1,266,970	$12,238,197	317
Kansas	62	347	3,291	191,441	2,404,799	938,685	8,684,239	473
Montana	37	115	1,336	990,169	6,401,144	749,794	7,211,919	387
Nebraska	58	461	4,213	580,531	5,179,766	1,280,495	12,780,985	657
New Mexico	18	114	1,376	682,379	8,712,090	662,148	7,984,779	263
North Dakota	30	314	3,449	467,486	4,613,593	618,027	7,008,089	494
Oklahoma	30	568	3,294	304,757	3,052,331	1,351,067	8,584,191	908
South Dakota	39	197	1,509	480,116	4,581,300	684,779	6,657,893	348
Texas	99	803	10,075	721,431	12,746,546	2,793,238	33,984,772	1,073
Wyoming	11	45	381	238,966	2,078,447	259,163	2,794,801	99
Total	420	3,227	31,122	5,176,284	56,601,700	10,604,366	[1] 108,019,865	5,019
Average per contract				1,604	1,819	3,286	3,471	

[1] Cumulative expenditures are about $80,000,000, leaving a balance of $28,000,000 unpaid cost-share obligations.

Mr. METCALF. Mr. President, on behalf of the Senator from Texas (Mr. YARBOROUGH), I ask unanimous consent to have printed in the RECORD a statement he has prepared on the bill.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

Mr. YARBOROUGH. Mr. President, in my life I have seen too many severe extended droughts for them ever to be erased from my memory. Others of you here can also remember the looks of despair on the faces of those good people who were trying to farm or raise cattle on the highly erodable soils of the plains country, but were facing foreclosure, and in some cases starvation, as the land dried up and blew away in drought days.

Those dust bowl days of the 1930's shocked the entire Nation. History books have accurate accounts of mass exodus of good people from the plains states.

In the late 1930's we began to develop programs to help stabilize this vast area, and typically we experienced a number of good moisture years which gave us encouragement that those dark days of the 1930's would not appear again.

Another extended drought which eventually laid bare much of the plains again in the mid-1950's jolted us out of our complacency. High winds again whipped the bare soil, and people again were aroused and alarmed over the prospect of another dust bowl. Strong measures were necessary if we were to stabilize our farms and ranches and to reclaim our land, much of which should never have been plowed or grazed to begin with.

In 1956, Congress set into motion the Great Plains Conservation Program. For the first time we provided for a contractual partnership between the government and the farmers and ranchers to accelerate the planning and application of needed conservation treatment on entire farms or ranches over a specified period of years. This gave them assurance of continuous cost sharing until the job was completed—and helped them do it at a pace they could afford.

The area covered by this program is roughly that between the Mississippi/Missouri river systems on the east and the Rocky Mountains on the west, between the Canadian border on the north, and central West Texas on the south. This land was once the domain of the Indian and the buffalo, a vast treeless open area covered by a grassy sea. It is a harsh land, prey to great extremes of weather—drought and flood, cold and heat. And as the settlers came, the grass disappeared along with the Indians and the buffalo and with the grass went the limited ability of the hard, dry earth to hold water and the condition of the 1930's came about.

There are now 421 counties covered by this program, in ten Great Plains States. Nearly a fourth of them are in my home state. The population of this area is now in the vicinity of 20 million people.

We should consider too that the Federal cost sharing has been Society's cost of keeping the dust out of the air, silt from the streams, and assurance that this vast agricultural area will always be available to feed and clothe our population.

The Great Plains Conservation Program in Texas is a real success story. A recent survey conducted by the Soil Conservation Service showed that of the 4,050 farms and ranches visited, the owners of more than 9 out of 10 were keeping their conservation work at a satisfactory level. A fourth of this number had invested in further improvements.

Looking back over their experience in the Program, some landowners reported that they had gained in the process a clear understanding of the needs of their land. Others commented that their conservation work had given economic stability to their enterprises. Some of the smaller operators said that the added economic stability in their enterprises had enabled them to stay on their farms.

But, Mr. President, the job is not yet done. The Texas survey indicated that the work accomplished under the program in the 98 counties in the 11 years of activity amounts only to from 10 to 15 percent of the conservation work needed in the area. Achievements would have been even greater had the funds been sufficient to meet the requests of all of the applicants.

The current authority for the Great Plains Conservation Program expires on December 31, 1971. The strong beginning that we have made must be continued. We need at least a 10-year extension of this Program to ensure the conservation of the Great Plains.

S. 1790, as reported out of the Committee on Agriculture and Forestry, provides for the extension of the Great Plains Conservation Program to December 31, 1981. It authorizes up to $250 million to carry out this Program, nearly twice as much as was provided in the Act of August 7, 1956.

Mr. President, this legislation has my strongest support. I am hopeful that this distinguished body will consider it favorably and provide a new lease on life to one of this Country's most valuable conservation programs.

The amendments were agreed to.

The bill was ordered to be engrossed for a third reading, was read the third time, and passed.

The title was amended, so as to read: "An Act to amend section 16(b) of the Soil Conservation and Domestic Allotment Act, as amended, providing for a Great Plains conservation program."

Mr. HRUSKA. Mr. President, the Senate has passed S. 1790, a bill to extend the Great Plains conservation program for 10 years and to enlarge its scope in a number of minor respects.

It was my privilege on April 15 of this year to join Senator YOUNG of North Dakota and several other colleagues as a cosponsor of S. 1790. The bill was referred to the Senate Agriculture and Forestry Committee from where it was reported favorably with certain amendments. The committee amendments are of a minor and generally technical nature, and the bill will still be substantially identical to the measure passed by the House of Representatives.

I have heartily supported the extension of the Great Plains conservation program and commend the Senate for its unanimous enactment of S. 1790.

The Great Plains conservation program was authorized in 1956 by the 84th Congress after being proposed and actively supported by the Eisenhower administration. This program represented a major step toward protecting and preserving the vast agricultural area of the Great Plains. It provided farmers and ranchers in the critically erodible areas with long-range, cost-sharing, and technical assistance, and contributed greatly to establishing well-planned conservation programs throughout this region. As of June 30, 1968, 31,122 cost-share contracts had been signed in the Great Plains area covering 56,601,700 acres, of which 18,732 contracts are still active on 37,449,169 acres.

In the 10-State area of the Midwest where the Great Plains conservation program has been authorized there are approximately 110 million acres of cropland and 215 million acres of range and pastureland. About 43 million acres of cropland and 91 million acres of range and pastureland and now have treatment adequate to meet the conservation needs of the area. It is apparent from these figures that more than half the cropland, range, and pastureland still needs conservation treatment.

Concentrated efforts have been and must continue to be made under this program to help the landowners and operators make needed land use changes. Much of the Great Plains area is suitable for production of cultivated crops when needed conservation measures are properly applied. There are other areas of the Great Plains, however, that are not suited for cropland.

Of the acreage that has not yet been treated, about 5,500,000 acres of cropland and about 12,500,000 acres of range and pastureland are in great need of vegetative cover.

The Great Plains conservation program is helping participants convert these lands to permanent vegetative cover and to reseed denuded rangelands. Nearly 15 percent of the cumulative cost-share payments paid to producers through June 30, 1968, was for the establishment of permanent grass on land previously used for cropland, and about 22 percent was for practices connected with the reestablishment of vegetative cover on range and pasturelands.

The Great Plains conservation program is of substantial benefit to my

State of Nebraska. Sixty counties in Nebraska are presently designated to receive assistance; many of these counties were subject to serious drought last year and will require extensive land treatment to prevent rapid erosion. As of January 1969, about 4,429 individual contracts had been entered into in Nebraska for cost-share assistance since the beginning of the program. These contracts cover about 5.5 million acres of Nebraska grassland. The amount expended for cost-share by the Federal Government in Nebraska has been about $13.4 million since 1956.

In addition, there are now more than 600 applications pending from farmers and ranchers of Nebraska seeking assistance. Many thousands of acres were damaged last year in Nebraska, and other Midwest States, by wind erosion; crops or cover were destroyed by wind last year in this region on 351,280 acres where the land itself was not reported as being damaged; hundreds of thousands of acres being used for cropland at the time initial contracts were signed still need to be converted to permanent vegetative cover or to be reseeded.

Passage of S. 1790 will extend the life of this vital program for a sufficient period of time to accomplish more adequately the conservation of our land resources in the Midwest. It is on this land that a substantial portion of our national grain and livestock production takes place.

For these reasons, I joined as a cosponsor of S. 1790.

On behalf of the farmers and ranchers of the Great Plains area, I want to express my appreciation to my colleagues in the Senate for extending this vital program.

YOUTH CONSERVATION CORPS

The Senate proceeded to consider the bill (S. 1076) to establish in the Departments of the Interior and Agriculture Youth Conservation Corps, and for other purposes which had been reported from the Committee on Interior and Insular Affairs, with an amendment, strike out all after the enacting clause and insert:

POLICY AND PURPOSE

SECTION 1. The Congress finds that the gainful employment of American youth during the summer months in the healthful outdoor atmosphere afforded in the national park system, the national forest system, the national wildlife refuge system, and other public land and water areas administered by the Secretary of the Interior and the Secretary of Agriculture creates an opportunity for understanding and appreciation of the Nation's natural environment and heritage. Accordingly, it is the purpose of this Act to further the development and maintenance of the natural resources of the United States by the youth upon whom will fall the ultimate responsibility for maintaining and managing these resources for the American people.

YOUTH CONSERVATION CORPS

SEC. 2. (a) To carry out the purposes of this Act, there is hereby established in the Department of the Interior and the Department of Agriculture a three-year pilot program designated as the Youth Conservation Corps (hereinafter referred to as the "Corps"). The Corps shall consist of young men and women who are permanent residents of the United States, its territories, or possessions, who have attained age fourteen but have not attained age nineteen, and whom the Secretary of the Interior or the Secretary of Agriculture may employ without regard to the civil service or classification laws, rules, or regulations, for the purpose of developing, preserving, or maintaining lands and waters of the United States under the jurisdiction of the appropriate Secretary. The Corps shall be open to youth of all social, economic, and racial classifications: *Provided, however,* That preference shall be given to disadvantaged youth. Employment preference for temporary supervisory personnel shall be given to primary, secondary, and university teachers and administrators, and university students pursuing studies in the education and natural resources disciplines.

(b) The Secretary of the Interior and the Secretary of Agriculture shall determine the areas under their administrative jurisdictions which are appropriate for carrying out programs using employees of the Corps. The rates and hours and other conditions of employment in the Corps shall be as jointly determined by the two Secretaries: *Provided,* That members of the Corps shall not be deemed to be Federal employees other than for the purposes of the Act of June 25, 1948, as amended (28 U.S.C. 2671 et seq.), and the Act of September 6, 1966 (5 U.S.C. 8102 et seq.). The Secretary of the Interior and the Secretary of Agriculture shall promulgate regulations to insure the safety, health, and welfare of Corps members. No member of the Corps may be employed for a term in excess of ninety days during any single year.

(c) The Secretary of the Interior and the Secretary of Agriculture may provide for such transportation, lodging, subsistence, and other services and equipment as they may deem necessary or appropriate for the needs of members of the the Corps in their duties. To minimize transportation costs, Corps members shall, insofar as is feasible, be employed on conservation projects nearest to their place of residence.

(d) Wherever feasible and appropriate, vacated Civilian Conservation Centers and other unoccupied facilities maintained and operated by the Departments of the Interior and Agriculture shall be utilized for the purposes of this program. Unoccupied military facilities shall also be utilized where appropriate and necessary, and upon approval by the Secretary of Defense.

(e) The provisions of title II of the Revenue and Expenditure Control Act of 1968 (82 Stat. 251, 270) shall not apply to appointments made to the Corps, to temporary supervisory personnel, or to other temporary program support staff.

SEC. 3. (a) Upon completion of each year's pilot program, the Secretaries of the Interior and Agriculture shall prepare a joint report detailing the contribution of the program toward achieving the purposes of the Act and providing recommendations. Each report shall be submitted to the President not later than one hundred and eighty days following completion of that year's pilot program. The President shall further transmit the report to the Congress for review and appropriate action.

(b) The Secretaries of the Interior and Agriculture shall prepare a joint report, indicating the feasibility of initiating a cost-sharing youth conservation program with State natural resource conservation or outdoor recreation agencies. This report shall be submitted to the President not later than one year following enactment of this Act. The President shall further transmit the report to the Congress for review and appropriate action.

SEC. 4. For three years following enactment of this Act, there are hereby authorized to be appropriated not to exceed $3,500,000 annually to be made available to the Departments of the Interior and Agriculture to carry out the purposes of this Act.

Mr. JACKSON. Mr. President, on February 18 I introduced S. 1076, a bill to establish a pilot Youth Conservation Corps program for young men and women, 14 to 18 years of age. These young Americans would participate in summer work and educational projects in our national parks, forests, recreation areas, wildlife refuges, and other public lands administered by the Departments of the Interior and Agriculture for periods up to 90 days. This program is seen as a step toward developing a valuable public resource—our lands—while at the same time benefiting our greatest national asset—our youth.

At a time when there is great national concern for the maintenance of the natural environment and for meeting the burgeoning demands for outdoor recreation, measures need to be taken to intensify resource management programs. If the future leaders of our Nation are to be expected to understand that the great out-of-doors has a relevant role in their lives, they must experience the sense of accomplishment in completing a difficult task, of understanding the intricacies of land and water conservation and management, and of working in programs to assure that future generations of Americans will enjoy life in a quality environment.

These young men and women would be employed in a variety of conservation duties. They would help to reduce the tremendous backlog of maintenance and development work necessary in our park and recreation lands. The Corps members would be expected to perform a variety of projects including timber stand improvement, trail maintenance, wildlife habitat improvement, basic soil and water conservation duties, and maintenance and construction of campgrounds and picnic facilities.

I want to emphasize that this bill authorizes appropriations to support a 3-year pilot program for approximately 3,000 youth each year. The pilot program is authorized to minimize the program costs and to provide data for an annual program analysis report to determine if the Corps is fulfilling the intended objectives of the act. Before the life of the program can be extended, or its size increased beyond the third year of the program, the program would be reviewed and new legislation would be required.

If the pilot program is successful, as I hope it will be, it can be continued and expanded into a permanent program.

Mr. MANSFIELD. Mr. President, I ask unanimous consent to have printed in the RECORD an excerpt from the report (No. 91–270), explaining the purposes of the bill.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

PURPOSE OF THE MEASURE

The purpose of this legislation, which was introduced by Senator Jackson for himself and 26 cosponsors, is to establish a pilot

Youth Conservation Corps program for young men and women, 14–18 years of age, who would participate in summer work and educational projects in our national parks, forests, recreation areas, wildlife refuges, and other public lands administered by the Departments of the Interior and Agriculture for periods up to 90 days. Corps members would be employed by the Department of Interior or Agriculture, without regard to the civil service or classification laws, rules, or regulations for the purpose of developing, preserving, or maintaining lands and waters of the United States under the jurisdiction of the appropriate Secretary. This program is seen as a step toward developing a valuable public resource—our lands—while at the same time benefiting our greatest national asset—our youth.

In addition to providing work experience, the program is envisioned as an opportunity to benefit the young enrollees by—

(1) Enhancing their understanding of the natural environment and its relationship to them;

(2) Stimulating high school youth who are capable of attaining greater goals, but presently lack motivation or direction in school, and

(3) Providing a forum for discussion and mutual understanding between youth of all socioeconomic and racial origins.

The bill authorizes appropriations to support a 3-year pilot program for approximately 3000 youth each year. If the pilot program is successful, it can be continued and expanded into a permanent program.

COMMITTEE AMENDMENTS

The committee amended the bill by deleting all after the enacting clause, and substituting language to adopt, in substance, suggestions made by the Departments of Interior, Agriculture, and Labor, as well as the Office of Economic Opportunity and the Bureau of the Budget.

The effect of the committee amendments are as follows:

1. The title of the bill was changed to reflect the fact that the Youth Conservation Corps is initially to be operated as a pilot program.

2. Specific language was added stating that membership in the Corps shall be open to youth of all social, economic, and racial classifications; however, a preference is to be extended to disadvantaged youngsters.

3. A second preference clause was added to indicate that the preference source of temporary staff personnel is to be primary, secondary, and university teachers and administrators, and university students in the field of education and natural resources.

4. A provision was included which charges the Secretaries of Interior and Agriculture with the responsibility of promulgating regulations to insure the safety, health, and welfare of Corps members.

5. Language was added to provide that, insofar as is feasible, Corps members will be employed on conservation projects nearest their place of residence.

6. Language was added to authorize the use of existing Federal facilities, wherever feasible, for operation of the program.

7. A provision was added to exclude temporary supervisory personnel and program support staff from consideration under the provisions of title II of the Revenue and Expenditures Control Act of 1968.

8. A new section 3 was added directing the preparation of an annual program review report to the President and the Congress by the Secretaries of Interior and Agriculture.

9. Section 3 further directs the preparation of a report by the Secretaries of Interior and Agriculture, indicating the feasibility of initiating a cost-sharing youth conservation program with State natural resource conservation or other outdoor recreation agencies.

10. A new section 4 was added which authorizes appropriations for the pilot Youth Conservation Corps for a 3-year period, with the appropriation level not to exceed $3,500,000 annually.

BACKGROUND

Several bills have been introduced in Congress during the past 10 years to establish youth conservation programs, although they differed in either scope or objective from S. 1076. This also applies to the civilian conservation centers operated under the Job Corps program which offer full-time employment for disadvantaged, out-of-school youth.

Section 101 of the Economic Opportunity Act of 1964, as amended by Public Law 90–222, authorizes the creation of the Job Corps in which unemployed, out-of-school, 14- to 22-year-old men and women could enroll for up to 2 years. According to section 106 of this act, no less than 40 percent of the male Job Corps enrollees were to be engaged in natural resource management work at civilian conservation centers. As of March 31, 1969, the capacity for civilian conservation center enrollees totaled 14,371. This number is to be reduced to 5,896, effective June 30, 1969.

Section 120 of the Economic Opportunity Act of 1964, as amended, authorizes the creation of a work-training program: the Neighborhood Youth Corps. Enrollees of this program conduct such duties as beautification projects and improvements and maintenance of school buildings, parks, and recreation facilities. Of the 364,000 youth enrolled in the 1968 summer Neighborhood Youth Corps program, approximately 600 conducted conservation work in connection with the Departments of Interior and Agriculture.

NEED

S. 1076 is designed to provide summer employment opportunities for youth, primarily those from urban areas, who have varying economic, social and racial backgrounds. Far too many young Americans never have an opportunity to receive meaningful work experiences. Because of the summer employment problems in urban areas, young men and women often turn from walking the streets seeking job to roaming the streets in pursuit of mischief.

More than a year ago, the President's National Advisory Commission on Civil Disorders reported that the lack of substantial employment opportunities for the youth trapped in urban ghettos was one of the principal causes of riots. The youth of these areas were characterized as encountering a life of despair and hopelessness. The Commission recommended greatly expanded training and employment opportunities for ghetto youth as the primary component of an attack on the causes of urban poverty. The Youth Conservation Corps would reach many of these young men and women and demonstrate to them that they can play a significant role in the functioning of our society.

At a time when there is great national concern for the maintenance of the natural environment and for meeting the burgeoning demands for outdoor recreation, measures need to be taken to intensify resource management programs. If the future leaders of our Nation are to be expected to understand that the great out-of-doors has a relevant role in their lives, they must experience the sense of accomplishment in completing a difficult task, of understanding the intricacies of land and water conservation and management, and of working in programs to assure that future generations of Americans will enjoy life in a quality environment.

These young men and women would be employed in a variety of conservation duties. They would help to reduce the tremendous backlog of maintenance and development work necessary in our park and recreation lands. The Corps members would be expected to perform a variety of projects including timber stand improvement, trail maintenance, wildlife habitat improvement, basic soil and water conservation duties, and maintenance and construction of campgrounds and picnic facilities.

The amendment was agreed to.

The bill was ordered to be engrossed for a third reading, was read the third time, and passed.

The title was amended, so as to read: "An Act to establish a pilot program in the Departments of the Interior and Agriculture designated as the Youth Conservation Corps, and for other purposes."

EXTENSION OF THE EXPORT CONTROL ACT, 1949

The joint resolution (S.J. Res. 122) to provide for a temporary extension of the authority conferred by the Export Control Act of 1949 was considered, ordered to be engrossed for a third reading, read the third time, and passed, as follows:

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That section 12 of the Export Control Act of 1949, as amended (50 U.S.C. App. 2032), is amended by striking out "June 30, 1969" and inserting in lieu thereof "August 30, 1969."

ARTHUR RIKE

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the Senate proceed to the consideration of Calendar No. 229, S. 1932.

The VICE PRESIDENT. The bill will be stated by title.

The BILL CLERK. A bill (S. 1932) for the relief of Arthur Rike.

The VICE PRESIDENT. Is there objection to the present consideration of the bill?

There being no objection, the Senate proceeded to consider the bill.

Mr. SCOTT. Mr. President, I ask unanimous consent, on behalf of the Senator from Arizona (Mr. FANNIN), the chairman of the minority calendar committee, to have printed in the RECORD a statement and an insertion concerning the bill.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

Mr. FANNIN. When a bill identical to S. 1932 was being considered by the Senate last year on September 18, I had some comments to make regarding it.

I include my statement in the RECORD on S. 2214 in the 90th Congress, on September 18, 1968, together with a copy of the deposition of a postal inspector to which I referred in that statement, in the RECORD at this point. (See exhibit 1.)

EXHIBIT 1

Mr. FANNIN. Mr. President, this bill, sponsored by Senator BURDICK, would confer jurisdiction upon the U.S. District Court for the District of North Dakota to hear, determine, and render judgment upon a claim by Arthur Rike. It would waive the defenses of the United States based on the statute of limitations, laches, or any previous proceedings in said district court.

The report of the Post Office Department on this bill to the Committee on the Judiciary states in part as follows:

"Our records disclose that on February 23, 1967, Arthur Rike filed a civil tort action in the District Court, First Judicial District, Grand Forks, N. Dak., against David John Mersey a postal employee. The suit demanded damages of $37,905 for alleged injuries sustained by Mr. Rike as a result of a collision on December 24, 1964, between Mr. Rike's automobile and that of Mr. Mersy, who was acting within the scope of his Federal employment. At the request of the assistant U.S. attorney the action was removed to the U.S. District Court for the District of North Dakota pursuant to 28 U.S.C. 2679(d), and the United States was substituted as a party defendant in place of Mr. Mersey. The Government then moved to dismiss the suit on the ground that plaintiff's cause of action was barred by the 2-year Federal statute of limitations, 28 U.S.C. 2401(b). The court granted the Government's motion, dismissing the suit on November 19, 1967.

"The Department opposes enactment of S. 2214. This bill would, in effect, nullify the above court proceedings and allow Mr. Rike an additional year within which to bring suit. In the 82d Congress this committee, in its report on Senate Joint Resolution 23, declared that it "would not relieve a claimant of a statute of limitations except for 'good cause' shown * * *." We see no evidence of "good cause" in this case to grant the relief which would be afforded by S. 2214."

The sponsor of the bill takes exception to the position of the Post Office Department that there was no showing of a "good cause" for extending the statute of limitations. He states:

"I feel that I must take exception to this. Mr. Rike was lulled into believing that the U.S. Government was not a party to claims arising out of an automobile accident in which he and David John Mersy were the drivers. The only reason that action was not filed within the statute of limitations is a belief on the part of Mr. Rike and his attorney, supported by statements made by representatives of the insurance company and the U.S. Post Office, that the Government was not a party to this suit. In a deposition taken by Mr. Rike's attorney, the postal inspector did not deny that he had made such a statement.

"I firmly believe that this is a good and sufficient cause for the Judiciary Committee to favorably report S. 2214. The only thing this bill would do is to give Arthur Rike the day in court which he has so far been denied."

The statement that Mr. Rike "was lulled into believing the U.S. Government was not a party to claims arising out of" this accident has been noted. However, a copy of the deposition of the postal inspector referred to by the sponsor of the bill has been made available by the Post Office Department. Its contents are relevant to this question. Therefore, I ask unanimous consent that the text of the deposition be printed at this point in the RECORD.

There being no objection, the deposition was ordered to be printed in the RECORD as follows:

"IN THE U.S. DISTRICT COURT FOR THE NORTHEASTERN DISTRICT OF NORTH DAKOTA, NORTHEASTERN DIVISION, ARTHUR RIKE, PLAINTIFF, *v.* DAVID J. MERSY, DEFENDANT

"Deposition of Paul E. VanRossum, taken by and for the Plaintiff, pursuant to notice served upon the attorneys, under the Federal Rules of Civil Procedure for the United States District Court, District of North Dakota, Northeastern Division. The deposition was taken in the Grand Forks County Court House at Grand Forks, North Dakota on Monday, May 8th, 1967.

"Appearances: Mr. Byron L. Edwards, On behalf of the Plaintiff, Mr. Timothy Davies, On behalf of the defendant, Mr. Richard V. Boulger, Assistant U.S. Attorney, On behalf of the Government.

"STIPULATION

"It is stipulated by and between counsel for the parties that the notice of filing of the deposition is waived, that the reporter may transcribe his notes out of the presence of the said deponent, Paul E. VanRossum, that the signature of the said deponent to the transcript of his deposition is expressly waived, and that said deposition is to have the same force and effect as though signed by the said deponent.

"[Monday afternoon session, May 8, 1967]

"Paul E. VanRossum being by the Notary first duly sworn, as hereinafter certified, deposes and says as follows:

"DIRECT EXAMINATION

"Mr. EDWARDS. Let the record show that the deposition of Mr. VanRossum is taken pursuant to notice, under the Federal Rules of Civil Procedure, and that notice of filing of the deposition is hereby waived.

"Mr. DAVIES. That is agreeable to me.

"Mr. BOULGER. Agreeable to the Government.

"By Mr. EDWARDS:

"Q. Will you state your name please?

"A. Paul E. VanRossum.

"Q. What is your age?

"A. My age is 40.

"Q. Where do you live?

"A. 2528 Eighth Avenue North, Grand Forks, North Dakota.

"Q. What is your occupation?

"A. I am employed by the postoffice department as a postal inspector.

"Q. How long have you been so employed?

"A. By the postoffice department, or as an inspector?

"Q. Well, first by the postoffice department.

"A. Since January 1948, and since around the first of or middle of April of 1964 as a postal inspector.

"Q. And you are employed at the Grand Forks, North Dakota postoffice.

"A. Well, my domicile is located in the Grand Forks Postoffice Building.

"Q. And do you work out of some district or division?

"A. Division headquarters at Saint Paul, Minnesota.

"Q. How long have you been assigned at Grand Forks?

"A. I believe I arrived here on December 27 or 28, around that period, in 1964.

"Q. And was there a postal inspector at Grand Forks prior to your arriving here?

"A. C. D. Ellington was here approximately eighteen months prior to that. The domicile had been vacant for about a year and a half.

"Q. Where had you worked prior to coming to Grand Forks?

"A. This was my first assignment as postal inspector.

"Q. What was the nature of your postal work prior to being a postal inspector?

"A. I started out as a city clerk and carrier, and then I went to assistant postmaster, in a town in Wisconsin.

"Q. After arriving at Grand Forks, did you have occasion to investigate an accident involving David Mersy and an Arthur Rike?

"A. Yes.

"Q. When did you commence your investigation of this accident?

"A. January 26 was the first day, 1965.

"Q. And what did your investigation consist of at that time?

"A. Well, the actual investigation is based upon a memorandum submitted by the postmaster advising the inspection service of the accident—when I receive the case—then I would make the investigation to determine that the employee involved in the accident was in his official capacity. And I attempt to obtain statements from any of the parties involved or any witnesses.

"Q. To whom do you report?

"A. My report goes to division headquarters.

"Q. And that is located where?

"A. In Saint Paul, Minnesota.

"Q. And when you started this investigation on January 26, did you take statements from the parties involved at that time?

"A. I took a statement from David J. Mersy on May 8, 1965; and also a statement from Thomas M. Gilmour on the 6th of May '65.

"Q. So was that the first part of your active investigation in this case?

"A. No, not—I wouldn't say it would be the first part of it. To begin with, really, when you're informed of an accident a month after it happens, you're going to have to go to the police department to obtain some of their records because you have nothing yourself. I talked to the police department; and I talked to the supervisors at the postoffice, who made an investigation of the accident at the time.

"Q. Did you take statements from the supervisors?

"A. No, I did not.

"Q. I show you what has been marked as Plaintiff's Exhibit 9 and will ask you if you can identify this?

"A. Yes, I would say that is the statement that I took from David J. Mersy on May 8th of '65.

"A. And this is a photocopy that you're examining at this time?

"A. Yes, it was.

"Q. And do you have a carbon copy of this statement in your files at this time?

"A. Yes, I have.

"Q. Is the photocopy which you have examined as Plaintiff's No. 9 a true and correct copy of the carbon copy that you have in your possession?

"A. I would say it would be, without reading the whole thing altogether, but it appears to me it would be the same. It would be an exact copy of my statement that I took.

"Mr. EDWARDS. At this time we will offer into evidence Plaintiff's Exhibit No. 9.

"Mr. BOULGER. No obection by the Government.

"Mr. DAVIES. No objection.

"Q. (By Mr. EDWARDS) Now with reference to Plaintiff's Exhibit No. 9, Mr. VanRossum, I notice this is typewritten. Did you do the typing yourself?

"A. I couldn't answer that for sure. Either I did it, or my stenographer did it.

"Q. And then after is was typed, did you have Mr. Mersy read and sign this statement?

"A. Yes.

"Q. And I notice this is in the form of a sworn statement or affidavit, is that correct?

"A. It is.

"Q. And you took the acknowledgment?

"A. Right.

"Q. And does this statement contain all of the information which Mr. Mersy gave to you relative to the facts of the accident and relative to his employment at the time of the accident?

"A. I would say it does.

"Q. Had you questioned Mr. Mersy at all regarding the delivery of mail that he was making at the time of the accident, as to where he had come from immediately prior thereto, and where he was going, outside of what is in this statement?

"A. Let's see—Yes, I would say I questioned him. And the answer he gave me, according to the statement, he said that, "I had finished delivering the items on the south side of the town and he was going to the north side, as I had some items to deliver there."

"Q. Did you question Mr. Mersy at all as to where his last stop was prior to the accident?

"A. I don't recall.

"Q. At any time did Mr. Mersy tell you that he had just been at his father-in-law's house on Maple Avenue?

"A. No.

"Q. Had you uncovered that information at all during the course of investigation?

"A. No.

"Q. Did you personally interview Mr. Mersy before preparing the affidavit-statement that is in evidence here?

"A. Yes, I interviewed him, and he gave me a copy of the statement that he had either furnished his insurance company or your firm, and with the information that he gave me and a copy of this—this is where the statement actually came from. In other words, I reviewed the——

"Q. From that——

"A. —I reviewed the statement that he had made to the insurance company, item for item, and then this is where this one was drawn from—what he said in this statement here (indicating Plaintiff's Exhibit No. 9).

"Q. Then, Mr. VanRossum, I will show you Plaintiff's Exhibit No. 10 and ask you if you can identify that?

"A. This would appear to be an identical copy of the affidavit that I took, or statement that I took from Thomas M. Gilmour on the 6th day of May at Grand Forks.

"Q. And do you have a carbon copy of this statement in your file?

"A. Yes, I have.

"Q. And is the exhibit, which is a photocopy, a true and correct copy of the carbon which you have?

"A. I would say it is.

"Q. Was this statement taken in the normal course of your business pursuits in connection with your employment?

"A. Yes; this was taken in the normal course of the investigation of an accident.

"Mr. EDWARDS. At this time we offer into evidence Plaintiff's Exhibit No. 10.

"Mr. DAVIES. No objection.

"Mr. BOULGER. No objection.

"Q. (By Mr. EDWARDS) Mr. VanRossum, with reference to Plaintiff's Exhibit No. 10, was this affidavit-statement taken in the same manner in which the previous affidavit-statement was taken?

"A. I think this statement was taken in my office. If I am not mistaken, I think that I typed this one out myself—I wouldn't say for sure—but I had Thomas Gilmour up in my office after school this 6th day of May, I think it was—unless it was in the afternoon or Saturday or something like that—I am not really sure.

"Q. And in connection with your investigation herewith, did you at any time make personal contact with Mr. Rike?

"A. I attempted to make contact with Mr. Rike through his attorney.

"Q. So you had no personal conversation or contact with Mr. Rike?

"A. No, I did not talk to Mr. Rike, I don't believe, at all. I talked to his wife at one time.

"Q. Then was that conversation by telephone or personally?

"A. This conversation was by telephone.

"Q. And what was the date of that conversation?

"A. I couldn't say.

"Q. Was it through Mrs. Rike that you learned that Mr. Rike had employed an attorney?

"A. Yes.

"Q. And did she advise you as to who the attorneys were?

"A. Yes.

"Q. And after that you then made contact with the attorneys, is that correct?

"A. Right.

"Q. And in making that contact, you made that with myself?

"A. Right.

"Q. And you made that contact on May 7, 1965 at about 10:15 a.m.?

"A. My records show May 5th, 1965.

"Q. Do they show a time?

"A. No, they do not.

"Q. Was that a personal contact on your part?

"A. Yes.

"Q. At my office?

"A. Yes, it was.

"Q. And at that time it was when my office was located in the Red River National Bank Building at Grand Forks?

"A. Right.

"Q. And I believe you were at my office for a period of about 30 to 45 minutes, is that correct?

"A. I would say that's about the length of time, yes.

"Q. And at that time you made inquiry of me relative to the injuries sustained by Mr. Rike?

"A. Yes. Our instructions contemplate that we will attempt to obtain a statement from any person involved in an accident with a driver of a vehicle employed by the post office department, and through—we're supposed to get it through the attorney, if we know that he's represented by an attorney.

"Q. And at that time did you ask me if I had a statement from Mr. Rike?

"A. I believe that I asked you if you would obtain one for me, and you stated that there would be a possibility of you getting a statement from Mr. Rike so that I could transmit it to the department.

"Q. Mr. Van Rossum, isn't it correct that, with reference to the matter of a statement from Mr. Rike, that I advised you that I had been contacted by his insurance company and that—because of their being involved in the matter—that I did not have a statement from Mr. Rike, nor did I contemplate giving any statements relative to his version of the accident and his personal statement as to what injuries he may have sustained as a result thereof?

"A. I think you're going to have to repeat that one over for me.

"(Question read by the Reporter).

"A. I'm afraid I can't answer that. I can't remember, really. It's quite a ways back, and my records show that you had said that you would attempt to obtain a statement from him.

"Q. Well, isn't it correct that we also further discussed the matter of medical reports, as to the injuries sustained by Mr. Rike?

"A. That's correct.

"Q. And I believe it's correct that I advised you that I did not have medical reports at that time, but that—if and when I should receive them—that I had no objection to medical reports in connection therewith?

"A. According to my records, the medical bills from Doctor Helm and Doctor Gustafson, at the Fargo Hospital, were not available at the time that I talked to you.

"Q. And that would be bills and also reports as to——

"A. I would——

"Q. ——to the nature and extent of the injuries, treatment, and any prognosis?

"A. I would imagine so, yes.

"Q. I believe I further advised you that Mr. Rike had been hospitalized twice in Fargo up to the time that you made the contact with me, is that correct?

"A. Yes.

"Q. And that's what your records of that contact so indicate?

"A. My records indicate that Mr. Rike had two such injuries in previous automobile accidents.

"Q. Well, as a result of this accident, did I advise you that he had been hospitalized twice in Fargo during the course of treatment?

"A. I don't recall. I first knew of this hospitalization from his wife. And I would imagine that, if he was hospitalized in January when I talked to her—I don't recall whether he was hospitalized in May when I was talking to you.

"Q. With reference to the date on which you contacted me, my daily office records indicate it to be May 7. Is it possible, Mr. Van Rossum, that May 7 is the correct date on your contact of my office?

"A. I would have to check my daily record at the office in order to find out if that was the correct date—which I could do.

"Q. It is possible, is that correct?

"A. There's a possibility, yes.

"Q. Well, at the time that you contacted me, do you recall my talking to you about having been contacted by Mr. Mersy's insurance company?

"A. I don't recall.

"Q. Then you don't recall whether or not I had stated that Mr. Mersy's insurance company wanted medical reports as soon as I was able to obtain them from the doctors, in connection with Mr. Rike's injuries?

"A. This seems like I can remember something like that, but I wouldn't want to say that I definitely do recall this.

"Q. All right. Do your records as such indicate anything of that nature?

"A. Repeat that question again, please.

"(The last two questions were read by the Reporter)

"A. My record does not show anything on that order. My records show that, if and when the medical statements are received, they will be forwarded along with any other information, as a separate report.

"Q. And at the time that you made contact with me at my office, you and I had not met prior to that time, is that correct?

"A. That's correct.

"Q. And when you came into my office, you exhibited your credentials as a postal inspector and introduced yourself?

"A. That's correct.

"Q. And you further advised me as to the nature of your contact with me at my office, that being the Mersy-Rike accident?

"A. That's correct.

"Q. I believe you also inquired about the passenger in the Rike vehicle being——

"Mr. DAVIES. Mrs. Rike—that's his mother, isn't it?

"Q. (By Mr. EDWARDS)—yes— being Mrs. Rike, the mother of the driver?

"A. Mrs. Charles Rike?

"Q. That's correct.

"A. Yes.

"Q. And you also inquired as to whether or not I knew if she was injured in any way as a result of the accident?

"A. Yes.

"Q. And I told you that I did not know for sure, because I was not representing her, but I did not think so from what I knew about the accident, isn't that correct?

"A. I believe that's correct.

"Q. And isn't it further correct Mr. Van Rossum, in making contact with me at this time, that you did advise that—as part of your investigation and in making your reports—that you wanted to get information relative to the nature and extent of injuries sustained?

"A. Right.

"Q. And isn't it further correct, Mr. VanRossum in mentioning to you that I had been contacted by Mr. Mersy's insurance company that I had stated that there was insurance on the vehicle, and I inquired of you as to whether or not the Government was involved?

"A. As to the first part—let's just repeat that.

"(The last question was read by the Reporter.)

"A. Well, I'm not sure about what you said about his insurance company. But I would imagine that you did ask me if we were interested in, in the investigation of the accident, because he was—as we determined—an employee of the department at that time.

"Q. And had you made that determination at the time that you talked to me?

"A. I would say—if I talked to you on May 5th and did not take a sworn statement from Mr. Mersy until the 8th—the determination possibly could not have been made; although the records at the postoffice would indicate that he was employed at the time.

"Q. But it is possible that you had not made any such determination at the time that you talked to me, in view of the status of your investigation?

"A. I don't recall whether I had talked to Mr. Mersy prior to my talking to you.

"Q. Do you remember—in response to my inquiry to you, after stating that Mr. Mersy had insurance, and I inquired about the Government being involved—that you replied to the effect that you did not know if the Government was involved, and further to the effect that the Government was not involved?

"A. I would say that—if I had a case bearing on an accident that was reported by the postmaster, and division headquarters jacketed such case—that I would automatically consider that I was investigating an accident because the Government was involved.

"Q. But do you recall whether or not you made that statement to me in my office at that time?

"A. No. I do not recall that.

"Q. After this contact on May 7, 1965, did you have one additional contact with me on June 7, 1965?

"A. I believe I did, but my records do not show the date I contacted you the second time. I would have to again refer to my daily worksheet.

"Q. And was that second contact by telephone?

"A. I don't recall. I thought it was a personal visit.

"Q. And it could be that it was a telephone conversation?

"A. It could be, yes.

"Q. And at that time you inquired if I had any further information on the Rike matter, and I advised you that I did not, that we had not received any further medical information, and I had no additional file information than from the time you first contacted me, is that correct?

"A. I would say that I contacted you to obtain any information or any statements that you might have received from the Rikes. And they aren't in here, so I would say that you said you didn't have any.

"Q. I believe the only other contact that we have had, then, Mr. VanRossum, was in the Fall of 1966 on a matter in my office which concerned other postal affairs outside of this Rike case, isn't that correct?

"A. I believe it did have something to do with a member of the armed forces from the Grand Forks Air Force Base.

"Q. Right. And that had no contact with the Mersy-Rike case at all?

"A. No, it had nothing to do with the Mersy-Rike case.

"Q. And in fact at that time we did not go into the Mersy-Rike case?

"A. I don't believe we did.

"Q. And outside of that then—having become acquainted with each other—the only other contact we have had is seeing each other a couple of times socially and meeting on the street to say hello, is that correct?

"A. That's correct, and a couple of times in the lobby of the postoffice.

"Q. Right. And during those times we have not entered into discussion or conversations relative to the Mersy-Rike case?

"A. Not that I can recall at all.

"Mr. EDWARDS. I have no further questions.

"CROSS EXAMINATION

"By Mr. DAVIES:

"Q. Mr. VanRossum, do you recall whether or not Mr. Edwards asked you on what basis the Government might possibly be involved in this claim?

"A. No. I don't believe I did. I can't say that I could recall that.

"Q. Did you have any conversation in regard to what Mr. Mersy was doing at the time of the accident?

"A. I would say that—if I was making the investigation—that I did tell Mr. Rike that he was employed by the postoffice—

"Q. 'Mr. Rike' or 'Mr. Edwards'?

"A. 'Mr. Edwards', excuse me—that he was employed by the postoffice, and that would be the reason that I would be making the investigation.

"Q. Well then is it your feeling that you must have mentioned this to him at sometime during your conversation?

"A. This is my normal procedure, yes.

"Q. When you had your second contact in June of '65, did Mr. Edwards ask you why the Government (the postoffice department) was still involved in this claim?

"A. I don't recall whether he did or not.

"Q. Mr. Edwards has asked you about this statement—whether or not you said to him that the Government was not involved—did you ever make such a statement to him?

"A. No, I didn't make a statement to him that the Government would not be involved. As long as I was making the investigation, it's automatic that they would be involved.

"Q. At any stage of the investigation, was there ever any indication that the Government was not involved in this claim?

"A. Not to my knowledge, no.

"Q. In other words, any time he would have inquired—at the stage of the investigation—as far as you were concerned, the Government was still involved?

"A. I would say yes.

"Q. Did you ever discuss with Mr. Edwards the written statement that you had taken from Mr. Mersy?

"A. I don't believe so.

"Q. You never discussed this claim with any other members of this firm, have you, or their investigators?

"A. I don't believe so.

"Q. And you have never discussed it with anybody representing Mersy's insurance company, have you?

"A. No, I don't believe so, either.

"CROSS EXAMINATION (FURTHER)

"By Mr. BOULGER:

"Q. Mr. VanRossum, if there was a determination that the Government was not involved—using the language that Mr. Edwards used, but interpreting that as meaning that Mersy was not a Government employee—would it be your function to inform Mr. Edwards of that fact?

"A. No, I would inform my division headquarters of that fact in my written report.

"Q. And if Mr. Mersy were on the rolls but (for some reason or other) was not within the scope of his employment at the time of the accident, would it be your function to make that determination?

"A. Yes, it would be, and to report that fact also.

"Q. But would your determination be final and binding?

"A. I would say it would almost have to be. The only thing I can do in my investigation—as long as it took place, say, a month after the accident, say from December 24th to the time the Postmaster advised division headquarters that there was a personal-injury accident—I would say that I talked to the postmaster, the assistant postmaster, and anyone else that possibly had anything to do with it, and I reviewed their accident records there, which were signed, and things like this, so I would say the determination was made by myself, that he was employed, and that would be the final determination.

"Q. Well if for some reason he was employed, but at the time of the accident was doing something that was not considered as Government work, would it be your function to report the facts or to make the determination?

"A. No, I would report the facts, whatever my investigation disclosed.

"Q. And if you made—assuming you, in your call upon Mr. Edwards made the statement that the Government was not involved—wouldn't you in effect be going beyond your function?

"A. Absolutely.

"Q. Now, Mr. VanRossum, you have almost 20 years with the postal service?

"A. That's right.

"Q. Would you detail for me the various positions that you have had? Are there others than clerk, carrier, and assistant postmaster? Or did you jump from there?

"A. I went from carrier to clerk to assistant postmaster to postal inspector.

"Q. And as a result of your experience in those capacities, are you familiar with the internal workings of a postoffice such as the size of Grand Forks?

"A. I would say that I have enough experience to know the internal workings of the office, yes.

"Q. What was the size of the postoffice that you worked in before you became an inspector?

"A. It was a first-class office. It isn't the size of Grand Forks. It's smaller than Grand Forks in all ways, actually, but the functions of each first-class office—those under a million dollars—would be almost identical.

"Q. Now in Grand Forks, under whom does the special-delivery messenger work?

"A. I believe it's assigned to either the superintendent of mails or the assistant superintendent. They more or less have split duties down there, and they're required to know all phases of the operation. But I would imagine either one of those two would assign the special-delivery messenger.

"Q. And Mr. Mersy was a special-delivery messenger?

"A. As far as can be determined, yes.

"Q. And furthermore he was a Christmas temporary special-delivery messenger?

"A. As far as the records, the office records show, yes.

"Q. And when a special delivery messenger goes out—particularly during the Christmas season—do you know what procedure they use as to delivery of mail?

"A. I would say that practically at any time, that they are given these special deliveries to deliver, and it's more or less up to them on which route or which way they're going to take this. In other words, you can't just have somebody inside lining up these special deliveries and saying, "You take them this way." It would be practically automatic for him to do it himself.

"Q. Now it's different with a city carrier? He's confined to a specific route?

"A. Right.

"Q. Is there a provision for a special delivery messenger to have lunch?

"A. I would imagine there would be, the same as a city carrier.

"Q. And what is that provision?

"A. I might have to refresh my memory because I haven't really studied the provision or—if it's changed since I've left the postoffice that I came out of. But when a carrier leaves, say, in the morning at nine o'clock, he's out on his route and he can automatically have a half-hour for his lunch. And when he comes back in, it's just deducted from his time.

"A. He can have that any time and any place that he wishes?

"A. Well it's usually a set time, when he reaches a certain point of his route, this would be the time that he would take it. It's usually—they try to arrange it so it's close

to his home or close to a place to eat. This is on a city carrier.

"Q. Well what about those who work in a residential area and whose home is not on their route?

"A. They've got what they call a 'drive-out' agreement where they can have their car there, or come back to their car, or use their car to go home for lunch. Or, if they're on a city mounted route, they would automatically take their car and drive home and drive back.

"Q. And what is a mounted route?

"A. It's a delivery to a rural box on the outskirts of town.

"Q. And does Grand Forks have mailsters?

"A. I believe they're all assigned at the air base.

"Q. The reason I ask is that our carrier in Fargo eats his lunch in his mailster. Now assuming in this matter that Mr. Mersy had just come from Mr. Gilmour's house, would you have pointed that out in your report?

"A. If my investigation would have disclosed that, yes.

"Q. Would you have drawn any conclusions from that?

"A. No, I don't believe I would have drawn a conclusion. In my conclusion I possibly would have said—in my conclusion in my report I would have pointed this out, that he was not in employment at that time. But the investigation—according to what I have here—did not reveal that he was on his lunch break. I haven't even looked to find out what time the accident happened, again—yes—1:43 P.M., I have.

"Mr. BOULGER. Could I have that last answer, please?

"(The last answer was read by the Reporter.)

"Q. (By Mr. BOULGER) Well then would it be your interpretation that—if he had had lunch at the Gilmour home, but was in his car and on the way to the north side to deliver additional special delivery messages—that he had not again started employment?

"A. I don't know how they handle these Christmas assistants but—say—if a city carrier has a half hour off for his lunch period (a specified half hour, say from 12:00 to 12:30), and he doesn't have to go into the office and punch out, he would be not employed at that period. But when he starts his route again—now, starting the special delivery route, this route could start wherever he left off. I mean, I would say that if he started going out to deliver specials again, he would be employed.

"Q. In other words, as soon as he left the Gilmour house, assuming he had been there?

"A. I would think so.

"Q. You've never been able to get a statement from Mr. Rike, is that correct?

"A. That's correct.

"Mr. BOULGER. I have no further questions.

"CROSS EXAMINATION (FURTHER)

"By Mr. DAVIES:

"Q. Mr. VanRossum, if some of Mr. Mersy's superiors in the Grand Forks postoffice testified that there was no set time for the lunch break for special delivery carriers, you wouldn't disagree with that, would you?

"A. No, I wouldn't.

"Q. And (if I understand you correctly) if a mailman has a prescribed route to follow, he is considered off duty from the time he deviates from that route to go out for lunch, till the time where he goes back to where he left off for lunch?

"A. A city carrier has so much allotted lunch hour. His—with his last delivery, that's his breaking time for lunch. I would say that he's not employed until he makes, or starts, and picks up the mail, to the box, and goes again.

"Q. And (if I understand your answers to Mr. Boulger correctly) it would be your position that a person, who was delivering special delivery and who had no prescribed route, would be back on duty as soon as he pointed himself in the direction of his next delivery after lunch.

"A. I would say that is correct.

"Mr. DAVIES. That's all I have.

"REDIRECT EXAMINATION

"By Mr. EDWARDS:

"Q. Mr. VanRossum, with reference to your opinion here as to when a special delivery carrier goes back on duty, this is just merely your own personal opinion, is that correct?

"A. I would say yes, it would be my personal opinion, until I look it up in the manual to see if there's anything specific about it.

"Q. And with reference to the Federal Tort Claims Act, and more specifically if under the Federal Tort Claims Act the law of the state as to scope of employment applies, are you basing this opinion upon the laws of the state of North Dakota in connection with the scope of employment?

"A. Repeat that again, please.

"(The last question was read by the Reporter)

"A. To be real truthful, I don't follow the question.

"Q. (By Mr. Edwards) Well in other words, Mr. VanRossum: in making a legal determination as to the scope of employment under the Federal Tort Claims Act, if the law of the state is applied to make this determination (rather than any Federal statutes), is your opinion based upon the laws of the state of North Dakota?

"A. I don't believe I would use the law of the state of North Dakota. I would have to use the postal manual and any records at the post office, to determine if he was employed.

"Q. And now when we talk about 'employed' and 'in the scope of employment,' isn't it possible that we are talking about two different things?

"A. I was using the term of—'scope of employment' and—my word, the 'employment,' would be the 'scope of employment' in your words.

"Q. So you're using the two terms synonymously or interchangeably, is that correct?

"A. Right.

"Q. And in effect you are not taking into consideration any of the laws of the state of North Dakota with reference to your opinion, that you stated, about the matter of employment or scope of employment, isn't that correct?

"A. I would say that's correct.

"Mr. EDWARDS. No further questions.

"RECROSS EXAMINATION

"By Mr. DAVIES:

"Q. Just to clarify one thing for me: When we're talking about 'scope of employment' and 'employment,' we are referring (are we not?) to a hypothetical situation, if he is returning from lunch or if he is returning from his lunch break?

"A. I would say the questioning in the last little while has been whether he was returning from lunch. My investigation did not reveal that he was returning from lunch.

"Q. As far as your investigation was concerned, your determination was that he was on his route at the time, is that true?

"A. He was in the scope of his employment (nods head affirmatively).

"Mr. DAVIES. Thank you.

"RECROSS EXAMINATION (FURTHER)

"Br. Mr. BOULGER:

"Q. Mr. VanRossum, you know the difference between 'employment' and 'scope of employment,' don't you?

"A. Yes. I was just using the words loosely, I would say.

"Q. In other words, you're a postal employee 24 hours a day, isn't that right?

"A. Right.

"Q. But in the evening, when you're home watching T.V. or drinking beer, you're not in the scope of your employment?

"A. That's correct.

"Mr. BOULGER. I have no further questions.

"Mr. EDWARDS. No further questions.

"Mr. VanRossum, you have the right to read and sign your deposition after the Court Reporter has transcribed his notes; or you have the right to waive the reading and signing of your deposition. I would suggest that you confer with Mr. Boulger and then give us your decision with reference to same.

"The DEPONENT. Mr. Boulger?

"Mr. BOULGER. If we may go off the record for a minute.

"(Discussion off the record.)

"The DEPONENT. We waive that.

"Mr. EDWARDS. That's all.

"CERTIFICATE

"STATE OF NORTH DAKOTA,
"County of Grand Forks, ss:

"I, Edward Rafel, do hereby certify that I am an official court reporter of the First Judicial District of North Dakota and was such at the time of the taking of the deposition of Paul E. VanRossum on May 8, 1967; that the witness was duly sworn by the Notary, Norman Mark, before testifying; that the foregoing is a true and correct transcript of my stenotype notes taken at the time of the deposition and contains all the testimony given at said deposition; and further the reading and signing of said deposition was waived by the deponent, and further I am not related by blood or marriage to any of the parties nor am I interested directly or indirectly in the matter in controversy.

"EDWARD RAFEL,
"Official Court Reporter.

"Subscribed and sworn to before me this ——day of May, 1967.

"NORMAN E. MARK,
"Notary Public.

"My Commission expires 4–7–72."

The PRESIDING OFFICER. The bill is open to amendment. If there be no amendment to be proposed, the question is on the engrossment and third reading of the bill.

The bill was ordered to be engrossed for a third reading, read the third time, and passed, as follows:

"S. 2214

"Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, notwithstanding any statute of limitations, or lapse of time, or bars of laches or any proceeding, heretofore had in the United States District Court for the District of North Dakota, jurisdiction is hereby conferred upon the United States District Court for the District of North Dakota to hear, determine, and render judgment upon any claim filed by Arthur Rike against the United States for compensation for personal injury, medical expenses, and property damage sustained by him arising out of an accident which occurred on December 24, 1964, allegedly as a result of the negligent operation of a motor vehicle by an employee of the United States while acting within the scope of his Federal employment.

"SEC 2. Suit upon any such claim may be instituted at any time within one year after the date of the enactment of this Act. Nothing in this Act shall be construed as an inference of liability on the part of the United States. Except as otherwise provided herein, proceedings for the determination of such claim, and review and payment of any judgment or judgments thereon shall be had in the same manner as in the case of claims over which such court has jurisdiction under section 1346(b) of title 28, United States Code."

Mr. MANSFIELD. Mr. President, I ask unanimous consent to have printed in

the RECORD an excerpt from the report (No. 91–239), explaining the purposes of the bill.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

PURPOSE

The purpose of the bill is to confer jurisdiction upon the U.S. District Court for the District of North Dakota to hear, determine, and render judgment upon a claim by Arthur Rike. The bill would also waive the defenses of the United States, to such claim based on the statute of limitations, lapse of time, laches, or any previous proceeding in the said district court.

STATEMENT

In its report to the committee, the Post Office Department stated the facts in the case and its recommendations as follows:

"On February 5, 1968, the Department submitted a report on S. 2214 to this committee. The present report amends and supersedes the February 5 report in order to reflect correctly the final disposition of the civil tort action which is discussed below.

"Our records disclose that on February 23, 1967, Arthur Rike filed a civil tort action in the District Court, First Judicial District, Grand Forks, N. Dak., against David John Mersy, a postal employee. The suit demanded damages of $37,905 for alleged injuries sustained by Mr. Rike as a result of a collision on December 24, 1964, between Mr. Rike's automobile and that of Mr. Mersy, who was acting within the scope of his Federal employment. At the request of the assistant U.S. attorney the action was removed to the U.S. District Court for the District of North Dakota pursuant to 28 U.S.C. 2679(d), and the United States was substituted as party defendant in place of Mr. Mersy. The Government then moved to dismiss the suit on the ground that plaintiff's cause of action was barred by the 2-year Federal statute of limitations, 28 U.S.C. 2401(b). The court granted the Government's motion, dismissing the suit on November 29, 1967.

"The Department opposes enactment of S. 2214. This bill would, in effect, nullify the above court proceedings and allow Mr. Rike an additional year within which to bring suit. In the 82d Congress this committee, in its report on Senate Joint Resolution 23, declared that it 'would not relieve a claimant of a statute of limitations except for "good cause" shown * * *.' We see no evidence of 'good cause' in this case to grant the relief which would be afforded by S. 2214.

"The Bureau of the Budget has advised that there is no objection to the submission of this report to the committee from the standpoint of the administration's program."

The sponsor of the bill, Hon. Quentin N. Burdick, has advised the committee as follows:

"It has come to my attention that the Post Office Department's opposition to S. 2214, a bill for the relief of Arthur Rike, is that there is no showing of a 'good cause' for extending the statute of limitations.

"I feel that I must take exception to this. Mr. Rike was lulled into believing that the U.S. Government was not a party to claims arising out of an automobile accident in which he and David John Mersy were the drivers. The only reason an action was not filed within the statute of limitations is a belief on the part of Mr. Rike and his attorney, supported by statements made by representatives of the insurance company and the U.S. Post Office, that the Government was not a party to this suit. In a deposition taken by Mr. Rike's attorney, the postal inspector did not deny that he had made such a statement.

"I firmly believe that this is a good and sufficient cause for the Judiciary Committee to favorably report S. 2214. The only thing this bill would do is give Arthur Rike the day in court which he has so far been denied."

The committee believes that the bill is meritorious and recommends it favorably.

The bill (S. 1932) was ordered to be engrossed for a third reading, read the third time, and passed, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, notwithstanding any statute of limitations, or lapse of time, or bars of laches or any proceeding heretofore had in the United States District Court for the District of North Dakota, jurisdiction is hereby conferred upon the United States District Court for the District of North Dakota to hear, determine, and render judgment upon any claim filed by Arthur Rike against the United States for compensation for personal injury, medical expenses, and property damage sustained by him arising out of an accident which occurred on December 24, 1964, allegedly as a result of the negligent operation of a motor vehicle by an employee of the United States while acting within the scope of his Federal employment.

SEC. 2. Suit upon any such claim may be instituted at any time within one year after the date of the enactment of this Act. Nothing in this Act shall be construed as an inference of liability on the part of the United States. Except as otherwise provided herein, proceedings for the determination of such claim, and review and payment of any judgment or judgments thereon, shall be had in the same manner as in the case of claims over which such court has jurisdiction under section 1346(b) of title 28, United States Code.

CONSTRUCTION DIFFERENTIAL SUBSIDY

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the Senate proceed to the consideration of calendar 258, H.R. 265, the construction differential subsidy bill, and that it be considered during the morning hour.

The VICE PRESIDENT. Without objection, it is so ordered.

The bill will be stated by title.

The BILL CLERK. A bill (H.R. 265) to amend section 502 of the Merchant Marine Act, 1936, relating to construction-differential subsidies.

The VICE PRESIDENT. Is there objection to the present consideration of the bill?

There being no objection, the Senate proceeded to consider the bill.

Mr. MAGNUSON. Mr. President, H.R. 265 is identical to S. 2341, which has been approved by the Senate Commerce Committee and reported to the Senate. We wish to take up the House bill rather than the Senate bill because the House has already acted favorably on this language.

This bill would extend for 1 year the 55-percent ceiling on construction differential subsidy. Under existing law the 55-percent ceiling would expire at the end of this month, so we are not initiating a new program, but merely extending the existing law for another year so that we can proceed with ship-construction contracts now pending.

The Merchant Marine Act of 1936 provided for a 50-percent construction-differential ceiling, but since 1960 we have amended the law to provide for a 55-percent maximum. This is necessary if we are to comply with the 1936 act and provide a true measure of differential because the disparity between foreign shipbuilding costs and our own requires that the ceiling be set at 55 percent rather than 50 percent. As Senators are aware ship construction contracts in recent years have required the use of the 55-percent differential.

Mr. WILLIAMS of Delaware. Mr. President, I shall vote against the extension of this subsidy. It has been said that nothing is more permanent than a temporary law passed by Congress. Several years ago Congress raised the construction and operational differential subsidies from 50 to 55 and 60 percent as that portion which would be paid by the Federal Government. Since that time the subsidy at these higher rates has been extended on a yearly basis.

I think it is time that Congress realized that when the Government pays over one-half of the cost of construction and operation of the merchant marine we are moving very close to the nationalization of this industry.

I shall vote against this proposal.

The VICE PRESIDENT. The bill is open to amendment. If there be no amendment to be proposed, the question is on the third reading and passage of the bill.

The bill (H.R. 265) was ordered to a third reading, was read the third time, and passed.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that Calendar No. 257, S. 2341, be indefinitely postponed.

The VICE PRESIDENT. Without objection, it is so ordered.

RECOGNITION OF 10TH ANNIVERSARY OF THE OPENING OF THE ST. LAWRENCE SEAWAY

Mr. MANSFIELD. Mr. President, I ask that the Chair lay before the Senate a message from the House of Representatives on Senate Concurrent Resolution 17.

The VICE PRESIDENT laid before the Senate the amendment of the House of Representatives to the concurrent resolution from the Senate (S. Con. Res. 17) to recognize the 10th anniversary of the opening of the St. Lawrence Seaway which was to strike out the premable.

Mr. MANSFIELD. Mr. President, I move that the Senate concur in the amendment of the House.

The motion was agreed to.

REPRESSIVE MEASURES BY THE THIEU GOVERNMENT

Mr. MATHIAS. Mr. President, on June 12, I expressed my concern over President Thieu's threats of "severe punishment" for South Vietnamese political leaders, legislators and intellectuals who discuss broader alternatives to his own leadership. I said this repressive attitude is inconsistent with the American goal of fostering conditions for a non-Communist political settlement. I pointed out that the time was fast ap-

proaching when a democratic assembly of non-Communist South Vietnamese leaders could only take place in jail.

Now it appears that such a prison convention might be covered directly by members of the foreign press. According to press reports and testimony before the judiciary committee's subcommittee on refugees and escapees, Thieu's ministry of information has warned reporters that stories critical of the South Vietnamese government could lead to punitive action against them. This warning to Reuters, Newsweek and Agence France Presse is inexcusable. Particularly reprehensible was the direct attempt to intimidate Newsweek Bureau Chief Maynard Parker. He was summoned to the ministry of information and told that all Newsweek correspondents might be denied entry to South Vietnam if their writing was judged "unsuitable."

As one who has lived all his life in a country where freedom of speech and freedom of the press are basic law, I cannot sit back indifferently when a nation which is sustained by U.S. assistance arbitrarily suppresses what we hold so dear. American goals in Vietnam are radically inconsistent with such an approach.

Americans are fighting at enormous human and monetary expense to buy time so that the South Vietnamese can have the right and the opportunity to freely determine their form of government and who will lead it. Intimidating the press and South Vietnamese political opponents is not the way I believe democracy is achieved.

Any political settlement in Vietnam, moreover, is going to involve American and world opinion. How can we expect Americans and citizens of the other nations to effectively evaluate the Government of South Vietnam when, because of censorship—first of its own press and now the international press—they cannot learn what is happening there?

President Thieu must understand that the Congress, the President, 200 million Americans, and much of the world deplore his attempts to impose totalitarian controls on his own non-Communist citizens and their leaders.

The attempt to impose such controls on American, British, and French reporters—as intolerable an effrontery as it is—is no momentary lapse. It follows a series of repressive measures by the Thieu Government that dictate immediate reconsideration of our support for it. I called for such reappraisal in my earlier statement. It is more than ever needed today if the diminishing chances for non-Communist self-determination in the country are to be preserved.

For if complete polarization occurs—if only a beleaguered military clique remains, facing an embittered people which has been deprived of non-Communist alternatives—ultimate Communist rule in South Vietnam becomes virtually inevitable; and its leading accomplice in gaining power will have been the Thieu government. As Thieu continues to destroy the possibilities of a democratic succession, it begins to appear that the longer he rules the more likely it is that the Communist will succeed him.

Mr. MANSFIELD. Mr. President, I suggest the absence of a quorum.

The VICE PRESIDENT. The clerk will call the roll.

The bill clerk proceeded to call the roll.

Mr. PEARSON. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The VICE PRESIDENT. Without objection, it is so ordered.

ALF LANDON IDENTIFIES THE CENTRAL ISSUES OF U.S. FOREIGN POLICY

Mr. PEARSON. Mr. President, Alf M. Landon, former Governor of Kansas and Republican presidential candidate in 1936, continues to make valuable contributions to the national debate about the future of U.S. foreign policy. From time to time it has been my pleasure to have the opportunity to call significant statements by Mr. Landon to the attention of my colleagues. Today I call attention to a convocation speech by Mr. Landon at Kansas State University on June 24. Mr. Landon effectively identifies and analyzes the central issues and key choices which we must come to grips with as we reshape our foreign policy to changing world conditions.

Mr. Landon suggests that we are at a critical point in the long history of man's struggle for freedom, justice, and peace. He states:

> We are either in the beginning of a new world of widespread freedom and justice—or a remaking of the old world in a new form of the police state.

The foreign policy decisions we make during the next few years will have a major influence as to which direction the world turns; hopefully it will be the former.

Mr. President, I ask unanimous consent that the speech by Mr. Landon be printed in the RECORD.

There being no objection, the speech was ordered to be printed in the RECORD, as follows:

CENTRAL ISSUES AND CHOICES OF OUR FOREIGN POLICY

Wars have increased in intensity and magnitude for the last 100 years—until they are reaching the climax of either total destruction or total peace. There is widespread preparation for war-violence and guerrilla fighting around the globe.

Essentially, conditions in the world have not changed much since January 1968, when U Thant, Secretary General of the United Nations, said: "We look around the world in vain for manifestation of either good will or good cheer. In the last twelve months, I have seen more crises and greater international tension than I can recall at any time during the eleven years that I have spent with the United Nations."

Right now, we are in a climactic period of adjustment leading to one or the other of two diametrically opposed societies. We are either in the beginning of a new world of widespread freedom and justice—or a remaking of the old world in a new form of the police state. In the cycle of time, the answer depends not only on Moscow's and Peking's continued quest for power and influence, but also on the United States of America's policies—both military and political. United States policies will depend on the response of President Nixon and the Congress to the many crises of our age.

Let us face the hard facts of war and peace—the central issues and choices of our foreign policy in the light of current, complex and dangerous developments.

First, I shall focus on Vietnam. Then I shall turn to the all-important triangular relationships among the United States, the Soviet Union, and China.

Vietnam, of course, has overwhelmingly dominated our foreign and domestic policies these past several years. And what happens in that tragic little land will have a tremendous impact on life around the earth.

The anguish of Vietnam at home and abroad is a fact we cannot avoid. So is the settlement of that war, for it is a continuity threaded through the labyrinth of all our important aspirations at home and our relations abroad.

The announcement of the decision to withdraw 25,000 American combat troops is the second step—following the 1968 cessation of the bombing of North Vietnam—toward deescalation and deamericanization of the war. So far, there has been no commensurate response from Hanoi. If our Government's expectations about the ability and the desire of the South Vietnamese people to protect themselves prove to be correct, we should prepare ourselves for a gradual redeployment and pullout of American combat troops from Vietnam.

On the other hand, if these expectations are wrong, then the American people will be confronted with the decision of whether or not they want to continue to sacrifice American lives and American dollars for South Vietnamese people either unable or unwilling to do what their national interest demands.

We have proved by unparalleled sacrifices our willingness to assist the South Vietnamese people. If they cannot or do not do more for themselves, if they do not measure up, how can anyone expect us to continue these great sacrifices indefinitely?

The problems of the world we live in—the realities of international affairs—include more than our hard choices in Vietnam. They include the current different interpretations of Communist dogma by the leaders of the Soviet Union, China, and other Communist governments as well as Communist parties all over the world; the Soviet-Chinese border warfare; Soviet invasion of Czechoslovakia; self-determination and non-alignment of developing nations; desires to diminish American economic domination; and world-wide growth of the concept of the welfare state.

I believe that war or peace in the coming decades will depend on the triangular relationships among the United States, the Soviet Union and China.

The Soviet-Chinese split is real and deep. Old ethnic conflicts have existed between China and Russia for centuries. Their current split dates from at least 1960 when China deported its last Soviet technicians and advisers. That split carries important ideological overtones with impact on national interests in every part of the globe. It adds to the complexity of the world in which mankind will live in coming decades.

The longest border in the world is that between the Soviet Union and China. And China's nuclear test site is much closer to Russia than it is to any other power.

The increasing belligerency between the Soviet Union and China may lead to more than border warfare. I do not mean that a Soviet-Chinese war is inevitable. However, if the conflict escalates into an all-out nuclear war, its fallout will result in a catastrophe for the whole world.

The increasing tension and conflict between China and the Soviet Union—and the deescalation and deamericanization of the war in Vietnam—offer a real opportunity for new diplomatic initiatives to President Nixon.

If the present belligerent position of the leadership in China toward the Soviet Union continues to develop in the same direction as now, the Soviet Government may gravitate toward a more cooperative posture with the United States. The mood of the national administration and of the people in this country is to enter a period of serious, realistic negotiations with the Soviet Union concerning the pressing international problems.

However, if the Soviet Government persists in its attempts to turn the clock back to Stalin's inflexible policies, the chances for cooperation between the Soviet Union and the United States will be very poor.

The present Soviet-Chinese tension and conflict also give the Nixon Administration an opportunity for maneuver and progress in Chinese-American relations—in spite of the deep chasm separating Washington and Peking. If the existing deadlock gives way to mutual understandings in the relations between these two great powers it will have a profound effect on the whole spectrum of international affairs.

Our foreign policy makers must avoid repeating tragic mistakes concerning China. One of them took place in October 1964. Two days after the explosion of China's first nuclear bomb, the Peking Government invited all nuclear powers to a conference to discuss means by which the world could establish nuclear disarmament. The United States promptly refused—terming the offer insincere. At that time, I immediately urged the United States Government to accept that invitation for the purpose of discussion. China's sincerity would thus be put to a test. The next day, in an unprecedented statement, United Nations Secretary General, U Thant, publicly approved my position. But the United States persisted in its ostrich-headed policy of refusing to use the opportunity for a new meaningful diplomatic contact with mainland China.

So far, diplomatic contact between the Communist Government of China and the United States has been minimum. The prospects for improvement now depend on how soon mutual de facto ties are established between the United States and mainland China in such fields as trade, travel, cultural and educational exchange and legal representation in the United Nations.

Given the widening rift with the Soviet Union, China may wish to pursue a more flexible policy with the United States and other non-Communist countries. The Soviet invasion of Czechoslovakia was a traumatic shock to the world that dramatically reminded all Communist governments—including China—that the old Stalinist doctrine of deciding the fate of other countries is a clear and present danger.

While considering the opportunities for new diplomatic probings with the Soviet Union and China, I do not mean we can ignore certain hard facts about Soviet and Chinese Communist influence in several parts of the world.

There is a link between the fear of China among Southeast Asian countries and the experience of Communist subversion. That was particularly evident in the case of Indonesia—a country comprising thousands of islands stretching over a vast area—with the fifth largest population of the world. Indonesia had the largest Communist party in Asia—outside of Communist China. Sukarno had initiated confrontation with Malaysia—withdrawn Indonesia from the United Nations—and maintained increasingly intimate relations with Communist China.

That was the situation in the fall of 1965—when the Communists, probably influenced by Peking, attempted to take over that government. The aftermath was one of the biggest blood baths in history which, to some extent, is still going on. The Communists suffered a serious reversal.

The Philippines also have experienced intermittent Communist so-called "Huk" guerrilla activity. Communist insurgency is a threat also in Laos, Thailand, Burma, Malaysia and Cambodia.

In August and September 1965 India and Pakistan went to war against each other. That conflict ended in a stand-off. The fact that they fought each other with American weapons caused the United States to stop military assistance to both nations. Since then, the Soviet Union is finding itself in a position similar to that heretofore held by the United States. It allegedly has promised military assistance to both countries, with neither being happy about the other receiving such assistance.

The fact is that neither the United States nor the Soviet Union wants to become embroiled in the hostility between Pakistan and India. Furthermore, the United States and the Soviet Union share the kindred interest of protecting India from Communist China.

Unfortunately, the British are in the process of rapidly withdrawing all their military forces east of Suez by 1971—which would leave Malaysia and Singapore, and neighboring nations in positions of having to seek alternative means of protection.

President Nixon already is facing up to how the United States should attempt to fill the void created by British withdrawal from that area. For the first time, the United States of America's Secretary of State swung around the circle—as it were—to visit Saigon and Tokyo and to meet with members of the Southeast Asia Treaty Organization and the Central Treaty Organization to discuss personally their area economic and political problems and to acquaint them with ours. The relationship among the three superpowers will definitely affect Korea.

The belligerent statements of the Communist Government of North Korea can lead to new acts of war and a military confrontation. Should hostilities break out in that area while we are still heavily involved in Vietnam, there will be great repercussions in the whole international situation.

We witness today a growing Soviet influence in the Middle East. Since the war between Israel and its Arab neighbors in June 1967, the Soviet Union is rapidly fulfilling the centuries-old quest of Russian regimes dating from the earliest czars for a Russian outlet to the warm waters of the Mediterranean. Today, the Soviet Union not only has the outlets—backed by its growing navy—but also has increased its influence in much of the Arab world—thus quickly upsetting the balance of power in that area as an aftermath of the June 1967 war. Victorious Israel still occupies the Sinai Peninsula and West Jordan, including the old city of Jerusalem—a holy city for Jews, Christians, and Muslims, alike. And the Suez Canal and Gulf of Aqaba still remain closed to the world's shipping.

United States support for Israel—though from private more than public sources—caused Egypt, Syria, Algeria, Yemen, and Iraq to sever diplomatic relations with the United States—and relations with them remain severed. The Soviet Union has furnished all those governments—and others, including North Vietnam—with enormous quantities of modern military equipment.

Israel refuses big-power mediation by the United States, the Soviet Union, Britain and France. Clinging to demands for face-to-face negotiations with the Arab states, Israeli Government states that on the record it trusts neither the words nor the intent of the Soviet Union. The Arab states are divided: Some would accept big-power mediation efforts, others will not.

Hostilities continue in the Middle East. At present, there is no evidence that the stalemate is breaking up.

Soviet leaders must face the question whether it is in the interest of the USSR to continue to escalate its military support of Arab states. The United States and the Soviet Union must face the question whether such continued support might not further embolden militarists and extremists within the nations of that area to enhance the possibility not only of continued intermittent Middle East wars but also a military confrontation between the United States and the Soviet Union and a consequent world catastrophe caused by the nuclear fallout.

Some of the Arab states are now turning to China for military equipment. Once China enters the Middle East picture, it will pose a more serious threat to the Soviet Union's southwest flank than does its present wedge in Albania.

In Europe the Soviet Union is just as interested in protecting its flanks to its west as it is in securing a foothold in the Mediterranean.

Precisely because the Soviet Union fears war with Communist China—perhaps even more than it fears war with the West—it wants to strengthen its position in East Europe while it faces the threat from China to its east and south.

It is in this context, I believe, that we must assess the Soviet invasion and occupation of Czechoslovakia in August 1968. The invasion upset the balance of power in Europe. It also set in motion a barrage from many Communist parties against Soviet leaders.

As we face the political changes taking place on the European continent, we should not overlook the preoccupation of Soviet leaders with the threat from China. I do not believe that Soviet leaders necessarily are as erratic and incalculable as some have pictured them. They are obtuse. Their use of raw military force in Czechoslovakia has set back their opportunity to secure their western flank through a detente with Western European governments—as well as with Britain and the United States of America.

The Soviet invasion of Czechoslovakia has resulted in reevaluating policy in France. Our relations with France are now more friendly. It could be that France under President Pompidou will reach agreements with Germany and the rest of the European Community about the new phase of European organization.

In the triangular relationships among the United States, the Soviet Union and China, Japan occupies a critical position. It is the fourth largest industrial power and a good trading partner and ally of the United States. We need to reach a mutually satisfactory agreement on our military bases in Japan—without delay.

We must not endanger our relations with that friendly nation.

I am particularly disturbed by the increasingly louder protectionist voices in the United States.

It is true that many nations restrict American investments and trade by various political and licensing methods. But such restrictions are likely to be increased in retaliation to a new wave of protectionism under way in the United States.

There is a gathering force in Congress for package legislation that would return to conditions under high protective tariffs in the guise of limiting quotas on imports of textiles, oil, steel, cattle and so forth into the United States—a definite step toward Fortress America. That would affect detrimentally, in my opinion, the entire scope of world affairs.

I cannot think of a greater benefit to Communist powers than for the United States to return to the conditions of a special interest trade policy so unpleasantly reminiscent of the Smoot-Hawley high tariff legisaltion folly that ushered in the Great Depression in 1929.

That is exactly what the new protectionism proposes to do. The tragedy is that ultimately it would wreck international cooperation, and would hurt the United States. Protectionist measures would evoke retaliation from other nations that could only restrict our trade at a time when we need more markets—more selling of our products abroad—to save the value of our dollar now under attack from other directions.

We shall be faced with a real tragedy unless we recognize the necessity of strengthening our trading ties with Japan, Canada, European Community, Britain and other nations.

It is evident that the way to a stable—and therefore a peaceful—world is building markets for trade which has been the meeting place for better acquaintance and understanding since ancient tribal days.

We must also continue our efforts to assist the low-income nations to improve their development strategy and tactics; Mexico's successful development without much direct government aid from the United States is a case in point. The development dialogue must be based on the assumption that the development effort should bear the stamp of each nation's identity. Such efforts cannot be divorced from the crucial international problem of the triangular relationships among the United States, the Soviet Union and China.

The quest for human dignity and freedom explains much about social and political changes taking place in Asia, Africa, Europe and Latin America.

To assess objectively these changes and realities, and to adjust our national interests and goals with respect to them, our President must support a comprehensive and complete review by the Congress of our foreign and military policies. Such a review must appraise our experience with foreign aid in terms of its costs, scope and effectiveness. It must appraise the future of the dollar, world trade, the United Nations, military strength and efficiency, arms control and disarmament, and also the huge world population growth.

I strongly believe that many of the problems concerning our attempted world posture derive from the fact that America has oversold its strength, its faith, and its hopes in relation to its abilities and resources.

We have oversold our military might. Despite our obvious strength, we cannot make all things happen that we would like to have happen, nor prevent all things from happening that we do not want to happen.

We have oversold the capacity of our economy. Despite our obvious affluence, we cannot finance world security, world development, the Vietnam War, and the elimination of poverty at home—all at the same time.

We have oversold our will and resolve. We are the most generous people of the world, the most committed to the protection of freedom, the most altruistic, but despite those qualities, there are limits beyond which we cannot reasonably exercise our will and resolve to assume alone the role of world policeman and benefactor.

We have oversold the dollar. Despite the dollar's being one of the world's most stable currencies and monetary value bases, we are witnessing its decline and vulnerability.

The United Nations has been oversold. Established to achieve world peace, the United Nations—after 24 years—is far from realizing its purpose, and its goal will remain a distant dream so long as the major powers—including the United States—act unilaterally on major world issues, and so long as Communist China—representing one-fourth of humanity—is unrepresented in that body.

Meanwhile, so long as we continue to live in a world without an effective international organization, world peace will depend chiefly on understanding and agreements reached among the Soviet Union, the United States and China or between any two of them. Chances for such agreements, in turn, depend on a parity of power based on mutual deterrence among the super powers. As of now, mutual detente is conditioned by mutual deterrence within the context of world instability. That is why, perhaps, the most important responsibility facing our President is to see to it that the United States may continue to negotiate with the Soviet Union and China from a position of at least equal military strength. However, that does not mean relying on military strength as the proper instrument for reconstructing international relations.

The assumption that in a major war between the superpowers the nuclear weapons will not be used can be a fatal delusion. No one can be sure. In a nuclear war every country in the world will be involved directly or indirectly. The nuclear fallout will not spare anyone.

Our President—in framing long-range foreign policies—must see to it that we do not miscalculate how the leaders of other lands may react to our moves and how they may feel about us and our intentions. Miscalculations have led to wars—small and big. The importance of consistent use of consultations cannot be overemphasized.

The times call for wisdom, tact and, above all, equity—in approaching the central issues of our foreign policy.

Mr. MANSFIELD. Mr. President, I suggest the absence of a quorum.

The VICE PRESIDENT. The clerk will call the roll.

The bill clerk proceeded to call the roll.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The VICE PRESIDENT. Without objection, it is so ordered.

APOSTLE ISLANDS NATIONAL LAKESHORE, WISCONSIN

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the Senate proceed to the consideration of Calendar No. 268, S. 621.

The VICE PRESIDENT. The bill will be stated by title for the information of the Senate.

The LEGISLATIVE CLERK. S. 621, to provide for the establishment of the Apostle Islands National Lakeshore in the State of Wisconsin, and for other purposes.

The VICE PRESIDENT. Is there objection to the present consideration of the bill?

There being no objection, the Senate proceeded to consider the bill, which had been reported from the Committee on Interior and Insular Affairs, with amendments, on page 1, at the beginning of line 3, strike out:

That (a)(1) for the purpose of conserving and developing for the benefit, inspiration, and use of the public certain islands, shorelines, beaches, sandspits, and other natural and historical features within Ashland and Bayfield Counties, Wisconsin, which make up a significant portion of the diminishing shoreline and archipelago environments of the Great Lakes region and which possess high values to the Nation as examples of unspoiled areas of great natural beauty.

(2) For the purposes of encouraging and enhancing the development and utilization of this region as an important center of public recreation activities, and particularly to encourage participation in the accomplishment of such purposes by the Bad River Band and the Red Cliff Band of the Lake Superior Chippewa Indians of Wisconsin (hereinafter referred to as the "Band River Band" and the "Red Cliff Band"), the Secretary of the Interior (hereinafter referred to as the "Secretary") is authorized to establish and administer the Apostle Islands National Lakeshore (hereinafter referred to as the "lakeshore").

And insert:

That (a)(1) the Congress hereby finds that—

(A) certain islands, shorelines, beaches, sandspits, and other natural and historical features situated within Ashland and Bayfield Counties, Wisconsin, should be preserved and developed for the benefit, use, and inspiration of all the people of the United States;

(B) such islands, shorelines, beaches, sandspits, and other natural and historical features make up a significant portion of the diminishing shoreline and archipelago environments of the Great Lakes region and possess high values to the Nation as examples of unspoiled areas of great natural beauty;

(C) the development and use of such islands, shorelines, beaches, sandspits, and other natural and historical features for public recreation activities should be encouraged and that the Bad River Band and the Red Cliff Band of the Lake Superior Chippewa Indians of Wisconsin (referred to in this Act as the "Bad River Band" and the "Red Cliff Band" respectively), especially, should be encouraged to participate in the accomplishment of such development and use; and

(D) the culture, heritage, homeland, and rights of the native Chippewa Indians, who have so greatly contributed to the preservation of such shorelines, beaches, sandspits, and other natural and historical features in their unspoiled and natural conditions, should be preserved and protected.

(2) The Secretary of the Interior (hereinafter referred to in this Act as the "Secretary") is authorized to establish and administer the Apostle Islands National Lakeshore (hereinafter referred to in this Act as the "lakeshore").

On page 3, at the beginning of line 20 after "(b)" insert "(1)"; in line 25, after the word "February" strike out "1967." and insert: "1967; except that no Indian tribal lands within the area described by said map as the Red Cliff unit shall be included in the lakeshore except on petition of the Tribal Council of the Red Cliff Band, the concurrence of the Secretary, and the publication of a description of such lands in the Federal Register: *Provided further,* That the inclusion of such lands in the lakeshore shall not become effective until the Secretary has forwarded a description of such lands to the President of the Senate and the Speaker of the House of Representatives and a period of ninety calendar days of a continuous session of Congress following the receipt by the said President and the Speaker of the description submitted by the Secretary has expired."

On page 4, after line 14, insert:

(2) For the purpose of paragraph (1) of this subsection—

continuity of session is broken only by an adjournment of Congress sine die; and

the days on which either House is not in session because of an adjournment of more than three days to a day certain are excluded in the computation of the ninety-day period.

On page 6, line 11, after the word "land" strike out "without the consent of all of the beneficial owners if the acquisition is agreed to by the owners of

not less than a 50 per centum interest in any land where ten or fewer persons own undivided interests or by the owners of not less than a 25 per centum interest in any land where eleven or more persons own undivided interests. The Secretary may represent for the purpose of this subsection any Indian owner who is a minor or who is non compos mentis, and, after giving such notice of the proposed acquisition as he deems sufficient to inform interested parties, the Secretary may represent any Indian owner who cannot be located, and he may execute any title documents necessary to convey a marketable and recordable title to the land," and insert "with the consent of 51 per centum of the beneficial owners responding and agreeing after due notice agreed on by the Secretary and the applicable tribal council of the Secretary's intent to acquire such lands. With the concurrence of the beneficial owners of such allotted or restricted land, the applicable tribal council shall be represented at any negotiations for the acquisition of such land."; on page 8, line 4, after "(a)" strike out "With the exception of not more than eighty acres of land in the Red Cliff Creek area that the Secretary determines are necessary for an administrative site, visitor center, and related facilities," and insert "With the exception of not more than eighty acres of land to be designated within the lakeshore boundaries by the Secretary as an administrative site, visitor center, and related facilities, as soon as practicable," on page 10, line 13, after the word "*Provided,*" strike out "That in order to preserve and interpret the historic, scenic, cultural, and other outdoor features and attractions within the lakeshore the Secretary may prescribe regulations under which the area can be traversed;" and insert "That for the sole purpose of the preservation of public safety the Secretary may prescribe regulations relative to the discharge of firearms;".

On page 11, line 7, after the word "for" strike out "construction or maintenance work or for other"; on page 12, line 12, after the word "authority" insert "of section 5(a)"; and on page 14, line 21, after "SEC. 12." strike out "There are hereby authorized to be appropriated such sums as may be necessary to carry out the provisions of this Act."; and insert "There are hereby authorized to be appropriated not to exceed $6,660,000 for acquisition of land and not to exceed $8,257,700 for the development of the area as provided for in this Act."; so as to make the bill read:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That (a)(1) the Congress hereby finds that—

(A) certain islands, shorelines, beaches, sandspits, and other natural and historical features situated within Ashland and Bayfield Counties, Wisconsin, should be preserved and developed for the benefit, use, and inspiration of all the people of the United States;

(B) such islands, shorelines, beaches, sandspits, and other natural and historical features make up a significant portion of the diminishing shoreline and archipelago environments of the Great Lakes region and possess high values to the Nation as examples of unspoiled areas of great natural beauty;

(C) the development and use of such islands, shorelines, beaches, sandspits, and other natural and historical features for public recreation activities should be encouraged and that the Bad River Band and the Red Cliff Band of the Lake Superior Chippewa Indians of Wisconsin (referred to in this Act as the "Bad River Band" and the "Red Cliff Band", respectively), especially, should be encouraged to participate in the accomplishment of such development and use; and

(D) the culture, heritage, homeland, and rights of the native Chippewa Indians, who have so greatly contributed to the preservation of such shorelines, beaches, sandpits, and other natural and historical features in their unspoiled and natural condition, should be preserved and protected.

(2) The Secretary of the Interior (hereinafter referred to in this Act as the "Secretary") is authorized to establish and administer the Apostle Islands National Lakeshore (hereinafter referred to in this Act as the "lakeshore").

(b)(1) The lakeshore shall comprise those islands, waters, and portions of mainland within Ashland and Bayfield Counties, Wisconsin, as generally depicted on a map identified as "Boundary Maps—Proposed Apostle Islands National Lakeshore, NL–AI–7100B, sheets 1, 2, and 3," dated May 1965, revised February 1967; except that no Indian tribal lands within the area described by said map as the Red Cliff unit shall be included in the lakeshore except on petition of the Tribal Council of the Red Cliff Band, the concurrence of the Secretary, and the publication of a description of such lands in the Federal Register: *Provided further,* That the inclusion of such lands in the lakeshore shall not become effective until the Secretary has forwarded a description of such lands to the President of the Senate and the Speaker of the House of Representatives and a period of ninety calendar days of a continuous session of Congress following the receipt by the said President and the Speaker of the description submitted by the Secretary has expired. Said map shall be on file and available for public inspection in the offices of the National Park Service.

(2) For the purpose of paragraph (1) of this subsection—

Continuity of session is broken only by an adjournment of Congress sine die; and

The days on which either House is not in session because of an adjournment of more than three days to a day certain are excluded in the computation of the ninety-day period.

(c) As soon as practicable after acquisition by the Secretary of an acreage within the boundaries of the lakeshore which in his opinion can be administered efficiently for the purposes of this Act, he shall establish the lakeshore by publication of notice thereof in the Federal Register.

SEC. 2. (a) Within the boundaries of the lakeshore, the Secretary is authorized to acquire lands and interests therein by donation, purchase with donated or appropriated funds, or exchange. Any property or interests therein owned by the State of Wisconsin or any political subdivision thereof may be acquired only by donation. Notwithstanding any other provision of law, any Federal property located within the boundaries of the lakeshore may, with the concurrence of the agency having custody thereof, transferred, without transfer of funds, to the administrative jurisdiction of the Secretary for the purposes of the lakeshore.

(b) Lands or interests therein within the boundaries of the lakeshore that are held by the United States in trust for the Bad River Band or the Red Cliff Band may be acquired by the Secretary only with the concurrence of the beneficial owner. The Secretary may agree to pay the purchase price either in a lump sum or in installments which in the aggregate equal the purchase price plus interest on unpaid balances.

(c) In order to provide substitute lands for the Bad River Band and the Red Cliff Band or for individual Indians of said bands in cases where their lands are acquired for the lakeshore, the Secretary may, from funds made available to him by such band or individual Indian, acquire by negotiated purchase any lands or interests therein outside of the boundaries of the lakeshore: *Provided,* That title to such lands shall be held by the United States in trust for the band or the individual Indians involved.

(d) In exercising his authority to acquire by negotiated purchase any land within the boundaries of the lakeshore that is held in trust or in a restricted status for individual Indians, the Secretary may, in cases where a particular tract of land is so held for more than one Indian, acquire such land with the consent of 51 per centum of the beneficial owners responding and agreeing after due notice agreed on by the Secretary and the applicable tribal council of the Secretary's intent to acquire such lands. With the concurrence of the beneficial owners of such allotted or restricted land, the applicable tribal council shall be represented at any negotiations for the acquisition of such land.

(e) In exercising his authority to acquire property within the boundaries of the lakeshore by exchange, the Secretary may accept title to any non-Federal property therein, and in exchange therefor he may convey to the grantor of such property any federally owned property under his jurisdiction in the State of Wisconsin which he classifies as suitable for exchange or other disposal. The values of the properties so exchanged either shall be approximately equal, or if they are not approximately equal the values shall be equalized by the payment of cash to the grantor or to the Secretary as the circumstances require.

(f) In order to facilitate the acquisition by exchange of the lands within the boundaries of the lakeshore that are held by the United States in trust for the Bad River Band or the Red Cliff Band or held in trust or in a restricted status for individual Indians of said bands, the Secretary may acquire by negotiated purchase, lands, or interests therein, outside of the lakeshore boundaries. Lands so acquired may be exchanged for such Indian lands. The values of the properties so exchanged either shall be approximately equal, or if they are not approximately equal the values shall be equalized by the payment of cash to the grantor or to the Secretary as the circumstances require.

SEC. 3. (a) With the exception of not more than eighty acres of land to be designated within the lakeshore boundaries by the Secretary as an administrative site, visitor center, and related facilities, as soon as practicable, any owner or owners, including beneficial owners (hereinafter in this section referred to as "owner") of improved property on the date of its acquisition by the Secretary may, as a condition of such acquisition, retain for themselves and their successors or assigns a right of use and occupancy of the improved property for noncommercial residential purposes for a definite term not to exceed twenty-five years, or, in lieu thereof, for a term ending at the death of the owner, or the death of his spouse, whichever is the later. The owner shall elect the term to be reserved. The Secretary shall pay to the owner the fair market value of the property on the date of such acquisition less the fair market value on such date of the right retained by the owner.

(b) A right of use and occupancy retained pursuant to this section may be terminated with respect to the entire property by the Secretary upon his determination that the property or any portion thereof has ceased to be used for noncommercial residential or

for agricultural purposes, and upon tender to the holder of a right an amount equal to the fair market value, as of the date of the tender, of what portion of the right which remains unexpired on the date of termination.

(c) The term "improved property", as used in this section, shall mean a detached, noncommercial residential dwelling, the construction of which was begun before January 1, 1967 (hereinafter referred to as "dwelling"), together with so much of the land on which the dwelling is situated, the said land being in the same ownership as the dwelling, as the Secretary shall designate to be reasonably necessary for the enjoyment of the dwelling for the sole purpose of noncommercial residential use, together with any structures accessory to the dwelling which are situated on the land so designated.

SEC. 4. (a) The Bad River Band and the Red Cliff Band, notwithstanding the provisions of section 1 of the Act of August 9, 1955 (69 Stat. 539), as amended (25 U.S.C. 415), may enter into leases with the Secretary for lands beneficially owned by the Bad River Band or the Red Cliff Band for a term of not to exceed ninety-nine years, and shall grant the Secretary the option of renewing the lease for as long as the lands are used as part of the lakeshore.

(b) Notwithstanding any other provision of law, improvements and structures needed for development and administration of the lakeshore may be constructed on lands leased pursuant to this section.

SEC. 5. Within the portions of the Bad River and Red Cliff Indian Reservations that are included in the lakeshore, recognized members of the Bad River and Red Cliff Bands shall be—

(a) permitted to traverse such areas in order to hunt, fish, trap, boat, or gather wild rice or to obtain access to their homes or businesses: *Provided,* That for the sole purpose of the preservation of public safety the Secretary may prescribe regulations relative to the discharge of firearms;

(b) granted the first right of refusal to purchase any timber at fair market value if the Secretary determines that the harvesting or removal of timber is necessary or desirable;

(c) granted, to the extent practicable, a preferential privilege of providing such visitor accommodations and services, including guide services, as the Secretary deems are desirable: *Provided,* That such a preferential privilege will not be granted unless the visitor accommodations and services meet such standards as the Secretary may prescribe;

(d) granted employment preference for work in connection with the lakeshore for which they are qualified; and

(e) encouraged to produce and sell handicraft objects under the supervision of the Secretary.

SEC. 6. The Secretary shall, to the extent that appropriated funds and personnel are available, provide consultative or advisory assistance to the Bad River and Red Cliff Bands with respect to planning facilities or developments upon their tribal lands which are outside of the boundaries of the lakeshore.

SEC. 7. Subject to such regulations as the Secretary may prescribe, the recognized members of the Bad River and Red Cliff Bands may use without charge any docking facilities within the lakeshore that are operated directly by the Secretary.

SEC. 8. (a) The Secretary shall permit hunting, fishing, and trapping on lands and waters under his jurisdiction within the boundaries of the lakeshore in accordance with the appropriate laws of Wisconsin and the United States to the extent applicable, except that he may designate zones where, and establish periods when, no hunting, trapping, or fishing shall be permitted for reasons of public safety, administration, fish or wildlife management, or public use and enjoyment. Except in emergencies, any regulations prescribing any such restrictions shall be put into effect only after consultation with the appropriate State agency responsible for hunting, trapping, and fishing activities.

(b) Except for such regulations as the Secretary may issue under authority of section 5(a) of this Act, nothing in this Act shall affect the existing rights of members of the Bad River Band or Red Cliff Band to hunt, fish, trap, or to gather wild rice, and the Secretary shall grant to such Indians the same rights with respect to lands acquired by him within the portions of the lakeshore that are applicable within the Bad River and Red Cliff Indian Reservations.

SEC. 9. The lakeshore shall be administered, protected, and developed in accordance with the provisions of the Act of August 25, 1916 (39 Stat. 535; 16 U.S.C. 1, 2–4), as amended and supplemented; and the Act of April 9, 1924 (43 Stat. 90; 16 U.S.C. 8a et seq.), as amended, except that any other statutory authority available to the Secretary for the conservation and management of natural resources may be utilized to the extent he finds such authority will further the purposes of the Act.

SEC. 10. (a) In the administration, protection, and development of the lakeshore, the Secretary shall adopt and implement, and may from time to time revise, a land and water use management plan which shall include specific provision for—

(1) protection of scenic, scientific, historic, geological, and archeological features contributing to public education, inspiration, and enjoyment;

(2) development of facilities to provide the benefits of public recreation and a scenic shoreline drive on the Bayfield Peninsula;

(3) preservation of the unique flora and fauna and the physiographic and geologic conditions now prevailing on the Apostle Islands within the lakeshore: *Provided,* That the Secretary may provide for the public enjoyment and understanding of the unique natural, historical, scientific, and archeological features of the Apostle Islands through the establishment of such trails, observation points, exhibits, and services as he may deem desirable; and

(4) preservation and enhancement of the unique characteristics of the Kakagon River and Bad River Sloughs.

(b) With respect to the portion of the lakeshore located within the boundaries of the Bad River Indian Reservation such land and water use management plan shall provide for—

(1) public enjoyment and understanding of the unique natural, historic, and scientific features through the establishment of such roads, trails, observation points, exhibits, and services as the Secretary may deem desirable; and

(2) public use and enjoyment areas that the Secretary considers especially adaptable for viewing wildlife: *Provided,* That no development or plan for the convenience of visitors shall be undertaken in such portion of the lakeshore if it would be incompatible with the preservation of the unique flora and fauna or the present physiographic conditions.

SEC. 11. Section 1 of the Act of August 9, 1955 (69 Stat. 539), as amended (25 U.S.C. 415), is hereby further amended by inserting the words "the Bad River Reservation, the Red Cliff Reservation," after the words "the Pyramid Lake Reservation,".

SEC. 12. There are hereby authorized to be appropriated not to exceed $6,660,000 for acquisition of land and not to exceed $8,257,700 for the development of the area as provided for in this Act.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the amendments be considered en bloc.

The VICE PRESIDENT. Without objection, the amendments are considered and agreed to en bloc.

The bill is open to further amendment. If there be no further amendment to be proposed, the question is on the engrossment and third reading of the bill.

The bill (S. 621) was ordered to be engrossed for a third reading, was read the third time, and passed.

ORDER OF BUSINESS

Mr. BYRD of West Virginia. Mr. President, I suggest the absence of a quorum.

The VICE PRESIDENT. The clerk will call the roll.

The bill clerk proceeded to call the roll.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The VICE PRESIDENT. Without objection, it is so ordered.

EXECUTIVE COMMUNICATIONS, ETC.

The VICE PRESIDENT laid before the Senate the following letters, which were referred as indicated:

REPORT OF NATIONAL COUNCIL ON RADIATION PROTECTION AND MEASUREMENTS

A letter from the General Counsel for the National Council on Radiation Protection and Measurements, transmitting, pursuant to law, a report on the examination of accounts of the National Council on Radiation Protection and Measurements, dated December 31, 1969 (with an accompanying report); to the Committee on the Judiciary.

PROPOSED LEGISLATION TO ESTABLISH A VISITING SCIENTIST AND SCHOLAR PROGRAM IN THE FEDERAL GOVERNMENT

A letter from the Chairman, U.S. Civil Service Commission, transmitting a draft of proposed legislation, to amend title 5, United States Code, to establish a Visiting Scientist and Scholar Program in the Federal Government (with accompanying papers); to the Committee on Post Office and Civil Service.

PETITIONS AND MEMORIALS

Petitions, etc., were laid before the Senate, or presented, and referred as indicated:

By the VICE PRESIDENT:

A resolution adopted by the Legislature of the Commonwealth of Massachusetts; to the Committee on Commerce:

"Resolutions memorializing the Congress of the United States to enact legislation providing for a two hundred mile off-shore limit for taking fish off the Atlantic coast by fishing vessels of foreign countries, and providing certain funds to assist the fishing industry

"*Whereas,* The closing of Georges Bank, the world's most productive fishing ground, has been proposed to enable depleted haddock stocks to recover; and

"*Whereas,* Congressmen Bates, O'Neill and Keith, of Massachusetts, in cooperation with the Speaker of the House, John W. McCormack, have sponsored a plan requesting $700,000 for a demonstration program and $750,000 for vessel conversion; and

"*Whereas,* The shortage of haddock off the shores of New England constitutes a serious economic threat to the fishing industry of the commonwealth, an industry which has

been the traditional life blood of our state's economy; and

"*Whereas*, The present territorial limitation as to fishing off the coast of the United States is totally inadequate to protect the fishing fleets of the commonwealth from irreparable loss, a situation which can be remedied by appropriate legislative enactment; now, therefore, be it

"*Resolved*, That the General Court of Massachusetts respectfully urges the Congress of the United States to enact legislation providing for a two hundred mile off-shore limit for taking fish off the Atlantic coast by fishing vessels of foreign countries and legislation providing funds for the demonstration program and for vessel conversion; and be it further

"*Resolved*, That a copy of these resolutions be transmitted forthwith by the State Secretary to the President of the United States, to the presiding officer of each branch of the Congress and to the members thereof from the Commonwealth.

"Senate, adopted, June 11, 1969.

"NORMAN L. PIDGEON,
"Clerk.

"House of Representatives, adopted in concurrence, June 16, 1969.

"WALLACE C. MILLS,
"Clerk.

"Attest:

[SEAL]
JOHN F. X. DAVOREN,
"Secretary of the Commonwealth."

REPORTS OF COMMITTEES

The following reports of committees were submitted:

By Mr. LONG, from the Committee on Finance, with an amendment:

H.R. 9951. An act to provide for the collection of the Federal unemployment tax in quarterly installments during each taxable year; to make status of employer depend on employment during preceding as well as current taxable year; to exclude from the computation of the excess the balance in the employment security administration account as of the close of fiscal years 1970 through 1972; to raise the limitation on the amount authorized to be made available for expenditure out of the employment security administration account by the amounts so excluded; and for other purposes (Rept. No. 91–281).

By Mr. ANDERSON, from the Committee on Aeronautical and Space Sciences, with an amendment:

H.R. 11271. An act to authorize appropriations to the National Aeronautics and Space Administration for research and development, construction of facilities, and research and program management, and for other purposes (Rept. No. 91–282).

EXECUTIVE REPORT OF A COMMITTEE

As in executive session,

The following favorable report of a nomination was submitted:

By Mr. BYRD of Virginia, from the Committee on Armed Services:

Gen. Earle Gilmore Wheeler, Army of the United States (major general, U.S. Army) for reappointment as Chairman, Joint Chiefs of Staff.

BILLS AND JOINT RESOLUTION INTRODUCED

Bills and a joint resolution were introduced, read the first time and, by unanimous consent, the second time, and referred as follows:

By Mr. HOLLINGS:

S. 2489. A bill to amend chapter 13 of title 38, United States Code, to provide that the death of any veteran who, at the time of his death, was entitled to disability compensation for certain service disabilities will be deemed to have resulted from service-connected causes; to the Committee on Finance.

By Mr. MAGNUSON:

S. 2490. A bill for the relief of Miriam Lazarowitz; to the Committee on the Judiciary.

By Mr. MONTOYA:

S. 2491. A bill to provide for the establishment of a National Academy of Medical, Dental, and Allied Sciences within the Department of Defense; to the Committee on Armed Services.

(The remarks of Mr. MONTOYA when he introduced the bill appear later in the RECORD under the appropriate heading.)

By Mr. MURPHY (for himself and Mr. CRANSTON):

S. 2492. A bill to establish the Fort Point National Historic Site in San Francisco, Calif., and for other purposes; to the Committee on Interior and Insular Affairs.

(The remarks of Mr. MURPHY when he introduced the bill appear later in the RECORD under the appropriate heading.)

By Mr. STEVENS:

S. 2493. A bill authorizing the Secretary of the Interior to transfer all jurisdiction and the right, title, and interest of the United States in and to the Pribilof Islands to the State of Alaska; to protect the rights of natives of the Pribilof Islands; and for other purposes; to the Committee on Interior and Insular Affairs.

(The remarks of Mr. STEVENS when he introduced the bill appear later in the RECORD under the appropriate heading.)

By Mr. JAVITS:

S. 2494. A bill for the relief of Miss Engracia H. Magbitang;

S. 2495. A bill for the relief of Miss Adoracion A. Ibanez; and

S. 2496. A bill for the relief of Miss Belen N. Vales; to the Committee on the Judiciary.

By Mr. MAGNUSON (by request):

S. 2497. A bill to further the effectiveness of shipment of goods and supplies in foreign commerce by promoting the welfare of U.S. merchant seamen through cooperation with the United Seamen's Service, and for other purposes; and

S. 2498. A bill to amend section 613 of the Merchant Marine Act, 1936, as amended; to the Committee on Commerce.

(The remarks of Mr. MAGNUSON when he introduced the last above bill appear later in the RECORD under the appropriate heading.)

By Mr. MCINTYRE (for himself, Mr. DODD, and Mr. RANDOLPH):

S. 2499. A bill to provide for the regulation of the maximum rates of interest which may be charged by federally supervised banks; to the Committee on Banking and Currency.

(The remarks of Mr. MCINTYRE when he introduced the bill appear later in the RECORD under the appropriate heading.)

By Mr. NELSON:

S. 2500. A bill for the relief of Dr. Serafin B. Teruel; to the Committee on the Judiciary.

By Mr. BURDICK:

S. 2501. A bill to provide for a 50-cent-per-bushel export marketing certificate on wheat for the 1969 and 1970 crops of wheat; to the Committee on Agriculture and Forestry.

(The remarks of Mr. BURDICK when he introduced the bill appear later in the RECORD under the appropriate heading.)

By Mr. BIBLE (by request):

S. 2502. A bill to authorize suits in the courts of the District of Columbia for collection of taxes owed to States, territories, or possessions, or political subdivisions thereof, when the reciprocal right is accorded to the District of Columbia, and for other purposes; to the Committee on the District of Columbia.

By Mr. HARTKE:

S. 2503. A bill to amend chapter 11 of title 38, United States Code, to provide full wartime benefits for extrahazardous duty;

S. 2504. A bill to amend title 38 of the United States Code to provide that veterans with disability rated less than 50 per centum shall receive additional compensation for dependents; and

S. 2505. A bill to amend title 38 of the United States Code to provide an annual clothing allowance to certain veterans who, because of a service-connected disability, wear a prosthetic appliance or appliances which tends to wear out or tear their clothing; to the Committee on Finance.

(The remarks of Mr. HARTKE when he introduced the above bills appear later in the RECORD under the appropriate heading.)

By Mr. HATFIELD:

S.J. Res. 129. A joint resolution to establish an advisory commission to make recommendations with respect to the acquisition of necessary property and equipment for, and the operation of, railroad passenger service by the Federal Government; to the Committee on Commerce.

(The remarks of Mr. HATFIELD when he introduced the joint resolution appear later in the RECORD under the appropriate heading.)

S. 2491—INTRODUCTION OF A BILI RELATING TO ESTABLISHMENT OF A "FOURTH NATIONAL ACADEMY"—THE NATIONAL ACADEMY OF MEDICAL, DENTAL, AND ALLIED SCIENCES

Mr. MONTOYA. Mr. President, "the only doctor in town has been drafted into the military service, and now I have to go 50 miles away to be treated." "My wife needs to see a doctor, but we don't have a single one in town." "It is so difficult to get an appointment with the one doctor in town."

Mr. President, more and more letters with complaints such as these fill my mailbag daily. We are unquestionably on the brink of a national health crisis, and indicators of this growing problem are everywhere, not just in my State of New Mexico. The situation, of course, has a number of dimensions which must be solved as rapidly as possible, and I should like to address myself to one solution which I propose at this time.

There is growing concern over the fact that the ratio of doctors and dentists to the population as a whole is steadily decreasing. Among the major influences which have been recognized as contributing to the increased demand for physician, dental, and other health care services are the following:

First, the fact that the population is increasing at a rapid rate.

Second, the young and very old—who require greater than average amounts of medical care—constitute a rising proportion of the population.

Third, there is a trend toward increased per capita use of medical services—particularly with medicare for the aged.

Fourth, the proportion of physicians in private practice appears to be falling.

Fifth, desperately needed general practitioners, capable of delivering direct patient contact and comprehensive medical care, are gradually being re-

placed by physician-specialists who tend to concentrate in metropolitan areas, thus drastically altering the physician-population ratio—to the detriment of nonmetropolitan and rural areas.

Sixth, legitimate medical needs in certain areas of government—primarily the military services, the Public Health Service, and the Veterans' Administration—tend to drain off the supply of doctors.

Seventh, the current rate of expansion of medical school facilities is inadequate to take care of future needs.

Take my own State of New Mexico, for example. In Bernalillo County—which consists primarily of the standard metropolitan area of Albuquerque—there were, in 1968, 446 doctors to serve a population of approximately 287,000 people—a ratio of approximately one doctor for every 645 people.

On the other hand, in neighboring Sandoval County—a rural area—as of 1968 there was not a single doctor to serve the 16,700 population of that county. Other similar cases abound. Torrance County—another remote area—has two doctors to serve 5,400 people; Harding County, with 1,600 population, has no doctor; and so on. Moreover, latest figures supplied by the American Medical Association indicate that as of January 1, 1968, there were 110 counties in the Nation without a doctor.

Despite this threat, no significant action has been initiated either in or out of Government to stimulate the development of a program which will result in a substantial increase in the production of medical personnel. Although there are programs whereby the armed services, for example, grant full scholarship assistance to commissioned officers who desire to become doctors, this in no way increases the total number of physicians available to the civilian population and uses up precious space in already overcrowded private medical schools.

All of these factors, and many others, suggest therefore that unless there is an increase in the supply of trained medical personnel, the situation will surely worsen and could reach crisis proportions. Given the long, arduous training which physicians must undertake, it is imperative that the Federal Government take action now to increase the number of physicians and other medical personnel available in order to satisfy both our civilian and governmental health requirements.

I am therefore today introducing a bill to provide for the establishment of a fourth academy focusing exclusively upon training in medical, dental, and allied sciences to insure that the Government has an adequate number of doctors and other medical personnel at their disposal, and so that the supply of such personnel available to the civilian population will not be siphoned off.

In order that the academy not compete with private medical and dental schools in the country, however, it should be run by the Government, with those selected for attendance subject to requirements and benefits similar to those of our military academies. It would also serve to provide opportunities for those of our youth possessing potential for a medical career, but who cannot now gain admission to medical, dental, and other schools, due to lack of funds and/or current crowded conditions in public and private schools.

Since graduates of the new academy would be possible future entrants into the civilian force of medical personnel, they must be provided with the best of medical education so that the quality of health care will be enhanced. Therefore, I envision that the academy should be designed to serve as a model for the Nation.

The school would be known as the National Academy of Medical, Dental, and Allied Sciences, and would be located in or near the District of Columbia. There are many Government medical and other resources already in existence in the District of Columbia and its environs—mature, long-established institutions with international reputations. It is time for the Federal Government to capitalize on them in view of the enormous capital investment involved. I envision that the new academy which I am proposing will serve to fill a gap in existing governmental facilities in the Nation's Capital, and that the utilization of these facilities—insofar as feasible—in conjunction with the operations of the academy will help reduce the costs as well as time involved in setting up the new academy. The combination of all of these untapped resources could also form the nucleus for the creation of a medical education center, as well as an opportunity for integrating the various health sciences with such new fields as medical engineering.

Not more than 730 students would be enrolled in the academy at any one time. A total of 538 students would be nominated in accordance with provisions for appointment to the U.S. Military Academy; that is, based upon the number of Members of Congress for each State. Additionally, each of the armed services would be allocated four appointments each year; the Public Health Service 12 appointments each year; and the President of the United States 16 appointments each year. An additional eight student slots would be available to other Government agencies each year, which if not used would be allocated to the President.

Upon successful completion of an education program and internship, graduates would receive a military commission. They would then be required to serve for not less than 5 years with the Government, and could opt for service with branches of the military, or with other Government agencies such as the Veterans' Administration or with community-based rural programs under the U.S. Public Health Service. After fulfillment of their 5-year contract, should academy graduates choose to leave Government service they would be subject to recall for a period of 3 years if need so dictated.

Mr. President, over the long run, the output of this Government-sponsored medical school would find its way into the civilian manpower pool. This would result each time a graduate completed his term of service and returned to civilian life. But those graduates remaining in Government service would help reduce the present drain on the civilian sector for medical personnel now secured through the doctor draft system. In short, it would also result in improved medical officer retention by the Government, thereby providing a solution to one of the most pressing problems of Government.

Mr. President, since the Government helps support most medical schools, I do not believe it illogical for the Government to support its own medical school to meet specific governmental needs. It is evident, therefore, that any action Congress can take to meet physician, dental, and other requirements of the Government will represent a most constructive step toward solving this problem, and in the process lessen any deprivation the civilian community may suffer from lack of essential health services.

Other provisions of my proposal are contained in the bill itself, and I ask that it be printed in the RECORD at the conclusion of my statement.

Mr. President, I urge that each of my distinguished colleagues study the proposal and assist in its most expeditious passage.

The VICE PRESIDENT. The bill will be received and appropriately referred; and, without objection, the bill will be printed in the RECORD.

The bill (S. 2491) to provide for the establishment of a National Academy of Medical, Dental, and Allied Sciences within the Department of Defense, introduced by Mr. MONTOYA, was received, read twice by its title, referred to the Committee on Armed Services, and ordered to be printed in the RECORD, as follows:

S. 2491

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That part III of subtitle A of title 10, United States Code, is amended by adding at the end thereof a new chapter as follows:

"CHAPTER 104.—NATIONAL ACADEMY OF MEDICAL, DENTAL, AND ALLIED SCIENCES

"Sec.
"2121. Establishment of Academy.
"2122. Commandant and deputy commandants
"2123. Command and supervision.
"2124. Faculty.
"2125. Students; appointment and numbers.
"2126. Requirements for admission.
"2127. Standards for courses of study; authority to confer degrees.
"2128. Service agreement.
"2129. Status of students; allowance and expenses.

"§ 2121. ESTABLISHMENT OF ACADEMY

"(a) There is authorized to be established within the Department of Defense an academy to be known as the National Academy of Medical, Dental, and Allied Sciences (hereinafter in this chapter referred to as the 'Academy') to train selected persons in medicine, dentistry, and fields allied thereto. The Academy shall be located in or near the District of Columbia.

"(b) The Academy shall utilize, to the maximum extent practicable, existing facilities and resources in the vicinity of the District of Columbia to provide the Academy with a 200 bed hospital and such other facilities and resources as may be necessary for use in connection with its programs of teaching, research, and clinical investigation. The Secretary of Defense is authorized to enter into a suitable cooperative arrange-

ment with any existing hospital or other institution in the vicinity of the District of Columbia under which the Academy would be permitted to use the facilities of such hospital or other institution in carrying out its functions under this chapter. The Academy shall offer a course of study in hospital administration. The location of the Academy shall be selected so as to permit in the future the establishment at the Academy of a school of nursing and a school for the training of medical technicians.

"(c) Advanced and specialized courses shall be offered graduates of the Academy. Students shall be selected for advanced and specialized work on the basis of merit in accordance with regulations prescribed by the Secretary of Defense, after consultation with the Secretary of Health, Education, and Welfare.

"§ 2122. COMMANDANT AND DEPUTY COMMANDANTS

"There shall be a Commandant of the Academy and two Deputy Commandants of the Academy appointed by the Secretary of Defense. One of the appointees shall hold a degree in medicine from an accredited school of medicine; one shall hold a degree in dentistry from an accredited school of dentistry; and the other shall hold a degree in an allied science from an accredited college or university.

"§ 2123. COMMAND AND SUPERVISION

"(a) The supervision and charge of the Academy shall be under a Board of Trustees. Such Board shall be appointed by the Secretary of Defense and shall be composed of eighteen members who are especially qualified for service on the Board by reason of their background, education, training, and experience. Members of the Board shall include physicians, dentists, educators, hospital administrators, and scientists.

"(b) The immediate government of the Academy is under the Commandant of the Academy.

"§ 2124. FACULTY

"Members of the faculty of the Academy may be either members of the armed forces or civilians and shall be selected and meet the same requirements and standards applicable to the United States Military Academy. Physicans, dentists, and scientists employed by the Federal Government shall, to the maximum extent practicable, be utilized in the teaching and research projects of the Academy.

"§ 2125. STUDENTS; APPOINTMENT AND NUMBERS

"(a) The authorized number of medical students at the Academy shall be 480; dental students, 125; and allied sciences, 100. The total enrollment at the Academy may not at any one time exceed 730 students.

"(b) Students shall be selected for appointment to the Academy as follows:

"(1) two students from each State, one nominated by each Senator from the State; and

"(2) one student from each congressional district, nominated by the Representative from the district;

Each Senator and Representative is entitled to nominate a principal candidate and nine alternatives for each vacancy that is available to him under this section.

"(b) In addition, there may be appointed each year at the Academy a number of students as follows:

"(1) Four students nominated by the Secretary of the Army from members of the Army;

"(2) Four students nominated by the Secretary of the Navy from members of the Navy and Marine Corps;

"(3) Four students nominated by the Secretary of the Air Force from members of the Air Force; and

"(4) Twelve students nominated by the Surgeon General of the Public Health Service.

"(c) Eight nominations for appointment to the Academy shall be allocated each year by the Secretary of Defense among the other departments and agencies of the Government, but in the event the total number is not used in any year by such departments and agencies, the President is authorized to select for appointment in such year a number of students equal to the unused number.

"(d) Sixteen students may be personally selected for appointment each year by the President, not including any number selected by him under subsection (b) of this section.

"(e) All students are appointed by the President. An appointment is conditional until the student is admitted to the Academy.

"§ 2126. REQUIREMENTS FOR ADMISSION

"To be eligible for admission to the Academy a candidate must meet such qualifications as may be prescribed by the Secretary of Defense after consultation with the Secretary of Health, Education, and Welfare.

"§ 2127. STANDARDS FOR COURSES OF STUDY; AUTHORITY TO CONFER DEGREES

"(a) The standards for any course of study offered at the Academy and the standards for the instruction of such course shall be the equivalent of standards for the same course of study offered by institutions of higher learning which rank among the highest in the United States with respect to such course of study, as determined by the Secretary of Defense after consultation with the Secretary of Health, Education, nd Welfare.

"(b) Under such conditions as the Secretary of Defense may prescribe, the Commandant of the Academy may confer appropriate degrees upon graduates of the Academy.

"§ 2128. SERVICE AGREEMENT

"(a) Each student shall sign an agreement that, unless sooner separated, he will complete the course of instruction at the Academy and—

"(1) accept an appointment and serve as a commissioned officer (Regular or Reserve) in the Armed Forces for at least five years immediately after graduation; or

"(2) accept an appointment as a commissioned officer in the Public Health Service and serve for at least five years immediately after graduation in an area of the United States which is in need of the services he is qualified to perform (as determined by the Secretary of Health, Education, and Welfare); or

"(3) accept an appointment with any other department or agency of the Government, whenever there is a need by such department or agency for the services he is qualified to perform and such need is determined by the President to be greater than that under (1) and (2) above, and serve in such department or agency for at least five years immediately after graduation.

"(b) Each student upon graduation from the Academy shall, unless discharged or released by competent authority, serve as provided in subsection (a) for a five year period beginning on the date of his graduation, but the Secretary of the department concerned may prescribe a shorter period of service whenever he determines that such action is consistent with the needs of his department. Upon completion of the required period of service, any graduate who so requests shall be released from his Government service but shall be subject to recall to active duty with the Armed Forces, the Public Health Service, or other department or agency of the Government, as the case may be, for a period not to exceed three years, whenever the Secretary of the department concerned determines such action is necessary to meet the needs of such department.

"(c) Any student who completes one or more years of training at the Academy, who fails to graduate therefrom, and who thereafter becomes licensed in any State to practice medicine, dentistry, or engage in one of the allied sciences taught at the Academy, shall be required to repay the United States the actual expenses of the training received at the Academy, including all allowances paid and the cost of subsistence and quarters furnished.

"§ 2129. STATUS OF STUDENTS; ALLOWANCE AND EXPENSES

"(a) Students at the Academy shall not be considered members of the uniformed services, and shall not be entitled to any rights or benefits administered by the Veterans' Administration or any other department or agency of the Government solely as a result of being enrolled in or participating in the training provided under this chapter.

"(b) Students at the Academy shall receive the same allowance as that provided for cadets at the United States Military Academy and, in addition, shall be furnished quarters, subsistence, and other necessities."

SEC. 2. There are authorized to be appropriated $75,000,000 to carry out the provisions of this Act.

SEC. 3. The table of chapters at the beginning of Part III of subtitle A of title 10, United States Code, is amended by adding at the end thereof the following:

"104. National Academy of Medical, Dental, and Allied Sciences.. 2121."

S. 2492—INTRODUCTION OF A BILL TO ESTABLISH THE FORT POINT NATIONAL HISTORIC SITE IN SAN FRANCISCO, CALIF.

Mr. MURPHY. Mr. President, on behalf of my distinguished colleague from California (Mr. CRANSTON) and myself, I introduce for appropriate reference a bill to authorize the establishment of the Fort Point National Historic Site in San Francisco.

Just under the south tower of the Golden Gate Bridge, at the entrance to San Francisco Bay, stands a classic example of a coastal fortification of the mid-19th century. It is one of the best examples of such military architecture in the United States, and it is certainly the finest on the west coast of North America. Fort Point has been standing since 1861 but, unfortunately, it has not received the full recognition it deserves in recent years. It is my hope that passage of the legislation I am introducing today will help remedy this situation by providing the historic fort with the designation it so richly merits.

To understand the historical significance of Fort Point, which is known to some as Fort Winfield Scott, it is helpful to retrace some of the history of California from 1776, which was long before Fort Point was established. In that year, the Presidio at San Francisco Bay was founded by Spanish settlers to control the Indians and to serve as a base for the great Spanish expeditions exploring the interior and northern areas of the San Francisco Bay region. After 1792, the Presidio became the northernmost stronghold of the Spanish Empire, and the chief barrier against the British, Russian, and American expansion on the west coast.

The advances by the Russians, English, and Americans into the northern coast

area of California alarmed the Spanish and when Capt. George Vancouver sailed through the Golden Gate in the first non-Spanish ship to enter the San Francisco Bay, the *Discovery*, on November 14, 1792, the Spanish began to realize how poorly the Golden Gate was being defended. This prompted the Spanish Viceroy, Revilla Gigedo, to build a new fort at the San Francisco Presidio. It was located about 1⅓ miles northwest of the original Presidio, 100 feet above the shoreline of the Golden Gate, and named Castillo de San Joaquin.

The news that Mexico had won its independence from Spain arrived in California in March 1822, and on April 13, the soldiers and citizens in San Francisco took the oath of allegiance to the Mexican Government. This marked the end of the Spanish empire in California.

Mexico was more careless than Spain in connection with her military establishments in California. From 1822 to 1835, the Mexicans watched the adobe walls of the Presidio and Castillo de San Joaquin disintegrate as a result of rain and poor maintenance. Under the command of Mexican Lieutenant Vallejo, most of the Presidio garrison was transferred to the newly established frontier post of Sonoma, leaving only seven artillerymen to guard the ruined Presidio and Castillo de San Joaquin.

The city of San Francisco, then called Yerba Buena, was founded in 1835. By the end of 1836, all troops from the Presidio had been withdrawn, and all that remained were a few retired soldiers and their families. The forts were in ruins by 1840.

Six years later, Capt. John Charles Fremont led about 20 American settlers in an attack on Castillo de San Joaquin, met little resistance, and took possession of the town of Yerba Buena for the United States. Two years later, in 1848, the war ended between the United States and Mexico, and the Presidio and the Castillo were formally ceded to the United States. The fort by this time was a rubble.

When the U.S. troops finally occupied the Presidio, the old Spanish forts were reconstructed and put into suitable condition. Two new forts were erected, one on Alcatraz Island and the other at the entrance to the bay where the ruined Castillo de San Joaquin once stood. They named the latter Fort Point.

During the Civil War, the Presidio and Fort Point were prepared to meet any attacks which might be directed against them. However, the war ended without any of the bay's defensive works having fired a shot. Fort Point served its defensive mission simply by existing. After the Civil War, the old war guns in Fort Point were transferred to permanent Army posts for ornamental use. In 1906, the fort was declared obsolete and about 9 years later was completely abandoned.

Today, the granite and brick of the fort is in much the same condition as it was when the fort was built in 1861. A bronze tablet which was placed at Fort Point on June 24, 1966, by the Fort Point Museum Association points out that the fort is the only major building constructed in San Francisco before the Civil War which has remained basically unchanged.

The Congress has the opportunity to restore and preserve this historic edifice. My bill provides for this by authorizing first, the transfer of sufficient land for the Fort Point National Historical Site from the Secretary of the Army to the Secretary of the Interior, and second, the appropriation of the necessary funds for the project. It is stated in my bill, Mr. President, that these funds shall not exceed $2,700,000 for development during the 5-year period beginning with the establishment of the Fort Point National Historic Site. I would like to mention in conclusion that I had the privilege of cosponsoring a bill with Senator Kuchel during the 90th Congress to establish the Fort Point National Historic Site and the measure I am offering today is identical to the version of that earlier bill which was passed by the Senate last July. Unfortunately, the 90th Congress did not take final action on the Fort Point measure I had cosponsored but it is my hope that this proposed legislation I offer today will receive prompt and favorable attention.

The VICE PRESIDENT. The bill will be received and appropriately referred.

The bill (S. 2492) to establish the Fort Point National Historic Site in San Francisco, Calif., and for other purposes, introduced by Mr. MURPHY (for himself and Mr. CRANSTON), was received, read twice by its title, and referred to the Committee on Interior and Insular Affairs.

S. 2493—INTRODUCTION OF A BILL TO TRANSFER TITLE AND INTEREST OF THE UNITED STATES IN AND TO THE PRIBILOF ISLANDS TO THE STATE OF ALASKA

Mr. STEVENS. Mr. President, I have today introduced a bill which authorizes the Secretary of the Interior to transfer the Pribilof Islands to the State of Alaska. The Pribilof Islands are a group of four islands, part of Alaska, lying in the Bering Sea about 180 miles north of Unalaska and 200 miles southwest of Cape Newenham, the nearest point on the mainland.

In 1786 Gerasim Pribilof, a mate in the service of a Russian sealing and wildfowling company based on Unalaska, discovered the island of St. George, the southernmost of the Pribilof group, and named it after his ship. The larger island of St. Paul, 27 miles to the northwest, was not seen from St. George until the following year because of the extremely foggy climate. These two islands and the satellites of Otter and Walrus Islands comprise about 64 square miles. The Russians found the main breeding rookeries of the valuable Alaska fur-seals—Callorhinus Ursinus on the islands and they established communities of Aleutes from Unalaska on St. Paul and St. George to gather the annual fur harvest.

The United States acquired the islands with Alaska in 1867. In 1872 and 1873, Henry W. Elliott, a clerk in the U.S. Treasury, was commissioned to investigate the Pribilofs—their resources, inhabitants, seals, and other native animals. He turned in a report that became a book and eventually inspired Rudyard Kipling's famous story "The White Seal."

The Russians began to take large annual harvests of fur seal pelts soon after the discovery of St. Paul. Incomplete historical records suggest that between 1789 and 1869 the Pribilof Islands produced more than 2.5 million skins. By 1805, when the Russian-American Co. took charge of the island industry, the Pribilof seal herd had declined to a point where a closed season was declared from 1806 to 1810. Additional periodic closures in the early 19th century did not prevent a continued decrease in the herds. Finally, from 1835 to 1867, a restricted kill of male animals and a prohibition against taking females resulted in a slow growth of the seal population.

When the United States purchased Alaska in 1867, and with it the Pribilof Islands, the fur seal population had increased to a point where it sustained an annual kill of several thousand males. Although the U.S. Government intended to continue the conservation practices of the Russians, the Pribilof herd was ruthlessly decimated by private American interests during 1868 and 1869.

An 1869 act of Congress prohibited the killing of fur seals and in 1869 the Pribilof Islands were set aside as a special reservation for the protection of the animals. A year later the U.S. Treasury Department was authorized to lease exclusive rights to the islands' fur seal resources, with the stipulation that no female seals were to be killed. Under the first 20-year lease, starting in 1870, the Alaska Commercial Co. took 1,854,029 pelts. A second 20-year lease granted to the North American Commercial Co. produced only 342,651 seal skins for the period ending 1909.

Unfortunately for the North American Commercial Co., its contract period coincided with the heyday of pelagic sealing. Commercial pelagic fur hunting began about 1868 and reach its greatest extent between 1889 and 1909. In that short period alone, an estimated 600,000 animals were taken on the high seas by American, Japanese, and Canadian sealers.

The combined effects of the land-based and pelagic sealing were so great that by 1909 only about 200,000 of the northern fur seals remained. Approximately 134,000 of these animals were found on the Pribilof Islands.

After extended diplomatic negotiations and a long series of ineffectual bilateral agreements, the United States, Japan, Canada, and Russia concluded a convention on July 7, 1911, for the protection of the fur seals of the North Pacific. This convention, with some modifications instituted in 1942, 1957, and 1964, is still in effect today. Under this agreement pelagic sealing was prohibited except by aborigines using primitive weapons. In lieu of pelagic hunting rights, Japan and Canada each received 15 percent of pelts harvests by the United States and the Soviet Union, with certain exceptions for the sharing of Russian production, particularly for the period 1964–67. The convention of 1911

and its amendments have provided a sound basis for a rational management program for the Pribilof fur seals.

The Pribilof fur seal industry is divided into three distinct operations. The first is the actual harvest and preparation of raw seal skins for shipment from the islands; the second is the processing and shipment of seal carcass biproducts; and the third is the final tanning and sale of finished seal skins by a U.S. Government contractor. Fundamental operations related to handling of the seal skins are labor intensive, there being at least 36 different steps in the island-based process and about 100 individual processes in the stateside processing factory. Some automation in the island byproducts plant has reduced the number of manual workers on the island of St. Paul.

Under the provisions of the Seal Act of 1966 (16 U.S.C. 1514) the authority of the Secretary of the Interior with respect to agreements for employing individuals to carry out the necessary provisions of both the act and the convention is outlined as follows:

1514 (a) The Secretary shall (1) take and cure fur seal skins on the Pribilof Islands and on lands subject to the jurisdiction of the United States whenever he deems such taking and curing is necessary to carry out the provisions of the Convention or to manage the fur seal herd, (2) employ natives of the Pribilof Islands and, when necessary, other persons for taking and curing of fur seal skins pursuant to this section, and compensate them at rates to be determined by the Secretary . . .

Although the law permits the Secretary of Interior to contract with persons other than natives for the taking and curing of fur seal skins when necessary, I do not feel that the Secretary has, in the past, acted in the best interests of the natives of the Pribilof Islands by awarding the contract for the curing of the fur seal skins to a company that is not based in Alaska. The justification in the past has been that the curing of the seal skins for commercial use is a very complicated process and that the firm that has the contract is the only firm that has the expertise and experience to carry out the preparation of the skins for market at a profit. However, it seems ludicrous to assert that the very people who have depended upon the resources of the area, including the fur seals, for their livelihood for untold centuries could not be trained to skillfully perform the tasks that are required to cure the skins. There is no reason why the government contractor could not set up operations in Alaska and hire natives to cure the skins.

Again in the past, the response to this proposal has been that the firm that is now processing the skins is doing so at a profit and that the profit would either be lower or nonexistent if the process were done in Alaska, where either labor costs would be higher or the costs of the necessary materials might be more, or even if the cost of building the plant for the operation might result in a loss of profit until the plant is paid for out of operating costs.

But we must keep in mind where these profits go. Seventy percent of the proceeds from the sale of the fur seal skins goes to the State of Alaska under the 1966 Fur Seal Act. By undertaking a potentially higher cost of production the State would possibly lose some immediate revenues that they have automatically received in the past. The State would, however, be better off in the long run to have a new industry located within its boundaries that would mean a higher rate of employment; a tax-generating industry rather than a royalty-generating resource. Alaska does not need royalties; the State needs revenue-generating and employment-generating capital development. This, however, supposes that the establishment of the curing plants in Alaska would not operate at a profit and maintain the royalty flow. If indeed the plant could operate at any level of efficiency, there is no reason to believe that Alaska could not benefit from both capital expansion and higher employment as well as royalty income.

The provisions of the Fur Seal Act of 1966 have a twofold purpose: First, to conserve the fur seal herd, and second, to provide for the welfare of the natives on the Pribilof Islands. When Gerasim Pribilof discovered the islands in 1786 they were uninhabited and the Russians imported natives from Unalaska to harvest the seal skins. The present population of the islands is largely made up of the descendants of Aleutian immigrants of some 180 years ago.

In hearings on the Fur Seal Act in 1966 my predecessor, the late Senator Bartlett, heard testimony on the Pribilof Islands, and one prevailing theme that came out of the testimony was that welfare of the natives ran second to the management of the seal herd. Two of the excerpts from those hearings are particularly revealing:

Senator BARTLETT. Do you feel, as an individual, or as chairman of the village council, that the people of St. Paul are now living in a state of servitude?

Mr. ILIODOR MERCULIEFF. No; not at the present time. I think you will find that answer likewise in the report of the commission to the Governor.

Senator BARTLETT. Do you feel that this condition used to exist?

Mr. ILIODOR MERCULIEFF. It used to exist. Nevertheless, I can mention, a while ago, the Russians ruled the islands here, after the State was bought—I mean after Alaska was bought by the United States, it was Russian-American, and up until 1950, from there, we were not paid fair compensation and we were allowed just very little food, and shelter, of course.

I think all those, added together, plus the fact that if we didn't cooperate with the Bureau, you used to be laid off. You had to do what the island manager said. What he says used to go.

Now, since 1960, that isn't so.

Senator BARTLETT. If you had criticized the Bureau in the old days, you might lose your job?

Mr. ILIODOR MERCULIEFF. In the old days they used to lay them off; yes. Or else if he asked for a vacation, and stayed out for about 6 months, when you came back you wouldn't get into your old house. So anybody was afraid to go out for more than 6 months. If they would come back, then they wouldn't have no home to stay in.

Senator BARTLETT. Did you get any cash money at all in those days?

Mr. ILIODOR MERCULIEFF. We used to get—the highest we used to get, around $400 or $500 a year, up until 1950.

Senator BARTLETT. And the rest of your salary was deducted for groceries?

Mr. ILIODOR MERCULIEFF. No; that was all cash, $400 or $500. Then on top of that they allowed us groceries.

Senator BARTLETT. And housing?

Mr. ILIODOR MERCULIEFF. And housing. Groceries they used to allow us for one family, man and wife, a dozen eggs for a week, and no meat.

Senator BARTLETT. No meat?

Mr. ILIODOR MERCULIEFF. No meat. They used to give us two cans of salmon and no meat.

Senator BARTLETT. For how long?

Mr. ILIODOR MERCULIEFF. For a week.

Although the conditions that the above testimony refers to have changed for the better, Mr. President, the following testimony points out in even stronger terms the extent of the dependency of the natives upon the Bureau.

Mr. FOSTER (Staff Counsel). What is the difference between housing here (St. Paul) and the housing over there (St. George)?

Mrs. SUSIE MERCULIEFF. I think that every married couple is living in the houses over there, but those families have moved over here, the houses demolished.

Senator BARTLETT. You mean the houses over there have been demolished?

Mrs. SUSIE MERCULIEFF. Yes.

Senator BARTLETT. Were they in good condition?

Mrs. SUSIE MERCULIEFF. Yes. Most of them were. Only two of them were pretty old that had to be destroyed—soon after they left.

Mr. FOSTER. Do you have adequate housing over there?

Mrs. SUSIE MERCULIEFF. Oh, yes.

Mr. FOSTER. To the point that——

Mrs. SUSIE MERCULIEF. I could have moved to one of those houses that were destroyed, from the one I am living in now because it is very old.

Mr. FOSTER. So the effort is made that when someone does move over here, they will destroy the house over there. Who else—

Mrs. SUSIE MERCULIEFF. Excuse me, that is another reason, too, they don't like this moving over here. If they want to return to St. George they don't have a house to return to, to live in. It is destroyed as soon as the person leaves. He doesn't come over and try to make up—you know, to find out whether he would like to stay here or go back to St. George again and be hired in the summertime over there.

It is a fact, Mr. President, that the Bureau of Commercial Fisheries has undergone a policy of moving the natives from St. George and centering their operation of the harvest and herd management to St. Paul. This decision apparently reflects the diseconomies of operating on the smaller island all year-round for a smaller percentage of the harvest. This policy of destroying houses in the middle 1960's is a prime example of the Bureau's concern for the seal operation of the Pribilof's and a corresponding lack of concern for the natives.

The Seal Act of 1966 was to alleviate some—if not all—of the exploitation of the natives. Nevertheless the mere title of the act and the hearings demonstrate the secondary consideration given to the natives. A recent study of St. Paul, contracted for by the Bureau with the Institute of Social, Economic, and Government Research at the University of Alaska, brings out the primary problem of the islands—the lack of a viable economy and supportive—labor needs—industry:

Throughout any efforts to strengthen St. Paul's economy, there should be constant awareness that the fur seal industry is and will remain the mainstay of the community, in addition to its functions as a basic national and state resource. In this context, one fact should be clearly established—that the fur seal industry is in fact to be run as an industry. It is probable that, through technological innovations and improvements, both the efficiency and the total net profit can be increased. Should this be the case, it is certainly appropriate that the local population share in the overall increased profit. Possibly, one long-range objective could be a program whereby the community of St. Paul contracts (at a given price per prepared skin) with the producer of the finished fur seal for delivery at dockside, at the airport, or at the processing plant. In this way, the community would be able to share in technological innovations which could improve the efficiency of the operation and cut down present costs. This type of program could operate under government biological and management controls, providing an incentive to abandon the welfare aspects of the industry and eliminating its many inefficiencies. Local profits under this arrangement could either go back to industry employees or be divided between the employees and the community for other development schemes.

The one distressing feature of this report and the way the economy of St. Paul and St. George is arranged is that there is no consideration of expanding the economic base on the islands by providing for the processing of the finished product on the islands themselves.

Earlier I cited the Fur Seal Act of 1966, which clearly stated that the Secretary of Interior was to—

(2) employ natives of the Pribilof Islands and, when necessary, other persons for taking and curing fur seal skins . . .

It is a matter of record that the Secretary has deemed it necessary to employ others for the actual curing of the seal skins. However, this intensive activity could provide a sound basis for the stabilization and expansion of the island economy. This is not considered as a potential solution to the problems of the islands. Indeed, the entire history of the natives on the islands is one of exploitation in one form or another.

This then is the primary reason for seeking the transfer of the islands to the State from Federal jurisdiction.

As an integral part of the State the islands would prosper, for, as in any other part of the State, the State government would seek to stimulate growth and economic stability. As a dependency of the Department of Interior's Bureau of Commercial Fisheries the natives will continue to take a role of secondary importance. As an integral part of the State, the State of Alaska wants to build a stable economy for them so that they would be a contributing sector of the State's economy, providing an increase in the State's tax base. By providing stable economic and labor conditions on the islands the natives on the islands would no longer be excluded from the growth that the profits generate.

Even though the proceeds from the sale of the seal skins goes to the State of Alaska, the Federal Government in its management of the fur seal resource has excluded the islands from social, economic, and political integration with the rest of the State. Alaska does not need royalties, as it were, from the sale of the fur seal skins. Alaska needs industrialization, capital improvements, and wage generation.

One might argue that the islands are administered by the Federal Government because the United States has entered into a treaty concerning the conservation of the fur seals in the North Pacific with three other nations. The argument might assert that the Federal Government must administer the herd because of their obligations under the treaty and that the herd cannot be successfully managed without control of the islands. This argument would be spurious for there is more than one instance of the execution of a treaty without direct Federal control of the object of the treaty. Just to cite one example of such an arrangement, on March 21, 1969, the United States and Canada concluded two exchanges of notes relating to the American falls at Niagara. One of the notes includes the following provision:

2. Entitlement to the power benefits deriving from this temporary additional diversion shall be divided equally between the Power Authority of the State of New York and the Hydro-Electric Power Commission of Ontario, upon the agreement of each such power entity to:

(A) contribute in cash or in services to the cost of the cofferdam and ensuing investigations the value of $385,500 in its national currency, if the additional diversion is permitted during the entire period from April 30, 1969 to December 31, 1969, or a portion of said contribution corresponding to any shorter period during which the additional diversion is permitted, such portion to be determined on the same basis as was the $385,500 by the International Joint Commission in consultation with the power entities; and

(B) assume responsibility for the disposition of claims for the physical injury or damage to persons or property occurring in the lower Niagara River on its side of the international boundary line, caused by the resulting temporary alteration of water levels in the lower river below that normally experienced at flows of 100,000 c.f.s. and 50,000 c.f.s., and for the satisfaction of any such claims that are valid.

These provisions demonstrate that a non-Federal entity can assume responsibilities for the Federal Government under treaty provisions that such an entity cannot be a party to. I doubt, however, that even the formal exchange of notes between the signers of the convention, would be necessary in this case, for under the bill I am introducing the Secretary of Interior retains responsibility and authority to carry out the provisions of the convention while transferring the actual physical management of the object of the convention to the State under his "supervision."

There is a second reason, Mr. President, for the transfer of the islands to State jurisdiction. Although the rationale for administering the islands by the Department of Interior is that the herds, as I have just mentioned, are protected by international convention, the Pribilof Islands and the fur seals that inhabit those islands during the summer months represent what I believe to be the only instance of the Federal Government usurping a State's right to manage and dispose of a natural resource of this type and the land that is affected for other than strictly conservation purposes. For, as I have outlined, Federal participation in the Pribilof Islands is not in the best interests of the natives of those islands or the interests of the State of Alaska.

Mr. President, the purpose of this bill is threefold: First, it would insure the profitable integration of the island economy and the economy of the State as a whole; second, it would end native dependence upon the Bureau of Commercial Fisheries while similarly stimulating the necessary economic basis for economic independence of the islands; and third, it would provide for the continued wise management of a valuable natural resource without abridging the terms of the existing treaty obligation of the U.S. Government.

I ask unanimous consent that the text of this bill be inserted at this point in the RECORD.

The VICE PRESIDENT. The bill will be received and appropriately referred; and, without objection, the bill will be printed in the RECORD.

The bill (S. 2493) authorizing the Secretary of the Interior to transfer all jurisdiction and the right, title, and interest of the United States in and to the Pribilof Islands to the State of Alaska; to protect the rights of natives of the Pribilof Islands; and for other purposes, introduced by Mr. STEVENS, was received, read twice by its title, referred to the Committee on Interior and Insular Affairs, and ordered to be printed in the RECORD, as follows:

S. 2493

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Secretary of the Interior is authorized and directed to transfer to the State of Alaska, without consideration all jurisdiction and the right, title and interest of the United States in and to the Pribilof Islands, including all property, buildings and other improvements thereon. Such transfer shall be made subject to agreement by the State of Alaska to the following conditions:

(1) That the State of Alaska assist and cooperate with the United States in carrying out all agreements and obligations on the part of the United States arising out of the Convention, insofar as such agreements and obligations involve the conserving, managing and protection of North Pacific fur seals on the Pribilof Islands;

(2) That, with respect to employees of the United States engaged in the taking and curing of fur seal skins, or other activities in connection with the administration of such Islands, on the date of the enactment of this Act, the State of Alaska, if such employees are thereafter employed by the State for any such purposes, shall provide such State employees employment benefits (including compensation and retirement) at least comparable to that provided them by the United States for such employment.

SEC. 2. (a) Following any transfer pursuant to this Act, the State of Alaska shall have the responsibility for conserving, managing, and protecting the North Pacific fur seals and other wildlife on the Pribilof Islands in accordance with the provisions of this Act and the Convention.

(b) In carrying out the provisions of subsection (a) of this section, the State of Alaska is authorized (1) to take and cure fur seal skins on the Pribilof Islands whenever it determines such taking and curing

is necessary to manage the fur seal herd, or it is informed by the United States that such taking and curing is necessary to carry out the provisions of the Convention; (2) to deliver, on behalf of the United States and at its direction, to authorized agents of the parties to the Convention (other than the United States) such fur seal skins as the parties are entitled under the Convention; (3) to receive or retain all such skins to which the United States is entitled as a party to the Convention and to dispose of such skins in accordance with the provisions of this Act; and (4) to utilize such quantities of fur seal skins taken or acquired by the State of Alaska pursuant to this Act for product development and market promotion, and to provide for the sale of fur seal skins and products of fur seal skins taken or acquired by the State pursuant to this Act, if such skins are not otherwise required for purposes of carrying out the Convention. Proceeds from any aforementioned sale shall be utilized by the State of Alaska in carrying out the obligations imposed on it by this Act or any transfer made pursuant to this Act, and for such other purposes as the State shall determine.

SEC. 3(a) Nothing contained in this Act or in any transfer made pursuant thereto shall be construed as impairing, diminishing, or affecting in any way the obligations imposed on the United States by the Convention.

(b) Nothing contained in this Act or in any transfer made pursuant thereto shall be construed as impairing, diminishing, or affecting in any way any valid rights of natives of the Pribilof Islands, existing on the date immediately prior to the date of the enactment of this Act.

SEC. 4. Notwithstanding the provisions of this Act or any conveyance made pursuant thereto, the United States retains jurisdiction, concurrent with that of the State of Alaska, over criminal and civil matters with respect to the Pribilof Islands to the extent necessary to enable the United States to carry out its obligations under the Convention and the laws of the United States.

SEC. 5. As used in this Act, the term—

(1) "take" means to pursue, hunt, shoot, capture, collect, kill, or attempt to pursue, hunt, shoot, capture, collect, or kill;

(2) "natives" means any Indians, Aleuts, or Eskimos who permanently reside on the Pribilof Islands;

(3) "Pribilof Islands" means the islands of St. Paul and St. George, Walrus and Otter Islands, and Sea Lion Rock;

(4) "Convention" means the Interim Convention on the Conservation of North Pacific Fur Seals signed at Washington on February 9, 1957, by the parties, as amended by the protocol signed at Washington on October 8, 1963, by the parties; and

(5) "Party" or "parties" means the United States of America, Canada, Japan, and the Union of Soviet Socialist Republics.

SEC. 6. All unexpended funds contained in, or earmarked for, the Pribilof Islands fund, established pursuant to section 407 of the Act of November 2, 1966 (80 Stat. 1098), on the date of the enactment of this Act are hereby transferred to the State of Alaska for use by it in carrying out the provisions of this Act.

SEC. 7. The provisions of the Fur Seal Act of 1966, to the extent that such provisions are inconsistent with the provisions of this Act, are hereby repealed.

S. 2498—INTRODUCTION OF A BILL RELATING TO U.S. PASSENGER SHIP CRUISING

Mr. MAGNUSON. Mr. President, by request, I introduce, for appropriate reference, a bill to amend section 613 of the Merchant Marine Act of 1936.

The existing cruise law contains restrictive provisions in section 613(c) that prohibit a vessel in cruise status from carrying one-way passengers or cargo except that which it normally could carry in its regular assigned service, and require that the cruise begin and end on the same coast as that to which the vessel is assigned on its regular service.

These limitations were initially designed to prevent operators on a cruise from encroaching on another passenger vessel operator's trade route. Since the enactment of the original cruise law in 1961, a few of the operators have been compelled by this legislation to forgo bookings of passengers and offerings of cargo on cruises that clearly would have been noncompetitive with any U.S.-flag service, and despite the fact that foreign-flag passenger operators would be permitted to offer the services which the American carrier is denied by law.

In order to correct this inequity to U.S. flag carriers, and to place cruise vessels on an even footing with foreign ships, it is proposed that the cruise law be amended to permit the U.S.-flag passenger carriers to begin and end cruises on different coasts, and to carry one-way passengers on routes where there is no U.S.-flag service or where the U.S.-flag carrier consents. A hypothetical case in point could be drawn from the following:

A U.S.-flag steamship company received Maritime Administration approval to perform an eastbound round-the-world cruise beginning at California, thence through the Panama Canal to Florida, Bermuda, Ponta Delgada, Lisbon, Casablanca, Dakar, Cape Town, India, Indonesia, Hong Kong, Japan, and San Francisco with a few intermediate stops. Under existing law that vessel would not be permitted to carry any one-way passengers from California, nor embark passengers at Port Everglades to ports en route, even though no other U.S.-flag operator is in a position to, nor offers, a competing service.

Other limitations upon cruise voyages provided by existing law would remain unaffected.

The VICE PRESIDENT. The bill will be received and appropriately referred.

The bill (S. 2498) to amend section 613 of the Merchant Marine Act, 1936, as amended, introduced by Mr. MAGNUSON, by request, was received, read twice by its title, and referred to the Committee on Commerce.

S. 2499—INTRODUCTION OF A BILL TO REGULATE MAXIMUM INTEREST RATES CHARGED BY BANKS

Mr. McINTYRE. Mr. President, for myself, Senator DODD, and Senator RANDOLPH, I introduce, for appropriate reference, a bill to provide for the regulation of the maximum rates of interest which may be charged by federally supervised banks.

The introduction of this bill comes at a point in the economic history of the United States when many of our citizens are losing confidence in the ability of their Government to protect them from the loss in value of their money.

It comes hard on the heels of the greatest period of continuous economic growth and prosperity in our history, a period which has clearly slowed in the past few months.

It comes, in a very specific and meaningful sense, immediately after an increase in the prime rates of interest set by our Nation's banks, an increase which brings the prime rate to an historic high of 8½ percent.

This latest increase in the interest charges on bank loans places an almost unbearable pressure upon small businessmen, homeowners, and consumers, while it has seemingly little effect in slowing the demand for commercial financing which is stoking the fires of inflation.

You know, Mr. President, for some time now I have been trying to avoid phrases like "stoking the fires of inflation." The words sound irresponsible and demagogic, appealing to fear and not to confidence. In the past, when I have voted for and supported anti-inflationary legislation, I have tried to explain my votes in the most dispassionate of terms. I did so because I had no desire to add a single bit of support to the inflationary psychology which has been so strongly evident in the securities market, the continued investment in excess plant capacity, and in the pricing practices of some of our major industries.

I still have no desire to add support to an irrational inflationary psychology. Nevertheless, the time has now come for responsible Members of the Congress to think the unthinkable thoughts and speak the unspeakable words. We are close to the point of no return and we must act now to stave off a potential inflation which could wipe out all of the gains of this decade and more.

It is not enough to utter pious platitudes about keeping the American dollar sound, or about how the strength of the American economy is so great that it can afford a dose of uncontrolled inflation, or about how we have so learned the lessons of the 1920's and the 1930's that it cannot happen here again.

Of course, we may have simply lost our ability to see the facts as they are. We may have forgotten, if we ever really learned, that a healthy economy, like the tree of liberty itself, must be carefully and continually nurtured, lest it wither away and die.

But I retain my confidence in the ability of the Congress to perceive the facts.

What are the facts?

The cost of living is accelerating its upward pace. For the first time in years, net real personal income has stopped growing and net farm income is declining. The stock market is dropping precipitously. We are saving less money. We are engaged in an expensive war which has yet to show meaningful signs of abating. The adjusted unemployment rate is creeping up. Our financial and monetary authorities, without exception, agree on the danger signals. But what is our response?

If we are industrial corporations, we are building new capacity on the theory that if we are going to need it in the future, it will be more expensive then. If we are producing materials, we are

raising our prices in the hope of earning now what inflation will force us to pay later. If we are employees trying to meet rising costs on a fixed income, we are demanding higher wages to cope with the inflation which is already here. In short, as a people we have entered that vicious circle which feeds upon itself, and produces the very inflation we seek to escape.

Now, if we are talking about the Federal Government, what do we do? Last year we imposed a surtax upon our people, telling them that its principal purpose was to bring inflation under control. Did it succeed? Obviously not. What is the response of the Government this year to inflation? It is to continue the surtax. But we know that it did not work last year, and why should it work now?

What if we are bankers, concerned, as bankers legitimately are, with the devastating effects of inflation. Why, obviously, we raise interest rates, hoping to reduce borrowing pressures, if we are responsible, and increase profits if we are not. To be sure, bank profits did increase during this past year. So did interest rates. But none of the four increases in the rate levels since this past fall appear to have had any effect on borrowing.

Quite the contrary. Corporation after corporation has been willing to pay these unusually high interest rates to build extra capacity, paying the loans through increased prices.

And it was with this experience fresh in mind that the bankers of our country 3 weeks ago raised the prime rate to 8½ percent, an unprecedented high.

Of course, Mr. President, it is important to bear in mind just what the prime rate is. It is a term used to describe what some banks charge for large commercial loans to their best, and most creditworthy customers. Small businessmen and consumers and farmers and personal borrowers pay higher rates. The effective rate paid by these people, after computing the impact of compensating balances, has gone to well over 10 percent in most cases.

Our officials concerned with the economic health of the Nation are powerless to act directly to curb this rate increase. The Secretary of the Treasury was not even consulted by the banks before they increased their rates.

The bill being introduced would give the Federal Government the authority to regulate interest rates. Thus our financial officials would be able, if they thought it necessary, to reduce the rates being charged to American consumers and businessmen.

Of course, the Federal Reserve Board might think that high interest rates are desirable, in that by discouraging more borrowing, they have the effect of reducing demand and thus halting the upward spiral of prices. But the record does not bear this out.

We find, for example, that loans by commercial banks have increased in every month but one since the latest round of interest rate increases began last fall. Higher rates have not reduced borrowings.

We find that gross private domestic investment has increased substantially. Higher interest rates have not reduced the investment in nonresidential structures nor durable equipment.

We find that personal savings have decreased while personal outlays for consumption continue to increase. Higher interest rates have not slowed down consumption.

Thus, I believe that the Federal Reserve Board must recognize that lessons learned in the past need not necessarily apply to present problems. Higher interest rates are not a surefire cure for inflation, and, indeed, may well spur it on. I would hope that the Board would use the power given in this bill to regulate rates downward.

Mr. President, I would like to close by once again calling upon the banks of this Nation to reduce their rates voluntarily, and thus make this legislation unnecessary. Only through full cooperation by the financial community can America most effectively respond to inflation. The banks must recognize that self-imposed restraint is clearly in their own interest.

The VICE PRESIDENT. The bill will be received and appropriately referred.

The bill (S. 2499) to provide for the regulation of the maximum rates of interest which may be charged by federally supervised banks, introduced by Mr. McINTYRE (for himself, Mr. DODD, and Mr. RANDOLPH), was received, read twice by its title, and referred to the Committee on Banking and Currency.

S. 2503, S. 2504, AND S. 2505—INTRODUCTION OF VETERANS' BENEFITS BILLS

Mr. HARTKE. Mr. President, following my appointment to the new Subcommittee on Veterans' Legislation of the Senate Committee on Finance, I made an extensive review of the existing benefits that a grateful government has provided for those who have served in its Armed Forces and for the widows and orphans of those who have made the supreme sacrifice in the service of their country.

As a result of this review, Mr. President, I have become convinced that the various veterans' programs, as presently constituted, are fulfilling in large measure the needs of those who have served us so well.

There still remain, however, a few areas in which additional legislation is necessary in order to more fully meet this Nation's commitment "to care for him who has borne the battle."

In recognition of this need, Mr. President, I am today introducing, for appropriate reference, three bills which are designed to extend and improve the benefits which are presently provided for our veterans and their dependents.

My first bill proposes a modification of existing law for the purpose of extending the full range of wartime benefits to a very deserving group of VA beneficiaries.

Enactment of the cold war GI bill in 1966 and the Veterans' Pension and Readjustment Assistance Act in 1967 have done much to provide a measure of wartime benefits to those veterans who have served in time of peace but under wartime conditions.

However, there is still a group of approximately 6,000 peacetime veterans who—because they were disabled in the performance of extrahazardous duty during peacetime—are entitled to be paid disability compensation at the wartime rate but who are not entitled to other wartime benefits. For example, the 1,071 veterans who were wounded in action in Vietnam between January 1, 1961, and August 3, 1969, are entitled to wartime rates for their service-incurred disabilities, but are not presently eligible for such wartime benefits as the $1,600 automobile grant for the loss or loss of use of an extremity due to injury occurring prior to August 4, 1964, or to nonservice-connected pension benefits if they had the misfortune to be honorably discharged before that date.

These men gave of themselves in the same extraordinary military effort and sacrifice, showed the same skill, firmness, and courage as that displayed by the troops who served on or after August 4, and it is my considered judgment that a peacetime veteran who became disabled in the performance of extrahazardous duty under wartime conditions should be entitled to the same benefits provided for war veterans who became disabled under similar circumstances.

I believe that in the American spirit of fairplay, equal treatment should be accorded these deserving veterans, and the enactment of the bill I introduce today would provide the full range of wartime benefits for them.

The second bill would extend eligibility for payment of dependency allowance to all eligible veterans with compensable service-connected disabilities.

Under existing law, a veteran who has a service-connected disability rated 50 percent or more is entitled to additional compensation for his wife, his children, and his dependent parents.

Veterans rated 10 through 40 percent disabled are not, however, entitled to any additional payments for their dependents.

A veteran rated 50 percent who has a wife and three children receives $156 a month while a veteran with a 40-percent disability who has the same number of dependents, receives only $89.

This is highly unreasonable since many disabilities rated 10 through 40 percent for compensation purposes reflect a high degree of industrial impairment. Some of the disabilities rated at 40 percent include amputations, the loss of an eye, muscle damage, and severe symptoms associated with diseases covering all systems of the body. Any of these conditions can place the veteran in the seriously disabled class where his industrial capacity is adversely affected.

This second bill which I introduce today would assist these veterans in overcoming their industrial handicaps through the payment of an additional allowance for their dependents.

The third bill which I introduce today would authorize an annual clothing allowance of $300 to veterans who, because of service-connected disabilities, must wear prosthetic appliances which tend to wear out or tear their clothing.

The proposal expressed in this bill,

Mr. President, is a matter of special importance to amputee veterans, for it is a fact, that the wearing of artificial limbs hastens the wearing out process of their clothing. I think it only fair and reasonable that these veterans be furnished a clothing allowance and I urge the Senate's approval of this deserving measure.

Mr. President, I ask unanimous consent that the text of these bills be printed in the RECORD immediately after my remarks.

The VICE PRESIDENT. The bills will be received and appropriately referred; and, without objection, the bills will be printed in the RECORD.

The bills, introduced by Mr. HARTKE, were received, read twice by their titles, referred to the Committee on Finance and ordered to be printed in the RECORD, as follows:

S. 2503

A bill to amend chapter 11 of title 38, United States Code, to provide full wartime benefits for extrahazardous duty

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That notwithstanding any other provision of law, any veteran entitled to compensation under subchapter IV of chaper 11 of title 38, United States Code, payable at the wartime rate under section 336 of such title, shall hereafter be entitled, if otherwise eligible, to any benefit under such title which, before the date of the enactment of this Act, was available only to a veteran entitled to compensation under subchapter II of such chapter.

S. 2504

A bill to amend title 38 of the United States Code to provide that veterans with disability rated less than 50 per centum shall receive additional compensation for dependents

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section 315 of title 38, United States Code, is amended to read as follows:

"§ 315. Additional compensation for dependents

"Any veteran entitled to compensation at the rates provided in section 314 of this title shall be entitled to additional compensation for dependents in the following monthly amounts:

"(1) If and while rated totally disabled and—

"(A) has a wife but no child living, $25;

"(B) has a wife and one child living, $43;

"(C) has a wife and two children living, $55;

"(D) has a wife and three or more children living, $68 (plus $13 for each living child in excess of three);

"(E) has no wife but one child living, $17;

"(F) has no wife but two children living, $30;

"(G) has no wife but three or more children living, $43 (plus $13 for each child in excess of three);

"(H) has a mother or father, either or both dependent upon him for support, then, in addition to the above amounts, $21 for each parent so dependent; and

"(I) notwithstanding the other provisions of this subsection, the monthly amount payable on account of each child who has attained the age of eighteen years and who is pursuing a course of instruction at an approved educational institution shall be $40 for a totally disabled veteran and proportionate amounts for partially disabled veterans in accordance with paragraph (2) of this section.

"(2) If and while rated partially disabled in an amount having the same ratio to the amount specified in paragraph (1) as the degree of his disability bears to total disability. The amounts payable under this paragraph shall be adjusted upward or downward to the nearest dollar, counting 50 cents and over as a whole dollar."

SEC. 2. The compensation payable pursuant to the amendments made by this Act shall be payable beginning with the first day of the second calendar month following the date of enactment of this Act.

S. 2505

A bill to amend title 38 of the United States Code to provide an annual clothing allowance to certain veterans who, because of a service-connected disability, wear a prosthetic appliance or appliances which tends to wear out or tear their clothing

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That (a) chapter 11 of title 38, United States Code, is amended by adding at the end thereof the following new section:

"§ 361. Clothing allowance

"The Administrator shall pay a clothing allowance of $300 per year to each veteran who, because of a disability which is compensable under the provisions of this chapter, wears a prosthetic appliance or appliances which the Administrator determines tends to wear out or tear the clothing of such veteran."

(b) The analysis of such chapter 11 is amended by adding at the end thereof the following:

"361. Clothing allowance."

SENATE JOINT RESOLUTION 129—INTRODUCTION OF A JOINT RESOLUTION ESTABLISHING AN ADVISORY COMMISSION ON FEDERAL RAILROAD PASSENGER SERVICE

Mr. HATFIELD. Mr. President, it was on May 10, 1869, that the final spike was driven at Promontory, Utah, uniting the Eastern and Western sectors of the United States—furthering the agricultural and industrial markets and providing a transcontinental means of travel for the people. Well, today the West is no longer wild, the railroad is no longer the only means of passenger transportation, and people are no longer cheering over any link in the chain of rail. The fact is that the railroads still provide a valuable service to agriculture and industry in transporting goods throughout the Nation, but as a means of passenger service, the railroads are in a deplorable state. Barely able to support passenger service with the profits from the transport of goods, railroads are being forced to continue offering passenger service in most of the lines in the Nation.

The dilemma is this: railroad travel is a valuable means of travel and is being forced to be maintained as a public service, but the decline in use and service hardly warrant system maintenance. Even though trains are no longer a comfortable means of travel, they are not necessarily reliable, and are poorly traveled, drawing a causal relation among the conditions seems futile, as it seems one problem has simply been added to another. But the consequences are clear—passengers are not choosing the train as a means of travel when competitive means are comparable in convenience and price, and the railroads are not offering a good ride to their customers.

Presently the railroad industry is one of the few still existing governmentally protected monopolies. In return for the monopoly position and in repayment for the land the Government provided at the time the railroads were built, the railroads are being required to perform services to the public which are useful, even though unprofitable. Federal policy, although requiring a minimal number of passenger runs be maintained, is actually discouraging the discontinuance of passenger service in that it does not require the rails furnish a quality of service high enough to encourage travelers, nor does it stimulate profits for the industry.

It has been noted that while the Nation is willing to spend $35 million per mile to construct Government-subsidized highways, the only assistance given rail lines which could carry the equivalent of 20 lanes of traffic—and just might do it if service were up to par—is a reminder that passenger coaches must continue operating. With the highways and airports becoming ever more crowded, however, and with rail transportation having the potential for a fast, convenient, and relaxing way to travel, it seems a more appropriate Federal policy toward the railroads might be developed to encourage improved rail service.

In approaching a policy change, it must be realized that deciding the need for passenger service is not so much a question of whether or not the industry is presently losing money on its passenger runs, but it may be one of whether or not the railroads would be losing money if adequate passenger service were provided. Evaluation of the number of people using railroads for travel cannot be easily made either, for calculations need to take into consideration the number of people who would use rail service were it upgraded—in speed, comfort, and courtesy.

Therefore, I offer for introduction a joint resolution for the establishment of an advisory commission to make recommendations with respect to the acquisition of necessary property and equipment for, and the operation of, railroad passenger service by the Federal Government. I ask unanimous consent that the joint resolution be printed in the RECORD.

The VICE PRESIDENT. The joint resolution will be received and appropriately referred; and, without objection the joint resolution will be printed in the RECORD.

The joint resolution (S.J. Res. 129) to establish an advisory commission to make recommendations with respect to the acquisition of necessary property and equipment for, and the operation of, railroad passenger service by the Federal Government, introduced by Mr. HATFIELD, was received, read twice by its title, referred to the Committee on Commerce, and ordered to be printed in the RECORD, as follows:

S.J. RES. 129

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled,

ESTABLISHMENT OF COMMISSION

SECTION 1. (a) There is hereby established an Advisory Commission on Federal Railroad Passenger Service (hereinafter referred to as the "Commission") which shall be composed of fifteen members as follows:

(1) Three appointed by the President of the Senate from Members of the Senate;

(2) Three appointed by the Speaker of the House of Representatives from Members of the House of Representatives; and

(3) Nine appointed by the President from among persons who are well qualified by training or experience to carry out the functions of the Commission, and who represent railroad management, railroad labor, and the general public.

(b) Any vacancy in the Commission shall not affect its powers, but shall be filled in the same manner as the original appointment.

(c) The Commission shall elect a Chairman and a Vice Chairman from among its members.

(d) Eight members of the Commission shall constitute a quorum.

DUTIES OF THE COMMISSION

SEC. 2. (a) The Commission shall make a full and complete study and investigation for the purpose of making recommendations with respect to—

(1) what property and equipment of the Nations' railroads should the Federal Government acquire in order to operate a National railroad passenger service;

(2) the best means of acquiring such property and equipment;

(3) what additional property and equipment, if any, would be needed; and

(4) the best means of operating such service, and the extent to which such operation should be carried out, in order to provide an efficient railroad passenger transportation system to the extent needed in the Nation.

(b) The Commission shall submit to the President and to the Congress a report with respect to its findings and recommendations not later than one year after the Commission has been fully organized.

POWERS AND ADMINISTRATIVE PROVISIONS

SEC. 3. (a) The Commission or, on the authorization of the Commission, any subcommittee or member thereof, may, for the purpose of carrying out the provisions of this joint resolution, hold such hearings, take such testimony, and sit and act at such times and places as the Commission, subcommittee, or member deems advisable. Any member authorized by the Commission may administer oaths or affirmations to witnesses appearing before the Commission, or any subcommittee or member thereof.

(b) Each department, agency, and instrumentality of the executive branch of the Government, including independent agencies, is authorized and directed to furnish to the Commission, upon request made by the Chairman or Vice Chairman, such information as the Commission deems necessary to carry out its functions under this joint resolution.

(c) Subject to such rules and regulations as may be adopted by the Commission, the Chairman, without regard to the provisions of title 5, United States Code, governing appointments in the competitive service, and without regard to the provisions of chapter 51 and subchapter III of chapter 53 of such title relating to classification and General Schedule pay rates, shall have the power—

(1) to appoint and fix the compensation of such staff personnel as he deems necessary, and

(2) to procure temporary and intermittent services to the same extent as is authorized by section 3109 of title 5, United States Code, but at rates not to exceed $50 a day for individuals.

COMPENSATION OF MEMBERS

SEC. 4. (a) Any member of the Commission who is appointed from the executive or legislative branch of the Government shall serve without compensation in addition to that received in his regular employment, but shall be entitled to reimbursement for travel, subsistence, and other necessary expenses incurred by him in the performance of duties vested in the Commission.

(b) Members of the Commission, other than those referred to in subsection (a), shall receive compensation at the rate of $— per day for each day they are engaged in the performance of their duties as members of the Commission and shall be entitled to reimbursement for travel, subsistence, and other necessary expenses incurred by them in the performance of their duties as members of the Commission.

EXPENSES OF THE COMMISSION

SEC. 5. There are authorized to be appropriated, out of any money in the Treasury not otherwise appropriated, such sums as may be necessary to carry out this joint resolution.

EXPIRATION OF THE COMMISSION

SEC. 6. The Commission shall cease to exist ninety days after the submission of its report.

ADDITIONAL COSPONSORS OF BILLS

S. 364

Mr. COOK. Mr. President, at the request of the Senator from Texas (Mr. TOWER), I ask unanimous consent that, at its next printing, the names of the Senator from Nebraska (Mr. HRUSKA) and the Senator from Nevada (Mr. CANNON) be added as cosponsors of the bill (S. 364) to amend title 10, United States Code, to equalize the retirement pay of members of the uniformed services of equal rank and years of service, and for other purposes.

The VICE PRESIDENT. Without objection, it is so ordered.

S. 740

Mr. ALLEN. Mr. President, at the request of the Senator from New Mexico (Mr. MONTOYA), I ask unanimous consent that, at its next printing, the names of the Senator from Alabama (Mr. ALLEN), the Senator from Nevada (Mr. CANNON), the Senator from Florida (Mr. GURNEY), the Senator from Oregon (Mr. HATFIELD), and the Senator from Alaska (Mr. STEVENS) be added as cosponsors of the bill (S. 740) to establish the Interagency Committee on Mexican-American Affairs, and for other purposes.

The VICE PRESIDENT. Without objection, it is so ordered.

S. 1632

Mr. STEVENS. Mr. President, I ask unanimous consent that, at its next printing, the name of the Senator from Texas (Mr. YARBOROUGH) be added as a cosponsor of the bill (S. 1632) to amend the Federal Property and Administrative Services Act of 1949, as amended, and for other purposes.

The VICE PRESIDENT. Without objection, it is so ordered.

S. 1685

Mr. BYRD of West Virginia. Mr. President, at the request of the Senator from Indiana (Mr. BAYH), I ask unanimous consent that, at its next printing, the name of the Senator from California (Mr. CRANSTON) be added as a cosponsor of the bill (S. 1685) to provide additional assistance for areas suffering a major disaster.

The VICE PRESIDENT. Without objection, it is so ordered.

S. 1967

Mr. HART. Mr. President, I ask unanimous consent that, at its next printing, the names of the Senators from Oklahoma (Mr. HARRIS and Mr. BELLMON) be added as cosponsors of the bill (S. 1967) to supplement the antitrust laws of the United States by providing for fair competitive practices in the termination of franchise agreements.

The VICE PRESIDENT. Without objection, it is so ordered.

S. 2004

Mr. BENNETT. Mr. President, I have discussed cosponsorship of S. 2004 with the distinguished Senator from Rhode Island (Mr. PASTORE) and request unanimous consent that, at its next printing, my name be added as a cosponsor of the bill (S. 2004) to amend the Communications Act of 1934 to establish orderly procedures for the consideration of applications for renewal of broadcast licenses.

The VICE PRESIDENT. Without objection, it is so ordered.

S. 2257

Mr. YOUNG of North Dakota. Mr. President, I ask unanimous consent that, at its next printing, the names of the Senators from Minnesota (Mr. MCCARTHY and Mr. MONDALE) be added as cosponsors of the bill (S. 2257) to provide for conserving surface waters; to preserve and improve habitat for migratory waterfowl and other wildlife resources; to reduce runoff, soil and wind erosion, and contribute to food control; to contribute to improved water quality and reduce stream sedimentation; to contribute to improved subsurface moisture; to reduce acres of new land coming into production and to retire lands now in agricultural production; to enhance the natural beauty of the landscape, and to promote comprehensive and total water management planning.

The VICE PRESIDENT. Without objection, it is so ordered.

S. 2355

Mr. BURDICK. Mr. President, I ask unanimous consent that, at its next printing, the name of the Senator from Oregon (Mr. PACKWOOD) be added as a cosponsor of the bill (S. 2355) to establish an advisory commission to make a study and report with respect to freight rates.

The VICE PRESIDENT. Without objection, it is so ordered.

S. 2360

Mr. SCOTT. Mr. President, at the request of the Senator from Arizona (Mr. GOLDWATER), I ask unanimous consent that, at its next printing, the names of the Senator from Minnesota (Mr. MONDALE), the Senator from New Mexico (Mr. ANDERSON), and the Senator from South Carolina (Mr. THURMOND) be added as cosponsors of the bill (S. 2360) to enlarge the boundaries of the Grand

Canyon National Park in the State of Arizona.

The VICE PRESIDENT. Without objection, it is so ordered.

S. 2372

Mr. BYRD of West Virginia. Mr. President, at the request of the Senator from Alaska (Mr. GRAVEL), I ask unanimous consent that, at its next printing, the name of the Senator from Oregon (Mr. HATFIELD) be added as a cosponsor of the bill (S. 2372) to authorize the appropriation of funds for the construction, reconstruction, and improvement of the Alaska Highway.

The VICE PRESIDENT. Without objection, it is so ordered.

S. 2446

Mr. JAVITS. Mr. President, I ask unanimous consent that, at its next printing, the name of the Senator from Oregon (Mr. PACKWOOD) be added as a cosponsor of the bill (S. 2446) to amend the Public Health Service Act to provide special assistance for the improvement of laboratory animal research facilities; to establish further standards for the humane care, handling, and treatment of laboratory animals in departments, agencies, and instrumentalities of the United States and by recipients of grants, awards, and contracts from the United States; to encourage the study and improvement of the care, handling, and treatment with the development of methods of minimizing pain and discomfort of laboratory animals used in biomedical activities; and to otherwise assure humane care, handling, and treatment of laboratory animals, and for other purposes.

The VICE PRESIDENT. Without objection, it is so ordered.

S. 2458 AND S. 2459

Mr. SCOTT. Mr. President, at the request of the Senator from Oregon (Mr. HATFIELD), I ask unanimous consent that, at their next printing, the name of the Senator from Oregon (Mr. PACKWOOD) be added as a cosponsor of the bills (S. 2458 and S. 2459) to authorize the Secretary of the Interior to engage in feasibility investigation of certain water resource development proposals.

The VICE PRESIDENT. Without objection, it is so ordered.

S. 2470

Mr. SCOTT. Mr. President, I ask unanimous consent that, at its next printing, the name of the Senator from Wyoming (Mr. HANSEN) be added as a cosponsor of the bill (S. 2470) to amend the Food Stamp Act of 1964 to authorize elderly persons to exchange food stamps under certain circumstances for meals prepared and served by private nonprofit organizations, and for other purposes.

The VICE PRESIDENT. Without objection, it is so ordered.

DEPARTMENT OF AGRICULTURE AND RELATED AGENCIES APPROPRIATION BILL, 1970—AMENDMENT

AMENDMENT NO. 53

Mr. WILLIAMS of Delaware submitted an amendment, intended to be proposed by him, to the bill (H.R. 11612) making appropriations for the Department of Agriculture and related agencies for the fiscal year ending June 30, 1970, and for other purposes, which was ordered to lie on the table and to be printed.

(The remarks and amendment of Mr. WILLIAMS of Delaware when he submitted the amendment appear later in the RECORD under the appropriate heading.)

NOTICE OF MOTION TO SUSPEND THE RULE—AMENDMENT TO DEPARTMENT OF AGRICULTURE AND RELATED AGENCIES APPROPRIATION BILL, 1970

AMENDMENT NO. 54

Mr. WILLIAMS of Delaware submitted the following notice in writing:

In accordance with rule XL of the Standing Rules of the Senate, I hereby give notice in writing that it is my intention to move to suspend paragraph 4 of rule XVI for the purpose of proposing to the bill (H.R. 11612) making appropriations for the Department of Agriculture and related agencies for the fiscal year ending June 30, 1970, and for other purposes, the following amendment; namely:

On page 23 at the end of line 19 add a new paragraph as follows:

"Section 103(d)(12) of the Agricultural Act of 1949, as amended, is hereby repealed."

Mr. WILLIAMS of Delaware also submitted an amendment, intended to be proposed by him, to House bill 11612, making appropriations for the Department of Agriculture and related agencies for the fiscal year ending June 30, 1970, and for other purposes, which was ordered to lie on the table and to be printed.

(The remarks and amendment of Mr. WILLIAMS of Delaware when he submitted the amendment appear later in the RECORD under the appropriate heading.)

ADDITIONAL COSPONSOR OF AMENDMENTS

Mr. BENNETT. Mr. President, yesterday I submitted amendments Nos. 50, 51, and 52 to S. 1832, the National Timber Supply Act.

I ask unanimous consent that, at the next printing, the name of the Senator from Massachusetts (Mr. BROOKE) be added as a cosponsor of the amendments to S. 1832, the National Timber Supply Act.

The VICE PRESIDENT. Without objection, it is so ordered.

NOTICE OF HEARINGS

Mr. ALLEN. Mr. President, the Committee on Government Operations will hold hearings on July 9 and 10 on the following bills relating to the disposal of surplus Federal property: S. 406, S. 1366, S. 1632, S. 1718, S. 2114, S. 2170, and S. 2210.

The hearings will be held in room 3302, New Senate Office Building, and will be conducted by a special ad hoc subcommittee consisting of Senators LEE METCALF, EDWARD J. GURNEY, and JAMES B. ALLEN.

Anyone wishing to testify or submit a statement should contact Mr. Glenn Shriver of the committee staff room 3308, New Senate Office Building, extension 7464.

NOTICE CONCERNING NOMINATION BEFORE THE COMMITTEE ON THE JUDICIARY

Mr. EASTLAND. Mr. President, the following nomination has been referred to and is now pending before the Committee on the Judiciary:

Donald E. Walter, of Louisiana, to be U.S. attorney for the western district of Louisiana for the term of 4 years, vice Edward L. Shaheen.

On behalf of the Committee on the Judiciary, notice is hereby given to all persons interested in this nomination to file with the committee, in writing, on or before Thursday, July 3, 1969, any representations or objections they may wish to present concerning the above nomination, with a further statement whether it is their intention to appear at any hearing which may be scheduled.

NOTICE OF HEARING

Mr. EASTLAND. Mr. President, on behalf of the Committee on the Judiciary, I desire to give notice that a public hearing has been scheduled for Tuesday, July 8, 1969, at 10:30 a.m., in room 2228, New Senate Office Building, on the following nominations:

Joseph O. Rogers, Jr., of South Carolina, to be U.S. attorney for the district of South Carolina for the term of 4 years, vice Klyde Robinson.

William L. Martin, Jr., of Georgia, to be U.S. marshal for the middle district of Georgia for the term of 4 years, vice Robert O. Doyle.

At the indicated time and place persons interested in the hearing may make such representations as may be pertinent.

The subcommittee consists of the Senator from Arkansas (Mr. MCCLELLAN), the Senator from Nebraska (Mr. HRUSKA) and myself as chairman.

NOTICE OF HEARINGS ON GOLDEN EAGLE PROGRAM RESTORATION

Mr. JACKSON. Mr. President, on behalf of the Committee on Interior and Insular Affairs, I announce that public hearings have been scheduled for July 17 on S. 2315, a measure to amend the Land and Water Conservation Fund Act to restore the popular Golden Eagle program for admission to Federal outdoor recreation areas.

The hearings will open at 10 o'clock in committee room 3110, New Senate Office Building. Any Member of the Senate, or other interested person, is invited to participate and should inform the committee of his wish to do so.

The Members of the Senate will recall that the Land and Water Conservation Fund Act established a uniform system of admission and user fees as one of the sources of revenue for assistance to the States for their outdoor recreation programs and for acquisition of additional Federal outdoor recreation areas. An annual fee of not more than $7 was authorized which would admit the payer to all Federal recreation areas during the

year. Such areas now number more than 3,000.

This provision for payment of a single annual fee for general admission was designated the Golden Eagle program. In the 90th Congress we enacted Public Law 90–401, which provided additional sources of revenue for the fund. An amendment by the House abolished the program forthwith, but in conference we were able to get a year's extension for the program, or until March 31, 1970. This is the form in which the 1968 amendment to the fund act was enacted. S. 2315 would repeal the provision by which the Golden Eagle program goes out of existence next year.

NOTICE OF RESCHEDULING OF HEARING

Mr. EASTLAND. Mr. President, the open hearing of the Senate Internal Security Subcommittee on bill S. 1988 introduced by Mr. THURMOND, to amend the Internal Security Act of 1950 to prohibit certain obstructive acts and practices, originally scheduled for Monday, June 23, and postponed at the convenience of the Department of Justice, has been rescheduled for 3 p.m., Tuesday, July 1, in room 2228 of the New Senate Office Building.

Witnesses will include, among others, the author of the bill and Mr. Jerris Leonard, Assistant Attorney General in charge of Civil Rights Division.

THE SURTAX

Mr. METCALF. Mr. President, there seems to be a fear on the part of some Members that unless the surtax is extended for a full year right now, this Congress will go down in history as having been fiscally irresponsible. What those people do not seem to understand is that there is nothing magic about the 30th of June as far as the surtax is concerned. The Senate proved that yesterday when it extended the existing withholding tax rate by 1 month.

I, for one, am quite willing for the present income tax withholding rates to be continued for a period up to 90 days so that any proposal to extend the surcharge can be considered simultaneously with comprehensive tax reform. There have been repeated assertions in the other body that reform legislation will be on the floor of the House in August. That promise was a key factor in a closed rule having been granted over there on the House bill, H.R. 12290.

If the people of this country are going to get the reform legislation they have been repeatedly told they would get this year, it will have to be a part of a legislative package that includes comprehensive tax reform along with an extension of the surtax. Certainly if a surtax extension bill is sent over to the Senate, it should be clear by now that it will just have to wait over here for a reform bill to catch up with it.

The whole point is that our rules permit us to place these moneys in escrow until such time as the surtax and reform legislation can be considerd together. We have already applied those rules to the present situation. What we have done was not fiscally irresponsible. On the contrary, it was simply an exercise of commonsense.

RACKETEERING INFILTRATION OF LEGITIMATE BUSINESS

Mr. McCLELLAN. Mr. President, on April 18, 1969, along with the Senator from Nebraska (Mr. HRUSKA), I introduced S. 1861, the Corrupt Organizations Act of 1969. S. 1861 has been the subject of testimony in hearings held June 3 and 4. Assistant Attorney General Will Wilson, in his prepared statement presented on June 3, categorized S. 1861 as an "innovative approach to the problem of racketeer infiltration of legitimate business," and stated:

> We are in accord with its objectives.

He further stated:

> We have organized a task force in the Department to give an intensive examination to the bill.

We are now awaiting the results of this examination, and although we anticipate some revision of the bill as a result, the primary features of S. 1861 will probably be retained.

An article in today's New York Times describes precisely the type of organized crime activities that could be investigated.

This article reveals facts that make possible the inference that a Mafia-controlled sales agency by unknown pressures negotiated "an unusual, uncancellable 10-year contract" with a New Jersey detergent manufacturing concern. The facts stated in the article permit a possible conclusion that there was an intimate connection between this sales contract and a number of murders of A. & P. store employees and instances of arson at A. & P. stores.

The contract was obtained by "big promises of sales." The detergent manufacturer apparently exercised less than the usual control of the sales agency. In at least one of the murders—of an A. & P. manager who had identified one who had attempted to burn his store—there purportedly was a definite link between the attempted arson at the store and an effort to get the manufacturer to stock a detergent.

If proper proof of the inferences raised by the article in the New York Times is forthcoming, and knowledge can be shown of the Mafia actions of violence in efforts to sell the manufacturer's detergent, not only would those responsible for these crimes be subject to imprisonment and fine under a bill such as S. 1861, but also those involved in the criminal actions could be required to give up, under comparable civil provisions, their property interests in the concerns engaged in violations, and the responsible individuals could be prevented from returning to the world of business to practice their rapacious and murderous trade practices on law-abiding businessmen.

Mr. President, I ask unanimous consent that the New York Times article be printed in the RECORD, in order that information concerning this monstrous and murderous invasion of our business community might receive as widespread circulation as possible. The citizens of America must become aware of the threat to legitimate operation of business presented by these criminal elements. S. 1861 would, in large measure, allow full and just punishment of these criminals and remove them from the business community.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

DETERGENT MAKER'S RELATIONSHIP TO MAFIA SALES AGENCY OUTLINED

(By Michael Stern)

A "very friendly" but economically disappointing relationship between a New Jersey detergents manufacturer and a Mafia-controlled sales agency is revealed in a Waterfront Commission transcript obtained by The New York Times.

The sales agency is suspected by the Queens County District Attorney of mounting a campaign of murder, arson and terror against the A. & P. food chain.

The transcript records sworn testimony given to the commission last year by Nathan N. Sobol, president of the North American Chemical Corporation of Paterson. The company manufactures a detergent sold chiefly to supermarkets for packaging under the markets' own labels.

Given behind closed doors and never made public by the commission, the testimony describes in detail how Best Sales Company, the sales agency run by the late New Jersey Mafia figure Eugene J. (Gene) Catena got an unusual, uncancellable 10-year contract with North American by promising big orders for its product, but brought in little business and finally let the corporation buy out the contract after two years.

Mr. Sobol's testimony sheds new light on heretofore unexplained conversations recorded by the Federal Bureau of Investigation between Catena and a Nat Sobol about the detergent business and between Catena and a Frank Palmieri about the A. & P. F.B.I. summaries of these discussions were part of the 2,000 pages of bugged underworld conversations that were made public the week before last when they were filed in Newark Federal Court.

The testimony also helps to fill out the still-incomplete picture sketched by Queens District Attorney Thomas J. Mackell on June 12 when he announced the indictment of a 20-year-old porter for allegedly setting fire to an A. & P. warehouse in the Ridgewood section.

At that time Mr. Mackell said he believed that the Ridgewood fire, the murder of two A. & P. store managers and 15 other fires and attempted arsons in A. & P. properties all were part of an attempt by the Catena-controlled sales agency to force the food chain to buy a detergent that A. & P. had tested and rejected because it did not meet its standards.

INVESTIGATION EXTENDED

The Queens County grand jury that handed up the indictment against the porter has had its life extended and is continuing its investigation of the four-year-long string of attacks on A. & P. properties and employes.

F.B.I. agents in New York and New Jersey also are working on the case, but bureau chiefs in both states refused to discuss their inquiries.

When Mr. Mackell announced the indictment he did not give the name of the detergent company, explaining that no charge had been made against the concern.

North American Chemical's name was disclosed in response to a reporter's questions last week when A. & P. conducted its annual stockholders meeting in Horseheads, N.Y., a suburb of Elmira. Other information was obtained from businessmen, credit agencies and law-enforcement officers in New York and New Jersey.

According to Mr. Sobol's testimony before the Waterfront Commission, he got to know Catena through a long-time friend and part-time associate, Frank Palmieri. He identified Mr. Palmieri as a teacher in Saddle River, an affluent Bergen County community, but inquiries at the town's public and private schools show that no one of that name ever was employed as a teacher there.

Mr. Sobol said he had told Mr. Palmieri that he was looking for agents to sell his company's products and that Mr. Palmieri had put him in touch with Catena, president of the Best Sales Company.

NO CANCELLATION CLAUSE

Although North American's usual contract with a sales agent or broker had a 30-day or 90-day cancellation clause, Mr. Sobol said that Catena refused such terms and demanded a non-cancellable 10-year-long agreement. "I had to do it," Mr. Sobol said. "That was the only way he would do it, he wanted a solid contract."

Mr. Sobol said he had a cordial relationship with Catena, went out with him and had lunches with him. "Very frankly, we were very friendly with Gene Catena," he said. "As a matter of fact, I thought a lot of him, I really liked him. Because he wasn't—he wasn't a pusher, he was very pleasant."

But later in the interview a different picture of the relationship emerged in these questions by a commission counsel and Mr. Sobol's answers:

Q. What made you sign a 10-year contract, something so binding?

A. Big promises.

Q. Of what, sir?

A. Sales.

Q. And those promises never materialized?

A. No.

Q. And yet you let it go another year or so without trying to . . .?

A. We had discussions.

Q. What were those discussions?

A. I had to keep it on a lighter vein because he got real mad at one time I pushed him.

Q. Well, when he got real mad, why didn't you tell him: "Look. Put up or shut up." Because you were afraid of any connections he might have had? Did he ever push his connections on you?

A. No, it wasn't that. He said, "You just cover your accounts and we will run our business our way." And when I saw he got upset I just dropped it.

In another exchange about the relationship, the questions and Mr. Sobol's answers went this way:

Q. To whom did Best Sales make most all or all their sales pitches for you?

A. To tell you the truth, I don't even know. We worked all the accounts ourselves and at one point, when I asked what they were doing, and wanted to know, as brokers, what they were doing, I was told that's their business; he said: "That's my business and we are running a brokerage and we don't have to tell you what we are going to do."

Q. Gene Catena?

A. That's right. We just dropped the damn thing, we dropped the discussion at the time and then it was a matter of just, you know, like waiting or what have you.

PRICE NOT DISCLOSED

Mr. Sobol said the contract finally was canceled at the suggestion of Catena, who had become ill and wanted to retire. He said North American was permitted to buy out the remaining term of the agreement, but he did not disclose the price.

Asked if he knew Catena's brother, Gerardo (Jerry) Catena, Mr. Sobol said no. Jerry Catena has been identified by law-enforcement officials as a major Mafia chieftain and the heir to the New Jersey enterprises of the late Mafia kingpin Vito Genovese.

Gene Catena was known to law-enforcement agencies chiefly as a principal in Mafia gambling operations.

Mr. Sobol could not be reached for comment on his testimony or on any aspect of the A. & P. investigation despite repeated telephone calls and a visit to his company's five-story plant and offices at Putnam and Mercer Streets in Paterson. Through his secretary he said he would not make himself available for comment or an interview.

Mr. Sobol's brother, Dr. Saul O. Sobol of Newark, is chairman of the board of directors of North American Chemical. He also refused to discuss the corporation's affairs, said his title was "honorary," and referred all inquiries to his brother, Nathan.

INCOME OF $54 MILLION

From other sources it was learned that the concern's modest looking plant in a Negro section of Paterson is headquarters of a $4-million-a-year business. It has 70 employes; a subsidiary, NAC Trucking Company, that operates a fleet of nine trucks; an affiliate, North American Holding Corporation, which controls the chemical concern's real estate; a branch plant at Franklin and Keen Streets in Paterson that includes a railroad siding, and other assets.

The company, which enjoys a good credit rating, makes detergents for clothes and dishwashing machines. The products are sold to chain stores, supermarkets and department stores and reach the public under whatever houses labels the stores put on them.

NOT IN TELEPHONE BOOK

The Best Sales Company's operations have proved more difficult to trace. District Attorney Mackell stated that the company went out of business in 1967. Although it operated out of Newark, it was not listed in telephone or business directories there and apparently paid no bills under the Best Sales name.

Mr. Sobol told the Waterfront Commission that Catena's company was agent for several products besides his own and sold them to all the major supermarket chains.

The commission is a bistate agency established by New York and New Jersey to fight crime in the Port of New York, with the Governor of each state appointing one member. The New York member is Joseph Kaitz of Cedarhurst and the New Jersey member is Steven J. Bercik of Elizabeth.

Charles E. McGee, secretary and spokesman for the commission, said the agency could not reveal why Mr. Sobol had been called in last June for an under-oath interview. He said the matters Mr. Sobol had been questioned about still were under investigation and could not be discussed. He added that the contents of such interviews never are made public by the commission.

RELATIONSHIP BEGAN IN 1964

Mr. Sobol told the commission that his two-year-long relationship with Catena and his sales agency began in 1964.

District Attorney Mackell said at his June 12 news conference that the chain of attacks on A. & P. personnel and properties began in 1964. He added that the indictment of the porter is the only charge that has been made in connection with the attacks.

North American has at no time been charged in connection with these or any attacks on the A. & P. It has been mentioned only as a manufacturer of a detergent sold through the Catena sales agency.

In one of the most brutal of those attacks, James B. Walsh, manager of an A. & P. Brooklyn store, was gunned down during a January, 1965, snowstorm when he stopped his car to repair a flat tire.

Frederick J. Ludwig, the chief assistant district attorney of Queens, described this murder as "definitely a gangland slaying." He added, however, that the police had not established any link between Mr. Walsh's death and the Catena Mafia family.

The second victim was John Mossner, manager of an A. & P. store at 925 Soundview Avenue in the Bronx. In February, 1965, a month after he had identified for the F.B.I. one of four men who had tried to plant a firebomb in the store, Mr. Mossner was shot in the head three times as he parked his car in the driveway of his Elmont, L.I., home.

In this case, Mr. Ludwig said, there was a definite link between the attempted arson at the store and an effort to get the manager to stock a detergent.

SIXTEEN FIRES STUDIED

The fires in A. & P. stores and warehouses began in January, 1964, and were scattered throughout the metropolitan area. Although Mr. Mackell listed 16 fires and arson attempts as subjects of his inquiry, two of the earliest fires he named—one in Yonkers and the other in Peekskill—are listed by the police in those communities as not suspicious.

Mr. Mackell said the first contacts with the A. & P. chain about the detergent were made by the Catena sales agency, but that the most recent attempt, made this year, was by the manufacturer.

In his answers to the Waterfront Commission's questions, Mr. Sobol said Best Sales had had no dealings with A. & P. on his behalf and that North American had approached the food chain's purchasing agents directly.

At the Great Atlantic & Pacific Tea Company's offices at 420 Lexington Avenue, Fred E. Campbell, secretary and general counsel to the company, was asked how A. & P. had been offered the detergent. He said he could not answer because the case was before a court and a grand jury.

FIVE THOUSAND STORES IN CHAIN

Mr. Campbell said that the company had no theory that would explain the slaying of the store managers and the fires as part of one pattern. He said a company as large as A. & P.—it operates almost 5,000 stores—suffered armed robberies of its employes and fires every year.

At the stockholders' meeting in Horseheads last week, the company said property losses in fires all over the country and in Canada had been running at the rate of $1.7-million a year for the last six years, most of it covered by insurance.

Mr. Campbell said it was impossible to project what lost business might have cost the chain while burned-out stores were being rebuilt. He explained that when one store was closed, business often picked up sharply at a nearby store as loyal customers shifted their buying.

However, Mr. Campbell said he thought an estimate made by the Queens District Attorney was too high. Mr. Mackell had projected a combined business and property loss of $24.6-million in just two fires—the April 8, 1968, fire in Ridgewood and a Dec. 31, 1967, fire in an Elmsford, N.Y., warehouse.

The porter accused of setting the Ridgewood fire is James A. Castorina. He is being held in $25,000 bail on a charge of first-degree arson for a hearing on July 9.

REGULATING INTEREST RATE—SELF-DISCIPLINE OR GOVERNMENT INTERVENTION?

Mr. MONTOYA. Mr. President, we face, for the first time since 1945, the serious and depressing circumstance of the decision of a majority of U.S. banks to raise interest rates for prime customers to an alltime high—from 7½ to 8½ percent. This historic climb in interest rates is a reflection of the enormous demand for credit, and the sizable

gap between the amount of money desired and that which lenders are willing to supply at prevailing interest rates.

As usual, consumers, small business, farmers, State and local governments, and large corporations account for the preponderance of the demand for funds. But in accord with the so-called economic laws of scarcity, the result is a veritable black market in money. The big spenders of long standing who are able to pay premium rates are welcomed by banks and given priority for these scarce funds. Whereas, the conventional mortgage market dries up, and those unable to pay the higher rates are not getting an equitable chance at securing needed capital. Moreover, as in the past, the favored large corporations paying the increased rate will simply transfer the increase on to the consumer by way of higher prices on the goods and services they sell.

Mr. President, this is a matter which is of immense consequence to the American people. The effect of this unprecedented raise in rates will spread far and wide—to the ruin of homebuilders, homeowners, small businessmen, farmers, and others who have to borrow to survive. And another result will be that hundreds of thousands of students will be prevented from going to college or vocational school because banks will not be willing to lend money to students at today's federally prescribed maximum interest rate of 7 percent. And what about the man who needs to borrow to send his wife to the hospital during a long illness?

Mr. President, very intelligent and embarrassing questions are being asked about this decision to raise the prime interest rates. At least the banking industry has the excuse that out of duty to its stockholders it has little choice but to pursue these policies. The administration, on the other hand, tells us that the hike in rates is necessary to slow inflation. Instead of using moral influence and exhortation to reverse this ruinous trend, or even providing evidence of an intention to do so, the Nixon administration has advanced speculative facts, conjecture, and proof of the position of the Federal Reserve Board, which have been macerated, dissected, and put in packages of medicine marked "benevolence," "patience," "perseverance," and so on, for the consumption of those willing to appropriate it.

I personally find these messages quite indigestible. The tactic is, in fact, quite recognizable—a few, bolder than the rest, stretch forth their hands; and then, with no resistance, the slaughter of the whole is easy. Moreover, I believe the Nixon administration has exhibited a shameful lack of courage in its approach to the problem. They would, rather than face their colleagues in banking and industry, assign so many Americans to the paupers' gallery.

But facts have been gathering faster than explanations, and America is not prepared to put up with the usual sets of automatic proclamations nor to be deceived by the hollowness of the masquerade. For the simple fact remains that boosts in costs of borrowing money will not slow inflation.

It is generally recognized, Mr. President, that the main inflationary components of our economy are corporate spending on plant and equipment, as well as Government spending on military and public works. While other sectors have moderated inflation to the extent possible, given the difficulties of the war in Vietnam, corporate business seems intent on pushing ahead with enormous increases in plant investment and equipment. As a result, planned expenditures have skyrocketed into the largest business expansion we have had in history. And monetary policies have utterly failed to restrain corporate investment demands, among other reasons to avoid anticipated higher prices and tighter credit conditions in the future.

Although there are those who claim that by hindering corporate investment we are "killing the goose that lays the golden egg," yet, this inflationary investment boom is completely unsustainable when we are utilizing but 84 percent of our industrial capacity.

In short, Mr. President, large corporations have no real concern over high interest rates, since the higher cost can always be passed on to the consumer. But if higher interest rates raise prices, how then is this supposed to cure and control inflation? Are we to listen to those who say that it is inflationary to use our national income to meet our pressing needs, but that paying out that same amount or more in higher interest rates to the affluent does not represent a mal-distribution of income? All it truly means is higher and higher profits to banks and their customers.

Take the case of the homeowner. The individual with a $20,000 8½ percent mortgage loan will pay as much as $140 per month in interest charges, and ultimately it will cost him $8,000 just in higher interest rates to pay for his home. At the height of the 1966 credit crunch—and even so recently as a year ago when the going rate fluctuated between 6.58 percent and 6.62 percent—the same loan would have cost the homeowner approximately $100 per month, $40 less per month than is now the case. And we can add to this the ever-increasing property taxes which have risen about 5 percent.

Additionally, with the current "credit crunch" people are also less inclined to move to better housing, because of the so-called discount rate—a fee assessed by mortgage companies to handle a loan when higher interest rates cannot be charged. The usury laws forbid charging the higher rate to either buyer or builder, so it is either pushed off on the seller or added to the sale price to the buyer by the seller. As a result, home prices are about 10 percent higher than last year and an individual would need a $22,000 loan to buy the same $20,000 house.

Moreover, Mr. President, many a family man could not get a home loan at the present interest rate because his pay may not be high enough to meet monthly payments required under the current going rate. He might have qualified, however, at last year's 6.75 percent level.

This represents a tremendously oppressive burden to America's families. Those committing themselves now to long-term mortgages are bound, anywhere from 10 to 20 years, no matter what happens to interest rates thereafter. And equally appalling is that under current conditions individuals with incomes of $10,000 or less—the majority of American people—simply will not be able to secure mortgage credit for buying a home.

Mr. President, this development also represents a most serious threat to the achievement of our housing goals—particularly in providing decent housing for low- and moderate-income families—as set forth in the 1968 Housing Act. That act set as a goal the construction of 26 million new or rehabilitated units by 1978, but it is altogether clear—within 1 year after enactment of the measure—that it is doomed before it even gets off the ground. Sky-high interest rates will increase the cost of and thus choke off and frustrate the new construction we so desperately need.

The Federal Reserve Board has estimated that the housing sector accounts for about 70 percent of the drop in expenditures dictated by the tight money policies since 1966. When an industry comprising only 3 percent of our gross national product must take 70 percent of the cutback, something is wrong with our monetary policies. Experience during 1966 alone illustrates dramatically how our monetary policies discriminate against achievement of our housing objectives. During that crisis, as compared with 1965, the sale of homes priced under $12,500 dropped 51 percent; those priced between $12,500 and $15,000 dropped 42 percent; and homes priced between $15,000 and $17,500 dropped 20 percent. But the sale of homes priced at $30,000 or over actually rose 10 percent.

The degree to which Americans can afford to own their own homes, to finance automobiles and refrigerators, is rapidly decreasing—and at a time of unparalleled prosperity when the doors of homeownership and increased well-being should be opening to many more Americans. This, Mr. President, is nothing less than a national disgrace.

Take another case of the still invisible consequences of the interest hikes—that of the small businessman. When the consumer is hurt, business is hurt. As a member of the Senate Select Committee on Small Business, I am greatly concerned over enhancement of the means by which small businessmen survive, and the effects of these high interest rates upon them as well as the customers they serve.

Unlike his larger competitors, the small businessman will find it more difficult to compete for the consumer's shrunken dollars. The consumer's spending accounts for 62 percent of our gross national product, but he cannot maintain this rate of buying if unable to get credit.

As a result, not only will the small businessman be forced to abandon plans for new plants and equipment, but business failures and bankruptcies will increase sharply due to an inability to meet

sales targets. We can anticipate, then, that an ever-greater portion of this vital segment of our economy will be absorbed by giant corporations.

Nor can we forget that the millions of jobs generated by medium- and small-sized firms will be cut back, and unemployment will also increase.

The high cost of money will also push our entire farm operations—farmers, ranchers, agricultural producers, alike who must borrow to stay in business—to an intolerable point. They cannot cut back in the sense industry can, since they cannot borrow less for fertilizer and feed for their cattle. Their crops are in the ground, and their plans for the year are virtually irreversible. They have managed to survive the economic inequities of the past because they have improved their efficiency at a greater rate than have other segments of our economy. But most farm depressions of the past have been the result of an inability to offset operating efficiencies against mounting costs of production, including higher rates of interest.

As for the municipal bond market—whereby State and local governments are enabled to secure funds for important urban renewal and other programs—it has been described as absolutely dead as a result of the hike in prime rates of interest. Since most communities cannot accept annual net interest costs above 6 percent, they will fail to attract bids for building bonds. Unless confidence is restored in bonded debt plans by lowered interest rates, we will experience a tragic faltering and starving of community development work in the Nation's ghettos and economically depressed regions.

Mr. President, I could recite a whole litany of these material statistics, as well as the closely intertwined moral statistics which are of no less value in enabling us to see far into the spirit of the times. Meeting our needs with material statistics alone is like meeting our want of food by the perpetual administration of concentrated essence of beef. It is not possible to reduce our needs to such concentrated form.

If the Nixon administration is unable to provide the leadership to remove obstacles to our national progress, and the industrial and banking sectors do not fulfill their obligation to operate in the public interest, then it remains for Congress to insure that the whole course of our economic evolution does not become different from what we are capable of becoming and achieving.

These are severe words, but they portray, in my judgment, our true state. I always hate to see Congress become the arbiter and artificially force issues of this character. They should not be undertaken unless prospects of remedy are clearly unforeseen. Accordingly, I see the following alternatives ahead:

In the first place, I implore the Nixon administration to call up the banking industry and the large corporate sector of our economy to an enlarged responsibility and patriotism on a higher and more significant plane of action than they have ever been on before. Charters to lend should not be interpreted as licenses to serve only the affluent, particularly during times of crisis, but, rather, as means for meeting all of the credit needs of the community on a fair and equitable basis. All of us are injured if this trend continues, and there is no defense or security for any of us except in the highest development and prosperity of all. The totality of American objectives contradicts and conflicts with this tendency to worship the means and forget the ends of American life—ends which give the means their value. In short, the banking and corporate segments of American life must cease to be regarded as isolated self-cultures, in light of the magnitude of the work ahead of us.

In the second place, greatly as I admire our mighty American banking industry, their statements and actions at this time appear to require limitation. I do not believe our banking industry wants the image of the inhuman commissar who condemns thousands without love or hatred simply in pursuance of an abstract duty. The way it and our giant corporate sector faces this national economic challenge will indicate to Americans as a whole whether or not they are preoccupied with the cares of Americans as a whole; whether they regard national issues as extracurricular activities that do not touch the core of their concerns; whether they care to help make us stronger or weaker.

I believe the banking and corporate segments of America can fashion a philosophy and poetry of their own by seeking a more excellent way to help build a more vigorous national life. They can discipline themselves without the need of Government intervention. In the current crisis, the large corporate borrowers can use restraint and reasonableness in their demands for scarce funds. And the banks can simply allocate a certain percentage of available funds to the various credit demands which confront them; indeed, some of our bankers have already spoken out against the rate increase and are attempting to pursue fair policies in distributing available funds.

I welcome them forth to help us with the work of focusing upon and elucidating the causes of our national progress. Efforts and means so invested will pay a thousand percent interest, and they will be amply recompensed by promoting the well-being of all Americans and securing our age against decay. How fine a unity this will give to the American epic.

But failing these alternatives, then we in the Congress must ourselves take drastic steps to reduce the trend and stop the raid on the living standards of the American family. Money cannot manage itself, we have long ago discovered, and the country is justified in intervening when the market will not work as effectively as it should.

Many suggested alternative reforms and policies have been forthcoming from concerned legislators here in the U.S. Congress that would have a salutary effect on the market processes. Hearings are also currently scheduled in the House Banking and Currency Committee for the purpose of examining into last week's rate increases and determining what can be done about the situation. Perhaps the Federal Reserve Board should insist upon some factor other than a borrower's willingness and ability to pay high interest rates in determining the distribution of the supply of money. Possibly we will need to place a limitation on the inflow of Eurodollars, which permit commercial banks to continue business lending even in the face of restrictive monetary policies. Or, a drastic revision and reform of the worldwide international monetary fund system may be in order.

In any event, lower- and middle-income Americans cannot be saddled with this terrible burden. They must not be priced out of the money market, and, if necessary, interest rates and the supply and demand for money must be regulated so that the public as a whole will benefit. But something must be done, and done quickly.

As a result the American people, the industrial and banking sectors, and the international community will be given confidence in the fiscal responsibility and the sheer dynamism of American society that is required in this time of doubt and uncertainty.

PROXMIRE SUBCOMMITTEE ZEROS IN ON MILITARY WASTE

Mr. HART. Mr. President, as we know only too well the Federal Government has been subjected to stringent budgetary pressures over the past year or so. As a result we have had to take a hard look at a number of programs to determine whether they can be justified in terms of the amount of payoff we get for the Federal dollars invested.

Until very recently the military budget has been largely exempt from this scrutiny. Too often the military appeared to have been given a blank check and as a result examples of waste and extravagance are the rule rather than the exception. This is not only bad for the national pocketbook, but it has an adverse impact, in my estimation, on our combat effectiveness.

Fortunately, over the past few months the Congress and the public have begun more carefully to question military expenditures. One of the first to raise these questions has been Senator WILLIAM PROXMIRE, my able colleague from Wisconsin. As chairman of the Economy in Government Subcommittee of the Congressional Joint Economic Committee, he has been holding a series of hearings into military procurement.

Although many of us have followed with interest these hearings on the military budget and national priorities, a report recently made by his subcommittee as a result of earlier hearings has gone largely unnoticed. Consequently, I ask unanimous consent to have printed in the RECORD at this point an editorial from the Milwaukee Journal commenting on this report and pointing out that the senior Senator from Wisconsin feels that "improved Pentagon management could mean at least a $10-billion saving in defense spending without reducing military effectiveness"—a goal we should all shoot for.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

HOW TO SAVE $10 BILLION

The close scrutiny that Sen. Proxmire (D–Wis.) has long applied to defense spending has now yielded an alarming record of gross inefficiency—if not outright plunder—in military procurement. The latest report of the subcommittee on economy in government, of which Proxmire is chairman, provides an excellent focus for the subcommittee's hearings next week on "the military budget and economic priorities."

Military procurement—the purchase of weapons, hardware and other goods—accounts for more than half of the total $80 billion defense bill. Proxmire estimates that improved Pentagon management could mean at least a $10 billion saving in defense spending without reducing military effectiveness.

What has happened to congress' spending watchdog, the general accounting office? Where is the efficiency that was supposed to materialize from the systems analysis approach, the program planning budgeting system (PPBS) introduced with such fanfare under former Defense Secretary McNamara? What about the renegotiation act that is supposed to recapture excessive profits earned on military contracts? Or the truth in negotiations act of 1962 that required contractors to submit certified cost data for all negotiated contracts? What has happened to competitive bidding?

Most of these surveillance devices have failed. GAO says it has neither men nor money to ride herd effectively on defense, and may even lack statutory authority. PPBS was apparently oversold. Moreover, to work properly it requires close co-ordination from the budget bureau. But of 500 employes in the bureau, only 50 have up to now been assigned to scrutinize defense programs—in other words, 10% of the bureau's staff is in charge of items that account for 40% of all federal spending. The special budget bureau assistant to oversee military spending has just been named, filling a post vacant for four years. The various acts passed to control military spending are ineffective because of the lack of uniform accounting procedures, lack of personnel to enforce them, or just plain graft.

The catalog of blunder and abuse is a national disgrace. The country has simply lost control over military spending. It is time it regained control.

THE PRESIDENT'S AIRPORT-AIRWAYS PROGRAM

Mr. PEARSON. Mr. President, Secretary of Transportation John Volpe in a speech Tuesday to the Aero Club discussed President Nixon's recommendation to the Congress for an airport-airways program. He addressed himself to many of the difficult questions that must be answered by the Congress in these deliberations.

The needs of a sound program for the airways side of the air transportation problem were given special emphasis by the Secretary and they deserve such emphasis. We cannot allow the continuation of a patchwork air traffic control system and complete dependence on the current Federal funding process. And I agree with the Secretary that aviation can meet these challenges.

While I do not concur in total with the Secretary's observations I do feel his remarks represent the feelings of the administration on the airport-airways question and I wish to bring this to the attention of my colleagues. I ask that this speech be placed in the RECORD.

There being no objection, the remarks were ordered to be printed in the RECORD, as follows:

REMARKS PREPARED FOR DELIVERY BY SECRETARY OF TRANSPORTATION JOHN A. VOLPE BEFORE THE AERO CLUB

Last week, President Nixon sent to the Congress his airport/airways legislation. The specifics of his proposal are well-known. Certain general facts pertaining to this proposal are not so well appreciated. The first of these is the urgency of time.

I remember back a few months ago—when I first moved into the Department—the sense of awe I felt at the magnitude of some of our transportation challenges. I have no less a sense of awe as I see these problems increase in size with each passing day.

Over the past five years, our airline industry has been increasing its capacity by an average of sixty-six million seat miles per day.

Our general aviation fleet—in the same period—has been increasing its flying hours by four thousand per day.

The automobiles on our highways increase by ten thousand a day.

And so it is with all our problems.

Now gentlemen, I have, in many years in private business and in public life, done my share of negotiating. I know that deliberate delay is sometimes considered a good tactic of hard bargaining. But I am also aware that any unnecessary delay in reaching agreement on this Airport/Airways Bill will only compound our difficulties. The cost of land needed for airport expansion and improvements is increasing. In some places needed land is being put to other uses. And there is the danger, finally, that a highly divisive, time-consuming debate with the aviation community could end in legislative inertia and stalemate. This must not happen.

There are in President Nixon's proposals two areas of special interest.

The first is our determination to what extent each segment of aviation uses our facilities and of our subsequent determination of appropriate user charges to cover these costs of this usage.

We feel the user charges we have proposed are just and equitable and we are prepared to defend them. I want to emphasize, however, they do not represent a determination designed for eternity. We are proposing in our measure that an intensive, two-year cost allocation study be made. This will tell us precisely what segments are using our services and to what extent. All branches of the industry will participate in this analysis. We shall, then, on the basis of this study recommend any appropriate adjustments of the tax level.

The second is our proposal that the funds derived from these user charges be used to operate, maintain, and expand our airways system—our air traffic control, our "Nav Aids" and so forth.

I want to discuss this in two forms—the practical and the philosophic.

The best way to be practical is to begin with dollars and cents. We shall need to spend—to operate, maintain, and expand our airways system during the next ten years—over twelve billion dollars. Better than three million dollars a day must be spent every day of the year for the next ten years.

This money will be spent for radars and towers—for automated equipment—for research and development and for personnel.

The expansion of our payroll is perhaps the best indication of our growing costs. Ten years ago we had a total of twelve thousand people in our centers, towers and flight service stations. Today we have twenty-four thousand. Ten years from now we shall need forty-three thousand. On the maintenance side, we now have sixty-five hundred electronic technicians. Ten years from now, we shall need a total of eleven thousand.

I have in the past few months become familiar enough with the cold, hard realities of the Federal budget. I know what's in there—and what isn't in there. I tell you there are no funds to meet the costs of this expansion. Unless funds are available from user charges, the expansion isn't going to happen.

I do not, even in principle, support the theory that airways costs should be borne by the general taxpayer. And let me preface my comments with the fact that I spent most of my career in private industry. Business has my understanding and appreciation. The fact is, however, the aviation industry has matured and prospered. And general aviation is not underprivileged. I think the aviation community should help pay its own way.

On our proposed allocation of airport funds, we are continuing the traditional government policy of not providing assistance for terminal facilities. Airport terminals are revenue producers. Concessions, space rentals, advertising rentals, and parking lots provide income. In many of the larger hubs, this income is sufficient to keep the airport self-sustaining—and even show a profit. We believe, consequently, this matter of terminal improvements should be left up to local authorities. They are the best judges of their own needs. They can best determine how to finance these requirements and they can often secure advantageous financing.

In some areas, income from concessions may not be sufficient to cover terminal needs. Here, we think it would be appropriate for the local airport operator to impose a small charge on the air travelers using his terminal.

Our proposed user charges are not new. The fact is aviation user charges already exist. Airline passengers have been paying them for years. So have most general aviation pilots. For one type of general aviation traveler, however, these user charges will be new. This general aviation pilot operates an executive jet costing about three quarters of a million dollars. He pays about $420 an hour to fly this aircraft and he utilizes most of the services of our billion dollar airways system.

Should he fly IFR from New York to Boston, we estimate the total cost of the government services he receives is about $57. We estimate his IFR Chicago to Miami flights costs the government $117. But at present he pays not one penny to help defray these costs—not one penny. We are now suggesting that he help pay part of this expense. We propose that he pay a new nine cents a gallon on his fuel.

Some may say most general aviation pilots don't use our facilities. But the facts prove otherwise.

Taking last year as an example, we find the total of air carrier aircraft contacted by our FAA Flight Service Stations was about seven hundred thousand. Total for general aviation—nearly eight million.

Total air carrier itinerant operations at airports with FAA towers last year—ten million. For general aviation—twenty-two million.

These FAA towers also recorded an additonal 19 million local operations for general aviation. And our FAA center handled some 3 million general aviation aircraft.

General aviation aircraft *are* using our facilities and they are using them every day. We think it only just that they help bear a fair share of the cost.

There seem to be general agreement that some form of user charges will be adopted. There is also some think, however, that the final numbers that emerge might be less than we are asking. I pray they won't.

We cannot in air traffic control fall back on compromise. We can no longer put on a patch here and another patch there. We cannot make do with baling wire and chewing gum. The iron dictates of safety rule against this. A failure to provide sufficient

funds to expand our system would mean only trouble—more regulations—more restrictions—more delays—now I don't want them. Aviation doesn't want them. I say let's work together then to get rid of them. Let's pass this bill!

I would also warn against the assumption that once our airport/airways proposal are passed, the battle is over. We shall still be far from the land of milk and honey. There are other obstacles to be overcome and they are of no small proportions.

The first is aircraft noise. I am aware of the hard work the manufacturers are putting in to resolve this problem. But everybody must join in—the local authorities and their planning commissions, the airport owner and the airline operators. Aircraft noise is taking on anew significance. Objections to airplane noises are preventing and delaying airport improvement and expansion. Noise is hindering the growth of aviation. This matter demands the attention of all.

Another potential obstacle to the growth of aviation may not be so apparent. A friend of mine who is quite knowledgeable in aviation made a remark the other day which intrigued me. "The biggest thing in aviation these days," he said, "is the Cleveland rapid transit." Exaggerated, it might be; but pertinent—it certainly is.

Two recent simultaneous transportation trends account for the substance behind his comment. Air carriers have become vehicles of mass transportation.

At the same time, downtown surface congestion has now mushroomed out till it reaches and includes the airport.

These trends may seem obvious and understandable to us here today. But the rapidity of their development is phenomenal. Just five years ago, one of our major cities was planning a new transit system with a spur going past its airport. The plan included *no* airport station. The reasoning was—just five years ago—that airline travelers were not the type to ride subways.

Today, the Air Transport Association advised the air passenger to travel in non-peak hours—and to go to the airport in public transit. The fact is, gentlemen, there is not much public transit available today. And unless present tendencies are reversed, there will be even less tomorrow.

We shall soon be proposing a new bill to establish greater financing for our mass transit systems throughout the nation. I hope the airline industry interests itself in this legislation. This suggestion may sound far fetched to members of the Aero Club now. But five years from now there will be a very definite connection between the growth and profitability of public transit and the growth and profitability of the air carrier industry. Aviation is no longer independent. It too now depends on the rest of the system.

But aviation will resolve these challenges. Any industry that has made as much progress as aviation has cannot be stopped. It can only move ahead. And that's what I want to see. My job is to promote and encourage aviation. But I have more than a professional interest. I am, by trade, a builder. I still like to build—to see things get bigger and better—to see improvement. And that's my approach to our government-industry partnership in aviation. If there's any way we in government can strengthen that partnership, I want to know. I am at your service.

THE NATIONAL COMMITMENTS RESOLUTION

Mr. FULBRIGHT. Mr. President, last Monday during debate upon Senate Resolution 85, the senior Senator from Wisconsin (Mr. PROXMIRE) made a statement with respect to an agreement entered into in 1967 between the Governments of the United States and Canada, which agreement restricts overland oil imports from Canada. According to the Senator from Wisconsin, this agreement is "in apparent violation of both the law and the publicly stated policy of the President." The Senator also stated that the agreement was made in secret and he challenges both the legality and the wisdom of this agreement.

Mr. President, I am not prepared to say at the present time whether the agreement should or should not have been made or whether it was wise or necessary. I call attention to Senator PROXMIRE's statement because it illustrates an instance of action by the executive branch of the U.S. Government not only without consulting or advising the legislative branch of the Government but apparently in complete secrecy. Thus, a solemn commitment was made under circumstances which are highly questionable. I congratulate Senator PROXMIRE for bringing this agreement to the attention of the Senate, and I share his concern about the circumstances under which the agreement was made.

NEW WOODMEN TOWER IS EXAMPLE OF HOW MAN'S SPIRIT CAN SOAR WHEN HIS PURPOSE IS NOBLE

Mr. HRUSKA. Mr. President, on June 6 it was my privilege to deliver some brief remarks at the dedication of the stunning new Woodmen Tower, a 30-story office building in downtown Omaha, which is the home office of the Woodmen of the World Life Insurance Society.

As a former president of the Nebraska Fraternal Congress and as chairman of the board of the Western Bohemian Fraternal Association, I believe I have a better-than-average appreciation of the splendid work that is done by the fraternal benefit societies.

Mr. President, nearly 10 million Americans, belonging to more than 60,000 lodges, have a total of approximately $20 billion of fraternal insurance.

One of the greatest of these societies is the Woodmen of the World, and it was for me a special privilege to be allowed to play a small part in the ceremonies, not only to honor Woodcraft, but to salute its able president Mr. Nick T. Newberry.

I ask unanimous consent, Mr. President, to have printed in the RECORD Mr. Newberry's and my remarks at the dedication ceremony.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

REMARKS OF NICK T. NEWBERRY, PRESIDENT, WOODMEN OF THE WORLD LIFE INSURANCE SOCIETY

Welcome! And thank you for being with us today. Perhaps little was the significance of June 6, 1890 to Omaha, the date of the organization in the old Paxton Hotel of the Woodmen of the World Life Insurance Society. Great is the significance of June 6, 1969, for it is today that we gather to formally dedicate the Woodmen Tower.

From ground breaking on May 23, 1966 to this date of dedication is a period of over three years and so many of us have enthusiastically awaited this moment. We thank you for joining us for the occasion. I am proud to make you aware of the fact that over 350 of our Woodmen employees and many additional retired employees are at this moment viewing this program over closed-circuit television in our 21st floor conference center, for unfortunately, space did not permit this loyal and dedicated group to join us here in the lobby area.

Seated in a special section, just east of me, is a group of people whom I would like to present to you, other than those in the group who will later appear on the program.

May I suggest that should you feel disposed to applaud, that you refrain from doing so until the group has been introduced and I would ask that they remain standing as each individual name is called:

J. R. Sims, R. N. Dossmann, Nick T. Newberry, Waylon Rayburn, C. W. Goodwin, T. E. Newton, Richard W. Ervin, Robert Kirk, John C. Robison, William E. Gallaher, Jr., L. A. Richard, MacDonald Gallion, Allen T. Brown, Jr., J. E. Williams, John N. Cochran.

Dan H. Varnum, T. G. Crewe, George E. Owen, Robert W. Deems, A. C. Ogden, James S. Maine, A. F. Wahl, Lloyd L. Hendrickson, Mrs. Ethel M. Donaldson, Mrs. Louise Patrick Stepanek, H. Clay Cox, Jr., Alfred G. Thomsen, Peter Kiewit, Leo A. Daly, and Harold Schiff.

Some years ago, I was impressed when the principal speaker at an important occasion was introduced by the governor of a state in the following manner: "If a man needs eulogizing, he doesn't deserve it; if man deserves eulogizing, he doesn't need it." Our dedicatory speaker of today has a glowing and distinguished record of service to his state and nation that speaks loud and clear for itself—though deserving of a eulogy, he is not in need of it. It is with a sense of pride and gratitude that I present for the dedicatory address a member of the Woodmen of the World, our senior senator from Nebraska, the Honorable Roman L. Hruska.

REMARKS OF SENATOR ROMAN L. HRUSKA

This is indeed an auspicious day, a historical day. We can conceive of it as being really two days in one. It's the beginning of Woodmen's 80th year—79 years old today, so that tomorrow morning, we're going to start the 80th year. And then, it's the dedication day for the new home; of a structure which has a beauty that is breathtaking! It's spectacular! And it is inspirational, whether seen from the sidewalk, from the air, or from a distance.

It is an example—in steel and stone and marble and glass—of the way in which Man's spirit can soar, when his purpose is noble.

The dictionary tells us—and it's my favorite definition of the word—that to dedicate means set apart for sacred purposes. And that is precisely what we are doing today. It is a highly relevant definition today, because this building is dedicated to people. First of all, to the 600,000 members of Woodmen today; to the millions who have been members since its founding on June 6, 1890, here in Omaha; and, to the "Objectives of Woodcraft." For those of you in the main part of the audience, on the east wall of this lobby and behind me, are imprinted the "Objectives of Woodcraft," and they will serve as my text today. The first Objective states that, "Woodcraft is to ennoble its membership," an Objective which is reached countless of times each day, because the guiding spirit of Woodmen is Fraternalism—the brotherhood of man.

In a time when the President of the United States recently declared, "We cannot learn from one another until we stop shouting at one another," each of us then can well consider that portion of the "Objectives of Woodcraft" which seeks "to encourage broad, charitable views; to make us more intelligent citizens, truer friends, gentler sons and daughters, more thoughtful brothers and sis-

ters, more considerate husbands and wives and more reasonable parents."

I suggest, ladies and gentlemen, that such efforts are sorely needed these days.

But, lofty ideals and grand statements of purpose are empty and meaningless, unless there is a sound, concrete plan for matching deed to worth and action to purpose.

I want to applaud again, as I do every time it is suitable to do so, the leadership that has been furnished by the Woodmen of the World through the decades. Certainly, in your President, Nick Newberry, we have the son of a revered and well-remembered father—one who was president of the Woodmen of the World and one of the leading civic figures of Omaha and of this state; and the son also of a lovely and talented woman, whom all of us who were privileged to know her admired greatly. So that in Nick, we have the kind of able, honest and compassionate leader fraternalism must have, symbolizing the other officers and the directors of this great fraternal society. His action program of "Fraternity at Work" is the essence of brotherhood in action through a wide range of civic, patriotic and fraternal projects.

I had to verify my memory a few minutes ago. I asked Nick if it wasn't true that some 20 years ago, his father had conceived and had put into use throughout all the states in which the Woodmen are functioning, the slogan, "Fraternity in Action." And he said, "Yes, Roman, your recollection is correct."

Anyone who sat in the chill of the Capitol Plaza in Washington on January 20, of this year, or who watched those solemn proceedings on television across the nation, must be reminded today of Richard Nixon's Inaugural call for "the building of a great cathedral of spirit, each of us raising it one stone at a time as he reaches out to his neighbor helping and caring and doing."

And it is in this spirit that the beautiful structure has come into being, because the millions of members of the Society have helped, and they have cared, and they have done something for their brothers and for their sisters.

To construct a massive building is no great triumph; it's been done for thousands of years, hasn't it? The Pyramids testify to that. But those of us who view those Pyramids, either in the remnants which they now represent or in the pictures that we see of them, cannot forget, that those Pyramids were built upon misery and suffering, exacted from the blood and muscle of the slaves of those times.

Life then was worth very little, but the Pharaohs did build their Pyramids. And throughout history, tyrants have erected monuments to their own vanity in similar fashion.

And let's have just a sober moment or two to recall that in one part of the world, the enslaved part of the world, that rule still exists. The practice still goes on.

But, to erect a building like this, dedicated not to one man or to one caste, but to millions who have been proud to call themselves Woodmen, and to the ideals of Woodcraft, and to the spirit and inspiration of Fraternalism—that is really Brotherhood in Action. It is "Fraternity at Work." And what more auspicious start could there be for those who will work in this building and for those who have come to bid them well than to resolve that, beginning today—at this very moment—whether we are Woodmen or not, whether we are red or yellow or black or white, whether we are Catholic, Protestant, or Jew, that we shall embrace the grand doctrine of the Brotherhood of Man and practice it for as long as we shall live, and for as long as this building shall stand.

And it should be in this spirit that we dedicate this building. It is these sacred purposes that we call upon it to achieve; that we set it aside for those humane and noble purposes.

TIME CAPSULE CONTENTS

Mr. NEWBERRY. The moment is now at hand for the placing of the capsule and having never before participated in such a project, I am somewhat lost to know which way to turn. I would imagine you would be interested in some of the material placed in the capsule. A few of the items are as follows:

1. A United States Flag.
2. A history of Omaha written by William Kratville. It tells about many Omaha firsts, such as the first home, the first business, the first church, the first library, the first hospital, et cetera.
3. A proof set of 1969 United States coins.
4. An "American Patriot's Handbook," a booklet given by the Woodmen of the World to newly naturalized citizens. It contains the Constitution of the United States, the Bill of Rights, the Declaration of Independence, the history of our flag and photographs and biographical sketches of each of our nation's presidents.
5. A history of the Woodmen of the World.
6. A scroll, signed by all Woodmen Home Office employees and officers, extending greetings across time to the fraternalists of the future.
7. Progress reports on the construction of the Woodmen Tower.
8. A book on the life of Joseph Cullen Root who, with his associates, founded the Woodmen of the World on June 6, 1890.
9. Copies of the June 1, 1969, and June 5, 1969, editions of the Omaha World-Herald newspaper.
10. A letter from Mayor Leahy to the Omaha citizens of the future.
11. A tape recording of ceremonies when the ground was broken for the Woodmen Tower, and copies of speeches made at this affair.
12. Photographs of former Woodmen of the World home office buildings.
13. Newspaper clippings dealing with the Woodmen Tower.
14. Woodmen of the World membership pins.
15. Copies of the Society's official publications, including the Woodmen of the World Magazine, a national publication going to the organization's more than 600,000 members each month; Shavings, an employee publication; and Chips, a magazine published for sales representatives.
16. Copies of the Society's oldest and newest Constitutions.
17. Photograph of the current members of the Society's Board of Directors.
18. Copies of Woodmen of the World Rituals.

On the wall immediately above the location on the capsule will be a bronze plaque inscribed as follows:

Woodmen of the World Life Insurance Society Time Capsule, buried June 6, 1969, "To preserve for the future some of the wealth of the past." Open June 6, 2040.

June 6, 2040, is the 150th anniversary of the founding of the Woodmen of the World.

AUTOMOBILE INSURANCE

Mr. HART. Mr. President, of all the auto insurance complaints which arrive in the offices of Congress from consumers, I am sure the majority deal with the problems in getting—and keeping—a policy, at a reasonable rate.

The Senate Antitrust and Monopoly Subcommittee, as part of its extensive investigation of the problems of this industry, has delved deeply into the industry thinking causing these problems.

Much of what we learned has been summarized in an excellent series of two articles by John Hanrahan in the Washington Post. Because I think these articles would be most helpful to my colleagues as background material, I ask unanimous consent that they be printed in the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the Washington (D.C.) Post, June 18, 1969]

INSURANCE DILEMMA: DO FIRMS HAVE RIGHT TO SAY NO?

(By John Hanrahan)

"When you buy a car, the salesman will sell you one if you have the money. Buying insurance for the car is more like joining a country club."

This view, expressed by Pennsylvania Insurance Commissioner David O. Maxwell, has become an increasingly visible fact of life—as well as an inconvenience and, in many cases, a real hardship to thousands of drivers across the Nation.

In an age in which increasingly numbers of people are dependent on cars for a livelihood, millions of Americans regard auto insurance as a necessity, and a right. They must drive, and to drive they must have insurance in some form.

But the insurance firms don't see it that way. In a nutshell, the auto insurance industry feels its obligation is to its policyholders—to keep rates down—and to its stockholders—to keep profits up. To accomplish both ends, insurers are selective in assuming new risks.

Numerous newspaper stories, along with complaints received by the antitrust and monopoly subcommittee of the Senate Judiciary Committee, which is conducting a continuing inquiry into auto insurance, vividly illustrate the conflict. For example:

A Charleston, S.C., man, just returned from a Vietnam hitch with the Navy, lost his policy because "investigation revealed the allegation that your wife has a bad moral reputation and is an excessive user of intoxicants." South Carolina's libel and slander laws prohibit suing insurance companies for the reasons given for cancellation.

Actress Dorothy Malone, who was paying $312 for her auto policy with Farmers Insurance Group, was notified of cancellation even though she had no accidents or traffic violations. "Occupational hazard" was listed as the reason. She subsequently got a policy with Lloyds of London for $2100 annually.

A Kensington, Md. man had his auto insurance policy cancelled by National Emblem Insurance Co., a subsidiary of Allstate, because he allegedly had a "filthy" house.

A Stafford County, Va., woman had her policy cancelled by the Royal Indemnity Co. because of "unfavorable information we have received concerning personal habits within your household." Senate subcommittee probing disclosed that the cancellation was the result of an Atlanta-based credit bureau report supplied with false information by some one who barely knew her husband, that he is a drunk.

When a motorist is turned away by an auto insurer he can usually go elsewhere—but at a more expensive, "high risk" price, regardless of his driving record.

In virtually every complaint, however, the person dropped by one company had great trouble obtaining insurance with another even at higher rates because the cancellation was regarded as a black mark on his record.

Says Paul T. McHenry, a Baltimore attorney and chief lobbyist for Maryland's independent insurance agents:

"The auto market is sick, period. Agents are no longer selling new automobile business. People are worried about cancellations.

"If there are 15 companies looking for your business, then no one worries about a cancellation. In the present situation the companies don't want new business.

"I can't walk down the street these days without someone coming up to me and complaining that he's had his policy cancelled and can't understand why."

According to Dean E. Sharp, counsel for the Senate subcommittee conducting the hearings, "Insurance is nothing more than spreading the risk. The more people you have in the pot, the more you spread the risk. People like myself believe that the companies are only trying to maximize their profits by writing only certain people. It's time we turned this thing around. I definitely feel that everyone who is licensed to drive by the state should be able to get auto insurance."

Sharp and other critics of the industry say that the insurers are not primarily interested in auto insurance, but rather in having a steady flow of cash that can be invested. This, they say, is the main reason for the scrutiny given anyone who appears likely to have an accident.

The industry counters that it must be selective because of the soaring increase in the costs of paying off claims in recent years. This they attribute to increases in the cost of repairing cars, in physician's fees and hospital rates, and in the amounts of jury awards and claims settlements in liability suits.

The companies also argue they must be selective in many states because of the reluctance of various state insurance regulators to grant rate increases.

The problem for many people, then, is not only having insurance cancelled—being thrown out of the "club"—but getting into the club in the first place, even if they have the money to pay for it and a "clean" driving record.

AGENTS WARNED

For many of these people, the problem is a "high risk" job. For others, it is their neighborhood. Still others are refused insurance on the basis of such vague shortcomings as "personality defects," "instability" and "lack of initiative."

Each company uses underwriting manuals that warn agents against selling auto insurance to a whole list of persons with certain jobs. The Continental Insurance Co.'s manual, which is similar to that used by other firms in the industry, tells agents to be wary of:

Owners, operators and employes of taverns, nightclubs and similar establishments; race track personnel; professional athletes, musicians and entertainers; circus and carnival personnel; sports promoters and their employes, and pool hall owners, operators and employes.

Regarded by Continental as "somewhat less undesirable" are waiters, waitresses, janitors, cooks, porters, bus-boys, kitchen helpers, taxi drivers, parking lot and garage attendants, bellhops, painters, merchant seamen, longshoremen, stevedores, dock workers, oil field employes, paperhangers, soda clerks, delivery boys, beauticians, unmarried manicurists, liquor store owners and employes and unemployed persons.

People in this category are not totally barred from obtaining insurance with the company—if they meet all other criteria. The "somewhat less undesirable" tag is used as a guide to warn agents that the person is not considered to be a good risk.

In addition to citing the probability of accidents relating to "exposure"—meaning mileage, number of hours on the road, driving in peak-hour traffic, etc.—the Continental manual warns:

"Persons who live in blighted, crowded slum areas present an above average exposure for comprehensive physical damage insurance because of crime and vandalism. Such areas are overexposed for collision and bodily injury. The streets are narrow and there is no place to park, except at the curb. Children play in the streets and dart in and out from between cars."

BACHELORS PAY MORE

The manual also states, "we think that this is as it should be," that unmarried males pay more for car insurance. In justifying higher rates for bachelors, the manual says:

"Any variation from the normal, conventional mode of living usually has an adverse influence on a risk. Marriage is the normal state for mature adults."

But even if you should pass the occupational, residential and marital status tests, the manual has more in store for you.

Under the category of temperament, the manual warns agents about "the exhibitionist who decorates his car with fox tails, fender fins, mud flaps, boxing gloves, baby shoes, spotlight and other ornaments . . ."

HIGH LIVERS SUSPECT

"Another area for concern," the manual states, "is the person who drives a Cadillac on a Chevrolet income . . ."

"Still in the temperamental category and just as undesirable even though their motives are good and they are usually wealthy, are the personalities in the entertainment field who feel that they must entertain themselves and their public even if they have to wreck a sports car to do it."

When he testified before the Senate subcommittee last year, Pennsylvania Commissioner Maxwell cited a "prohibited list" used to "weed out undesirables" by "one of the country's leading writers of automobile insurance."

"Hazardous" occupations, according to this guide, included actors, clergymen, radio and television announcers, athletes, caterers, chauffeurs, commissioner military officers and enlisted men, farmhands, manicurists, masseurs, newspapermen, salesmen, painters, stevedores, textile workers, waiters and weavers.

HAZARDS LISTED

"Even a cursory review of the list made plain the reluctance to insure most occupations in which Negroes predominate," Maxwell said.

In addition, he noted, the guide enumerated 25 specific "hazards" militating against issuance of a policy.

These included truck drivers ("poor public image") clergymen ("too preoccupied"), persons who were divorced or separated and any driver not renewed or canceled by another company.

Other revealing testimony on auto insurers' standards came from Fred Jasper, president of Jasper's Reports, of Chicago, a commercial reporting agency that has been handling inspections for the insurance industry in the Metropolitan Chicago area since 1949.

Purchasers of Jasper's book—"A Confidential Report on Environmental Conditions in the Metropolitan Chicago Area"—were mainly insurance companies, including the Nation's two largest, Allstate and State Farm.

WRITTEN YEARS AGO

Jasper and Sen. Philip A. Hart (D. Mich.), chairman of the subcommittee, got involved in a long dialogue when Hart asked why the book referred "to areas being predominantly Polish, predominantly Jewish, predominantly hillbilly and predominantly Negro."

In response, Jasper pleaded that the book "was written several years ago" and, at that time, "companies were attaching more significance to the ethnic backgrounds of individuals from an underwriting standpoint."

For many years, Jasper said, companies "had associated upkeep of neighborhood with environmental and ethnic background information." This, he claimed, was no longer the case and most companies had asked him to eliminate such references in his reports.

A sampling of "ethnic information" in the report:

"These Mexicans are, for the most part, well behaved but a few do drink to excess and many of them are illiterate and cannot speak English. . . . (They) should be inspected carefully for auto insurance."

Hart found much else to quarrel with in Jasper's book. For example, the Senator wanted to know, what did the housekeeping of the individual—as mentioned in one of the reports—have to do with driving ability?

Jasper acknowledged that it had nothing to do with driving.

"But," he added, "I think it perhaps to some degree portrays the general over-all reputation and I think perhaps a case might be made for the fact that an individual who lives in what you might classify as a pigpen might conceivably take the same care of their automobile from a mechanical standpoint."

Hart wondered about a report on a woman who was married and divorced before she was 20 and whose family was described as "standoffish" in a report. What, Hart asked, did that have to do with driving ability?

Jasper answered that the marriage and divorce before 20 indicated "nothing other than perhaps to portray instability."

"Or bad judgment with respect to mates but not necessarily to traffic," retorted Hart.

As to the "standoffish" claims, Jasper said that he felt "perhaps the inspector may have been using that in defense of being unable to develop as much personal information as he might have otherwise."

DISDAINFUL OF MORES

Hart pressed on. What, he asked, was the relevance to a person's driving record of a report that "indicates the subject was living with a woman suspected not to be his wife?"

"I do not know that it would affect the driving," Jasper answered, "but it might portray a situation where they were completely disdainful of the accepted mores, the accepted patterns of behavior, a little disregard for anybody else."

Jasper, along with other auto insurance industry witnesses, was merely restating what has become the industry's basis for much of the material in its underwriting manuals. Namely, "as you live, so shall you drive."

Contained in Jasper's book was a series of maps of areas of Chicago with portions colored red, gray and white. These areas, Jasper said, are those producing "a higher incidence of vandalism and theft." The red area of alleged higher crime included the center city.

The "red" area approach is not unique to Chicago. Committee testimony has shown that similar practices are in effect in other major cities.

BLACKLISTING CHARGED

In Baltimore earlier this year, Allstate Insurance Co. was charged by the Maryland State Insurance Department with "blacklisting" for refusing to write comprehensive and collision insurance policies in the inner city.

Allstate defended its practices. It acknowledged having a "special marketing territory" within which it required persons to have adequately safeguarded garaging before it would insure them. This, they said, was proper because of the excessively high crime rate in the area.

In addition, Allstate said it had not violated State law that prohibits discrimination based "solely" on geography. The crime rate and the lack of garages—and not geography were the major factors, it said.

During those hearings, which covered 13 sessions, Allstate spokesmen also acknowledged that it has "special marketing territories" in effect in other cities in the East, including Washington's inner city.

Also in the District of Columbia, Government Employees Insurance Corp. (GEICO), refuses to write comprehensive and collision policies in virtually the entire city unless the person has a garage. Only two postal zones in the Upper Northwest area of the city are exempt from this requirement.

WORKS HARDSHIP

In the Baltimore case, State and city legislators testified that Allstate's practice worked

a hardship on people in the inner city. The area in question was estimated to be 90 per cent Negro. It includes the city's highest poverty areas, as well as the fashionable restored Bolton Hill section.

A ruling on the case from Maryland Insurance Commissioner Newton I. Steers, Jr. is expected this month. Steers says he knows of no examples of "special marketing territories" elsewhere in the State.

The Baltimore case is typical of the problem in other cities.

Last summer, David B. Washington, executive director of the Pittsburgh Commission on Human Relations, told the Senate subcommittee that "the lack of availability of automobile insurance to black residents of our metropolitan areas is a crisis which is national in scope."

Black citizens, Washington said, find it difficult to obtain auto insurance. When they do, he added, they must pay higher premiums than residents of white areas since companies attach importance to the type of neighborhood and the crime rate.

In addition, Washington said, Negro residents find "that the few companies willing to write insurance are companies with questionable financial structures."

EFFECT IS THE SAME

Jerome Kay, commissioner of the New York City Commission on Human Rights, offered similar testimony to the Senate subcommittee. Kay said that whether the auto insurers deliberately set out to discriminate against Negroes or Puerto Ricans, or whether they say they refuse to write ghetto policies because of the bad neighborhood is really irrelevant—since the net effect is the same.

"It is possible that removing this instance of discrimination would lift one more burden from the shoulders of minority and low-income group members," Kay said.

While auto insurance companies have repeatedly stated that they no longer discriminate on the basis of race, Kay stressed the point that the ghetto citizen feels that his inability to get car insurance is just another example of white discrimination.

In emphasizing that the ghetto citizen's need for an auto is as great or perhaps even greater than that of other citizens Kay stated:

"The ghetto resident, suffering from discrimination in employment, housing, education and being subjected to a whole series of anti-black and anti-Puerto Rican attitudes, finds his car an important source of status, and sometimes his only source of recreation and in many cases the only escape from a dreary apartment and neighborhood."

To insurance lobbyist McHenry, the problem of obtaining and keeping auto insurance in Maryland, and in the Nation as a whole, "cuts across all lines" and is not confined to certain areas or people with certain jobs.

"There's just a bad market everywhere, period," he said.

CAR INSURANCE SYSTEM HARDEST ON YOUNG, OLD, MILITARY

(By John Hanrahan)

The problem of getting and keeping auto insurance has proved to be especially severe for three distinct groups—the young, the old and members of the military.

The continuing probe of the auto insurance industry by the antitrust and monopoly subcommittee of the Senate Judiciary Committee has turned up scores of examples of the difficulties encountered by members of these groups.

B. J. Higgins, who heads the Higgins insurance Agency of Long Beach, Calif., provided the subcommittee with some enlightening testimony on the insurance problems of the old.

Higgins, whose agency handles Farmers Insurance Group, gave numerous examples, including that of a 78-year-old man who had received a bill on his insurance premium that was more than double what it was six months earlier.

The man, Higgins said, "was in excellent physical condition, very alert for his age, and had never had any losses with the company before, and he was with the company for approximately 30 years."

Unfortunately for the man, Higgins said, the company just four months earlier put into effect a "maximum senior citizen charge" that added about 30 per cent to his premium charge. His premium cost was increased an additional 42 per cent because the man reported a damage claim of $112 for a minor accident.

"Now, the point here is they (the company) have got this man tied down," Higgins said. "He cannot go anywhere else for insurance. He is 78 years old. Who is going to insure him? He is indeed fortunate to have insurance at his age. He has got to stay with Farmers."

Jack Veatch, immediate past president of the District of Columbia Insurance Agents, says that the situation has improved and that many companies have done away with the higher rates for older people. These companies, Veatch said, came to the realization that, as a whole, "older people were safer drivers."

BELOW AVERAGE

Donald P. Kent, former special assistant for aging, Office of the Secretary, U.S. Department of Health, Education and Welfare, pointed out to the Senate subcommittee that "the accident index for drivers 60 to 69 years of age is well below the national safety average. The accident index for those above 70 equals the national average."

The problem of young drivers obtaining insurance has been one of the most publicized. Companies maintain that young drivers—especially young, single males under 25—have the highest accident rate.

Some companies claim to be making strides in providing lower cost insurance for the young, responsible drivers. Some companies, for example, offer "good student" discounts. Others give discounts to students who have had driver education courses.

Nonetheless, young people—good and bad drivers alike—or their parents find it extremely difficult to obtain auto insurance or to get it at what they consider to be a fair rate.

Higgins supplied the subcommittee with a report of a sudden cancellation of an entire family that had a 17-year-old son who had just come of driving age and obtained his license and a 1952 car to drive.

The boy, Higgins said, had good grades, was "a studious type" and "did not run around throwing beer cans out of a car."

Higgins, a friend of the family's, said he checked around and finally learned that the cancellation was based on a retail credit report. The report quoted two men who lived across the street as saying that the youth "played ball in the street . . . raced his car in taking off . . . burned rubber, and drove in a reckless manner in a neighborhood of a 15-mile zone."

Ironically, Higgins said, the men making the complaint also were illegally "making a homebrew and wine in the backyard."

OBSTACLES TO MILITARY

The military—especially the young, noncareer enlisted man—also encounters severe obstacles to getting car insurance. George H. Kline, vice president, secretary and general counsel for the Allstate Insurance Co., summed up the reason for the industry attitude:

"The obvious increased hazard presented by the single military risk is the very limited time provided him for the use of his car.

"All of us remember the 800-mile round trip on a 36-hour pass just to spend a few hours at home or some other source of relief from the drabness of a military post; the frenzied dash to the destination; and then the long, exhausting drive through the night with drooping eyelids and dulled reflexes, to make Monday morning reveille.

"Too fast, too far, too little sleep—these are the hazards that concern underwriters."

Adding it all up, the auto insurers can use a combination of any of the thousands of underwriting standards to refuse to write a policy for a person who would be regarded as a good driver, the critics say.

Pennsylvania Insurance Commissioner David O. Maxwell estimated that in his state there is "a theoretical possibilty of 104,000 different risks." This is based on 40 rating territories multiplied by the 2600 categories developed by the Insurance Rating Board.

Insurance companies defend their underwriting practices either on actual loss experiences or on what they consider to be informed judgments as to the likelihood of accidents occurring to people living in certain neighborhoods or having certain types of occupations or having certain personality traits.

Critics of the system complain that the companies are basing their classifications mainly on subjective judgments, rather than actual statistics showing that this or that category of persons has more accidents. The problem goes even deeper, suggests Sen. Philip A. Hart (D-Mich.), who heads the Senate subcommittee investigating the auto insurance industry.

"In a country which has placed great faith in the principle that each man should be judged according to his abilities, the insurance notion that it is the classification—not the individual driver—that counts runs contrary to our basic instincts," Hart said last fall in a speech to the convention of the National Association of Mutual Insurance Agents.

"A father may train his son well, imbue him with a sense of responsibility, the boy may be a great careful driver. It makes no difference. He pays the price of his classification. In some cases, this may be actuarily sound. In many cases it may not.

"But the basic question is, does any system based on such classifications—whether arbitrary or not—make good sense in the world in which we live? . . . It seems to me—at least at this time—that the entire underwriting system with its subjective judgments, classifications and surcharges at renewal time—is in need of rather basic overhaul."

What makes the current auto insurance situation unique is that virtually every one—insurers, drivers, state insurance departments, legislators, Congressional investigators—agree that there is a serious problem for people trying to get and keep auto policies.

CRITICS BLAME GREED

The cause of the problem, the critics say, is the auto insurers' greed for even bigger profits. This causes the companies to cancel some policies suddenly and to refuse to take on any new business with any element of risk involved, they claim.

On the other side, the industry and the agents maintain that the current problem is caused by the failure of State Insurance Departments to grant rate increases that are sorely needed to cover losses paid out.

"Open competition" has become the battle cry of the insurance industry. Under such a system—not in existence in three states—the insurance commissioner is stripped of his power to give prior approval of rate increases.

Thus, companies can put the new rates into effect and then notify the commissioner. If the commissioner feels the increase is too much, or unjustified altogether, he can order it rescinded.

ANSWER OF FIRMS

The aim of all of this, the industry says, is to let the "free market" set the rates. The customer will benefit because he will have a number of companies competing for his business, it contends.

In a memorandum prepared by the Insurance Information Institute for the Maryland

Association of Insurance agents for use in the 1969 session of the Maryland General Assembly, the industry's position on "open competition legislation" was made clear.

What is the problem? the memo asks.

"Insurance companies have been paying out more for claims and operating expenses than they have been collecting in premiums."

What is the answer to the dilemma? it asks.

"After long and careful consideration, 'open competition' has been deemed by many observers to be in the best interest of Maryland's public, industry and economy . . . open competition among insurance companies would hold the cost of insurance at a realistic level, just as open competition in America's free enterprise system has protected the public in other fields of business."

The memo also cites the fact that since 1962, the number of persons in Maryland's assigned-risk plan (known as the Maryland Automobile Insurance Plan) has increased from approximately 20,300 to 85,500. While this figure was climbing by 300 per cent, the number of vehicles registered in the State increased by just 30 per cent.

INDUSTRY REFUTED

The critics counter that the industry's position is indefensible in light of statistics gathered by the subcommittee showing that since 1931 the auto insurers of the Nation (as of 1968) had collected $120 billion in premiums for three primary forms of coverage and have paid out just $60.8 billion.

Of the remaining $59.2 billion, $21.6 billion has been accumulated in the last five years alone. This was not all clear profit, since it does not take into consideration commissions, company operating expenses, company claims investigation and legal expenses.

In 1966, according to a Senate subcommittee chart, 20.6 cents of every auto bodily injury liability dollar went to commissions and other production expenses.

One way to cut costs of policies, the critics maintain, is to permit group auto liability policies similar to group health and accident policies. Such policies are virtually nonexistent. In fact, group auto insurance policies are prohibited in 34 states, due largely to industry efforts.

Dean E. Sharp, counsel for the Senate subcommittee, is among the insurance company critics who can't see how "open competition" will make any difference at all in solving the problem.

He notes that California, which has an "open competition" law that the industry cites as a model, has 250,000 drivers in its assigned-risk plan with the number increasing yearly. New York and Georgia also have "open competition" while the District of Columbia has a modified "open" system for physical damage policies.

"Open competition" was thoroughly debated by a Maryland Senate Committee earlier this year. The legislation died in the Economic Affairs Committee but is expected to be revived at the 1970 session.

During the Maryland hearings, Attorney General Francis B. Burch contended that "open competition" would drive insurance rates even higher than they now are. The system also would result in extensive price-fixing, he charged, with certain bigger companies raising their rates and the others following suit.

Burch, a former State insurance commissioner, also said if the industry were sincere about "open competition," it would also ask that it be brought under the Federal antitrust laws.

The industry rejected all of Burch's contentions. Paul T. McHenry, lobbyist for the State's independent insurance agents, acknowledged that rates might go up initially after "open competition" came in, but that once the "free market" came into play, rates would level off. A company charging higher rates would be forced to come down or lose much of its business, he added.

OPEN COMPETITION

The critics also say that open competition is still only "open" from the companies', not the customer's point of view. In other words, even with open competition, there is no guarantee that a driver will be insured by the company of his choice since all of the underwriting standards will still hold. It's still a case of being accepted by the company.

The critics also come down hard on the auto insurance companies' claims that they are losing money. Maryland's three most recent insurance commissioners—Burch, Norman Polovoy and Newton I. Steers, Jr.—have all criticized companies at one time or another for claiming to experience losses while at the same time their investment income was soaring.

Auto insurers have consistently argued that investment income must be kept separate from the figures on premiums written and losses incurred.

Burch, Polovoy and Steers all incurred the companies' wrath by devising formulas in which some of the investment income was included as part of the rate-making process.

The industry's own study, prepared for the American Insurance Association by Arthur D. Little, Inc., the research organization, claimed that 99 out of 100 major corporations were making higher profits than property and liability insurance companies.

SAME BASIC DATA

Taking the same basic data, two University of Southern California analysts—Richard Norgaard and George Schick—gave the subcommittee the "unqualified opinion" that insurance firms "have reaped a high rate of profit."

Using a highly complicated formula based on the "reasonable" yardstick of "return on investment," the two analysts said the insurance firms were doing better than 90 of the 100 major corporations.

"There is indeed a great deal of discussion on whether or not the auto insurance business is profitable," notes Sen. Hart.

"Sometimes, the argument turns more on accounting methods than the actual state of health of the companies. One set of figures at our hearings indicated this was a highly profitable business, another that it was dismal. The real truth is probably somewhere between. . . .

"What bothers me most is a plea of poverty based on underwriting results only. For instance, the underwriting and investment income results of the 'Stock Property and Casualty Industry' from 1958 to 1967 show a statutory underwriting loss of over $731 million, which when adjusted becomes a $413 million profit.

"During the same period, their net investment income was over $7 billion. When someone turns one pocket inside out to show you how empty it is, but has over $7 billion in the other, it is difficult to take their claim of poverty too seriously."

An equally serious auto insurance problem, not dealt with at length in this article, is the long delay experienced in having claims processed. In many cases, personal injury settlements drag on for years and years.

Efforts to push so-called "nonfault" plans through state legislatures have met with stiff resistance to date. Less than one year ago, Puerto Rico became the first U.S. jurisdiction to adopt the "Aponte-Denenberg" plan which would insure everyone directly against accident losses—rather than require proving in court who is at fault in an accident.

EXEMPT FROM ANTITRUST

The insurance industry was exempted from the Federal antitrust laws by the McCarran Act of 1945. The purpose of the Senate subcommittee hearings has been to determine how effective state regulation has been in doing the job of protecting the public.

The hearings are expected to wind up in September. Also in progress and at the halfway point is a two-year study of the auto insurance industry.

In addition, various state insurance departments and legislatures are taking a new look at their state regulations. In Maryland, the Allstate "blacklisting" case has prompted Del. Walter S. Orlinsky (D-Baltimore) to propose for introduction at the 1970 session legislation that would create a state insurance system.

Whether by government action or by reform of the industry from within, the goal of those criticizing the present system is clear. As expressed by Sen. Hart, it is a day "when auto insurance is available to all motorists on reasonable and more equal terms, and accident victims can be promptly and fairly reimbursed."

WATER SERVICE TO EXCESS LANDS

Mr. MURPHY. Mr. President, recently the Western Water News published an article by Mr. Earl Coke, assistant to Gov. Ronald Reagan for cabinet affairs and secretary of California's Agriculture and Services Agency, concerning the legislation which has been introduced to amend and supplement the Federal reclamation laws relating to the furnishing of water service to excess lands. Secretary Coke's remarks on this subject confirm the observations I made when I introduced S. 1631 to modernize the archaic 610-acre limitation provision of our reclamation regulations and I ask unanimous consent that the secretary's comments be included in the RECORD at the conclusion of my statement.

Secretary Coke, as is well known, is one of the outstanding agricultural authorities in the Nation. Prior to accepting his present positions, his career included service as director of the agricultural extension service in California and assistant Secretary of Agriculture during the Eisenhower administration.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

BACK TO 1902?

(By Earl Coke)

If California wants to keep agricultural production at its present dollar value of $4 billion per year, immediate passage of new legislation is a necessity.

Congress is presently considering a bill introduced by Senator George Murphy of California which could eliminate yesteryear's unrealistic land and water restrictions still being applied to each agricultural landowner and operator in the State who uses water from a Federal project.

The vital interests of agriculture—California's largest water-using industry—are now in the hands of the Senate and House Committees on Interior and Insular Affairs.

Enactment on S. 1631 and its House companion, H.R. 9441, would lift the Federal land limit yoke which has been choking irrigation farmers for the past 60 years.

However, if Senator Murphy's bill does not pass, or is allowed to die in committees, the farmer might as well return to the agricultural practices of 1902 and hitch old dobbin to the plow again.

Advancements in our technology since that date have produced equipment that permits the farmer to operate on the business-like basis which is so necessary today. But, that same technology is useless on a dollar basis if the farmer has to limit it to the 160 acres which, in 1902, was considered the proper family farm. In order to get the greatest benefit from today's expensive new machinery and advanced technology, a man must be permitted more flexibility and more room to

operate than the present 160-acre limitation allows.

Reality is staring us in the face. No business can operate today under programs and procedures designed for the turn of the century. To ask the farmer to do so for one more second is ridiculous, is costly, and will soon lose us most of our farmers if we do not make the necessary change to rid ourselves of obsolete antiquities that hamper our existence at the very foundations of its food and fiber.

S. 1631, as introduced by Senator Murphy, provides two basic changes to the 1902 reclamation law on land restrictions and the water allowable to make that land produce.

IMMEDIATE INCREASE

First, it calls for an immediate increase in the number of acres eligible in one ownership for interest-free financing from 160 acres to 640 acres. Provisions are also included for review of further increases in the limitation every 10 years if economic or technological changes indicate that an increase is appropriate and consistent with public interest.

Second, it would provide immediate adoption of the "Engle formula" which would allow the landowner with lands in excess of the 640-acre limitation to obtain water for his excess lands by paying interest costs and applying those costs to the price of the water.

INEQUITABLE LAW

In 1902, when the reclamation law was first passed, it was fair and equitable—for its time. At the beginning of the century land had to be settled and worked for production. The western lands, being semi-arid or arid, required irrigation before they could produce economically. The only "machinery" available to the farmer at that time was his own strong back and his horse. Congress, therefore, set a 160-acre limitation in the law for application of irrigation water, because 160 acres was the reasonable limit to what one man and one horse could cover in a dawn-to-dusk operation on a family-sized farm.

But, 67 years have passed and the one-man-one-horse family farm has literally disappeared. The law, however, is still there. It must be changed so that it reflects the needs of today as much as the original law reflected the needs present when it went into effect.

NEW TECHNIQUES

True, it has received patchwork modifications over the ensuing years, but the fundamental provisions still stand today as relics of an era which exists only in the memories of our parents and grandparents.

Today we use machinery that our ancestors never imagined and that, sometimes, seems to be as intricate as the hardware we send to the moon. We apply new fertilizers that new chemists manufacture under today's theories in today's laboratories. New farming techniques crop up almost daily as science expands and our present communications systems bring the message from source to application with a rapidity not known in 1902.

In effect, the law has not kept pace with the land or the people and now is the time to correct that gross mistake.

If our nation loses any more farmers it will find itself in dire economic straits because its foundation of the fuel which keeps people alive will have been too severely weakened. But, no farmer is going to keep farming if he cannot make a living at it and our present antiquated land restriction law is making that living almost impossible.

REMEDIAL ACTION

It is a known fact that the cost per acre of operating a 160-acre farm is usually higher than for larger farm units. Somebody has to pay for that lifted cost and it is most often passed along to the consumer. For that reason, it is just as important to the consumer as to the farmer that the remedial action offered in Senator Murphy's bill be taken as soon as possible.

The twin provisions in S. 1631 and H.R. 9441 might not be the entire solution, but they are certainly the first concrete step. Without them, it may soon be a case of: "Leave the land or get a horse."

MAIL DELIVERY

Mr. HART. Mr. President, daily I receive letters from my constituents complaining about mail delivery and rising postage rates. Many in Congress believe that congressional action is essential to halt what is approaching an overwhelming breakdown in postal service. The problem is, of course, to determine just what action to take.

One of the letters I have received reports on an intriguing at-home survey of postal service. Since I admittedly lack expertise in this area, I am forwarding this letter to the Senate Committee on Post Office and Civil Service for its consideration. I also ask unanimous consent that this thoughtful letter from Mr. Bruce S. Lane of Galesburg, Mich., be printed at this point in the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

GALESBURG, MICH.,
June 13, 1969.

Senator PHILIP A. HART,
Senate Office Building,
Washington, D.C.

MY DEAR SENATOR HART: I understand consideration is once again being given to increasing postal rates.

During the month of May, I kept track of all the mail that was delivered to my home. There are only two of us living here, my wife and myself.

We received: 101 pieces of first class mail, of which 31 pieces were solicitations and eight of these were duplicates; 84 pieces of "junk" mail, of which 14 pieces were duplicates.

Since "junk" mail and solicitations, even when mailed via first class, are an imposition, I would propose that all such mail carry a premium rate of an added five cents per piece, over and above the first class postage requirement. This will once and for all put an end to our postal deficit.

The rationale is not unreasonable. When an advertiser places an advertisement in a newspaper or a magazine he reduces the cost of reading to the subscriber. When an advertiser pays for radio or television advertising he defrays the cost of bringing entertainment to the listener and the viewer.

When an advertiser mails his advertising directly to my home, he contributes nothing to my welfare, and to make matters worse, I must pay more taxes or higher postal rates in order to pay for this foolishness.

Furthermore, I must dispose of all this costly junk. I can't let it just pile up in the mail box; the Post Office Department would probably issue a stern warning to me, the innocent party, if I did this. I am forced to burn all of the useless paper. (Has anyone looked at the air pollution that is caused by just the burning of junk mail?)

Seriously, I think you should think seriously of adding a premium charge to all advertising and solicitation mail, in addition to making all of this stuff travel at first class rates. This would eliminate the postal deficit. Ask the professionals, ask your own postman about this.

Sincerely,

BRUCE S. LANE.

MINERALS POLICY

Mr. ALLOTT. Mr. President, on June 20, 1969, Assistant Secretary of the Interior, Hollis M. Dole, made an address before the Wyoming Mining Association which I believe is particularly pertinent and timely.

In his address, Assistant Secretary Dole touches upon some of the many problems facing the Nation's mineral industry in trying to meet the requirements of our industrial economy to satisfy the needs of the consuming public. Mr. Dole makes the point:

Minerals shortages could well become a social problem of the future.

Secretary Dole also points up the need for a national minerals policy in his speech.

Mr. President, the distinguished chairman of the Minerals, Materials and Fuels Subcommittee of the Senate Committee on Interior and Insular Affairs (Mr. Moss) has scheduled hearings on my bill, S. 719, for July 9, 1969. The junior Senator from Utah (Mr. Moss) among many others has joined me in sponsoring this measure not only in this Congress but in several past Congresses.

I am hopeful that these upcoming hearings will help to delineate some of the serious problems facing the minerals industry in this country, and I believe that the enactment of S. 719 will provide us with a mechanism with which we can deal with these problems in a realistic and intelligent manner.

Mr. President, I ask unanimous consent that the remarks of Assistant Secretary Hollis Dole be printed in the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

REMARKS BY HOLLIS M. DOLE, ASSISTANT SECRETARY—MINERAL RESOURCES, BEFORE THE WYOMING MINING ASSOCIATION, CASPER, WYO., JUNE 20, 1969

DEPARTMENT OF THE INTERIOR,
OFFICE OF THE SECRETARY,
June 20, 1969.

I am delighted to be with you folks today. My pleasure springs from being back in the West, and from appearing before people who are interested in the same subject that I have spent most of my life working in—that is—the mineral industry.

As you know, I recently arrived in Washington, D.C. from Oregon and I am still far from informed on much that goes on in our Nation's Capitol. I thought, however, that you might be interested in several items that I'm working with and my thoughts on them. I would also like to take this opportunity to suggest to you areas of mutual effort which, in my opinion, will lead to a stronger mineral industry in this country of ours. This is, after all, the common goal which we are striving for.

The Metal and Nonmetallic Mine Safety Act, which was passed on August 30, 1966, became P.L. 89–577. A departmental committee was established to formulate regulations under the Act and the suggested regulations were published for public comment on January 16, 1969. A 45-day time extension was granted for comment on March 14. On April 22 the revised regulations were published and an additional 30 days were given for further public comments. This time has now passed and we are in the process of reviewing all submissions.

Those parts of the rules and regulations that have met with agreement will soon be published and become effective. Public hearings will then be held on those rules and regulations upon which there was wide divergence of opinion, and when satisfactory, they will also be published. At that time the ground rules for the enforcing of the law will have been established and the Fed-

eral Government will be fully committed to enforcing metal and nonmetalic mine safety, and the U.S. Bureau of Mines will have an additional responsibility.

As you know, one of the first messages President Nixon sent to the Congress was a call for stronger coal mine health and safety legislation. This legislation is being hammered out at the present time and a bill will be passed before Congress adjourns this session.

This attention on the part of the Federal Government for the health and safety of miners should be a great significance to you people here. To the mining engineer it should mean that stronger emphasis must be placed on health and safety or else government's role in mine operations may become dominant. It should give you second thoughts on the adequacy of the mining engineering college curriculum. Have we been stressing health and safety enough? Right now, recruitment for safety engineers in the Bureau of Mines is most difficult. We cannot get the calibre of people we think necessary nor can we get the number we need. Is this a reflection on the training mining engineers are getting in the universities? I think it is. I think that both the mines and government must look to you to establish the methods and attitudes for health and safety. It is not enough to find and extract ore. It must be found and mined safely, and under healthful conditions. Finding, mining, and safety are all of equal importance and are all part of one system.

On July 9 hearings will begin on S. 719, a bill to establish a National Minerals Policy. This bill, introduced by Senator Allott of Colorado and amongst others cosponsored by Senators Hansen and McGee is, in my opinion, one of the most important bills in Congress with which your Association should be interested. It is not only important to the Wyoming Mining Association and its members, it is important to all the people of Wyoming, and to all the people of the U.S.

The hearings on this bill are important because they provide a forum calling the attention of all the people of the country to the tremendous quantity of mineral raw materials that will be needed in the coming years. You know that to provide this requirement will take years of searching, billions in investment with a high risk factor, and many years of mining effort. You know this—but unfortunately the man in the street doesn't. He buys his metal in the form of fabricated goods from the store, in accord with his requirements, never realizing that the metal he uses today may have taken many years to get to him.

All forecasts on mineral needs for the future indicate that our industry will be hard pressed to furnish the basic materials that go into the color TV's, cars, air conditioners, boats and the thousands of other items we accept as necessary today and the many new items of tomorrow that will be added to our descendants everyday living needs. The hearings on S. 719 will be the opportunity to reveal the basic character of the mineral industry, because effort *today* is needed to prevent constraints on *tomorrow's* affluence. Unless the man in the street recognizes that his future is at stake in the minerals industry, he will continue to underestimate your requirements. The result will be ever-increasing restraints on exploration and mining, a greater dependence on overseas sources of supply with its accompanying erosion of National security and a continuing decline in the number and calibre of students studying earth sciences in our universities. Perhaps the latter is the most important problem, for it is going to take keen and imaginative minds to provide for the future. If you think getting a man on the Moon is glamorous, look at what is being currently planned or is on the drawing boards for the mineral industry; nuclear stimulation for gas, nuclear fracturing followed by leaching for copper, *in-situ* retorting of oil shale, combustion drive for oils liquefaction and gassification of coal, offshore mining, offshore drilling in thousands of feet of water, rapid excavation underground, use of nuclear explosives to open new gas and oil fields in the West, mine mouth power generation, recovery of uranium from mine wastes, and new methods of determining open pit mine stability; and Wyoming can take pride in the fact that it is to be the site for several of these experiments.

So I urge you, join with me in giving wholehearted support and full testimony at the hearings to be held on our National Minerals Policy. If you can't attend, submit written statements, for I warn you, if due significance isn't given to the real value of our mineral industry today—the minerals shortages could well become a social problem of the future.

There is one last bit of legislation pending in Congress that I would like to discuss with you, these are S. 524 and H.R. 222, the Surface Mine Reclamation Bills. They are similar to S. 3132 in the last Congress, and were introduced in January 1969 just before Secretary Hickel was appointed. To date hearings have not been scheduled.

Currently there are no Federal statutes directly regulating mine reclamation, although there are specific regulations governing the public lands. Laws governing surface mining are those of the separate States and most of them until recently were directed only towards strip coal mining. West Virginia passed the first of these laws in 1939, just 30 years ago. Other coal mining States soon followed: Indiana in 1941, Pennsylvania in 1945, Ohio in 1947, Kentucky in 1954, Maryland in 1955, and Illinois in 1961. Many of these State laws have been revised and stiffened. Virginia in 1966 and Tennessee in 1967 were added to the list and since 1967, Kansas, Oklahoma, Iowa, Wyoming, North Dakota, Georgia, and Montana have joined the parade. Colorado has a voluntary agreement in force. Seven other States including California and North Carolina, New York, Alabama, New Mexico, Washington and Maine are currently considering some form of regulation.

The reason that I have gone into this is because 5 years ago there were only 7 States with mine reclamation statutes; today there are 17 and there may be more before the year is out. Perhaps handling mine reclamation at the State level is the way to do it. I can tell you, if the States don't do it, the Federal Government will.

Not only are the States paying more attention to environmental hygiene but companies are too. Mining associations are exhorting their membership to greater efforts and, best of all, both they and their companies are starting to tell the public what they are doing and for how long they have been doing it. This story has been too long in the telling. An excellent example of an association "telling the story" is the publication "Shaping the Land—Planned Use of Industrial Sand Deposits" which is published by the National Industrial Sand Association. This publication shows the need for sand, how it occurs, how it is mined, and how the land is put to use after mining. This kind of effort is needed by all segments of the mineral industry—and I include oil, gas and coal in my statement.

You know that we have sat by quietly while the preservationist has put over his message to the public that he cares about the environment of the future. It is about time we put over our message: we care about the environment of the future and we care about the mineral needs of the future. We've been practicing it—now let's tell it like it is.

But we can't be satisfied with our present efforts. We must accelerate them, for the tremendous quantities of mineral materials we will require will necessitate the moving of an even greater volume of waste. Learning how to take care of this waste and the hole we create will be the challenge. And so this adds one more element to the mining system I referred to a little earlier. You will recall that I said it is no longer enough to find and extract ore. We have to do it safely and under healthful conditions. The mining system of today, then, is to find and extract ore under safe and healthful conditions with due regard for the environment. This is what the public wants to buy and this is what we should give them.

President Nixon has expressed it this way:

"The deterioration of the environment is in large measure the result of our inability to keep pace with progress. We have become victims of our own technological genius. But I am confident that the same energy and skill which gave rise to these problems can also be marshaled for the purpose of conquering them. Together we have damaged the environment and together we can improve it."

Thank you.

TIMBER INDUSTRY PROBLEMS

Mr. MONTOYA. Mr. President, the forest products industry of the United States is facing an immediate crisis of such proportions that it may adversely affect the entire housing picture of the Nation for years to come.

This crisis must be dealt with promptly. It must also be resolved in the immediate future if we are to fulfill our national housing goals in the interest of all the people and if we are to sustain a fundamental industry which provides a livelihood for millions of Americans.

My own State of New Mexico, although rarely recognized primarily as a lumber producing State, is deeply concerned over a combination of factors which are denying the people homes at prices they can afford, reducing employment opportunities for people dependent upon forests and timber—related industry for their livelihoods, and strangling the economic development of our economically depressed region which so desperately needs to attract and retain industries, including those based upon natural resources.

In response to these anxieties expressed by my own constituents, I have consulted with other Members of the Senate and House whose States and districts are also concerned with forest products and the wise use of public timber resources. In every case I have been told that the circumstances adversely affecting the State of New Mexico, its industries, its workers, and its potential homebuyers, apply throughout the length and breadth of the land.

Mr. President, I believe it is time, if the administration is unwilling or unable to act, that the Congress undertake to determine the facts of this deplorable situation and take positive steps to correct it.

I have focused my personal inquiries into this matter upon the role of the Forest Service of the Department of Agriculture. For it is this public agency which is largely responsible for the conditions which are depriving producers of raw material they can operate profitably and which, as a consequence, is forcing shutdowns, closures, and bankruptcies among producers who had every right to expect that prudent management would enable them to continue.

The Forest Service, intimidated by the Bureau of the Budget, has adopted an

attitude that it is obliged to wring the last possible dollar from any timber sale without regard to the economic realities of the communities which depend so heavily upon a highly competitive end-product market. The Forest Service is at present offering timber for sale at prices which, instead of reflecting current lumber and plywood market conditions, are keyed to the unprecedented high prices which occurred in the first 3 months of this year. The skyrocketing prices which prompted both congressional and White House investigations in March of this year have plummeted just as sharply as housing starts have ground to a halt in the face of extremely high mortgage rates. But the Forest Service, operating under its Bureau of the Budget mandate, is still demanding that producers often wholly dependent upon Forest Service timber continue to pay inflated prices for that timber.

I contend, Mr. President, that it is not only unrealistic but perhaps immoral for the Federal Government to traffic in human misery by adhering to procedures for the sake of procedure, when those procedures are denying the people housing and are putting people and companies out of work.

There must be a disclosure of the facts in this situation, and it is my intention to ascertain these facts at the earliest possible moment.

I therefore announce, Mr. President, that as chairman of the Subcommittee on Economic Development of the Senate Public Works I will conduct hearings in order to seek an accounting from the Secretary of Agriculture for the conduct of the Forest Service; I will strive to determine why a public agency charged with management of a public resource declines to operate in the broad public interest.

The Forest Service is not altogether alone in this fault, however, and I think we must hear from the Secretary of Housing and Urban Development as well as to his stewardship of the statutory obligation to provide 2.6 million housing units each year for benefit of our people.

It seems to me, Mr. President, that there has been a dismal performance by both the Department of Agriculture and the Department of Housing and Urban Development in the fulfillment of their statutory obligations. The one, in its failure to recognize the economic realities of communities and producers dependent upon Federal timber supplies; and the other, in its failure to offer practical steps to meet the housing requirements of the Nation.

We have slid along too long in adherence to business as usual—or no business as usual—in both the Forest Service and the housing area. It is my hope that the investigation conducted in my subcommittee will provide the facts which will oblige the administration to act in creating a housing market which will use the lumber and plywood the industry can produce and to assure realistic costs of publicly owned timber so that end product prices will provide houses at sensible economic levels.

The forest products industry over recent years has been a plaything of the Government; it is the yo-yo and the Federal Government had held the string. This condition must be ended if the Nation's housing goals are to be met and if this primary manufacturing industry upon which so many of our rural communities and citizens depend is to survive.

I serve notice today that it is my intention to be the "burr under the saddle" of the agencies involved in this matter until they develop new resolution and new responsibility toward their obligations.

ADDRESS BY SENATOR PASTORE AT THE NAVAL WAR COLLEGE

Mr. JACKSON. Mr. President, this is a period in our history when many Americans are being diverted from considering the central problems we face by their preoccupation with scapegoat hunting and name calling, all of which takes their attention off the real issues.

In this period, Senator PASTORE is an invaluable public servant. All through the years, he has performed a responsible role in national security affairs. Time after time, his informed and analytic approach to national security decisions has been of crucial help to the Congress. As chairman of the Joint Atomic Energy Committee, Senator PASTORE was the advocate and supporter of wise and far-sighted programs.

Once again, in his remarks at the graduation exercises at the Naval War College this week, Senator PASTORE has some wise words for the American people. He emphasizes that this country is ready to travel more than its share of the road to arms control, but that until others are ready to join us, experience teaches that it would be disastrous to attempt to pursue the journey from a posture of weakness.

Mr. President, I ask unanimous consent that Senator PASTORE's address be printed at this point in the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY SENATOR PASTORE AT THE NAVAL WAR COLLEGE, JUNE 25, 1969.

I count it an honor to share this graduation day with you. You are men who have here perfected the talents which have already distinguished you in patriotic service—in the ways of war—but with the fundamental purpose of peace.

Particularly I express my felicitations to those graduates who have come to us from some twenty-five Free World nations.

Here—and beyond these college walls—I am sure they have found a welcome—ready and warm. I trust that those ties of friendship will never be broken—by distance or dispute.

To your families and loved ones I have an understanding appreciation of what this day means to them—and what they mean to you. It is a day of satisfaction for them in these further honors that come to you—and you love them the more for the sacrifices they have borne and the inspiration they have been in all your years of service.

I hope that your fond memories of this day will be framed in the hospitality of our friendly people of Rhode Island and the Providence Plantations.

Ours is an old love affair with this college—a friendly neighbor for some eighty-five years.

We have a deep sense of gratitude for its graduates—men like you whose learning, loyalty and lives stand between us and every threat to our own lives and liberties.

The ship of your destiny may take strange courses from Coasters Island. Who would have thought—eighty-five years ago—that men of the services would be sailing around the moon—and looking down on the rest of us from some two hundred thousand miles out in space.

Soon we will be landing a man on the moon—at an investment of twenty-four billion dollars. We will have enlisted the skills of some 300,000 Americans. We have used the resources of one hundred and sixty-five universities—in this partnership of perfection.

The journey to the moon—you will remember—was the determination and decision of a young sailor who learned the arts of war in these Newport waters—and went on to become—eight years ago—the Commander in Chief of the Armed Forces of the United States.

John F. Kennedy was a President of the missile age. His was the courage of the Cuban crisis. His was the commitment to peace in the nuclear test ban treaty. His was the call to preparedness as our power for peace.

The primacy of our power had catapulted us into a place of world leadership. We have continued as sort of a caretaker in a world in a delicate balance between optimism and frustration.

Our power has always been subject to challenge by others—and subject to change by ourselves. From time to time we have appraised and reappraised the extent of our world responsibilities within the limitation of our resources.

I am reminded of such a time six years ago. It was in March of 1963 at a time when we were considering a multilateral force for our Atlantic Alliance.

At his invitation, I had a long discussion with former President Kennedy on this very subject. During the course of our meeting, I asked President Kennedy, "Mr. President—what will we do when Red China becomes a nuclear power?"

He reflected for a moment—and then said very solemnly—"John, at that time we will have to reappraise the balance of power in the world."

On October 16, 1964—scarcely a year and a half later—Communist China exploded its first nuclear device well ahead of expectations.

Within a short two and a half years—and with six atmospheric tests—the Red Chinese have successfully tested a multimegaton thermonuclear device.

In January of 1967—as Chairman of the Joint Committee of the Congress on Atomic Energy—I undertook extensive hearings with reference to the impact of Red China's nuclear weapons progress on United States national security.

Our committee rendered an exhaustive and revealing report in July of 1967 indicating that Red China had conducted thermonuclear explosions in December of 1966 and June 1967, a feat that surpassed even France which, at that time, had been testing for over seven years.

Moreover, testimony by experts from our Intelligence, the Defense Department, and the Atomic Energy Commission's Los Alamos and Livermore nuclear weapons laboratories, indicated that by the early 1970's the Chinese Communists probably would achieve an operational intercontinental ballistic missile.

The information developed during this study led me—on September 9, 1967—at the launching of the NARWHAL submarine at Groton, Connecticut—to call upon the Administration to speed up its development of an antiballistic missile system.

It was in that same month—less than two weeks after my statement—that former Defense Secretary Robert McNamara—realizing this new peril—announced the so-called Sentinel System by way of a speech in San Francisco.

Today—as you all know—the so-called Safeguard System advocated by President Nixon is under serious attack. The Senate is sincerely divided on this important issue. This division has reached into the Senate Armed Services Committee—and the probability is that an attempt will be made to compromise the already scaled down defense system.

Any drastic curtailment would be, in my opinion, unfortunate and could well be dangerous to our security in this divided world.

Furthermore, it is my strong conviction that any delay to develop a defensive weapon on our part can be suffered only—and I repeat, only—if meaningful and productive talks take place to limit all weapons.

Disarmament is not only our hope—it is our prayer.

Here again I must indulge in some history.

In December of 1964 in conjunction with my Senatorial responsibilities, I visited our nuclear weapons laboratory in Livermore, California. While there I was shown a photograph of an atomic weapon which had all the characteristics of an antiballistic missile and which had been paraded by the Soviets in their previous May Day celebration.

Further study and testimony before our Committee by Mr. John McCone, then Director of the CIA and formerly Chairman of the Atomic Energy Commission, and other experts, confirmed this—and time and events have borne out the accuracy of that conclusion.

Today the Russians have ringed Moscow with sixty-seven antiballistic missile sites—and we have none.

Will the Russian ABM system work?

I don't know—and maybe they don't know either. But at least the Russians must believe so.

I know that the leaders of the Kremlin are cunning and crafty—but they are not stupid. I don't think that they would be investing their money in a weapon that they didn't believe would work.

And if they believe that theirs will work—how can they possibly conclude that the nation that was able to circumnavigate the moon on two occasions—and will place two men on the moon next month—is incapable of producing on its own part an antiballistic missile that will work?

Thus you have here the one important point that is being seriously overlooked; namely, that an ABM which is purely a defensive missile and not an offensive weapon will insure the credibility of our deterrent power which is our best guarantee against the mad act of a surprise attack and a nuclear holocaust.

Why do I say this?

Merely to corroborate what President Nixon said to the graduates of the Air Force Academy only a short time ago when he remarked:

"You are entering the military service of your country when the Nation's potential adversaries abroad were never stronger."

And I might add that the gap is fast closing—and that the prophecy of President Kennedy is fast becoming a reality.

A reappraisal of the balance of power in the world is in order. But in saying this, I must make one point very clear.

This is not the responsibility of America alone. Those whom we lifted from despair and defeat must make a greater effort in our joint endeavor for security and peace than they have been inclined to do heretofore.

We went into South Korea practically alone—and we are there today after a score of years still heavily committed—and again practically alone.

We are now in Vietnam practically alone—an engagement which has cost us dearly in lives and money and dissension among our own people.

We are heavily involved in Europe in men and money—and yet we find that those whom we are defending are doing business as usual with those against whom we are defending them.

This—too—has caused dissension among our people and could—unless remedied—lead to precipitous and damaging withdrawals from our Atlantic Alliance.

We have often said that America cannot and should not police the world alone. But as we look around this world we can well understand that we are doing exactly that. Thus the frustration and discord at a time in history when our people—and we and our allies—should be united.

There is no question that America must be strong—and I am sure that its people are willing to make whatever sacrifices are necessary for freedom.

We shall always be ready to carry out the admonition of President Kennedy on that cold Inaugural Day of January 1961 when he said:

"Let every nation know, whether it wish us well or ill, that we shall pay any price, bear any burden, meet any hardship, support any friend or oppose any foe in order to assure the survival and success of liberty."

But this is a task that requires the cooperation of all nations and all people who believe in freedom. It goes without saying that we shall always be ready to travel more than our share of the road to disarmament and peace.

This has been our guide and our goal since the Baruch plan of 1946. But until the day of understanding comes—and I sincerely hope that it will come soon—experience teaches us that it would be disastrous to attempt to pursue the journey from a posture of weakness.

Peace with honor has its source in material as well as moral strength. Defense of freedom deserves all that is necessary to sustain it.

But—let me add—we should write no blank check—not even for national defense. Waste in military procurement is not to be condoned. It must be condemned as deplorable and unforgivable.

But—make no mistake—we pledge ourselves to a sufficiency for security.

Our fighting men deserve no less.

For—after all—our first line and our last line of defense is the same—it is you men in the uniform of our country that you serve so nobly and so well.

A civilian leadership imposes upon you tasks that call for sacrifice to the limits of life—and beyond. And you carry them out with a devotion beyond the call of duty.

Your uniform is indeed the robe of nobility—whether it be the camouflaged fatigue of the jungle—or the ribboned magnificence of the flagship deck.

We salute you proudly—you who wear the uniform proudly.

We bid you God-speed—safe journey on the course where duty calls—and a fair haven in the ports of peace.

THE OIL INDUSTRY

Mr. HART. Mr. President, it is obvious that this Congress will be called upon to decide whether any of several changes should be made in the treatment the oil industry has received in recent years.

To make these decisions intelligently will be difficult because of the great complexity of the industry—and the maze of subsidies, with modifications, which have grown up.

In light of that, I recommend to my colleagues a Fortune magazine article, "Our Crazy, Costly Life With Oil Quotas," by Allan T. Demaree, which appeared in the June issue.

The Senate Antitrust and Monopoly Subcommittee has been one of the congressional groups interested in the oil industry this year. So far we have held 13 days of hearings, totaling about 1,650 pages of transcript and untotaled pages of exhibits.

We have learned a great deal. However, I was happy to come upon Mr. Demaree's article. It is good background material.

Mr. President, I ask unanimous consent that the Fortune article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

OUR CRAZY, COSTLY LIFE WITH OIL QUOTAS

(By Allan T. Demaree)

The quota system that chokes off the free flow of oil into the U.S. costs the nation billions and shelters gross inefficiencies in the domestic crude-oil producing industry. Imposed in the name of national security just a decade ago, it has become the object of mounting discontent. It has given government officials the power arbitrarily to parcel out enormous fortunes to individual companies. It has been administered with ever increasing ineptitude, bringing about the most heavy-handed bureaucratic meddling in the marketplace. And it has caused huge domestic industries, regions of the country, and even nations to pit themselves against one another in an unseemly battle for political favor in Washington. All in all, the quota on oil imports has proved to be one of the most ill-conceived and ill-executed federal regulatory schemes since the abortive flight of the NRA's Blue Eagle.

Once above earnest scrutiny in Congress, the oil quota is now being subjected to searing criticism there. Democratic Senators William Proxmire of Wisconsin, Ted Kennedy of Massachusetts, Edmund Muskie of Maine, all from consumer states, have repeatedly lambasted it in recent months. "The system reeks and is ripe for change," Senator John Pastore, a Rhode Island Democrat, proclaimed on the Senate floor. "The industry should know that this is a time of consumer revolt." A small army of economists paraded before Senator Philip A. Hart's antitrust and monopoly subcommittee a few weeks ago, denouncing current policies as expensive, wasteful, and administered on dubious principles. And on the other side of the Capitol, Chairman Wilbur Mills and his powerful Ways and Means Committee have given the oil industry added jitters by questioning the 27½ percent depletion allowance, a provision that, like the quota, has been supported on grounds of national security.

Not even the oil industry is satisfied with the way the quota system is run. Charging that the government has favored a few companies at the expense of most, the American Petroleum Institute urged President Nixon to undertake the first serious review of the quota system in seven years, a task Nixon has delegated to a Cabinet committee headed by Secretary of Labor George P. Schultz, former dean of the University of Chicago Business School. What the committee recommends after studying the turbulent history of oil quotas will undoubtedly prompt some changes. The decision to impose quotas was founded on an astonishing dearth of clear-headed analysis, and the system has since drifted through a series of compromises that have satisfied no one. This experience should make government officials chary of extending similar protection to the swelling number of industries that have beaten paths to Capitol Hill and the White House in recent years. These quota seekers range from the giant steel companies to the American Beekeeping Federation, which argues that without a protected market for honey, the U.S. will surely lose bees essential for pollinating crops, from alfalfa to garlic.

A $4-BILLION PRICE TAG

By erecting quota barriers, the government limits the amount of foreign oil that is brought into the U.S., currently to about 21 percent of domestic consumption. This has saved most of the U.S. market for domestic crude-oil producers, and has helped to maintain the wellhead price of U.S. crude at about $3 a barrel, more than twice the price of crude in the Middle East. Even after adding on shipping charges and import duties, Middle Eastern and Venezuelan crude has been landed on the east coast in recent years for $1.25 to $1.40 less per barrel than crude produced in Texas and Louisiana.

The cost to consumers of this restrictive import policy is impossible to determine exactly; but reasonable estimates put the price tag at about $4 billion a year—more than the combined budgets of the six New England states. The restrictions on foreign crude result in higher gasoline and heating-oil prices. They also increase costs to industries that use oil for fuel and raw materials. This fact has hardly escaped the notice of petrochemical producers, who constitute one of the largest manufacturing industries in the nation. They complain vociferously that they cannot continue selling in world markets while using raw materials that cost more than those available to their foreign competitors.

Moreover, the gap between domestic and world crude prices has been getting wider, increasing the cost of import restrictions. Only seven years ago the difference in price between domestic and foreign oil on the east coast was about $1 a barrel. But domestic crude-oil producers, walled off from competition by the quota barriers, have been jacking up their prices recently (15 cents a barrel since January). This has occurred even as the world price of oil has been declining because of robust competition and the development of huge tankers that have cut transportation costs in half during the past ten years. The decline in the delivered price of foreign oil was interrupted in 1967 by the Arab-Israeli war, but resumed last year.

Import quotas shore up the system of state regulation that has been keeping domestic crude prices high for years (see "U.S. Oil: A Giant Caught in Its Own Web," FORTUNE, April, 1965). The big producing states, Texas and Louisiana, which account for more than half the nation's output, hold production down to the amount the market will absorb at high prices. Simultaneously, this state system, called market-demand prorationing, favors inefficient producers over efficient ones. The states allow hundreds of thousands of so-called "stripper wells" to produce freely, pumping out an average of 3.6 barrels a day, while they cut back the flow from efficient wells that could produce far more at lower costs. Henry Steele, an economist at the University of Houston, estimates that if market-demand prorationing had been abolished in 1965, production costs would have fallen 46 percent in Texas and 38 percent in Louisiana. The free flow of cheap foreign crude into the U.S. would, of course, undermine these state-run cartels. It would force inefficient producers out of the industry by lowering the price of crude.

I GOT BY WITHOUT A SCANDAL

The oil industry's stake in the quota system is prodigious. By fiat, the government divides, mainly among U.S. refiners, the foreign oil that is allowed to enter the country. The Interior Department's Oil Import Administration dispenses import allocations, or "tickets" as they are known in the industry; a ticket to import one forty-two-gallon barrel of crude oil into the east coast has a value of about $1.25, the approximate difference between domestic and world prices. The value of the tickets being handed out right now comes to nearly $1 million a day. Some companies have received as much as $35 million in tickets in a single year. The tickets awarded Standard Oil Co. (New Jersey) since the beginning of controls are conservatively valued at $305 million; Gulf Oil, $290 million; Standard Oil of California, $265 million.

Needless to say, decisions on how the tickets are to be split up—who will be allowed a share, who won't, and in what proportion—bear heavily on the profits of individual companies. During the Kennedy-Johnson years, Stewart Udall, the then Secretary of the Interior, had much to do with the way these valuable licenses were passed around, and his decisions were subject to impassioned polemics. "A small decision meant a lot of money," he recalled recently. "It was a minor miracle that I got by without any major scandal."

While the benefits of tickets given to industrial giants like Jersey, Gulf, and Socal seem breathtakingly large, little refiners gain relatively more than big ones. The government has built a small-business subsidy into its allocation system. While Jersey was granted one barrel of foreign oil for every twenty barrels of domestic oil it processed last year, scores of small refiners in the country were given a barrel of foreign crude for every five of domestic. This subsidy has undoubtedly kept many a marginal refiner in business.

All refiners receive tickets whether or not they process foreign crude. Many inland refiners can't use imported crude because the transportation costs are prohibitive. So they trade their tickets to the great coastal refiners in return for domestic crude and, in effect, pocket the $1.25 differential. A robust trade in tickets has grown up. For many of the smaller inland refiners, ticket swapping may well be the most lucrative transaction of the year.

The oil industry and its regulators argue heatedly that this system is essential to the national security. Indeed, a forceful case can be made for the proposition that the U.S. must maintain a strong crude-oil producing industry lest it become overly dependent on foreign sources for the great bulk of its supply. Much of the world's crude is produced in unfriendly or unstable countries, such as the Middle Eastern states that embargoed supplies to the West for twelve weeks in 1967. If the U.S. were to become overly dependent on foreign sources, there would be no guarantee that sheiks, shahs, and South American politicos wouldn't try to wield their power over this vital strategic commodity to influence our foreign policy.

Domestic crude-oil producers seized upon this argument not in a moment of international crisis, but when they were hurting economically. By 1948 the development of low-cost sources in the Middle East and Venezuela had transformed the U.S. from a net exporter to a net importer of oil. Ten years later foreign crude had captured 18 percent of the U.S. market. Domestic producers were both injured and insulted when a few refiners landed Middle Eastern oil in Texas ports, and others had the temerity to ship Venezuelan crude past Louisiana's oil wells and up the Mississippi.

The surge of imports shoved U.S. crude out of its accustomed markets. The Texas Railroad Commission, which controls production in that state, shut regulated wells down to eight producing days a month in 1958. "The torrent of foreign oil," declared Commission Chairman Ernest O. Thompson, "robs Texas of her oil market," costing the state nearly $1 million a day. To the argument that the U.S. mustn't become dependent on foreign oil, domestic producers added a corollary: if producers are to have sufficient incentive to explore for future supplies in the U.S., they must be guaranteed a fair share of the American market at prices they consider adequate.

So persuasive were these arguments that President Eisenhower twice tried to curtail imports on a voluntary basis. When that failed, he acted on producers' pleas for mandatory quotas in 1959. As his aide Sherman Adams recalls in his memoirs, Eisenhower's action "was primarily an economic decision brought on by an economic emergency." It was executed by presidential proclamation on the basis of national security, the only grounds then available under international trade agreements for the unilateral imposition of quotas. To this day oil remains the only commodity in which the U.S. restricts imports for reasons of national security.

HOW MUCH IS TOO MUCH?

While something can be said for the national security argument, many questions about it have gone unanswered. What is "overdependence on foreign oil"—the current level of 21 percent, or 11 percent, or 31 percent? A quarter of all imported crude comes via underground pipeline from Canada. While tickets are not needed to import Canadian oil, the amount imported is limited by bilateral agreement and deducted from the total allowed under the quota. Is this crude less secure than that shipped to east-coast refineries from the Gulf of Mexico by tankers, which are vulnerable to submarine attack? Are we willing to build an antiballistic-missile system with the cooperation of our neighbor to the north, but unwilling to depend on it for oil?

Two-fifths of our crude imports come from Venezuela, which is as close to Philadelphia Harbor by tanker as Texas City, Texas. This leaves less than a fifth of our crude imports—and less than 3 percent of the total U.S. crude requirement—coming from the volatile Middle East. Would a cautious increase in this amount involve grave danger to the national security?

The very nature of modern war mocks a policy of oil isolationism. Nuclear attack would almost certainly destroy more American refining capacity than production, leaving the U.S. with more crude than it could process. In limited wars like Korea and Vietnam, on the other hand, the U.S. has relied to an increasing extent on foreign oil because the supply lines are shorter and the price is lower. More than three-quarters of the oil used in Vietnam last year came from foreign sources, much of it from the Mideast.

Other questions have barely been broached in government circles. Is subsidizing the domestic crude-oil industry—with all its state-supported inefficiencies—the cheapest way to meet our national security goals? If the U.S. were willing to pay the price—if, for example, crude went to $5 a barrel—many other domestic fuels would come on the market. A price high enough would prompt companies to synthesize liquid fuels from coal and produce oil from the vast shale deposits of Colorado, Utah, and Wyoming, where estimated reserves total two trillion barrels—enough for four hundred years at current rates of consumption.

In fact, many alternatives exist that may be cheaper than today's subsidies. The U.S. could diversify foreign sources to limit risk. Or stockpile oil in storage tanks or underground. Or pay companies to explore for oil on federal lands and hold these reserves for an emergency. While none of these alternatives wins huzzahs from the oil industry, all deserve more serious examination than they have received in the past. Otherwise, the U.S. will continue buying insurance at high premiums.

The need for probing the alternatives is dramatized by two comparisons. First, quotas are defended on the grounds that they encourage oil companies to explore in the U.S. Yet *total* industry expenditures for oil exploration and development in this country amounts to less than $3.3 billion a year. This is well below the $4-billion cost of the quotas and the inefficiencies they protect. Moreover, the quota system is not the only subsidy to the industry rationalized on the basis that it encourages exploration. The depletion allowance and the right to expense intangible drilling costs are estimated to reduce the domestic industry's tax bill by more than $1 billion a year.

As one might expect, oil executives argue that an end to quotas would severely blunt their incentive to search for oil in the U.S. where production costs are higher than elsewhere in the world. Says Richard C. McCurdy, the president of Shell Oil, "We'd stop exploring. We'd slowly liquidate our U.S. production." Both Jersey Standard and Atlantic Richfield say they probably would not have looked for the titanic reserves on the North Slope of Alaska if they had anticipated selling that oil at $2 a barrel rather than $3.

Yet no one can say for sure whether incentive would really be dulled if import controls were relaxed and market-demand prorationing died a timely death. In fact, it can be argued that incentive might ultimately be strengthened because efficient producers could pump more oil at lesser unit costs. This would make low-cost, high-production reservoirs, such as those in the Gulf of Mexico and Alaska, more profitable to search out and develop. Large amounts of U.S. production probably could compete profitably with foreign oil today if only the incubus of regulation were lifted. Exactly how much is not known. Oil companies jealously guard information on their production costs, yet this information is essential if policy makers are to judge how much protection American oil needs. Amazingly, the government has never pressed the industry for this critical data.

The high costs of current policies are also pointed up by comparing them with the expense of storing oil for emergencies. A recent study by M. A. Adelman, an economist at M.I.T., shows that Europe could purchase and store 2.2 billion barrels of oil, a six-month supply, for a total annual expenditure of $770 million. Even if the costs in the U.S. turned out to be four times higher than Adelman's estimates for Europe, they would be far less than the price of current protectionist policies.

During the Suez crisis of 1967—the only time that foreign supplies have been disrupted since the imposition of quotas—U.S. domestic production was increased by more than 100 million barrels. The increase was not to meet U.S. emergency needs, but to supply Europe. This oil cost the U.S. over $300 a barrel when the expense of maintaining quotas for the past decade is figured in. If the U.S. is maintaining expensive, spare producing capacity to supply Europe, a fair question to ask is whether the Europeans, who buy cheap oil from the Mideast day in and day out, shouldn't pay for a bit of their own security.

A NIMBUS OF AUTHORITY

The original government report recommending import restrictions ignored many important questions. It was thrown together in eight weeks by a White House-appointed task force made up of an oilman, a coal executive, an investment banker, and a judge. Although the report revealed nothing more sensitive than its own lack of erudition, it was kept under security wraps for six years, acquiring a numbus of authority with age like a Chinese grandfather. Three years later a Cabinet committee rejected out of hand alternative proposals for assuring a safe supply. For the government to contract out the search for reserves was dismissed in a sentence as both "contrary to the principles of free enterprise" and "costly," although no effort was made to assess the expense. The costs of the present system were not seriously considered until 1962, when a committee appointed by President Kennedy put the price at about $3.5 billion a year, and urged that controls be liberalized to permit "a modest increase" in imports. Kennedy ignored the recommendation, however, and instead tacked the quota lid down still tighter.

During the Kennedy years, federal oil policy was directed from the White House. When Lyndon Johnson took office, he sensed that oil decisions could prove embarrassing to a President from Texas. So he made a point of delegating authority to Interior Secretary Udall, although Udall allows that "in one or two instances people in the White House tried to get a heavy oar into oil matters." Nixon has snatched oil policy back to the presidential bosom. Last February, Michael L. Haider, chairman of Jersey Standard and of the American Petroleum Institute, met with presidential counselor Arthur Burns to urge the review of import controls that has since been undertaken.

The choice of a chairman for this sensitive, Cabinet-level study proved an *Alphonse et Gaston* affair. Robert Ellsworth, a key White House aide before being named Ambassador to NATO, advised Nixon to pick Burns; but Burns attached a covering note to Ellsworth's memo pleading that he was too busy. Nixon's choice of Shultz, a widely respected economist, came as a surprise. The President explained it by saying that the Labor Department had "no direct involvement in the issues to be weighed," so Shultz could remain detached. Until the study is completed this fall no major moves in oil policy are expected.

SQUABBLING OVER THE SPOILS

Founded on a questionable rationale and ensnarled in confusion about its goals, the oil quota system has proved unusually susceptible to the buffeting of pressure groups. Because the stakes are so high, great corporations, politically powerful regional interests, and major oil-exporting countries squabble fiercely over the benefits oil quotas bestow.

Venezuela, which earns 92 percent of its foreign exchange from oil exports, stands vigil lest the slightest change in U.S. policy decrease its markets. So concerned was former President Romulo Betancourt, in fact, that when John Kennedy installed a "hot line" to South American capitals in 1962, Betancourt was the first to call Washington, audibly agitated over rumors that Kennedy was going to reduce quotas. And when Secretary Udall allowed Phillips Petroleum to switch its purchase of about $40 million worth of oil from Venezuelan to other sources, Venezuelan officials marched on Washington in a fury. As a result, the White House and State Department pressured Udall into reversing his decision, after a dispute that left President Johnson and his Interior Secretary at swords' points in the waning days of their Administration.

Oil policy was also a sensitive issue when Canada's Prime Minister Pierre Elliott Trudeau paid his first visit to President Nixon last March. Canadian oil is officially exempt from import restrictions on grounds that it is exported overland into the northern tier states of the Midwest, and is therefore considered a safe source of supply. Still, the U.S. engages in the questionable practice of negotiating secret agreements with Ottawa to limit the amount of oil Canada may export to this country—not for security reasons but to make sure that Canadian production doesn't disrupt the cozy U.S. market. In the latest agreement, which was flushed out of secrecy in a recent lawsuit, a promise was wrung from Canada to "exert every effort" not to displace U.S. production, not to supply refiners who were "unduly expanding their market area," and not to send oil to Chicago before 1970. In other words, not to compete too hard. Much to the exasperation of U.S. producers, however, the Canadians have repeatedly exceeded the limits set by the agreements, and Trudeau is now seeking a still bigger share of the high-price market.

Perhaps the most ridiculous bargain ever struck in the name of national security is an agreement the U.S. negotiated in 1961 giving Mexico an "overland exemption" similar to Canada's. Since there is no pipeline between Mexico and the U.S., the state-owned oil company, Petroleos Mexicanos, ships 30,000 barrels of oil a day by tanker into Brownsville, Texas. From there the oil is pumped into tank trucks, driven over the Gateway Bridge into Mexico, and then U-turned back into the U.S.—all to qualify as a quota-exempt "overland" import. Branded "el loophole" by indignant Texas oilmen, this little charade has cost the companies importing the oil nearly $15 million in extra loading and transportation charges.

A SERIES OF "SPECIAL DEALS"

Whenever the government creates valuable assets, like import tickets, and awards them arbitrarily to a limited number of people with special interests, like refiners, contention is inevitable. Companies originally excluded from the club of ticket holders, including Du Pont, Union Carbide, Kodak, and other giants of the petrochemical industry, have successfully battled their way in over the shrill cries of refiners, who were forced to give up some of their own tickets to make room. At the same time, oil executives have finagled with the ingenuity of wily tax lawyers to win larger cuts of the pie. In 1965, Phillips Petroleum won the right to establish a $45-million petrochemical plant in Puerto Rico, process exclusively foreign oil, and then ship 24,800 barrels a day of gasoline "byproduct" to the east coast, where it competes with fuels made from high-priced domestic crude. The right to ship this gasoline has been estimated to be worth about $11 million a year. Competitors were outraged because the amount of the shipments was deducted from the total amount of foreign oil they shared.

To many oil executives, this marked the the beginning of a series of "special deals" in which Udall recommended, and President Johnson approved, the exclusive grant of profit-making opportunities to a few select companies at the expense of others. Udall justified the Phillips deal not on national security grounds, but on the theory that a special import allocation was needed to induce job-creating investment in Puerto Rico, where unemployment was running at 11 percent. In return for the allocation and liberal tax concessions from the Puerto Rican Government, Phillips promised to reinvest $55 million in satellite plants, which would use the petrochemicals Phillips produced as feedstocks.

The grant to Phillips encouraged others to apply for similar arrangements. Typically, these deals have combined three factors: a company eager to import cheap oil, a geographical region that would benefit from the company's investment, and a crevice in the quota barrier. After Phillips, Udall awarded Sun Oil, Union Carbide, and Commonwealth Oil Refining valuable rights to process exclusively foreign oil in Puerto Rico and ship products to the mainland. By that time the Virgin Islands were crying for "parity with Puerto Rico." Hess Oil & Chemical won tickets to ship to the U.S. mainland gasoline and heating oil produced from foreign crude at its refinery on St. Croix. (Udall had difficulty justifying the special deal for Hess since employment in the Virgin Islands was so high that workers were being imported from the British West Indies.) The Sun, Commonwealth, and Hess shipments, which will total 54,500 barrels of oil products a day by 1972, are deducted from the amount of oil other companies may import. The effect is to slash the benefits of many for the sake of a few. (Carbide ships only petrochemical products to the mainland; these are exempt from quota restrictions and aren't deducted from other companies' allocations.)

THE BATTLE OF MACHIASPORT

Similar applications began pouring in from every company and region that could conjure up a rationale—Guam, Hawaii, Savannah, Georgia, and Machiasport, Maine. The application by Armand Hammer, the septuagenarian chairman of Occidental Petroleum, to process 300,000 barrels a day of Libyan and Venezuelan crude at Machiasport became a *cause célèbre* in the oil industry. It was overwhelmingly opposed by the major oil compa-

nies, which feared a further nibbling away of their tickets, and unanimously supported by New England politicians, who saw the promise of lower oil prices for their constituents. Battled to a stalemate in the closing days of the Johnson Administration, Occidental's plan now hangs in limbo.

The special deals underscore the government's awesome power to distribute exclusive franchises, without detailed justification. While quota applications for others were approved, Udall brushed aside a request by Texaco to build a refinery in Puerto Rico, where it is the leading gasoline marketer. He offered no official explanation, allowing the company's application to perish without taking action on it. When Udall approved the Hess application in the Virgin Islands, he simultaneously turned down a request from Coastal States Gas Producing, saying only that his "firm and final" decision was to permit no other refineries on the islands in order "to protect and conserve the incomparable reefs and beaches."

Although it deals with fabulous sums of money, the Interior Department has adopted few of the procedural safeguards common to other regulatory agencies. It issues no formal opinions to explain its decisions. It has held fifteen hearings on various aspects of the program, but has never followed one of these with a report of findings. Unlike the award of oil leases or contracts, the special deals have never been opened up to competitive bidding by Interior, which has preferred to negotiate the terms privately. (It once proposed a plan to auction off quotas, which would have let the Treasury, rather than refiners, collect the price differential between foreign and domestic crude; the scheme was quietly scuttled when it met nearly universal opposition from the industry.)

Companies dissatisfied with their lot under the quota system may plead their cases to an Oil Import Appeals Board, on which sit three officials, one each from the departments of Interior, Commerce, and Defense. Under its rules, the board dispenses or adjusts allocations to companies that are "in special circumstances" or are suffering "exceptional hardship." These ill-defined criteria have led to some questionable awards.

Udall's own decisions have been highly unpredictable. In the case of Phillips, Hess, and others, Udall made decisions beneficial to the companies, then changed the oil-import regulations to validate his actions. These ex post facto turns in policy have made it difficult for oil companies to plan. An application by Mobil to import oil into Puerto Rico was rejected a few years before the Phillips application was approved, without the slightest indication then that any change in policy would later be considered. As Jersey Standard Chairman Haider puts it with soft-spoken confidence: "We're flexible. We can play the game any way you want—if somebody will just tell us what the rules are."

A PECULIAR WAY TO REGULATE

When vast sums are involved, such irregular procedures undermine the sense of fair play that is an essential attribute of any regulatory agency. Tongues clucked in the oil industry, and suspicion pervaded the capital, when well-connected Washington lawyers and influential politicians were associated with one request for special privilege after another. Oscar Chapman, a prominent Democrat, Secretary of Interior under Truman, and now a Washington lawyer, was instrumental in putting together the Puerto Rican deal. First he drummed up oil-company interest in the project, then he approached Interior Department officials confidentially in 1962 and finally he represented Phillips as counsel when the company requested an import allocation two years later. Puerto Rico was represented by Arnold, Fortas & Porter, the firm co-founded by President Johnson's close confidant, Abe Fortas, who had been intimately connected with the island's affairs since World War II. David T. Willentz, a director of Hess Oil and Chairman Leon Hess's father-in-law, was a powerful figure in New Jersey Democratic politics, The Hess quota application was stoutly supported by such congressional oligarchs as Representative Michael Kirwan, an Ohio Democrat, who for years headed the House Interior appropriations subcommittee, with power over the Interior Department's purse, and Representative Wayne Aspinall, a Colorado Democrat, who chairs the House Interior Committee, which holds sway over the department's legislation.

Not even Udall's harshest critics in the oil industry accuse him of personal dishonesty, and most believe that he was earnestly trying to bend oil-import controls to serve his vision of the national good. The companies did "pay" for their special privileges in varying degree. Hess agreed to pay $2,700,000 a year (50 cents for each barrel of oil products it shipped to the States) to a conservation fund on the Virgin Islands. Sun agreed to pay about $1 million (or 10 cents a barrel) into a similar fund in Puerto Rico. And Occidental held out a promise to contribute more than $7 million a year to such a fund for New England. But to grant special privileges in return for charitable contributions seems a peculiar way to regulate.

With one mystifying amendment after another, the import regulations became so complex that Senator Proxmire charged it would take a "Ph.D. in chemistry and a Philadelphia lawyer to begin to comprehend them." When petrochemical producers were admitted into the ranks of ticket holders, the Oil Import Administration unwittingly worded the necessary amendments so that some refiners that also produced petrochemicals were allowed to "double dip" into the import pool. In an oilman's game of now-you-see-it, now-you-don't, these refiners claimed one set of tickets based on their refining operations, then picked up another batch based on their petrochemical operations—even though the same oil was used for both.

No sooner had this situation been corrected than Udall found himself bogged down in a $1,500,000 misunderstanding about what was and what wasn't a petrochemical. Standard Oil Co. (Indiana) was producing large quantities of aromatic chemicals for use in its unleaded gasoline, and these technically qualified as petrochemicals under Interior regulations. It came as a surprise to Udall, however, when the company claimed and received tickets worth more than $1,500,000, cutting heavily into the foreign oil he had intended to provide chemical companies as low-cost feedstock. Pronouncing himself "appalled" at this turn of events, and declaring himself "not very happy" with his staff (who had sent him a memo on the situation that had mysteriously been lost), Udall revoked the company's tickets without notice or hearing. Standard of Indiana was "shocked at the arbitrary action" and filed suit, the Justice Department refused to defend Udall, and the embarrassed Secretary was forced to return the tickets—and put his staff to work rewriting the regulations once again.

THEY WINCE AT COMPETITIVE BLOODLETTING

One outgrowth of the Standard of Indiana debacle was that Interior for the first time began auditing refiners' claims for tickets. One of the first audits concluded that Standard of Indiana claimed to have converted more oil to petrochemicals than it actually had, thereby earning extra tickets worth about $600,000. But the company is fighting Interior's efforts to recoup, arguing that it had really claimed too little, not too much. Subsequently, Interior spot-checked thirty-seven requests for new quotas, discovered "many discrepancies," and threw out six of the applications. The fact that audits had never previously been conducted can be laid in part to congressional parsimony. The Oil Import Administration has only five professional people. They were forced to make some of the spot checks over a holiday weekend.

As import controls became more and more confused, so did their objective. The Oil Import Appeals Board winces at the sight of free competitive bloodletting. It awarded tickets to two small refiners that had been shut down for years, hoping the handouts would help them pay off creditors and reopen their plants. Another company bought an abandoned refinery from Mobil in Wyoming and encountered unexpectedly high costs rehabilitating it. "Moved by the plight of this small company," as it said, the board doled out tickets to that refiner, too.

Several of Udall's actions involving Commonwealth Oil of Puerto Rico provide a graphic illustration of market meddling. In 1966, Commonwealth discovered a loophole in the regulations that allowed it to ship products from its refinery in Puerto Rico to the West Coast. Commonwealth won Udall's tacit approval and subsequently negotiated a forty-six-month contract to supply a cut-rate marketer in San Francisco with up to 10,000 barrels of gasoline daily. Major refiners in California screamed foul, charging that Commonwealth's gasoline had a competitive advantage and that the shipments had the effect of cutting back their own import allocations. They enlisted the aid of former Senator Thomas Kuchel, then the Republican whip, and other politicians to bring an end to the shipments. Yielding to political pressure, Udall reversed his position, closed the West Coast loophole, and gave Commonwealth permission to ship to the east coast instead. The move cut the San Francisco marketer off from supplies.

Another of Udall's actions was tantamount to pressuring a company to buy from a particular supplier as a condition for obtaining a federal grant—an especially pernicious kind of government pressure. Commonwealth Oil was seeking the right to increase shipments from its refinery to east coast markets, claiming that it should have parity with the new Phillips plant, which Interior had allowed to ship 24,800 barrels daily. Then Union Carbide applied for permission to expand its petrochemical facilities on the island. With this Udall saw a chance to provide Commonwealth with a market—without allowing the company to increase its shipments to the mainland, which would surely have raised fresh complaints from competitors there. So, as a condition of approving Carbide's request, Udall bargained Carbide into agreeing to purchase half its feedstocks in Puerto Rico from Commonwealth. Commonwealth subsequently dropped its demand to ship more products to the east coast. "We twisted a lot of arms," Udall concedes.

Udall's rejection of Texaco's request to build a refinery in Puerto Rico, which has never been officially explained, also relates to Commonwealth Oil. As the biggest gasoline marketer on the island, Texaco bought a substantial amount of its supplies from Commonwealth's refinery. If Texaco were allowed to build its own refinery, Udall knew that Commonwealth would have to search for new customers, and would surely seek the right to ship more gasoline to the east coast—once again roiling the industry. Udall's desire to avoid such upsetting complications was a central reason for allowing the Texaco application to die.

A FAR LESS COSTLY WAY

The U.S. today finds itself saddled with an expensive, muddled, and unseemly system of import restrictions because it has ignored the dictates of rational economical policy making. The government has not determined how large a reserve of oil the U.S. would need in the event of a foreseeable emergency. Nor has it tried to adopt the least costly method of providing such a reserve. It has preferred to rely on senseless

protectionism—a policy it must now abandon.

No doubt exists that the U.S. can provide for its emergency needs at less cost than under the current system. Since the government has never taken the trouble to weigh the alternatives, the methods—or combination of methods—that make the most sense are not yet clear. The studies conducted by Adelman of M.I.T. surely indicate that the storage of oil for emergencies may prove a feasible course of action. But the most important consideration is that all courses be examined with an open mind.

The cost and the maladministration of the quota system have raised cries for its abolition. Much can be said for that direct solution. But it may be that some form of import restrictions, less onerous than those now in effect, has a place in a rational oil policy. If so, those restrictions must be adopted on the rational grounds that they enhance U.S. security at a tolerable cost—not because they prop up the domestic industry in its present inefficient form. The government must quit mixing defense considerations with protectionism, as it has done so dramatically, and shamefully, in its efforts to keep Canadian oil out. At the very least, the U.S. should permit the free movement of oil from Canada, a country with which we enjoy uniquely close relations. The government should also put pressure on the states to abandon those regulatory practices that stifle efficiency. The time has come to allow a fresh breath of competition to blow through the industry.

THE CONSTITUTION AND DISSENT

Mr. HART. Mr. President, a former colleague, whom I miss very much, Senator Wayne Morse, of Oregon, recently gave thoughtful advice both to those in our Nation who would stifle dissent and those who resort to violence in the name of dissent.

To the former, Senator Morse pointed out:

The Constitutional right to dissent guaranteed by the first amendment to the Constitution is one of the checks against the development of police-state tactics.

To the latter, he said:

Those who want to make their voices heard in the determination of public policy must have staying power. They must accept the challenge of the Bill of Rights to discuss, argue, and take full part in the political processes until they convince a majority they are right. They have no more right to short-circuit this process than does government have the right to short-circuit their full participation.

These are just two of many points raised by Senator Morse in his commencement address at Fairleigh Dickinson University on June 7.

I ask unanimous consent that his address, "The Constitution and Dissent," be printed at this point in the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE CONSTITUTION AND DISSENT

(Address by Wayne Morse, at Fairleigh Dickinson University, Teaneck, N.J., June 7, 1969)

This is an occasion for congratulations to each of the graduates in whose honor these Commencement Exercises are being held. It is also an appropriate time and place for reflection upon the part of each one of us, concerning our responsibilities of citizen-statesmanship owed to our system of constitutional self-government. We assemble here as free men and women only because we are the beneficiaries of those abstract principles of democratic government which we inherited from the framers of the Constitution, along with its subsequent amendments.

In speaking to you on the subject, "The Constitution and Dissent," I come not asking for agreement. I never do. To agree is not nearly so important as it is to reach judgments by the process of reasoning. I suppose it is only human to substitute glandular responses for cortical reactions to the controversial issues which are shaking public opinion today. But it does seem that this is more prevalent than it should be in a country as enlightened as ours. If we are to fulfill our responsibilities of citizen-statesmanship in reaching jugments on the foreign and domestic issues which plague our country, we must apply the cool, cortical processes of reasoning to the merits of each issue in reference to the facts as we find them.

In essence, all of our individual liberties encompassing our civil, political, property, and social rights spring from the checks and balances of the Constitution, administered through three co-ordinate and co-equal branches of government, with each branch having constitutional checks upon the other two. Thus was the Constitution designed to give us a government by law rather than by mere men with all their human frailties.

Unfortunately in recent decades there has been a growing trend toward government by Executive supremacy, due in no small part to a laxity on the part of Congress in surrendering—or delegating—to presidents, legislative prerogatives and powers vested in the Congress by the Constitution. In too many instances, Presidents have usurped power and authority that rightfully under the Constitution should be exercised by the Congress. The result has been a weakening of our constitutional structure of three co-ordinate and co-equal branches of government;—namely, the Executive, Judicial, and Legislative.

If we are to stop the trend toward a government by Executive supremacy we must not permit our constitutional system of checks and balances to become a mere platitude of expedient politicians. We must remember that the exercise of capricious, arbitrary, discretionary power by mere men in political office is irreconcilable with the guarantees of the Constitution that we shall be governed by law and not by political caprice.

Concomitant with the development of government by Executive supremacy is its handmaiden of government by secrecy. In a democracy there is no substitute for the full public disclosure of the public's business. The rapid trend in our country toward government by Executive supremacy and secrecy is seriously weakening constitutional self-government by the American people as it was envisioned by the framers of the Constitution when they wrote into it the check and balance guarantees against the exercise of arbitrary discretion by mere men who happen to be holding public office.

Fortunately and hopefully there is another growing trend in our country as increasing numbers of citizens—young, old, and in between—are rising up in dissent against the abuses of government by secrecy and unchecked arbitrary discretion.

Dissent has reached forms and proportions in American life today that call upon all sides to look again at the rights and responsibilities of dissent. By "all sides" I mean to include those being dissented from, for their reaction and anger with the appearance and actions of the demonstrators is as much a part of the picture as are the methods and motives of the dissenters.

The place for all these parties to begin is with the Bill of Rights. That document starts out by prohibiting the abridgement of freedom of religion—a freedom the Founding Fathers considered to be foremost. Next, the First Amendment prohibits any abridgement of freedom of speech, freedom of the press, and the right to assemble peacefully, and to petition Congress.

These are absolute and unqualified limitations upon the law-making power. Usually we regard them as protections for personal liberties of individuals. They certainly are that. But the reports of the historical debates suggest that this was not their primary purpose.

The primary purpose, rather, was to make certain that the full flow of information and debate would be brought to bear upon the development of public policy. The Founding Fathers were familiar with the evils that a state church created for the whole society. Beyond that, free speech, free press, free and peaceful assembly, with the right to petition, were considered essential to the avoidance of error in decision-making as much as to the maintenance of individual rights. To the framers of the Constitution, and the Bill of Rights that followed soon after, dissent was more a necessity of sound government than a privilege for the individual.

A good example of this is the removal of censorship in Czechoslovakia and the reaction of the Soviet Union. It was not the personal liberty available to the Czech people that so frightened the Communist leaders of Poland, East Germany, and the Soviet Union; it was the fear that the absence of censorship might endanger the Communist system.

The holding of decision-making in the hands of a few who are protected from criticism and debate is the only way that Communism can perpetuate itself. So let us not forget that bound up in the question of dissent in our own country is the whole spectrum of expression, argument, debate, and discussion that makes the difference between government by fiat of the few, on the one hand, with their susceptibility to error, and on the other hand, bringing the whole wisdom of the people to bear upon all public issues.

It has been my experience in public life, too, that the errors the United States has fallen into, have usually been mistakes embarked upon by the judgment of the few, rather than by the debate and discussion of the many. The Vietnam War and the Tonkin Gulf Resolution are good examples. Under the Tonkin Gulf Resolution, half a million Americans have been sent to Southeast Asia. The measure had only perfunctory debate. It had only a few hours of private hearings, at which the Secretary of Defense, the Secretary of State, and some Pentagon generals testified. On their say-so that the enactment of the Resolution would forestall further armed engagements, the Resolution was promptly passed.

Three years later, we found that the exact circumstances of the whole Naval encounter in the Tonkin Gulf were different from those which the Congress had been led to believe in 1964. But the Congress acted within the span of three or four days to endorse whatever unspecified military action the Executive Branch might want to take anywhere in that part of the world.

Only two of us in the entire Congress—Senator Gruening of Alaska and I—voted against the Tonkin Bay Resolution. I was satisfied then, and said so in my Senate speeches against the Resolution, that the United States was a provocateur in Tonkin Bay. If the spokesmen for the Administration had told the Congress five percent of the truth concerning the United States acts of provocation and constructive aggression in connection with the Tonkin Bay Incidents, the Resolution would never have passed the Congress. History will record that the Johnson Administration resorted in a shocking degree to government by secrecy in denying

to the American people and their Congress a full, public disclosure of the public's business in respect to the truth about the events that led up to the Administration's calling for a quick passage of the cover-up Tonkin Bay Resolution.

In fact, the massive escalation of the War on both sides which immediately followed the passage of the Tonkin Bay Resolution raised doubts and suspicions across America concerning the legality, morality, and justifiability of our military-containment policy in Southeast Asia. Dissent against the War spread across the nation and opened wide chasms of disunity in American public opinion. "Truth will out," and it percolated through public opinion creating widespread resentment over the increasing casualties on both sides of an unjustifiable war.

We should have recognized that the Tonkin Bay Resolution would only be productive of war. We had a form of national unity resolution in the case of Mexico; it, too, authorized the President to take certain military action that was supposed to frighten off Mexico. But it did not. It led straight to war. And the historians are still writing their condemnation of us for that war. People are inclined to forget, so some of us have had to refresh their memories, as we have discussed the Mexican War in connection with the Vietnamese War. There was opposition to the Mexican War by a dissenter of his day, a man named Abraham Lincoln, a Congressman from Illinois, who forthrightly and courageously spoke out about the illegality of the Mexican War, about the immorality of the Mexican War, about the lack of justification for involving the American people in the Mexican War.

That great speech of Abraham Lincoln in the House of Representatives stands as one of his many deserved monuments in the history of the Republic.

From Lincoln's letters explaining why he voted against the Resolution authorizing President Polk to take preventive military action against Mexico, I take this quote:

"Allow the President to invade a neighboring nation whenever he shall deem it necessary to repel invasion, and you allow him to do so, *whenever he may choose to say* he deems it necessary for such purpose—and you allow him to make war at pleasure. Study to see if you can fix *any limit* to his power in this respect, after you have given him so much as you propose.

"The provision of the Constitution giving this warmaking power to Congress, was dictated, as I understand it by the following reasons. Kings had always been involving and impoverishing their people in wars, pretending generally, if not always, that the good of the people was the object. This our convention undertook to be the most oppressive of all kingly oppressions; and they resolved to so frame the Constitution that *no one man* should hold the power of bringing this oppression upon us."

Lincoln's statements against the Polk Mexican War Resolution are equally applicable to the Johnson Tonkin Bay Vietnam War Resolution.

In 1968, the President who embarked on the Tonkin Bay policy without benefit of either Congressional or public debate based upon full information, declined to seek reelection. The dissent that should have been heard at the time the Resolution was pending before the Congress eventually rendered campus and public meetings of all kinds into critical anti-war protests. Much of the ugly, unruly, and frequently illegal nature of the dissent against the war must be attributed to the short-circuiting of dissent in the first place.

By dissent, I should make clear, I mean the whole spectrum of debate, as it is through debate that disagreements and even clashes of conflicting viewpoints can bring about a sound policy able to gain majority support. I saw this occur many times when I was in the Senate.

To the extent that dissent today is centered around the Vietnam War, around racial injustice, and in general opposition to repressive standards of society, the dissent is still largely from young people, but it is far from being limited to them.

The disruption of college campuses, the invasion of buildings, and the interference with the rights and movements of others have taken some of these young people, and others, far beyond legitimate dissent. Resort to violence has no place in a country where free speech is protected both in theory and in practice. To the extent that groups or individuals resort to violence to impose their minority opinion upon the majority, they are subject to the full penalties of the law, and they should expect to be held accountable, if government by law is to prevail.

Without government by constitutional checks and balances the legal rights, freedoms, and personal liberties of both the dissenters and those dissented against go down the drain of Anarchy.

The attitude toward the War that inspires a few to commit acts of violence or physical trespass against the activities of others, also permeates the thinking of many dissenters who do not resort to violence. The political phenomenon of 1968 was the attraction by Senator Gene McCarthy of thousands of young people into political action on his behalf. They accomplished more than they yet know.

But how astonishing it is to hear many of them talk about "dropping out" of political activity because they did not prevail the first time out. Many of those who felt called upon to retire from the burdens of citizenship after the Chicago convention had not even cast their first ballot!

The ideals that most of these activists on our campuses espouse are those of political honesty, a fair shake for the underdog, and inspiring national leadership that stirs the best instincts of Americans. All these ideals call for fighters, for they cannot be won easily, nor achieved in weeks or months. Most will take many years.

This is not because of any organized conspiracy against young people. It is, rather, a reflection of the purpose of the Bill of Rights. It does not intend that a group of college students either, should impose their will upon others without need to explain and win acceptance of their ideas.

Those who want to make their voices heard in the determination of public policy must have staying power. They must accept the challenge of the Bill of Rights to discuss, argue, and take full part in the political processes until they convince a majority they are right. They have no more right to short-circuit this process than does government have the right to short-circuit their full participation.

Professor Henry Steele Commager, of Amherst, stated the case very well for the necessity of dissent within our constitutional system of government when he wrote in the Saturday Review issue of December 18, 1965:

"The point is that when a nation silences criticism and dissent, it deprives itself of the power to correct its errors. . . .

"It cannot be too often repeated that the justification and the purpose of freedom of speech is not to indulge those who want to speak their minds. *It is to prevent error and discover truth.* There may be other ways of detecting error and discovering truth than that of free discussion, but so far we have not found them."

It is this means of discovering truth that is supposed to distinguish us from all totalitarian forms of government, including Communist forms. To the charge that dissent misleads an enemy into thinking we may abandon a policy, Mr. Commager replies:

"If government, or those in positions of power and authority, can silence criticism by the argument that such criticism might be misunderstood somewhere, then there is an end to all criticism, and perhaps an end to our kind of political system. For men in authority will always think that criticism of their policies is dangerous. They will always equate their policies with patriotism, and find criticism subversive.

"And as for the argument that criticism may give aid and comfort to some enemy, that is a form of blackmail unworthy of those who profess it. If it is to be accepted, we have an end to genuine discussion of foreign policies, for it will inevitably be invoked to stop debate and criticism whenever that debate gets acrimonious or the criticism cuts too close to the bone. And to the fevered mind of the FBI, the CIA, and some Senators, criticism always gives aid and comfort to the enemy or cuts too close to the bone."

Justice Robert Jackson, speaking for the Supreme Court in the case of West Virginia vs. Barnett went to the heart of the meaning of dissent under our constitutional system when he wrote:

"Freedom to differ is not limited to things that do not matter much. That would be the mere shadow of freedom. The test of its substance is the right to differ as to things that touch the heart of the existing order."

There is a great need for increased dissent against the fast-developing government by executive supremacy and secrecy in our nation. The constitutional right to dissent guaranteed by the First Amendment to the Constitution is one of the checks against the development of police-state tactics.

Government by executive supremacy and secrecy throughout history have spelled out the denial or loss of individual freedom and liberties under law. It makes no difference, as far as protecting human rights is concerned, if government by executive supremacy and secrecy takes the form of some brand of Communism, Fascism, Absolute Monarchy, Military Junta Dictatorships, or the semantic trappings of an alleged Democracy with a subservient legislature and judiciary, and an unchecked presidency. Tragic examples of mockery governments that pretend to be democratic exist in too many places in the world. Unfortunately many of them are buttressed by American military and foreign aid, and sometimes by American troops.

Our Dr. Jekyll and Mr. Hyde foreign policy has not gone unnoticed by other nations in the world which exhibit a growing disenchantment with the incompatibility of our professings with our practices in respect to the inherent right of a people to determine for themselves the form of their government without intervention by the United States in support of dictatorships of varying degrees.

It is charged that too frequently, when the chips of freedom are down in countries where the people are struggling against the imposition of a government of executive supremacy, the United States walks out on freedom and supports military dictatorship. Such has been our policy too often in Latin America.

Not so many years ago we walked out on freedom in Cuba and supported a ruthless, fascist dictator—Batista. His misrule brought his overthrow by a Communist dictator—Castro. In times past we have walked out on freedom in Nicaragua, Ecuador, Guatemala, Peru, and more recently, in the Dominican Republic, Argentina, and Brazil. Is there any wonder that the President's emissary to Latin America is not having his pathway strewn with flowers of welcome? Could it be that flowers are a symbol of peace and not of military intervention and economic exploitation?

The world takes note that in Vietnam we support mockers of freedom who serve as Quisling military dictators hiding behind a facade of democratic labels. It is tragic that American men are being sacrificed to main-

tain them in power. It is tragic that we support the corruption of Thieu and Ky. It is tragic that American military commanders are permitted to sacrifice lives on Khesanh and Hamburger Hill in the name of military strategy and then shortly thereafter withdraw from the very same heights because they never were of strategic importance.

How much longer are the American people going to stand by and permit the White House, State Department, Pentagon Building, yes, and the Congress to continue authorizing the senseless slaughter of American boys in Vietnam through stepped-up escalation of the War.

How much longer are the American people going to stand by and permit our government to maintain 50,000 soldiers in South Korea and, in addition, pour millions of dollars of economic and military aid into South Korea while its non-democratic President Park seeks to join with the Thieu-Ky police state in Vietnam and the Chiang Kai-shek totalitarian regime in Taiwan, in laying down terms which they insist we must agree to, before we may negotiate a settlement with North Vietnam which would permit us to wtihdraw our troops.

It is in the field of foreign policy that the morality of our nation is being questioned around the world and with much justification. We have become a militaristic nation. No other nation comes anywhere near approaching us in maintaining military forces abroad, no other nation compares with us in conducting military interventions beyond its perimeter of national defense and security.

We have not kept faith with the ideal that we have taught to our young for decades; namely, that we seek to substitute the rule of law for the jungle law of military might, as a means of settling threats to the peace of the world.

The initiation in 1953 of the Eisenhower-Nixon-Dulles military-containment policy in Asia scuttled that ideal. This policy has lead us rapidly into constructing an American military lifeline around the world to replace the shattered and destroyed British lifeline. The British Empire before its fall was a diplomatic and economic empire maintained by military power. It fell.

We are supplanting it with an American military empire and it too, in its time, is destined to fall because it is morally insupportable. War and the threat of war will be the inevitable products of the Eisenhower-Nixon-Dulles military-containment policy.

Dulles's threats of massive retaliation including nuclear threats—his pactmania resulting in 42 security pacts with 42 nations pledging the lives of American soldiers to defend foreign governments, many of questionable reliability and desirability—his obsession that the U.S. has the right and duty to militarily oppose any threatened spread of Communism—were all sanctioned by the Eisenhower-Nixon Administration. This unilateral U.S. military-containment policy has created a serious moral crisis in American foreign policy and has produced great disunity throughout our nation. It is rapidly becoming recognized that our national disunity will continue to worsen until our government stops slaughtering American boys in Asia and restrains our military-industrial complex from escalating a nuclear armament race that, if not stopped, will lead us eventually to a nuclear holocaust from which no nation will survive as a victor, if, indeed, any survives at all.

To show how militaristic we have become, I would point out that in implementing the 42 security treaties, which the Eisenhower-Nixon-Dulles Administration negotiated, we have arranged to have military installations all over the world, totalling 429 major bases and 2,972 minor ones. This is a total of 3,401 installations in 30 different countries. They are manned by one million military men at a cost of 4 to 5 billion dollars a year. We are in the process of adding to the preparedness for instant defense of anyone, anywhere in the world, by creating a "fast deployment fleet" which will deploy permanent, floating war bases in several oceans, carrying the equipment for immediate landing of American Battalions. The present Administration's attempt to justify a scientifically unsound ABM system by playing upon the fears of our people is but a proposal to escalate the nuclear armament race.

This burgeoning American military might around the world raises basic moral issues that the American people cannot and must not ignore. War will never again be the road to peace. War will only lead to more war.

Modern war destroys a nation's morality. More and more disclosures by scientists are coming to light concerning the shocking consequences of some of our military policies in the conducting of the Vietnam War. Our scorched-earth bombing, the brutalities of our napalm bombing, our use of chemicals, not only to defoliate jungle areas but to destroy food crops as well, our indiscriminate bombing resulting in the killing of many thousands of civilians, are all adding to the moral crisis in our foreign policy. We are being bombarded with criticisms from around the world, questioning our moral standards, or lack of them.

We have spawned in this country, without knowing it, a vast and extensive complex of civilian bureaucrats, military officers, scientific engineering and business concerns for whom war preparation in general and the Vietnam War in particular are a normal way of life. It maintains them in power and blood-money profits.

They now manage and spend $80 billion a year of public money on our military-industrial complex.

Listen to General Shoup, the former Commandant of the U.S. Marines discuss these problems:

"Now, however, we have numerous contingency plans involving large joint Airforce-Army-Navy-Marine task forces to defend U.S. interests and to safeguard our Allies wherever and whenever we suspect Communist aggression. We maintain more that 1,517,000 Americans in uniform overseas in 119 countries. We have eight treaties to help defend 48 nations if they ask us to—or if we choose to intervene in their affairs. We have an immense and expensive military establishment, fueled by a gigantic defense industry, and millions of proud, patriotic and frequently bellicose and militaristic citizens. How did this militarist culture evolve? How did this militarism steer us into the tragic military and political morass of Vietnam?"

General Shoup continued in his recent Atlantic Monthly article to state:

"The punitive air strikes immediately following the Tonkin Gulf incident in late 1964 revealed the readiness of Naval Air-Forces to bomb North Vietnam. (It now appears that the Navy actually had attack plans ready even before the alleged incident took place.) So by early 1965, the Navy carrier people and the Airforce initiated a contest of comparative strikes, sorties, tonnage dropped, 'Killed by air' claims and target grabbing which continued up to the 1968 bombing pause.

"Much of the reporting on air action has consisted of misleading data or propaganda to serve Airforce and Navy purposes. In fact, it became increasingly apparent that the U.S. bombing effort in both North and South Vietnam has been one of the most wasteful and expensive hoaxes ever to be put over on the American people."

General Shoup continues:

"For years up to 1964, the chiefs of the armed services, of whom the author was then one, deemed it unncessary and unwise for U.S. forces to become involved in any ground war in Southeast Asia.

"In 1964, there were changes in the composition of the joint chiefs of staff, and in a matter of few months the Johnson Administration, encouraged by the agrressive military, hastened into what has become the quagmire of Vietnam."

General Shoup then makes this comment:

"Actually, however, the military commanders have directed the war in Vietnam; they have managed the details of its conduct. It has been popular to blame the civilian administration for the conduct and failures of the war rather than to question the motives of the military. But some of the generals and admirals are by no means without responsibility for the Vietnam miscalculations.

"Militarism in America is in full bloom and promises a future of vigorus self-pollination—unless the blight of Vietnam reveals that militarism is more a poisonous weed than a glorious blossom."

If we are to meet the moral challenges of a foreign policy dedicated to making peace rather than continuing war making and risking starting new wars we must return to constitutionalism in foreign policy and restrict the use of military power. This course of action is in the interest of both our people and our government. It should be sought at once. Growing dissent is demanding it. Moral values cry out for it.

Now is the time to bring the American military under the control and checks of our constitutional system based upon government by law rather than by the exercise of arbitrary power by presidents, secretaries of state and defense, joint chiefs of staff, CIA, Formosa and Tonkin Bay Resolutions.

Now is the time for the American people to demand a foreign policy that commits us to a military withdrawal from Asia and elsewhere in the world where we are maintaining a unilateral military posture of dominance.

Now is the time for us to return to the foreign policy role of offering to abide by the binding jurisdiction of adjudication through multilateral negotiations of threats to the peace of the world conducted under the aegis of international tribunals and treaties;—such as the United Nations.

Yes, now is the time for us to practice our professed ideals of substitution of the rules of law of the United Nations Treaty for the jungle law of military might as we have come to practice it in Vietnam, and threaten to practice it elsewhere in Asia.

Unless the killing of American men in Southeast Asia is stopped quickly, domestic disunity is certain to increase because a foreign policy that conscripts our youth into military fodder to be consumed in an immoral and unjustifiable war will be repudiated by our people. It is being repudiated by thousands of our citizens, and it should be.

I wish to say to each member of this graduating class that irrespective of whether you agree with specific manifestations of dissent, lawfully expressed, never forget that the Constitutional right to dissent is one of the basic guarantees of personal freedom which we inherited from the statesmanship of the framers of the Constitution. It is in times of crisis, such as now, involving our nation's foreign and domestic policies that the citizen-statesmanship obligations of each one of us demands that we help keep inviolate the constitutional right to dissent. Unless we all live up to that obligation we will enhance the danger that government by the arbitrary, capricious, unchecked discretion of mere men will be permitted by an apathetic or acquiescent public to supplant the guarantees of the Bill of Rights. Among those guarantees is the right to lawfully dissent, demonstrate, and petition in opposition to policies of our government which dissenters believe should be stopped or modified.

The history of dissent in our country is replete with examples of demands for changes in government policy by the public after

dissenters had persuaded the majority that their case on the merits was, in fact, in the public interest. The mounting dissent since the Tonkin Bay Resolution—in opposition to our military intervention in Vietnam—in opposition to our military containment policy in Asia—in opposition to our escalating the armament race—in opposition to our failure here at home to feed the hungry, house the poor, employ the jobless, doctor the sick, face up to racism, provide adequate educational opportunities for all the young in the ghettos and poverty areas without discrimination—dissent mounting to a crescendo has already produced many changes in our government's foreign and domestic policies. Many more changes must come about if unity is to be restored in America.

Sincere, honest, factual dissent, conducted within our constitutional framework of self-government, must continue to be used as an effective check against government officials and policies which seek to resort to repressive tactics against the exercise of dissent.

TO ARM THE ARVN: $6.2 BILLION

Mr. SYMINGTON. Mr. President, an article in the Armed Forces Journal of June 21, "To Arm the ARVN: $6.2 Billion," which consists primarily of a colloquy between Senator ROBERT BYRD and the Deputy Chief of Staff, Logistics, is indeed interesting.

A few years ago, when considering our growing economic problems, I used to say, "There does not appear to be any problem with respect to our foreign commitments that another billion dollars cannot help solve."

Perhaps that should be changed to "There does not appear to be any problem with respect to our foreign commitments that another $6.2 billion cannot help solve."

I ask unanimous consent that the article in question be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

TO ARM THE ARVN: $6.2 BILLION

The total estimated cost of the Defense Department's program to modernize the South Vietnamese Army is $6.2-billion, the Army has disclosed.

MGen Henry A. Miley, jr, Army's Deputy Chief of Staff Logistics, presented the program's total cost at a Senate Appropriations Committee hearing on Fiscal Year 1969 supplemental appropriations. The Army is requesting supplemental appropriations for FY '69 in the amount of $246.4-million for the modernization program.

The Army's modernization schedule calls for $323-million worth of equipment and ammunition to be delivered to the South Vietnamese Army in the balance of FY '69, and $814-million worth to be delivered in FY '70.

The modernization program began in March 1967, with a decision to provide the South Vietnamese Armed Forces with M–16 rifles. The broader program was approved six months later.

Here are the details of the modernization program, as spelled out in an exchange between General Miley and Senator Robert C. Byrd (D–WVa) in the recently released Senate Appropriations Committee testimony:

"SOUTH VIETNAM ARMY MODERNIZATION

"Senator BYRD. How much of this request is directly related to the program to modernize the South Vietnamese Army?

"General MILEY. The answer is $246.4-million.

"Senator BYRD. I assume that the present program to modernize the South Vietnamese Army began with the decision to provide them with the M–16 rifle. Is this correct?

"General MILEY. It is correct that the decision to provide the Vietnamese Armed Forces with the M–16 rifle was the first step in modernizing those forces, but that decision was made in March 1967, based primarily on the characteristics of the rifle. The broader ARVN modernization and improvement program was approved about six months later.

"Senator BYRD. What is the total estimated cost of the program to modernize the South Vietnamese Army, how much has been provided to date, and what is the schedule by fiscal year to complete this program?

"General MILEY. The total cost of the program, considering all appropriations, to improve and modernize the Vietnamese Army is about $6.2-billion. This includes equipment, consumables and ammunition. It is subject to adjustment as requirements continue to be refined and as the pace of combat is changed by future events.

"The PEMA portion of these costs is estimated at $4.4-billion, $3.7- of which is for ammunition.

"Our records indicate that as of the present, equipment valued at approximately $400 million and ammunition worth $370-million have been delivered.

"The current schedule calls for deliveries of equipment and ammunition by fiscal year as set forth below:

	Millions
Balance of fiscal year 1969	$323
Fiscal year 1970	814
Fiscal year 1971	[Deleted]
Fiscal year 1972–74	[Deleted]

"Senator BYRD. Who has the responsibility to determine just what type of equipment is to be provided?

"General MILEY. The commander of the U.S. Military Assistance Command, Vietnam is responsible for developing and approving the authorization documents which specify the types of equipment required by the RVNAF. The Secretary of Defense, based upon recommendations of the JCS, approves the supply of items against the requirements in these documents.

"Senator BYRD. Provide for the record a detailed statement on this program, specifically discussing the types of equipment that are to be provided.

"General MILEY. The current plan for improvement and modernization of RVNAF has evolved in four stages, each culminating in a formal plan. The first plan was submitted in May 1968, shortly after initiation of the Paris talks." (Remainder classified.)

FORMER SENATOR PAUL H. DOUGLAS RECEIVES THE MURRAY-GREEN AWARD

Mr. WILLIAMS of New Jersey. Mr. President, at the 14th annual AFL–CIO community services conference, Paul H. Douglas, of Illinois, our friend and former colleague, was awarded that union's highest honor—the Murray-Green Award.

Paul H. Douglas' career as a soldier, teacher, U.S. Senator, statesman, and humanitarian is in the highest ideal of service to America. Paul Douglas is one of those rare men whose life embodies the whole spirit of a nation. A Maine farm boy, a professor and Ph. D., a novelist, a decorated marine, and a loved leader, Paul H. Douglas stands for the aspirations and the accomplishments of the men and women throughout our history who have made our Nation great. He holds countless degrees and has been active in many causes, but if I were asked what exactly Paul Douglas does, I must answer that he represents the conscience of America.

Whether leading a fight for tax reform, conservation, or civil rights, Senator Douglas has unequivocally demonstrated his integrity with and concern for the American people. Paul H. Douglas, of Illinois, wrote the first slum clearance and urban renewal legislation which became law in 1949.

He raised the minimum wage to $1 an hour, and wrote the Railway Retirement Act, thereby liberalizing benefits for railroad workers.

When other men spoke of equal opportunity in jobs, housing, education, and health care, Paul Douglas acted. He worked for the successful vote in the historic 89th Congress that led to the bold Housing and Urban Development Act of 1965, and also introduced for the administration the demonstration cities program. He led the fight for the 1957 Civil Rights Act, the first passed in 80 years, and sponsored the 1960 Civil Rights Act and later the 1964 act that integrated public accommodations. The aforementioned legislation is merely a small sampling of the results of a career marked by dignity and moved by the highest conviction.

Before coming to the Senate in 1949, Senator Douglas coauthored the Roosevelt administration's Social Security Act. Since that time, Paul Douglas has had the courage and perseverance to work for causes that take a long time to win. He worked for years on behalf of medicare, truth in lending, consumer protection, civil rights laws and Federal aid to education.

I feel that no better words can describe this unique man than those he spoke at the Amherst College commencement in 1966:

That what is most needed in the world is love—or energized good will—which, if given a chance and practiced with devotion can in most cases melt antagonisms within a democratic society and reconcile opposites.

* * * * *

That the Athenians did well to make the owl and olive tree their symbols to denote wisdom and peace. But freedom tempered with love is the only atmosphere in which true wisdom and peace can flourish. And to preserve and maintain all these virtues, a strong admixture of Spartan courage is needed. Thermopylae was necessary that Socrates might practice his dialectic.

With that special combination of love and courage, Paul H. Douglas, of Illinois, serves his world well.

Mr. President, I ask unanimous consent that an article from the Machinist and one from the AFL–CIO News describing the presentation of this award to Senator Douglas be reprinted in the RECORD at this time.

There being no objection, the articles were ordered to be printed in the RECORD as follows:

[From the Machinist, May 29, 1969]

MURRAY-GREEN AWARD GOES TO PAUL DOUGLAS

American trade unionists gave their highest award to former Sen. Paul Douglas of Illinois last week and the old fighter returned the compliment.

At the AFL–CIO's national conference on

community services in Washington, D.C., Douglas received the Murray-Green Award for a lifetime of striving for social and economic justice. Leo Perlis, AFL–CIO Community Services director, presided.

Making the presentation, Joseph A. Beirne, vice president of the AFL–CIO and president of the Communications Workers' Union, called Douglas "the catalyst whose foresight and courage turned so many of our ideals into reality."

Since long before he was summoned by President Roosevelt from the University of Chicago to draft the original Social Security Act, Beirne declared, Douglas has worked to improve the lives of all Americans.

In his 17 years in the Senate, Beirne continued, "COPE's official scoreboard shows Paul Douglas voted 76 times on the right side of the issue, zero times on the wrong side."

A long-time member of the Teachers' Union, Douglas gave the trade-union movement most of the credit for his achievements in public life.

"We could not have passed Medicare or put a floor under wages without your help. Most of the unions helped us in the long battle for civil rights. They were the backbone of our successful movement to pass Truth-in-Lending and aid for depressed areas. The political history of those two decades would have been far more arid without your help," he told the conference delegates.

Accepting the award in behalf of "the great mass of men and women who gave me their support," Douglas asked that the $5,000 award be divided among five organizations working in the public interest: The Joint Committee on Apprenticeship, the Consumers Federation of America, the Indiana Dunes National Lakeshore Trust Fund and the Hyde Park Neighborhood Club of Chicago.

[From the AFL–CIO News, May 31, 1969]

MURRAY-GREEN AWARD: LABOR'S TOP HONOR GIVEN SENATOR DOUGLAS

Former Sen. Paul H. Douglas (D-Ill.), whose dedication to liberal causes put him in the forefront of many of labor's battles, received the AFL–CIO's top honor, the Murray-Green Award, in ceremonies highlighting the 14th Annual AFL–CIO Community Services Conference.

Speaking of his 18 years in the Senate, Douglas told an audience of 800 at the award banquet:

"The efforts of the progressive bloc in behalf of the great mass of the American people would have been relatively ineffective if we had not had the American labor movement on our side. We could not have passed Medicare or put a floor under wages without your help."

He cited unions for their aid "in the long, continuing battle for civil rights" and said "they were the backbone of our successful movement to pass truth-in-lending and aid for depressed areas. The political history of those two decades would have been far more arid without your help."

The Murray-Green Award is given by the AFL–CIO in the name of the late William Green, who was president of the former AFL, and the late Philip Murray, who led the former CIO. In accepting the award, Douglas specified that the accompanying $5,000 be used "for purposes in the public interest."

The four recipients he designated are:

The Joint Committee on Apprenticeship, consisting of the representatives of the building trades unions and of Negro and other minority groups ($1,000).

The Hyde Park Neighborhood Club of Chicago ($1,000), ". . . one of the few communities that has been able to maintain racial integration over many years, instead of this being—as is so common—merely a fleeting transition between being a segregated white community to being a segregated black one."

The Indiana Dunes National Lakeshore Trust Fund ($2,000), to purchase recreational land.

The Consumers' Federation of America ($1,000), "to help provide expert representation for that numerous and long suffering body of citizens in their dealings with regulatory and public bodies . . ."

In presenting the award, AFL–CIO Vice Pres. Joseph A. Beirne cited Douglas's voting record, saying: "Certainly no man more nearly matches labor's own image . . . COPE's official score card shows Paul Douglas voted 76 times on the 'right' side of the issue—zero times on the wrong side."

Beirne, who is outgoing chairman of the AFL–CIO Community Services Committee, called Douglas "the catalyst whose foresight and courage turned so many of our ideals into reality." He listed many of the senator's achievements in the social welfare field from co-authoring the original social security law to introducing the first truth-in-lending bill in the Senate.

Federation Pres. George Meany, noting how parallel are the contributions and aims of Douglas and the AFL–CIO Community Services, called him "a rare public servant who gives complete adherence by his actions as well as his words to the principle of public service as a public trust."

Meany cited Douglas's record as "life-long champion of all that is human and compassionate" and noted that the senator's career has encompassed being "a teacher, a member of the trade union movement (still a member of the Teachers), an impartial arbitrator for the printing industry in his home city, member of the city council, a soldier with honors for heroic achievement in action and a United States senator for 18 years."

Douglas, recalling organized labor's long struggle against exploitative working conditions, Douglas said:

"Most of these abuses, and others as well, have now been cured, and cured primarily because of the activity of unions as well as the middle class of reformers. I am proud that I have been a member of my own union for nearly half a century, and I feel that it has greatly improved conditions in the teaching profession."

He observed that while the labor movement is not perfect and at times will make mistakes, "it is humane at heart, and we must see to it that this spirit continues to be dominant. The record is so good that we cannot permit it to be sullied by unworthy acts."

RAIL ACCIDENTS SOAR

Mr. HARTKE. Mr. President, today, the Wall Street Journal has published a front-page article on the increasing rate of railroad accidents.

Unless the industry and the Government make an immediate and drastic improvement in railroad safety, there will be many more front-page stories on railroad accidents.

I hope that it will not take a series of appalling railroad accidents to alert the Nation to this pressing problem.

As one railroad official states:

So far we've been lucky . . . one of these days we are going to wipe a whole town right off the map.

Already this year two towns—Laurel, Miss., and Crete, Nebr.—were almost wiped off the map. Let us take the necessary actions before a whole town is eliminated.

I ask unanimous consent that the article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

RAIL WRECKS: RAILROAD ACCIDENTS SOAR TO NEARLY 100 PER DAY, BUT BLAME IS IN DISPUTE—NEW GOVERNMENT REGULATION MAY RESULT—SPEEDS CUT—"SO FAR WE'VE BEEN LUCKY"—A STATIONARY ENGINE DERAILS

(By Todd E. Fandell)

CHICAGO.—"So far we've been lucky," says a top official of a Midwestern railroad. "One of these days we're going to wipe a whole town right off the map."

The man is talking about railroad accidents, and he isn't exaggerating. Already this year, Laurel, Miss., and Crete, Neb., were almost wiped off the map. In Laurel, a derailment resulted in explosions of tank cars that killed two people, hospitalized 33, demolished 54 homes and two factories and damaged 1,350 homes, four factories, six schools, five churches and 100 small businesses. Total damage was $3.5 million. In Crete, a derailment ruptured a tank car, which spread a deadly chemical mist over the town, killing nine persons and injuring 40.

Those figures are astonishing enough, but here are some more:

There now are around 30,000 railroad accidents a year—aproaching 100 a day. The number of accidents where damage to railroad property total $750 or more was 8,028 in 1968, up 83% from 4,378 in 1962, despite a decline in miles traveled.

There now are about 15 derailments a day, compared with nine in 1964.

Last year 2,359 persons were killed in railroad accidents and 24,608 were injured. In contrast, 351 persons died in airline accidents.

And in 1967, the latest year for which figures are available, accidents cost the nation's railroads $266.3 million in out-of-pocket expenses—a figure equal to more than half of the net income of all U.S. railroads that year.

SOME CAUSES

What's the matter? It depends on whom you talk to, but there apparently are several reasons for the rash of accidents. Negligence, faulty rolling stock and improper maintenance or defects in track are about equally to blame as the immediate causes of the accidents. But the underlying causes are in dispute or unknown.

"There is nothing being done in the way of research," says the president of one big road. He says he was appalled at the inadequacy of the answers he was given when he recently began a personal investigation into a costly rise in the number of derailments on his line. He says he would ask for the cause and be told it was a broken rail. But no one ever seemed to know how or why the rail broke. "To say the cause is a broken rail and drop it at that is ridiculous," he says. "But that's what we've been doing."

One reason rails are breaking is that roads are using bigger, longer, heavier and faster trains on the same old track and roadbeds. But why the tracks and roadbeds haven't been improved along with the rolling stock seems to be unanswerable. Unions blame the managements. The managements blame the unions and the Government. And the Government says it doesn't know who's at fault—but that somebody better do something quick to halt the rise in wrecks.

Indeed, mounting public concern is likely to prompt Congress to give the Department of Transportation broad powers to establish and enforce comprehensive safety regulations for the railroads, which are the only major mode of transportation not covered by copious safety rules.

SAFETY CANNOT BE LEGISLATED

Talk of such regulation doesn't sit well with railroad officials. "Safety can't be

legislated," asserts Thomas M. Goodfellow, president of the Association of American Railroads. Some railroad executives claim legislation would stifle their own efforts to solve the problems. Other railroad executives say that instead of legislating safety the Government should let the roads raise rates so they could afford to buy better equipment and make more frequent repairs. In support of this argument, they say that richer roads have better safety records than the poorer ones.

The richer roads do, in fact, have better safety records. The well-heeled Union Pacific, for instance, had 4.2 accidents per million miles traveled in 1967. The loss-ridden Missouri-Kansas-Texas Railroad had the worst record that year, 33.3 accidents per million miles. The Katy's track is so bad that a few years ago an engine derailed while standing still.

On the whole, claims Harold C. Crotty, president of the Brotherhood of Maintenance of Way Employees, "rail and tie replacement work has been neglected and, as a direct consequence, railway accidents caused by track and roadway defects have increased."

CUTTING TOP SPEED

Mr. Crotty says that a decline in maintenance of way workers to 88,000 from 251,000 in 1951 reflects a decline in inspection and maintenance standards. The roads reply that the drop in maintenance workers instead reflects improved work methods, materials and mechanization. And some road executives say they could afford to hire more maintenance workers were it not for union "featherbedding" practices in other areas that eat up railroad money.

Wherever the blame rests, a number of roads are taking steps to cut down the accident rates. Some have ordered lower maximum speeds for freight trains. The Soo Line, for instance, has trimmed its freights' maximum speed to 40 miles an hour from 60. "It was one of a number of steps we took to do something short range about the accident problem while we stepped up study efforts to discover causes and long-term solutions," says a spokesman. A large Western road has cut its top speed to 50 from 70 miles an hour.

The cutting of speeds hasn't been publicized, and most industry officials don't like to talk about it. "That's rather embarrassing and sure won't help us in Washington," says one official, who fears legislators will interpret the moves as admission of unsafe conditions.

NATIONAL COMMITMENTS

Mr. FULBRIGHT. Mr. President, I wish to make some additional comments in connection with the consideration of Senate Resolution 85, which was approved last night by the Senate.

These statements provide additional information of the extent to which we have gone in making military and financial commitments without the approval of of Congress.

To illustrate the fundamental proposition of the national commitments resolution; namely, redressing the constitutional imbalance that has developed, I have indulged in a little experiment. I have selected certain of the executive acts that have concerned me and juxtaposed the kind of congressional requests for action that were received or considered at about the same time as the executive action. This illustrates, in the most absurd light, the state to which Congress or the Senate has fallen.

To further demonstrate that this is not a partisan inclination on the part of the Executive, I have taken samples from each administration, beginning with President Roosevelt. I ask unanimous consent that they be printed at this point in the RECORD.

There being no objection, the samples were ordered to be printed in the RECORD, as follows:

EXECUTIVE	LEGISLATIVE
September 1940 (Roosevelt)	
By Executive agreement, Roosevelt exchanged overage American destroyers for British bases in the Western Hemisphere.	Senate was asked to approve 4 treaties of which 3 defined the application of a U.S.-U.K. treaty to Canada, Australia and New Zealand, and one was an Inter-American "Convention on the Provisional Administration of European Colonies and Possessions in the Americas."
May 1950 (Truman)	
In the tripartite declaration regarding the Middle East, the U.S., U.K., France declared that they "would immediately take action, both within and outside the United Nations, to prevent such violation" [of frontiers or armistice lines].	The Senate received draft bills (1) to authorize certain persons to wear decorations; (2) to provide for the education of dependent minor children of military and civilian personel stationed overseas.
May 1958 (Eisenhower)	
The North American Air Defense Command Agreement was effected by an exchange of notes "delegating to an integrated headquarters the task of exercising operational control over combat units of the national forces made available for the air defense of the two countries."	Not a single Executive request for Congressional action in the foreign policy field was received.
June 1958 (Eisenhower)	
President Eisenhower made clear that in accordance with the Mutual Defense Treaty with the Philippines and the deployments of troops resulting from it, an armed attack against the Philippines would involve an attack against U.S. forces stationed there and against the United States and would instantly be repelled.	The Administration submitted draft legislation to amend the Foreign Service Act of 1946.
March 1962 (Kennedy)	
Rusk assured Thai Foreign Minister Khoman of "the firm intention of the United States to aid Thailand, . . . in resisting Communist aggression."	The Senate approved amendments to the Statute of the International Atomic Energy Agency enlarging its Board of Governors.
May 1963 (Kennedy)	
President Kennedy, in a press conference stated, with reference to the Middle East, "we would support appropriate measures in the United Nations, adopt other courses of action of our own to prevent or to put a stop to such aggression, which, of course, has been the policy which the United States has followed for some time."	The Senate was asked to approve agreements (1) for the maintenance of certain lights in the Red Sea; (2) for the exchange of official publications; and (3) on Diplomatic Relations (Vienna Convention).
September 1963 (Kennedy)	
The U.S.-Spanish Base agreement was renewed, declaring that "a threat to either country, and to the joint facilities . . . would be a matter of common concern . . . and each country would take such action as it may consider appropriate within the framework of its constitutional processes."	The Committee on Foreign Relations acted on amendments to the Convention on International Civil Aviation, which concerned the procedure for calling extraordinary conferences.
April 1965 (Johnson)	
President Johnson sent American armed forces to the Dominican Republic.	Two treaties were sent up to the Senate: (1) amendments to the United Nations Charter, enlarging the Security and Economic and Social Councils; and (2) extension of the International Wheat Agreement framework for 1 year.
February 1966 (Johnson)	
Humphrey, in Bangkok, declared that the United States would provide all necessary assistance to enable Thailand and the other countries of Southeast Asia threatened by Communist aggression to defend themselves. Humphrey, in Korea, declared: "As long as there is one American soldier on the line of the border . . . the whole and the entire power of the United States of America is committed to the security and defense of Korea."	The Senate was asked to ratify Convention on the Settlement of Investment Disputes. (Non-controversial, it was approved 72–0 in May.)

EXECUTIVE	LEGISLATIVE
August 1966 (Johnson) Dean Rusk declared: "No would-be aggressor should suppose that the absence of a defense treaty, congressional declaration, or U.S. military presence grants immunity to aggression."	The Senate was asked to approve the Convention on Facilitation of International Maritime Traffic and to enact bills (1) authorizing certain Foreign Service and State Department officers to administer oaths; and (2) authorizing certain persons to wear decorations.
July 1967 (Johnson) Administration announced the dispatch of three C–130 Hercules military transport planes to "provide long-range logistic support for the Congolese Government in meeting the mercenary-led rebellion."	The Administration requested Senate advice and consent to amendments to the Convention of Intergovernmental Maritime Consultative Organization enlarging its executive organ and submitted a bill to authorize retirement credit for certain alien employees of the Foreign Service.

Mr. FULBRIGHT. Mr. President, since World War II, we have entered into the following treaties which commit the United States to send armed forces to defend 43 countries in various areas of the world: 1947, Inter-American treaty of reciprocal assistance with 21 other American Republics—Rio Treaty; 1949, North Atlantic Treaty with 14 other governments; 1951, security treaty with Japan—superseded by new treaty in 1960; 1951, security treaty with Australia and New Zealand; 1951, mutual defense treaty with the Philippines; 1953, mutual defense treaty with Korea; 1954, Southeast Asia collective defense treaty with seven governments; and 1954, mutual defense treaty with Republic of China.

In addition to the above defense treaties, the United States, although not a member, joined in a declaration with members of the Baghdad Pact—CENTO—agreeing to cooperate with members for their security and defense and to enter into agreements with the members "designed to give effect to this cooperation."

According to a letter dated August 15, 1967, the Department of State interprets U.S. obligations under our defense treaties to be individual rather than collective. That letter states:

Under each of our multilateral treaties, the commitment to extend assistance in the event of an armed attack is individual and requires no collective finding or decision by a multilateral organization. The Rio Treaty provides that in the event of an armed attack against an American state *"each one* of the said Contracting Parties undertakes to assist in meeting the attack" (Art. 3(1), emphasis added). The Treaty goes on to provide that *"each* one of the Contracting Parties may determine the immediate measures which it may *individually* take" (Art. 3(2), emphasis added). In the North Atlantic Treaty, *"each"* of the signatories "in the exercise of the right of individual or collective self-defense recognized by Article 51 of the Charter of the United Nations, will assist the party or parties attacked by taking forthwith, *individually* and in concert with the other parties, such action . . ." (Art. 5, emphasis added). In the Southeast Asia Collective Defense Treaty and in the Anzus Security Treaty "each party" agrees that "it" will act to meet the common danger (Art. IV in both). The same is true of the bilateral treaties with the Philippines, Korea, Republic of China and Japan. Thus, under each of these treaties there is an individual obligation independent of any collective action.

With regard to actions taken in response to attack by subversion, the Department of State says:

The question posed in your letter of August 1 is asked also in regard to actions taken in response to attack by subversion. All of our defense treaties call for consultation in the event of a threat other than armed attack—such as externally supported subversion. Article 6 of the Rio Treaty provides for a meeting of the Organ of Consultation "if the inviolability or integrity of the territory or the sovereignty or political independence of any American State should be affected by an aggression which is not an armed attack . . . or by any other fact, or situation that might endanger the peace of America." The Organ of Consultation can determine "the measures which must be taken . . . to assist the victim of the aggression or, in any case, the measures which should be taken for the common defense and for the maintenance of the peace and security of the continent." Article 4 of the NATO Treaty provides that "[t]he Parties will consult together whenever in the opinion of any of them, the territorial integrity, political independence or security of any of the Parties is threatened." Substantially similar language exists in the Anzus and SEATO Treaties (Arts. III and IV(2), respectively). Thus, when the threat takes the form of subversion rather than armed attack, each multilateral treaty calls for consultation. No individual obligation of unilateral action is imposed. The same is true by virtue of similar language under the bilateral treaties with the Philippines and Korea. Under the Japanese treaty consultation is called for "whenever the security of Japan or international peace and security in the Far East is threatened."

Not only has the United States committed itself to come to the defense of our treaty partners, apparently we have also assumed the obligation of insuring their military and economic stability. By way of illustration, since World War II, the United States has furnished the 43 countries we are committed to defend over $90 billion in economic and military assistance. A breakdown of this assistance by treaty area and country is attached.

Moreover, the United States has a worldwide network of military assistance agreements and military bases and training missions both within and without the framework of our defense treaties. The report of the Congressional Conference on the Military Budget and National Priorities, which was issued on June 1, 1969, had this to say about U.S. bases overseas:

The United States now has military installations around the world, including 429 major and 2,972 minor overseas military bases staffed by a million men. These cost us billions of dollars, disturb our international balance of payments, and create implicit commitments to the countries involved which return to haunt us when crises erupt. And yet most of these bases are maintained simply because they were set up long ago, not because a public evaluation of our national objectives indicates they are needed.

Congress should be asking why such bases should be established and what national commitments are involved in their maintenance. Such basic decisions are now made by the Executive Branch in a context which minimizes debate, avoids consideration of the costs as well as the benefits, and often does not even bring before Congress or the American people the fundamental decisions at the time they are made.

* * * * *

Many of our overseas installations were originally created to serve military needs that no longer exist. But the Defense Department has developed new rationalizations for keeping these bases—particularly the desire to maintain a U.S. military presence as a base for political influence. Recognizing the drive among the peoples of these countries for national independence and greater democracy, we do not want our primary relationship defined by military bases or advisory missions. Our interests would often be better served if the bases and the military advisors were gone.

In fiscal year 1969, Defense Department appropriations to carry out our treaty obligations in Southeast Asia and the Far East amounted to approximately $35 billion. This figure includes costs for maintaining troops in such places as Japan, 40,000; Korea, 55,000; Okinawa, 40,000; Thailand, 40,000; and the Philippines, 25,000. In addition, it is estimated that the annual cost for carrying out our NATO commitments is approximately $12 to $14 billion. It is safe to say, therefore, that well over half of the present Defense Department budget is directly related to carrying out obligations which we assumed pursuant to defense treaties concluded between 1947 and 1954, 15 or 20 years ago.

Obviously, since that time, the world situation has changed drastically and many of the reasons advanced for entering into these treaties are no longer valid. Such being the case, the time is appropriate for Congress to reexamine the validity for continuing U.S. participation in these agreements. This is in keeping with Secretary Rogers' statement when he appeared before the Committee on Foreign Relations on March 27, 1969. At that time he said:

It is clear that our involvements need constantly to be reviewed in the light of current conditions and the availability of our resources.

I ask unanimous consent to have printed in the RECORD a statement on U.S. overseas grants and loans through 1968.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

U.S. OVERSEAS GRANTS AND LOANS, FROM 1946 THROUGH 1968

[In millions of dollars]

Treaty	Economic	Military	Total
Inter-American	$11,239.6	$1,147.2	$12,386.8
NATO	27,940.5	18,760.2	46,879.0
SEATO	20,557.0	[1] 12,716.6	26,749.5
Australia and New Zealand	169.2	576.5	745.7
Republic of China	2,291.1	2,796.3	5,087.4
Japan	3,076.5	1,065.5	4,141.5
Korea	4,630.6	2,825.3	7,455.9
Philippines	1,487.3	535.9	2,023.2
Total	56,635.8	[1] 33,218.6	[2] 89,854.4

[1] Does not include the total amount of military assistance furnished to Pakistan and Laos. This is classified.

[2] This figure takes into consideration fact that certain countries are members of more than one defense treaty.

THE PESTICIDE PERIL—XXI

Mr. NELSON. Mr. President, according to this morning's New York Times, the cause of the death of millions of fish in a 200-mile stretch of the Rhine River has been confirmed as the insecticide endosulfan.

Dutch scientists had earlier identified the insecticide as the source of the contamination and German analysts have confirmed its presence in the dead fish they examined.

Endosulfan is used to dust fruit trees and vineyards. It is suspected that the area near St. Goar on the Rhine was dusted last week and that some of the insecticide drifted into the river.

I ask unanimous consent that the article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the New York Times, June 26, 1969]

SOURCE OF FISH POISONING IN RHINE IDENTIFIED AS INSECTICIDE

(By David Binder)

BONN, June 25.—A poisonous wave of insecticide washed out of West German waters today after killing millions of Rhine River fish and some ducks during the last six days. It is still lingering in the Netherlands, where about 100 tons of dead fish have washed up.

The source of the poison was identified by Dutch chemists last night as an insecticide called endosulfan and marketed as Thiodan (it is a sulphurous acid ester). German analysts in Düsseldorf said today that their own tests showed "with great probability" that the Dutch estimate was correct, but they did not rule out other sources.

Endosulfan, used to dust fruit trees and vineyards, is distributed by three West German concerns at Frankfurt, Stade and Düsseldorf.

German investigators said that the manufacturers, including the huge Höchst dye works, just west of Frankfurt, were not at fault.

Rather, they are working on the theory that either someone dumped more than 200 pounds of the poison into the river near St. Goar or dusted the vineyards and fruit trees around St. Goar with endosulfan from the air last Wednesday and possibly again on Friday.

Dead fish and ducks began appearing just downstream from St. Goar last Thursday morning.

The Dutch Institute of Public Health, which identified the poison, said that one microgram—less than a three-millionth of an ounce in a quart of water was enough to kill most fish.

Destruction of fish life in Germany alone was estimated by the North-Rhine Westphalia state government at more than $500,000.

But fears that the river life, including micro-organisms, had been permanently damaged, were allayed by tests at Honnef, near Bonn, and Griete, near Dusseldorf, showing that fish now remain alive in the river. Yesterday, fish from other rivers dipped in the lower Rhine died within seven minutes.

About 300 people are investigating the poison wave along the German, Dutch and French banks of the Rhine, which for years has been termed "the sewer of Europe" by governments and the press.

Yesterday, the Netherlands Government charged that the North-Rhine Westphalia authorities had been negligent in having failed to advise the Dutch of the oncoming contamination.

Today, the Agriculture Minister of the state, Diether Deneke, issued a reply, saying that the state Institute for Hydrography had sent a contamination warning to all German waterworks along the middle Rhine at 8:30 A.M. last Friday. The German Waterworks Authority was supposed to have passed this warning on to the Dutch immediately, but failed to do so.

In any case, the state authorities disclosed today that the river police at Duisburg, 40 miles upstream from the Dutch frontier, warned their colleagues in the Netherlands at 8:30 A.M. Monday of the oncoming poison wave, 12 hours before it reached the border.

The Germans maintain that this provided adequate time for the Dutch to shut the conduits taking Rhine water to purification plants and thence to major drinking-water reservoirs in the Netherlands. However, they are taking steps to insure that any future contamination perils will be announced promptly to all concerned along the river.

In a telephone interview, an official of the Rhineland-Palattinate state government at Mainz said that "everyone of us who has legs is working on the case," trying to clarify the innate state government at St. Goar, a wine-growing county with a population of 53,000.

He said that the investigation was complicated by the fact that the poison traces had practically vanished from the region, swept downstream by the seven-mile-an-hour current.

FRENCH CONDEMN INSECTICIDES

PARIS, June 25.—French conservationists charged today that insecticides such as the one that has polluted the Rhine River were responsible for deaths of people as well as wildlife.

They appealed to the new Minister of Agriculture, Jacques Duhamel, to impose a ban, held up, they said, in the Ministry for three years because of pressure from chemical companies.

Antoine Reille, spokesman for the Federation of Societies for the Protection of Nature, said in an interview that worldwide conservation organizations were seeking an international agreement to halt pollution by organochlore insecticides.

Last Saturday, a day before the Rhine alert, Mr. Reille's office had issued a warning that blackhead gulls nesting in the Loire Valley were laying eggs without shells.

It blamed the same insecticides that, it said, were responsible for sterilizing up to half the heron population of Britain and half of the 50 pairs of peregrine falcons surviving in France.

Mr. Reille said that European conservationists were concerned about the threat of the Rhine pollution to the bird-breeding grounds of the Waddenzee, in the Netherlands.

He angrily denied statements by West German officials Sunday that the insecticide in question was not harmful to human life.

Following an antimosquito campaign with similar chemcials in southwestern France, he said, an incomplete canvass of physicians disclosed 75 cases of poisoning of human beings, four of them fatal.

ADDRESS BY DANIEL P. MOYNIHAN

Mr. SCOTT. Mr. President, on June 1, Daniel Moynihan, Assistant to the President for Urban Affairs, gave the commencement address at Notre Dame University. I ask unanimous consent that his address, entitled "Politics as the Art of the Impossible," be printed in the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

POLITICS AS THE ART OF THE IMPOSSIBLE

I take for my theme a sentence from Georges Bernanos: "The worst, the most corrupting of lies are problems poorly stated."

My charge is similar. It is that much of the intense difficulty of our time is in nature conceptual, and that it arises from a massive misstatement of our problems. Intellectuals, if this view is correct, have done their work badly and there is little prospect that their mistakes will soon be undone. As ours was perhaps the first society consistently to expect the future to be better than the past, the apprehension that we may have profoundly mistaken the nature of our difficulties, so that we must expect years of effort to resolve the wrong problems and in presumably unavailing ways, strikes with special force. A certain nostalgia arises for a future that now appears lost. It becomes necessary to live much more in the present than has been the American mode.

If this be no great pleasure, it can, nonetheless, be stimulating. Here a sub-theme can be taken from another alert Frenchman—when asked what he had done during The Terror, the Abbe Sieyes answered, "I survived." This must now be a very great concern of those Americans whose lives, in Midge Decter's formulation, are devoted to the direction of their thought. Anyone old enough to have had any intellectual contact with the 1930's will take my meaning. The men of both the left and right who dominated, even terrorized, *that* time lived intense but brief lives. Their intellectual corpses are still stacked in the odd corners of universities, government departments, and the like where they do whatever it is they do. No one much cares, for they were subsequently judged to have been appallingly wrong about American society and, worse, were seen to have been unforgivably intolerant of any who hesitated to embrace their all-encompassing credos. Archibald MacLeish has remarked of his fellow poets that: "There is nothing worse for our trade than to be in style." The equivalent for those whose concern is government is submission to the noisiest problems of the moment to the exclusion of the most important ones.

What then are the "problems poorly stated" of our time? They are various but have, it seems to me, a unifying characteristic; namely, the rejection by those seeking a more just, more equal society of any indications that the society is in fact becoming more just and more equal. Society is seen in historical terms: what is not altogether acceptable is altogether unacceptable gradations are ignored and incremental movements are scorned. Those who by disposition are incrementalists, or for whom the contemplation of society has led to a conviction that incremental change is a necessity not a choice in human affairs, are baffled by this attitude and resentful of it. The exchanges that follow are bitter and unproductive. It is at all events my view that this is so because the problems at issue have so far been defined in fairly traditional *political* terms when what in fact is at issue is an immense stirring, little understood, if indeed understandable, of cultural dimensions. Fundamental ethical and moral issues—religious issues—are involved: issues which politics, especially

the politics of a liberal democracy, are uniquely unable to resolve.

Two years ago, in the Phi Beta Kappa oration at Harvard, I argued that in fact we were witnessing the onset of the first heresies of liberalism. Heresy is an unloved term, especially in a liberal society, but it has real meaning: the rejection of beliefs fundamental to the dominant, pervasive world view of the society involved. Of necessity, the heresies of liberalism would be procedural in nature, for it is in process that a liberal society defines itself. In thinking about the subject, I have not been able to get much farther than this, but neither have events moved so as to cast greater doubt on the thesis than that which must attend any such large assertion. To the contrary, the rejection of the *authority* of liberal processes, the code that holds it is bad form to club the Dean, that civic statutes must be abided by, that rules of order and civility will be followed at meetings—all that—continues apace, and the pace if anything quickens. As Robert A. Nisbet continues to remind us, when authority relations collapse, power relations take their place; and this process, too, has advanced. Violence, which is the means by which power relations are maintained, is considerably more widespread now than it was two years ago, and surely vastly more common at the end of the decade of the 1960's than it was at the beginning of it.

Nothing suggests that the pattern of former times will quickly reassert itself. To the contrary, the indications are that we rose to a new plateau of internal violence in the mid-1960's and that the most we can hope for is to keep from yet another escalation.

Such violence has, of course, made its way onto university campuses and this has led to great apprehension for the future of academic freedom. There are analogues, indeed precedents, for the violence of the streets, the poor, the police, and suchlike. But nothing like the present pattern of threats to and actual assault on university institutions and university members has ever yet occurred. Here, in particular, it would seem a future has been lost to us.

This had led to great despair among academic intellectuals: far greater than the news media have yet let on. For probably the first time in our history, professors speak of going into exile. Nor is the alarm simply that of Bourbons. A Marxist historian such as Eugene Genovese speaks with not a little alarm of the "pseudo-revolutionary middle-class totalitarians . . . of the left wing student movement," and one learns that even Professor Marcuse has suggested that professors ought to be treated differently from the oinkish common swine.

The strongest view, from a notably unhysterical pen, in the recent assertion by Arnold Beichman, writing in *Encounter*, to the effect that university faculties "have quietly decided that for the foreseeable future the university is no longer a place where truth is to be pursued. What has been tacitly ratified is a decision that the American university is primarily (not secondarily) the springboard for upward social mobility as the ascriptive right for ethnic minorities."

This can be overdone. Beichman accurately (but almost alone in the flood of commentary) notes that ethnic mobility has always been a prominent component of higher education—certainly so from the time Catholics began to establish competitive institutions with Protestants. One recalls Yeats' letter of 1904 to Lady Gregory:

"I have been entirely delighted," he writes, "with the big, merry priests of Notre Dame, all Irish and proud as Lucifer of their success in getting Jews and non-conformists to come to their college and of the fact that they have no endowments."

One recalls far more vividly growing up in New York City in the poverty-ridden 1930's, and yet possessing in that Notre Dame football team a symbol of tribal might and valor that can stir the blood atingle to this day. O, the golden Saturday afternoons when, in the name of every Irish kid caught in the social wreckage of the eastern slums, thunder indeed shook down from the skies and those mighty Polish tackles swamped the Navy!

If the demands of newer groups come as a shock to some, it is at least in part because this group function of higher education has tended to be ignored by those groups for which it has been functioning. Yet, the role was obvious enough; and it was not less clear that it would become, if anything, more pronounced to the degree that universities became more central institutions of the society. In the concluding paragraph of *Beyond the Melting Pot*, Glazer and I wrote that: "Religion and race define the next stage of the American peoples." We were not wrong, and one is mystified still that the proposition was viewed at the time by such skepticism on the part of so many. (Not a few of whom, it may be added, having become committed to ethnic studies, pursue the matter with a single-minded zeal that is notoriously the accompaniment of sudden religious conversion.

Simultaneously, if somewhat incompatibly, universities have been mini-bastions of class privilege. This phenomenon has been evident enough in the insistence by almost all parties to intramural disputes that those involved are exempt from punishment for deeds that would send lesser persons—without the walls—to court at very least and prison in all likelihood. But again, this is nothing new.

Indeed, some good could come of this if the excesses of the moment were to serve to restore some perspective on just what universities are and what they can do. They are institutions inhabited by younger and older persons of often very great abilities, but usually of very limited experience. With respect to their individual specialties, the judgment of the professors is singularly valuable. But their collective judgment is no better—could, indeed, be worse—than that of the common lot of men. This is not an incidental, random fact; it is a fundamental condition of human society, and the very basis of democratic government.

When William F. Buckley, Jr., wrote that he would far rather entrust his governance—by which he would include the preservation of his civil liberties and his intellectual freedom—to the first hundred persons listed in the Boston telephone directory than to the faculty of Harvard College, he was saying no more that what Thomas Jefferson or Henry Adams would have thought self-evident. The remark was greeted with considerable derision in Cambridge at the time, but it may be stated with certainty that more than one tenured professor of that ancient institution has come of late to see its truthfulness with excruciating clarity.

All this is to the good. What is bad is that the diffusion of violence to the intellectual life of our society is likely to lead to even greater failure to correctly state our problems than has been the case to date. This is so for the most elemental of reasons. Intellectual freedom in the American university has now been seriously diminished. It is past time for talking about what might happen; it has happened. We would do well to clear our minds of cant on that subject. Especially in the social sciences, there is today considerably less freedom than there was a decade ago; and we should expect that it will surely be ten to twenty years before what we would hope to be a normal state will be restored.

I deem it essential that this almost suddenly changed situation be more widely understood; otherwise, the sickness of the time will gradually come to be taken for a normal condition of health—and that would be a blow not merely to the age, but to the culture. But if we do perceive our circumstance for what it is, if we do come to accept that for reasons of prudence, or cowardice, or incompetence or whatever, faculties have been everywhere allowing principles and men to be sacrificed, we will at least retain the understanding that something has gone wrong, something that it may be possible someday to right.

It is important then to survive, with our faculties, as it were, as little diminished as possible, and to seek to understand the times—which is to say to state the problems of the time correctly.

Few individuals can hope to contribute more than a small increment to this effort; but more, then, is the reason as many as possible should seek to do so. Hence, with less hesitance than might otherwise attend the effort to make a simple abstraction about a hopelessly complex reality, I would offer, from the world of politics, the thought that the principal issues of the moment are not political. *They are seen as such*: that is the essential clue to their nature. But the crisis of the time is not political, it is in essence religious. It is a religious crisis of large numbers of intensely moral, even Godly, people who no longer hope for God. Hence, the quest for divinity assumes a secular form, but with an intensity of conviction that is genuinely new to our politics.

It is important to be clear whence this peculiar secular moral passion arises. It is from the very eighteenth century enlightenment from whence arose the American civilization that has so far followed so different a course. The rejection of Christian religion by the Enlightenment has obscured the fact, especially to Christians, that it did not constitute a rejection of Christian morality. To the contrary, it was more often in the name of that morality that the creed was attacked. It was Rousseau, as Michael Polanyi argues (although others would disagree) whose work widened the channels of Enlightenment thought so that in fact "they could be fraught eventually with all the supreme hopes of Christianity, the hopes which rationalism had released from their dogmatic framework." Wherewith, supreme of ironies, was loosed upon the world a moral fury that has wrought as much evil, in contrast with the mere brutality of the past, as mankind has ever known, an evil which may yet destroy us. The process arises from a sequence of premises which are logically unassailable, yet which in practice produce a society that is inherently unstable. Polanyi states the argument, which he correctly observes, no one has yet answered:

"If society is not a divine institution, it is made by man, and man is free to do with society what he likes. There is then no excuse for having a bad society, and we must make a good one without delay. For this purpose you must take power and you can take power over a bad society only by revolution; so you must go ahead and make a revolution. Moreover, to achieve a comprehensive improvement of society, you need comprehensive powers so you must regard all resistance to yourself as high treason and must put it down mercilessly.

Repeatedly, as this ferver becomes pathological, a kind of inversion takes place which transforms violence from a means to an end to an end in itself. There are surprises but few mysteries to this process: the nineteenth century was able to read it in Russan novels; the twentieth to watch it on film. It has been the great disease of the committed intellectual of our time. Thirty years ago, Orwell wrote that: "The common man is still living in the mental world of Dickens, but nearly every modern intellectual has gone over to some or other form of totalitarianism." For that is the correct term. The total state; the politicization of all things. It would seem that Britain and America managed in the nineteenth century to escape any deep infestation of this view mostly by not thinking too closely about politics. But one result of this is that in political theory there is no serious counter argument: all one can say is

that one does not like doing good by sending men "up against the wall" to use the apparent term of the Che Guevara and the battle cry of the Barnard girls. For the disease is amongst us, and will spread. Incongruously, it appears to have taken roots within organized religion itself. The course of the coming generation is all but fixed: it will include a strong and possibly growing echelon that will challenge the authority of American institutions across the board, and will not be especially scrupulous as to how it does so. In this the extreme left is very likely to be joined by the extreme right, for to each the values and process of the present American democracy are the enemy to be destroyed.

All in all, there is cause enough for despair. As Midge Decter has put it: "When you are caught between left and right, the only way to go is down." But we are not yet down. We are a strong and competent people, increasingly, I think, aware of our troubles and dangers and shortcomings. The challenge to authority that is now upon us can strengthen and renew institutions as much as it can weaken them. And it can be fun.

There is always room, as Orwell wrote, "for one more custard pie." We are not especially well equipped in conceptual terms to ride out the storm ahead, but there are things we know without fully understanding, and one of these is the ultimate value of privacy, and the final ruin when all things have become political.

Having through all my adult life worked to make the American national government larger, stronger, more active, I nonetheless plead that there are limits to what it may be asked to do. In the last weeks of his life, Persident Kennedy journeyed to Amherst to dedicate a library to Robert Frost and to speak to this point. "The powers of the Presidency," he remarked, "are often described. Its limitations should occasionally be remembered."

The matter comes to this. The stability of a democracy depends very much on the people making a careful distinction between what government can do and what it cannot do. To demand what can be done is altogether in order: some may wish such things accomplished, some may not, and the majority may decide. But to seek that which cannot be provided, especially to do so with the passionate but misinformed conviction that it *can* be, is to create the conditions of frustration and ruin.

What is it government cannot provide? It cannot provide values to persons who have none, or who have lost those they had. It cannot provide a meaning to life. It cannot provide inner peace. It can provide outlets for moral energies, but it cannot create those energies. In particular, government cannot cope with the crisis in values which is sweeping the western world. It cannot respond to the fact that so many of our young people do not believe what those before them have believed, do not accept the authority of institutions and customs whose authority has heretofore been accepted, do not embrace or even very much like the culture that they inherit.

The twentieth century is strewn with the wreckage of societies that did not understand or accept this fact of the human condition. Ours is not the first culture to encounter such a crisis in values. Others have done so, have given in to the seeming sensible solution of politicizing the crisis, have created the total state, and have destroyed themselves in the process. Irving Kristol has warned against it in terms at once cogent and urgent:

"The one way not to cope with this crisis in values is through organized political-ideological action. Most of the hysteria, much of the stupidity, and a good part of the bestiality of the twentieth century have arisen from efforts to do precisely this. Not only do such efforts fail; they fail in the costliest fashion. And if modern history can be said to teach anything, it is that, intolerable as a crisis in values may be, it invariably turns out to be far less intolerable than any kind of 'final solution' imposed by direct political action."

I surely do not argue for a quietistic government acquiescing in whatever the tides of fortune or increments of miscalculation bring about: and in our time they have brought about hideous things. I do not prescribe for social scientists or government officials a future of contented apoplexy as they observe the mounting disaffection of the young. I certainly do not argue for iron resistance, as other societies have successfully resisted somewhat similar movements in the past.

I simply plead for the religious and ethical sensibility in the culture to see more clearly what is at issue, and to do its work.

Sympathy is not enough. *Tout pardonner, c'est tout comprendre* is not a maxim that would pass muster with Bernanos or any who have helped us through the recent or distant past. If politics in America is not to become the art of the impossible, the limits of politics must be perceived, and the province of moral philosophy greatly expanded.

MIKE CORBIN, NEIGHBORHOOD YOUTH CORPS WORKER

Mr. HATFIELD. Mr. President, daily the media exposes us to the violent and destructive results of a disaffected and angry part of our country's young people. From the irresponsible actions of a few springs the impression that much of America's youth are callous, hostile; in a word, alienated. I personally regret this notion and reject it as ill-founded. The vast majority of young Americans are certainly concerned about the hypocrisy and wastefully ordered priorities that they see around them, but their persuasion is to seek constructive solutions.

Similarly, much publicity is given to those few young men and women, particularly in the Nation's poverty programs, who see fit to defect from these programs' constructive goals and pursue less than honorable activities. Too many people stand ready to chastise an entire program on the basis of isolated examples while the preponderant successes are greeted with silence.

The story of Mike Corbin, Mr. President, is just one example of individual success that I strongly believe deserves mention and commendation. Mike is a Neighborhood Youth Corps worker in Medford, Oreg. When he began the program in December of last year, he was a shy, retiring young man; uncomfortable around people, and possessed with little aptitude for work. "Once Mike knew that someone was interested in him, the transformation was amazing." During his 6 months with the Neighborhood Youth Corps, working as a maintenance crewmember in one of Medford's city parks, Mike has learned self-confidence, responsibility, and, with the help of a tutor, gained the tools and motivation to return to school.

I have telephoned my encouragement to Mike. I am proud of his accomplishments and the growth of many young men and women like Mike throughout the country. Mike Corbin's experience in the Medford, Oreg., Neighborhood Youth Corps is an example of cooperation between many Federal, State, and municipal governmental agencies. It represents courage on Mike's part, and a successful application of the Neighborhood Youth Corps program. In recognition of both Mike Corbin's job well done and the program that gave him his opportunity, I ask unanimous consent that the letter from Mike's supervisor describing his impression of Mike's growth, be printed in the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

CITY OF MEDFORD,
Medford, Oreg., June 6, 1969.

MRS. VENITA JONES,
Neighborhood Youth Corps,
Cooperative Extension Service,
Medford, Oreg.

DEAR MRS. JONES: It has come to our attention that Mike Corbin, a Neighborhood Youth Corps worker, has nearly completed his six month period of employment with us. The purpose of this letter is to first give background of Mike's work with our department thus far and second, to express our desire to retain Mike and hopefully to continue to aide his remarkable growth in both work and social skills background.

When Mike first came to us in the latter part of December, 1968, he was an extremely shy, backward, young boy. He had virtually no experience with being in or even around a work situation. He lacked confidence and as a result, a certain amount of hostility and rebellion was noted. The Park Foreman and members of the crew worked with Mike, however, and he soon realized we were on his side. All he needed to do was ask and we would help in anyway possible. Once Mike knew that someone was interested in him, the transformation was amazing. He progressed rapidly from having to be told how to perform each individual thing he did to being able to handle the entire restroom clean-up project or irrigate a flower bed or anyone of a number of other duties. Mike's social skills improved also. His self-confidence gained by mastering even simple tasks, brought him out of his shell, so to speak, and he became more at ease around the crew and the public in general. He learned that he could ask questions when he didn't understand how to do something and even that he might have a suggestion or two that he could offer. Once he learned some of the simple tasks, he was more than anxious to take on the responsibility for making sure they were done. He became attached to the members of the crew and felt that he was one of them, not someone from the outside looking in as seems to have been the case through his past history. His team spirit encouraged Mike even further, I believe, and his work habits have certainly improved beyond belief.

Mike attended school to further his scholastic abilities but unfortunately was unable to arrange transportation and finally had to stop attending class. The major problem seemed to be that he was living in White City and was without a car or driver's license. I have been told that Mike pays $50.00 a month for his present inadequate living accommodations. It would seem to me that better accommodations, closer than White City could be found if someone would just take the initiative and help Mike.

As for the future, I feel Mike has seen that he can better himself and that all it takes is a little effort on his part. He has shown an interest in going back to school and as a matter of fact, told me that he would very much like to be able to go back to school full time next fall. His main concern was that he could make enough money between now and then so that he could support himself while going to school. Although, education is certainly important, I feel the very basic

social skills that Mike has learned thus far, while working with us here in the Park and Recreation Department are even more important.

It is our hope that Mike will receive an extension so that he can continue his work experiences with us through the summer months which, as you can well imagine, are extremely busy for Park and Recreation personnel. During the summer, the variety of duties expand considerably and there are a great many things that Mike has yet to experience as far as working with the Park Department. Mike has just barely started to "crawl" with a little more exposure, he can begin to "walk". It would seem especially critical that Mike be encouraged at this point. Time and effort have been spent and I think Mike is just starting to appreciate the results. I feel that if he is not offered a helping hand for just a little while longer, he may revert and withdraw back into his shell.

Sincerely,

MICHAEL A. STARR,
Assistant Director.

SYNOPSIS OF FORCED LABOR CONVENTION

Mr. PROXMIRE. Mr. President, for the past few days, I have been speaking on the floor of the Senate in behalf of the specific human rights treaty known as the Abolition of Forced Labor Convention. In hopes of catalyzing my audience to action and with the express purpose of expediting the whole procedure, I should like to present to you today a synopsis of the convention itself.

Article I is the section containing most of the substance of the convention. It states:

Each member of the International Labor Organization which ratifies this Convention undertakes to suppress and not to make use of any form of forced or compulsory labor—

(a) as a means of political coercion or education or as a punishment for holding or expressing political views or views ideologically opposed to the established political, social or economic system;

(b) as a method of mobilizing and using labor for purposes of economic development;

(c) as a means of labor discipline;

(d) as a punishment for having participated in strikes;

(e) as a means of racial, social, national or religious discrimination.

Article II of the convention pledges all ratifying members to take effective measures to "secure the immediate and complete abolition of forced or compulsory labor as specified in article I."

The third and fourth articles are concerned with the specific mechanics of formal ratification, registration, and date which the treaty shall come into force.

Article V provides an outlet whereby a member who has previously ratified the convention may denounce it 10 years after the date which the convention would come into force, a date 12 months after the date on which the ratification of two members has been registered with the Director-General. Such a denunciation would take effect 1 year from the date it would be registered by the Director-General of the ILO. Any party which has not, within a year following the expiration of that 10-year period, exercised the right of denunciation, will continue to be bound for another 10-year period and, thereafter, by a communication to the Director-General, may denounce the convention at the expiration of any period of 10 years.

Article VI specifies that the Director-General shall notify all members of the organization of the registration of ratifications and denunciations and of the entry into force of the convention while the seventh article outlines the procedure whereby the Director-General of the ILO shall register the convention with the United Nations.

Article VIII provides for consideration of a revision of the convention.

Article IX is concerned with the replacement of this convention by some future one. Specifically, it provides that, if the ILO conference adopts a new convention revising this present convention in whole or in part, then, unless the new convention otherwise provides, ratification by a member of the new convention shall involve the immediate denunciation of this convention notwithstanding the provisions of the fifth article.

The 10th and last article merely calls attention to the authenticity of the text and that the English and French versions of the text of the convention are equally authoritative.

Mr. President, I can see nothing in these 10 articles which would either go contrary to our guiding principles as a nation or which would interfere with our existing State and Federal laws. On previous days, I have provided the Senate with testimonies from outstanding authorities in the field of labor and constitutional law who have explicitly stated that these provisions contained in the convention would not contravene with our judicial structure. There is no constitutional conflict which opponents of the ratification have tried to use as the basis for their reluctance to ratify. But there most definitely is a moral and ethical conflict induced by our persistent failure to act on this convention as well as the rest of the human right conventions.

Mr. President, in these troubled times, I can think of no better way for the United States to confirm its position as a leader in the field of human rights than by passing this legislation at its earliest opportunity.

JOE McCAFFREY, WASHINGTON CORRESPONDENT

Mr. CASE. Mr. President, this month marks the 25th year that Joe McCaffrey has been a Washington correspondent.

I am sure that many, if not most, of the Members of this Chamber know Joe either on a personal basis or through his regular reports over WMAL radio and television in Washington.

He has many friends and admirers on Capitol Hill. I count Joe as a friend and able reporter and I like to recall that we were fellow townsmen in Poughkeepsie, N.Y., when both of us were younger men.

My arithmetic tells me that Joe McCaffrey became a Washington correspondent in 1944, the year before I entered Congress as the representative from the Sixth District of New Jersey.

Mr. President, I join in honoring Joe McCaffrey on this milestone in his career, and in wishing him well in the years of productive journalistic endeavor that I know still lie ahead of him.

NATIONAL CITIZENS CONFERENCE ON REHABILITATION

Mr. GOODELL. Mr. President, the first National Citizens Conference on Rehabilitation is now meeting in Washington, D.C. I want to commend Miss Mary Switzer, the Administrator of Social and Rehabilitation Services at the Department of Health, Education, and Welfare, Dr. Howard Rusk, director of the Institute of Rehabilitation Medicine at the New York Medical Center, and W. Scott Allen, the assistant vice president of Liberty Mutual Insurance Co., for their outstanding dedication to the rehabilitation work in this Nation, and for the foresight that made this important conference possible. I know that the conference has brought thoughtful and dedicated people from throughout the Nation to Washington to discuss and to work on the problems they face. I am certain that all of my colleagues recognize the tremendous importance of their work and of this conference.

The Vocational Rehabilitation Act governs Federal participation in the rehabilitation of physically and mentally impaired adults. The program is administered by the Social and Rehabilitation Service of the Department of Health, Education, and Welfare, and by State vocational rehabilitation agencies. The program is to provide whatever services may be needed in assisting physically and mentally impaired persons to become self-supporting and contributing members of society.

Under the program, over 207,000 individuals were rehabilitated in fiscal 1968. However, estimates are that there are now at least 5 million persons in the United States who are in desperate need of rehabilitation services; and there is annual increase of about 500,000 individuals needing such services.

Practically all of the people served by this program are poor people. Although economic need is not required by the Federal Government as a condition for participation in the program most States apply economic need principles to varying degrees. Thus, over half of the individuals served have no incomes; 90 percent have incomes which are below what is ordinarily referred to as the poverty level."

The vocational rehabilitation program has returned tens of thousands of these people to profitable living wherein they were able to earn salaries to support both themselves and their families.

Further, the vocational rehabilitation program has proven second only to the GI bill of World War II in the amount of money which it has returned to the Government not only in increased taxes, but from people who have been put back into industry and taken off public assistance.

Since funds for rehabilitation have not been adequate in recent years, President Nixon has requested an increase of 36 percent over the 1969 budget appropriations for rehabilitation programs.

The President has rightly given priority to those programs while making every attempt to curb inflation.

It has always been the intent of Congress to make maximum use of these highly successful rehabilitation programs. I strongly urge that the President's efforts to bring them up to the level that is necessary be supported by the Congress.

PAN AMERICAN WORLD AIRWAYS

Mr. CANNON. Mr. President, 30 years ago, on June 28, 1939, the Dixie Clipper, operated by Pan American World Airways, lifted into the air from Long Island Sound to inaugurate transatlantic passenger service to Europe.

Some 5,000 spectators cheered and a brass band played, as the 22 passengers filed onto the yacht-type pier in Manhasset Bay and boarded the Boeing 314 Flying Boat. The plane, cruising at 150 miles per hour, took 42 hours and 10 minutes—29 hours and 20 minutes in the air—to fly to Marseilles via the Azores and Lisbon.

Pan Am now flies the Atlantic with Boeing 707's, cruising four times as fast as the flying boats and carrying as many as 161 passengers. In the same amount of time the Dixie Clipper required to reach Marseilles, the 707 on Pan Am's flight 2 flies more than halfway around the world from New York.

Pan Am has announced that it hopes to pioneer transatlantic travel once again at the end of 1969, when it is scheduled to become the first to fly the 362-passenger Boeing 747 in regular commercial service.

Thirty years ago, at the end of 1939, the airline announced that it had crossed the Atlantic 100 times. With Pan Am's introduction of the jet in 1958, the pace quickened, and the airline announced on July 2, 1962, that it had crossed the Atlantic 100,000 times. By June 28, 1969, Pan Am will have made over 187,000 crossings, and will be continuing to make 373 crossings each week as part of its service to 119 cities in 89 lands around the world.

Capt. Harold E. Gray, who piloted Pan Am's first transatlantic commercial survey flight in 1937, now serves as chairman of the board of Pan Am. Under the guidance of Captain Gray and Juan T. Trippe, who founded the airline in 1927, Pan Am has been in the forefront of airlines attempting to lower transatlantic fares, making New York to Paris travel within economic reach of a greater number of people than ever before.

THE GREAT SOCIETY'S POOR LAW: A NEW APPROACH TO POVERTY

Mr. GOODELL. Mr. President, I wish to call to the attention of my colleagues a study of the Office of Economic Opportunity conducted by Dr. Sar Levitan, director of the center for manpower policy studies at George Washington University. His extensive analysis, recently published in a work entitled "The Great Society's Poor Law: A New Approach to Poverty," has been called by far the most complete and most thoroughgoing study by a nongovernmental source.

I ask unanimous consent that a review of Dr. Levitan's book by Howard W. Hallaman, formerly staff director of a study of the OEO program conducted by the Senate Subcommittee on Employment, Manpower, and Poverty, be inserted in the RECORD. Mr. Hallaman's incisive review appeared in the June issue of Community Development.

There being no objection, the review was ordered to be printed in the RECORD, as follows:

"THE GREAT SOCIETY'S POOR LAW"

(Reviewed by Howard W. Hallman)

OEO is like the poor it seeks to serve: There! An embarrassment to the larger society, too intractable to eliminate, but too annoying to praise.

President Johnson discovered this within a year after he pushed the Economic Opportunity Act through Congress.

Candidate Nixon talked of eliminating the Job Corps altogether and seemed to threaten the very life of OEO, but President Nixon has preserved OEO and has kept at least half the Job Corps.

Prof. Daniel P. Moynihan scourged the Community Action Program and advocated that such local efforts to be completely under city hall control, but when he became a Presidential adviser he supported continuation of CAP as an independent operation.

The Government Accounting Office launched a million-dollar study of the EOA programs, creating great fears at OEO and great expectations among OEO's enemies on Capitol Hill. But after a year, GAO gave the anti-poverty agency a positive rating.

For four years, Dr. Sar Levitan, working with Ford Foundation funds, probed deeply into OEO's operations and published numerous critiques in journal articles and mimeographed papers, sometimes raising the hackles of OEO administrators. But when he put all together in The Great Society's Poor Law, Levitan concluded that OEO's pluses exceed its minuses. He, too, wants OEO to continue, albeit with an abridged role more fitting its resources and place in the Federal structure.

These dual strains of criticism and support carry over into efforts to judge the Federal agency created to mastermind the attack on poverty. Ignoring the beam of Defense Department waste, we have microscopically examined the mote of OEO's shortcomings. But yet we cannot bring ourselves to do away with this modest program. So we give it enough to prevent outright starvation, but not enough to allow it to gain much strength.

In the face of this social ambivalence, Dr. Levitan offers a dispassionate study, basically objective though not entirely free of the author's opinions, as factual as meager data allow. It is by far the most complete and most thoroughgoing study by a non-governmental source.

The Economic Opportunity Act, says Levitan, focused on the causes of poverty not merely the symptoms, the most obvious of which is lack of money. Therefore, it concentrated on self-help programs and was not directly concerned with income support. While these "efforts have in one way or another helped millions," they "bypassed many who could not benefit from the self-help approach, and they failed to reach additional millions because of limited funds."

On the funding question, the author shows time and again how available funds allowed the various programs barely to scratch the surface of need for the self-help activities, much less get into major income-support programs. As the Nixon Administration has surely learned by now, there are no bargain-basement cures for poverty.

On specific programs, Levitan makes the following judgments:

Head Start has helped the participating pre-school children although by itself it is no panacea. The full-year program is preferable to the shorter summer one. The "fade-out" of achievement levels in following grades should not be too surprising in view of inadequate follow-through. "A more realistic role for Head Start is a pre-school program in the context of a strategy for a change in the primary schools offering poor children an enriched and more comprehensive education."

Because of the heavy caseloads undertaken, Legal Services has not operated much differently from traditional legal-aid organizations, in spite of the additional objectives of legal reform, education, and representing organizations of the poor. Even so, attorneys have achieved several victories in law reform. "Where the program has been effective, business and government officials may treat more warily when dealing with the poor community."

Even if the neighborhood health centers are too new to evaluate fully, the concept of one-stop health centers for the poor has already won many adherents. But so far, this has not led to a redirection of non-OEO Federal health funds, nor are the centers effectively tied into the major programs for financing individual medical care, such as Title XIX of the Social Security Act.

Although OEO had to be pushed into family planning projects, they have proven to be effective measures for combating poverty. "A separate OEO birth-control program continues to be necessary because HEW has been even slower than OEO in adopting family planning efforts."

"In urban areas there is real question as to whether VISTA has a legitimate role other than as a manpower subsidy to local agencies . . . Rural areas that lack social services, technical skills, and efficient communication with the 'outside world' would seem to provide the most fertile ground for VISTA efforts."

On some of the special rural programs, Levitan has these conclusions: "Rural loans appear to be a poor investment if the goal is achieving economic independence, but it may be an acceptable means of providing income maintenance under the guise of self-help. In assisting rural-migrant and seasonal labor, OEO could not decide whether its programs should concentrate on 'keeping 'em down on the farm' or on aiding farm laborers to move into urban areas where the jobs are. Similar issues remain unresolved in Indian assistance programs."

"The Job Corps is one institution with the potential of helping disadvantaged youths bridge the gap between aspiration and reality. The harsh fact is that it has helped only a minority of those who sought its aid, despite the relatively ample resources of those who sought it."

On these programs with fairly specific objectives, Dr. Levitan has confidence in his conclusions. But when he comes to the CAP, apart from national emphasis programs, he rejects a summary judgment on its effectiveness. And no wonder, for there is great diversity among the 1,000 CAAs. But he sees the CAAs as a definite advance over traditional welfare organizations, especially in advancing the role of the poor. "On that score," he says, "CAP must certainly be judged an innovative agency which gave the poor their first social and political role . . . The effort should be nourished, even if progress thus far has been uneven and falls short of the hopes advanced by the antipoverty warriors that CAP would eliminate the need for a welfare system by eradicating poverty."

Having surveyed all of these programs and the overall performance of OEO as well, Dr. Levitan concludes that planning, coordination, and evaluation should be removed from

its workload and given to a White House agency, not to the new Urban Affairs Council, which he thinks is too likely to ignore the needs of the poor, but to a special council, perhaps modeled after the Economic Opportunity Council of the 1967 Amendments or a proposal of the House Republican's Opportunity Crusade (1967).

The OEO remnant would then be basically an experimental and demonstration agency, using CAP as a tool for innovation. Under Levitan's proposed revision, 70 percent of CAP funds would go through the states, the remainder being used for experiment projects or direct local aid bypassing the states. The states would arbitrate local disputes for control.

Having spent 1967 as staff director of the study of the OEO program by Sen. Clark's Subcommittee, I am in fundanmental agreement with Dr. Levitan's evaluation of the various programs. But when it comes to his recommendations, I must conclude that he just hasn't studied state government. For with few exceptions, state control of CAP would be a serious setback.

However, I fully concur with his final conclusion that a real attack on poverty would require far more than the modest expenditures so far committed—at least $20 billion more. And I am afraid that he is correct in reporting, "There is little evidence that the American people are willing to assign a top priority to a real war on poverty."

This makes me think that as important as an evaluation of the administration of the Economic Opportunity Act would be an evaluation of us, the American people, and why we are unwilling to eliminate poverty when we have the economic capacity to do so.

NEED FOR PERMANENT FARM STORAGE LOAN PROGRAM

Mr. HRUSKA. Mr. President, yesterday, my able colleague, Senator CURTIS, introduced S. 2488, a bill to amend the Commodity Credit Corporation Act to authorize the Commodity Credit Corporation to insure loans made to farmers for the construction or purchase of facilities for storage of grain on the farm. I was pleased to join as a cosponsor of the bill.

A farm storage facility loan program to aid producers in obtaining on-farm grain storage bins and dryer equipment has been in effect since June 1949. Since the beginning of the program through the end of calendar year 1968, about $422.7 million has been loaned to farmers through 279,312 loans which included farm storage structures with a total capacity of almost 1.3 billion bushels.

More than 25 percent of the total funds loaned and more than 20 percent of the total storage capacity built since the beginning of the program was accounted for in 1968. During last year, producers borrowed $106.4 million through 44,249 loans for storage structures and drying facilities with a storage capacity of approximately 270 million bushels.

By contrast, only 8,491 loans were made to farmers for $7.4 million for structures with a storage capacity of 28.9 million bushels in 1949.

By 1967, changes in eligibility requirements and numerous other revisions were made in the existing farm storage facility loan program which made the program increasingly useful and resulted in the significantly increased activity in 1968.

Following is a schedule of the number of loans made, the capacity of the structures on whicn the loans were made, and the dollars loaned for each of the past 5 fiscal years, together with an estimate for the current fiscal year.

NATIONAL TOTALS

Fiscal year	Number of loans	Amount (in million bushels)	Value (in million dollars)
1964	8,597	34.9	11.9
1965	6,070	25.2	8.7
1966	9,189	38.1	13.6
1967	8,398	40.4	15.7
1968	23,146	122.9	56.9
1969	43,000	300.0	120.0

The purpose of the facility loan program is to enable producers to store their production on the farm so that they can market it in an orderly manner. Having farm storage, of course, gives a farmer maximum flexibility in handling his crop and eliminates the necessity for his paying for off-farm storage. For commodities for which reseal programs are authorized, producers may also earn storage payments for grains which are resealed in structures financed with facility loans. There is little disagreement that on-the-farm storage is the most efficient, economical, and practical method of storing grain.

However, because of the inflationary pressures on our economy, it was decided by the Bureau of the Budget that the farm storage facility loan program had to be substantially reduced. The Department of Agriculture therefore announced drastic program changes which would reduce the loan activity for fiscal year 1970 to $20 million from an estimated level of $120 million during the current fiscal year. The number of loans for storage structures and drying facilities were to be decreased from the fiscal 1969 level of over 44,000 to less than 9,000.

While I am in sympathy with the urgent need to halt inflation, and agree that Federal expenditures must be decreased to help accomplish this goal, I do not believe that vital programs contributing to the health and stability of our agriculture community should be so substantially reduced. The announced limits are too abrupt without sufficient notice to the farming community, and the level of funding is too severely reduced.

For this reason, as the ranking Republican member of the Senate Agriculture Appropriations Subcommittee, I suggested for the subcommittee's consideration during executive session on the agriculture appropriations bill language in our report which would permit a loan program level during fiscal 1970 of approximately $70 million. The subcommittee adopted the language and recommended that all amounts of repayments received during the coming fiscal year be made available along with $20 million of new funding; repayments in the coming fiscal year have been estimated at about $50 million.

During its executive session this week, the Senate Appropriations Committee approved the language recommended by the subcommittee, and it will be incorporated into the committee report to the Senate. The bill will be considered on the floor of the Senate in the near future.

The basis for stability and continuance of the farm storage loan program should not, however, be limited to language in a committee report. What is needed is legislative authority to permit the Commodity Credit Corporation to insure loans to grain growers by commercial lending institutions whenever the Secretary of Agriculture determines that insured loans will effectively carry out the purpose of maintaining an on-farm storage program. Insured loans in conjunction with the direct loan program will greatly reduce the need for Federal funds for loans. S. 2488 will accomplish this goal.

I urge my colleagues to support the committee language on this matter in the agriculture appropriations bill and to support S. 2488 when it is reported to the Senate floor for consideration.

FEDERAL ASSISTANCE TO THE DISTRICT OF COLUMBIA

Mr. PROXMIRE. Mr. President, several weeks ago I asked the General Accounting Office to compile a table of Federal assistance to the District of Columbia for the Subcommittee on Appropriations for the District of Columbia.

With the thought that this information would be of general interest, I ask unanimous consent that my letter of request and the Comptroller General's response and table be printed at this point in the RECORD.

There being no objection, the items were ordered to be printed in the RECORD, as follows:

APRIL 3, 1969.

Mr. V. L. HILL,
Assistant Director, Civil Division, U.S. General Accounting Office, Room 213 District Building, Washington, D.C.

DEAR MR. HILL: I will appreciate your office preparing for the use of this Subcommittee a detailed table showing as completely as possible total Federal assistance to the District of Columbia.

This information is desired in connection with the hearings of the Subcommittee on Appropriations for the District of Columbia for fiscal year 1970.

Best wishes.

Sincerely,

WILLIAM PROXMIRE,
U.S. Senate, Chairman, District of Columbia Subcommittee.

COMPTROLLER GENERAL OF THE STATES UNITED,
Washington, D.C., June 16, 1969.

The Honaroble WILLIAM PROXMIRE,
Chairman, District of Columbia Subcommittee, Committee on Appropriations, U.S. Senate.

DEAR MR. CHAIRMAN: Herewith is the table of Federal Assistance to the District of Columbia that we have prepared in response to your request dated April 3, 1969.

The amounts appearing in the table are largely Federal Agency estimates extracted from The Budget of the United States, 1970 (appendix) or obtained directly from the agencies involved. The explanation and footnotes, which are part of the table, provide further details.

We trust that the information will serve your purpose.

Sincerely yours,

ELMER B. STAATS,
Comptroller General of the United States.

FEDERAL ASSISTANCE IN THE DISTRICT OF COLUMBIA

The following table provides an indication of the extent that Federal program assistance

is rendered to residents of the District of Columbia, over and above local funds collected as revenues and appropriated for various expenses of the City Government. No attempt has been made to list and total all Federal expenditures in the District, such as those growing out of service, supply, and research contracts awarded by Federal agency headquarters offices or the payrolls of these headquarters offices. Emphasis, instead, has been placed on community action, job, and training programs, such as those administered by OEO and the Department of Labor, which are more directly related to the involvement of District residents. No opinion is expressed or implied concerning whether Federal assistance to the District of Columbia is relatively greater or less than such assistance to the various states.

The table shows the amount of the Federal payment to the District of Columbia and subtotals of the Federal grant assistance to the benefit of District residents (1) through the D.C. Government and (2) through other public agencies. Subtotals are presented also of (1) the non-grant Federal assistance received by the District of Columbia organizations and groups and (2) the non-grant Federal assistance received by agencies with jurisdictions encompassing a more inclusive National Capital area because separation cannot be made of the non-grant benefits as they apply to the District and to its environs.

Salary payments made by the Federal Government have not been included in the table because they are similar to salary payments by the private sector, and Federal program assistance is not particularly reflected in these amounts. Unemployment insurance, Federal retirement, and similar maintenance payments also have been excluded because the payments into these systems have been made by worker and employer, and the payments out thus represent, in part, the repayment of worker earnings rather than payment of Federal program benefits. Social security payments differ from the other maintenance and retirement payments since they are not as clearly related to earnings and the repayment of withholdings, although withholdings are paid into the system. The payments in part represent other features, such as disability, health, and welfare, that identify them partly as Federal program assistance. However, the payments, in excess of $80 million annually to District residents, have not been included in the table because of the mixed nature of the program features.

Program expenditures have not been included where it appears that the assistance does not specifically benefit the District's citizens. For example, several million dollars are paid by HEW annually to private universities in the District for research work. However, because the private universities' students (except Howard University) are not in any significant degree District citizens and the research is not especially aimed at the solution of specific District problems, these funds have not been included in the table.

Federal contributions are made, through the National Park Service, for the operation and maintenance of various parks in the District of Columbia. The costs of these operations, as shared by the District of Columbia and the Federal Government, are as follows:

[In millions]

	1968	1969	1970
Federal Government	$7.0	$9.2	$10.3
District of Columbia Government	5.4	5.9	6.9
Total	12.4	15.1	17.2

The Federal share of cost has not been included as Federal assistance to the District because it is not clear in what proportion the expenditures benefit D.C. residents and others.

Consideration has been given to whether the Government of the District of Columbia benefits from the authorization provided it to use the United States Treasury facilities and services. The Treasury acts as a depository for all District revenue; prepares individual checks for most District expenditures, for which it is reimbursed; and lends money to the District—without interest for some short-term cash requirements and at average Treasury rates for other borrowings. Because of uncertainties in estimating comparative costs under assumptions that (1) the District would borrow on the open market through the issuance of tax exempt municipal bonds with attendant underwriting expenses, (2) that the District would develop capability to issue its own disbursement checks, or (3) that the District would arrange for the services of a commercial bank as a depository and as a source of short term cash requirements, the net benefit to the District of Columbia is not clear and, consequently, has not been included in the table.

The data, in general, were extracted from the Budget of the United States Government, fiscal year 1970 (appendix) or were obtained from agency records; the amounts shown for fiscal year 1968 are generally obligations and the amounts for fiscal years 1969 and 1970 are generally the agencies' budget estimates. The individual footnotes state other sources and estimating methods. None of the data has been audited, although care has been used in collection and compilation procedures.

FEDERAL ASSISTANCE IN THE DISTRICT OF COLUMBIA

	Fiscal year 1968	Fiscal year 1969 (estimated)	Fiscal year 1970 (estimated)
Federal payment to the District of Columbia	$70,000,000	$90,000,000	$90,000,000
Federal grant assistance to the District of Columbia:			
Through the District of Columbia government [1]	103,545,000	196,052,000	133,226,000
Through agencies other than the District of Columbia government:			
United Planning Organization—to local contractors [2]	21,484,758	19,159,662	19,160,000
Office of Economic Opportunity—to local contractors	22,627,979	20,460,000	22,185,000
Department of Housing and Urban Development—to National Capital Housing Authority	6,373,000	6,500,000	7,000,000
Department of Agriculture—food stamp bonus—through banks, etc.	1,841,460	2,375,703	2,500,000
Department of Labor—to local contractors	19,169,406	11,257,000	11,257,000
Department of Health, Education, and Welfare—Medical Facilities Construction Act of 1968 [3]			15,000,000
Total, Federal grant assistance	175,041,603	255,804,365	210,328,000
Federal assistance, other than grants, to the District of Columbia:			
Commission of Fine Arts	102,000	115,000	115,000
Commission on Revision of the Criminal Laws of the District of Columbia	0	0	150,000
Smithsonian Institution [4]	6,000	25,000	65,000
St. Elizabeths Hospital [5]	4,676,000	5,296,000	5,156,000
Howard University [6]	5,174,400	9,034,240	9,003,200
Freedmen's Hospital [7]	6,937,000	9,030,000	31,309,000
General Services Administration [8]	2,200,000	2,200,000	2,200,000
Civil Service Commission:			
Services, administrative expenses, and payments [9]	1,250,000	1,254,371	1,250,000
Increase in unfunded liability of civil service retirement fund [10]	45,050,000	50,660,000	56,300,000
General Accounting Office audit	280,000	300,000	375,000
Federal City College	0	0	400,000
Total, nongrant Federal assistance	65,675,400	77,914,611	106,323,200
Federal assistance other than grants to National Capital region:			
National Capital Planning Commission	940,000	1,047,000	1,248,000
Washington Metropolitan Area Transit Authority	1,626,000	49,479,000	126,112,000
Metropolitan Washington Council of Governments	908,834	2,289,364	2,262,108
Washington airports	3,603,000	3,693,000	3,46 ,000
Total National Capital region	7,077,834	56,508,364	133,091,108
Grand total	317,794,837	480,227,340	539,742,308

[1] Grant information and estimates furnished by the District of Columbia Government Budget Office as of Apr. 1, 1969. Summary follows:

[In thousands of dollars]

Agency	Fiscal year 1968 actual	Fiscal year 1969 estimated	Fiscal year 1970 estimated
Highways and traffic	37,163	112,742	10,134
Public schools	19,809	20,559	20,779
Public welfare	20,702	19,989	27,156
Urban renewal	3,560	13,837	39,584
Public health	10,151	12,105	10,370
All other	12,160	16,820	25,203
Total	103,545	196,052	133,226

[2] United Planning Organization fiscal year ends Sept. 30.

[3] Consists of $7,500,000 for grants and $7,500,000 for loans. Total authorized through 1972; grants $40,052,000 and loans $40,575,000. The District of Columbia Medical Facilities Construction Act of 1968 provides Federal project grants in addition to those available under various programs provided by the Medical Facilities Acts (title VI of the Public Health Service Act, including the Hill-Burton program, title II or pt. C of title I of the Mental Retardation Facilities and Community Health Construction Act of 1963).

[4] Represents appropriations received and requested by the Smithsonian Institution for operation of a neighborhood museum which appears to be of special benefit to the District of Columbia residents. Total appropriations of $38,400,000 have been requested for the Smithsonian for fiscal year 1970. However, the Smithsonian is considered primarily of national benefit rather than strictly as a benefit to District residents.

[5] Federal contribution to cost of patient care of District of Columbia residents in St. Elizabeths Hospital:

	1968	1969	1970
A. Per diem cost for patient care excluding repairs and construction	$77.24	$19.23	$21.27
B. Per diem cost paid by District of Columbia government	$14.47	$15.95	$17.94
C. Portion of per diem cost paid by Federal Government	$2.77	$3.28	$3.33
D. Patient days—District of Columbia residents	1,687,932	1,614,760	1,548,330
E. Total cost of patient care for District of Columbia residents contributed by Federal Government	$4,675,571.64	$5,296,412.80	$5,155,938.90

[6] Since 32 percent of Howard University students (school year 1967-68) were recorded as having been born in the District of Columbia, we considered 32 percent of the obligations and estimates, budget of the United States, fiscal year 1970 (appendix) as assistance to the District of Columbia:

	1968	1969	1970
Salaries and expenses	$15,534,000	$18,231,000	$20,445,000
Construction	636,000	10,001,000	29,890,000
	16,170,000	28,232,000	50,335,000
Less construction of new teaching hospital at Freedmen's			22,200,000
Total, Howard University	16,170,000	28,232,000	28,135,000
Assistance to District—32 percent of above	5,174,400	9,034,240	9,003,200

[7] According to Freedmen's Hospital officials the vast majority of patients are residents of the District of Columbia. In addition to obligations and estimates for salaries and expenses, we have included the estimated cost of construction of the new teaching hospital which was included in funds for construction at Howard University for fiscal year 1970.

[8] Represents estimated value of rent-free office space provided to the District of Columbia government by GSA and the savings in operating expenses of the District Procurement Office due to privilege of purchasing through GSA, as estimated by District of Columbia government officials.

[9] Estimated costs applicable to the District of Columbia government which are included in Civil Service Commission funding. Estimates by Civil Service Commission for 1969.

[10] The District of Columbia government and its civil service employees are members of the civil service retirement system, the costs of which are shared by the employees and the Federal Government. The Federal Government, however, has not deposited into the retirement fund its full share of contributions needed to provide retirement benefits. It, in effect, owes the funding of these retirement benefits to the employees of the Federal agencies in the system. The amount that has not been funded by the Federal Government (deficiency) is increasing each year primarily because Federal payments into the fund were not made or were insufficient in amount, especially in the earlier years. The Federal payments into the fund have been insufficient because benefits have been liberalized, interest income cannot be earned on the unfunded liability, and the pay raises provided result in unplanned increases in annuities. The deficiencies precluded the drawing of interest and the accumulating of the income needed to provide for the retirement annuities on an actuarial basis.

The Federal Government's deficiency in the retirement fund at June 30, 1968, was $52.6 billion, having increased during fiscal year 1968 by about $4.5 billion. Such annual increases in the unfunded liability represent the increase in the amount needed to provide for the retirement due the employees in the Federal Civil Service Retirement System. The Federal Government is liable for making provision for and paying retirement annuities.

Since the District's Civil Service employees constitute about 1 percent of the total in the system, it is estimated that about 1 percent of the annual increase in the unfunded liability ($45 million for fiscal year 1968, for example) pertains to the Federal Government's obligation to provide its share of the retirement benefits for District employees. The Federal Government now provides for retirement costs in current annual appropriations to agencies, but provision has not been made for the deficiency. It is assumed that retirement annuities will be paid and accordingly, the annualized amounts of the deficiency are included as a measure of the impact of Federal financing in addition to that included in District appropriations and other Federal payments and grants.

[11] Estimated income from the endowment fund of $7,241,706 provided by the fiscal year 1969 second supplemental appropriation act to the Department of Health, Education, and Welfare for the Federal City College in lieu of a land grant.

[12] Federal participation in WMATA is anticipated at about 46 percent of the total estimated cost of $2.5 billion. In San Francisco, Federal participation in the San Francisco Bay Area Rapid Transit System is about 8.4 percent of the total estimated cost of $1.3 billion. Net obligations incurred by WMATA for fiscal year 1968, as shown in the Budget of the United States Government, fiscal year 1970 (appendix) total $1,626,000. Obligations, as estimated in the Budget for fiscal years 1969 and 1970 are $49,479,000 and $43,173,000 respectively. Additional Federal support for fiscal year 1970, designated in the Budget as Sharebond proceeds, is estimated to be $82,939,000. The total estimated Federal support of WMATA for fiscal year 1970, therefore is $126,112,000. At June 1, 1969, it appears that obligations for fiscal year 1969 will be less than estimated in the budget since only about $6 million have been made available for obligation to date in 1969.

[13] Consists of grant supplements from HUD, HEW, Justice, and the Department of Transportation for regional planning and control.

[14] Actual and estimated operating losses for the National Capital Airports, consisting of the Washington National and Dulles International Airports.

Mr. PROXMIRE. Mr. President, I would suggest that those having an interest in this information carefully note the introductory statement which outlines the manner in which the table was compiled, as well as the footnotes which clarify certain individual items.

THE INTERNATIONAL GRAINS ARRANGEMENT

Mr. HARTKE. Mr. President, last year, on June 12, the Senate approved the International Grains Arrangement by a vote of 62 yeas to 21 nays, and immediately after that the operative provisions of the agreement went into effect on July 1, 1968.

The new International Grains Arrangement established minimum prices for wheat which were on the average 20 cents a bushel higher than those established under the International Wheat Agreement which had been in force from 1949 to 1967, greatly expanded the varieties of wheat which were covered by the agreement and established the gulf ports of the United States as the base points for determining f.o.b. prices.

The series of events that have transpired within less than 1 year have fully confirmed the worst fears which were expressed by opponents of the treaty. The high prices established by the new convention have encouraged uneconomical production of wheat abroad. At the same time the United States is one of the few countries which is reducing its acreage of wheat planting, so that it, in effect, is penalizing itself. The United States has become a residual supplier, and the U.S. taxpayers have had to increase appropriations to the Commodity Credit Corporation in order to hold the unsold surpluses.

Immediately after Senate action on the arrangement, the Department of Agriculture in June 1968, imposed export taxes or "inverse subsidies" on wheat exported from the United States to raise the price quotations abroad to the minimum established in the grains arrangement. These export taxes on wheat from the United States ranged from 21 cents a bushel in July 1968 on U.S. No. 1 Hard Winter wheat of ordinary protein, to 24 cents in September 1968 and were at 17 cents per bushel in April 1969—see table 1. This means that the U.S. farmer now receives $1.52 a bushel for this type of wheat, and with the 17-cent export tax per bushel the wheat is sold abroad for $1.69, still 4 cents a bushel below the minimum price of $1.73 established in the grains arrangement.

UNECONOMIC PRODUCTION TO CREATE A WORLD GLUT OF WHEAT

In calendar year 1968, the world wheat crop was a record 305 million metric tons, 10 percent above the preceding year—1967—and 7 percent above the 1966 record year; a 32-percent increase over the 1960–64 average. All wheatgrowing countries except Argentina had bumper crops.

At the start of the current crop year—July 1, 1968—it was estimated that the amount of wheat held in storage throughout the world exceeded 1 billion bushels. See table 2 showing the wheat supply of major exporting countries from 1960 to 1968.

It is expected that world wheat production in 1969 will be 9 percent above last year.

According to the U.S. Department of Agriculture—the "World Agricultural Situation, Review 1968 and Outlook for 1969," February 18, 1969—the high level of world wheat production in the past 3 years primarily reflects larger harvests in the Soviet Union which is not a signatory of IGA. Average annual production in the U.S.S.R. was 75 million tons during 1966–68, compared with 48 million during 1963–65. The U.S.S.R. harvested its second largest crop of wheat in 1968. Government domestic procurements were about 13 million tons in excess of domestic needs and the U.S.S.R. again is in a position to increase net exports. There will be an increase in exports to Eastern Europe and perhaps to the United Arab Republic and Cuba.

The Department further stated that—as shown in table 2—the United States and the four other major exporters—Canada, Australia, Argentina, and France—have reversed positions in terms of wheat supply during the 1960's. While total supply of wheat has gone down, the combined supply in Argentina, Australia, Canada, and France has gone up.

U.S. wheat exports during the first

half of the 1968–69 crop year were about 25 percent below the same period a year earlier and prospects are bleak for a full recovery in the latter half of this year. Although lower sales in the first quarter—July to September—may be explained by heavy foreign buying in June to avoid the higher IGA minimum prices effective July 1, lower sales in the second quarter can only be explained by lower demand and increased competition. Buying in anticipation of the U.S. longshoremen's strike in December caused some pickup in exports to Europe.

THE UNITED STATES REDUCES ITS WHEAT ACREAGE WHILE OTHER NATIONS INCREASE PRODUCTION

In 1968 Australia planted 26 million acres of wheat compared with 23 million in 1967 and 21 million in 1966. Canada had an 0.7-million-acre reduction in area in 1968, but produced an average wheat crop. Moisture reserves in western Canada should be exceptionally good for planting the 1969 spring wheat crop.

In the United States, production of wheat was 60 million bushels more than anticipated—from 1,510 million to 1,570 million bushels—while exports are expected to fall about 190 million below earlier expectations—from 790 million to about 600 million bushels.

Meanwhile the U.S. Department of Agriculture has set the national wheat acreage allotment for the United States for 1969 at 51.9 million acres, a 13 percent reduction from last year; further reductions can be expected from the sign-up through March 21, 1969, under the voluntary storage differential program.

Seeding of winter wheat in the U.S. for the 1969 harvest was 6 million acres less than in the previous year. Despite a record crop in 1968, the area in production in the United States was 3.5 million acres less than in 1967.

UNITED STATES AS A RESIDUAL SUPPLIER

Between 1955 and 1967, when the International Grains Arrangement was in force, the United States became the residual supplier of wheat, mostly on concessional terms. One-half to two-thirds of our exports of wheat and wheat flour were on concessional terms, while other suppliers, Canada, Australia, Argentina, and France sold primarily on commercial terms—see table 3. In the future, however, even our Government-financed programs will be reduced, as the urealistically high prices under the grains arrangement encourage uneconomic production and competition abroad. India and Pakistan through U.S. assistance with fertilizers, new varieties of seed and irrigation, have greatly increased their production of wheat—see table 5. U.S. wheat shipments to India and Pakistan were down to 54 million bushels for July-December 1968, compared with 147 million bushels during the same 6 months a year earlier.

FUTURE PROSPECTS

Secretary of Agriculture, Clifford M. Hardin, in testifying on March 5, 1969, before the House Appropriations Committee Subcommittee on Agriculture, pointed out that American agriculture has expanded its capacity to produce faster than the growth rate of aggregate demand and that it is expected that this excess capacity to produce will continue through 1980 even under the most favorable assumption. He added:

> One may disagree as to the best approach to this problem of excessive supplies—but there should be no disagreement that excess capacity does exist in our national agricultural "plant" and that it centers mainly in grain. Crop yields continue to increase faster than needs expand.

With these prospects for increasing production for American farmers, the high prices set by the International Grains Arrangement can only result in the encouragement of foreign, less economic, production, diminishing exports for the United States, resulting in lowered prices for the American farmer and mounting expenses for the U.S. Government.

U.S. exports of farm products in fiscal year 1967 were $6.8 billion, dropped to $6.3 billion in fiscal year 1968, and are expected to fall to $6.0 billion in fiscal year 1969.

In 1968 direct Government payments to farmers were $3.5 billion, $400 million higher than in 1967 because of substantial increases in payments to producers who participated in the feed grain program. A record 1968 crop raised the wheat supply for the current marketing year to 2.1 billion bushels, an increase of 160 million bushels from a year earlier. Domestic disappearance and exports may fall within a range 1.3 and 1.4 billion bushels this marketing year, so that the carryover, July 1, 1969, may climb to the area of 700 to 775 million bushels.

In March of this year Congress was hurriedly asked for a supplemental appropriation for an additional $1 billion to permit the Commodity Credit Corporation to carry on its program of loans to farmers, because of the unexpectedly heavy production of commodities.

Representative WHITTEN, chairman of the subcommittee, pointed out that as of March 7, 1969, the value of commodities on hand and under loan from the CCC was estimated at $5.1 billion. The Senate cleared the bill for the White House on March 27, 1969.

It is obvious that the United States, despite programs to limit acreage, faces the prospect of mounting surpluses with the resultant increasing expense to the Government for storage, loans, and diversion payments. The high prices set under the International Grains Arrangement encourage uneconomic production, competition, and advantages for foreign producers and reduced prices and returns for the American farmer.

The fictitiously high prices now set under the International Grains Arrangement have clearly not helped the American farmers to obtain additional income for their products. During the Foreign Relations Committee hearings and the Senate consideration of the agreement, it was predicted that high minimum world prices could only result in increased surpluses of wheat, and this is exactly what has happened.

Thus it is apparent that the U.S. Government must resort to policies which will obtain for American producers the highest possible exports of American wheat and other commodities for cash at competitive world prices. American wheat farmers have a great comparative advantage in being able to produce wheat more economically than foreign producers.

We must face up to the realization that the income of our farmers is a matter of internal domestic policy and that the maintenance of a fair share of the national income for the farmer is a matter for our national decision to see that he is adequately compensated. The aim of our export policy should be to sell as much of our production as can be moved through competitive pricing. The minimums in the International Wheat Convention must be reduced. This will move wheat into international channels, reduce the domestic surplus, raise the domestic price to the farmer, and diminish the budgetary cost to the Government of storing surpluses.

DURATION OF THE INTERNATIONAL GRAINS ARRANGEMENT

The International Grains Arrangement entered into force on July 1, 1968, and is to remain in force for 3 years, through June 30, 1971.

Under article 21 of the arrangement, any country which considers its interests have been seriously prejudiced may bring the matter to the attention of the International Wheat Council, which may refer the matter to the Executive Committee or the Prices Review Committee. Within the Council two-thirds of the votes cast by the exporting countries and two-thirds of the votes cast by the importing countries are required for a decision granting relief. If no relief is granted by the Council, however, and the country concerned still considers that its interests as a party to the convention have suffered serious prejudice, it may withdraw from the convention at the end of the crop year by giving written notice. The weighted votes allotted exporters and importers under the Convention are shown in the attached table 4.

Also, under article 8 of the Grains Arrangement, provision is made for review of and adjustments in minimum prices by the Prices Review Committee and the Wheat Council which shall decide whether provisions of the convention shall be suspended and if so to what extent.

On April 3 and 4, 1969, representatives of the five major wheat exporter nations who are members of the IGA—the United States, Argentina, Australia, Canada, and the European Economic Community—met in Washington to discuss problems which have arisen under the convention. The communique issued at the end of the meeting disclosed no more results than the following:

> Ways and means of resolving these difficulties were explored and it was agreed that the necessary adjustments would be made collectively and individually by the exporting countries to overcome them and to foster the effective operation of the arrangement.

The United States should press for a

substantial reduction in the minimum price levels now established under the IGA and also for the removal of the arbitrary distinction in the IGA between types of wheat which now benefit foreign producers to the disadvantage of American growers. In addition the United States should use every means to press for the removal of the variable levies which the EEC imposes on products entering the Community, the proceeds of which are then used to finance subsidies on EEC exports.

I ask unanimous consent that six tables be printed in the RECORD.

There being no objection, the tables were ordered to be printed in the RECORD, as follows:

TABLE 1.—SELECTED PRICE SERIES OF INTERNATIONAL SIGNIFICANCE

Year and month	Wheat, Canada No. 1, Northern, in store, Fort William–Port Arthur export (class II)		Wheat, U.S. No. 1, Hard Winter, ordinary protein, f.o.b. gulf ports [1]						Wheat, U.S. No. 2, Hard Winter, c.i.f. United Kingdom, nearest forward shipment	
			Buyer's price		Export certificate or payment		Seller's price			
	Canada dollars per bu.	Dollars per m.t.	Dollars per bu.	Dollars per m.t.	Dollars per bu.	Dollars per m.t.	Dollars per bu.	Dollars per m.t.	Pounds per l.t.	Dollars per m.t.

[1] Years shown refer to years of harvest in the Northern Hemisphere. Harvests of Northern Hemisphere countries are combined with those of the Southern Hemisphere which immediately follow; thus, the crop harvested in the Northern Hemisphere in 1968 is combined with preliminary forecast for the Southern Hemisphere harvests, which begin late in 1968 and end early in 1969.

[2] Harvested acreage as far as possible.

[3] Preliminary.

[4] Metric tons converted to bushels at 36.7433.

[5] Estimated totals include allowances for producing countries not shown.

[6] Production estimated.

Note: Foreign Agricultural Service. Prepared or estimated on the basis of official statistics of foreign governments, other foreign source materials, reports of U.S. agricultural attaches and Foreign Service officers, results of office research, and related information.

IMPACTED AID PROGRAM

Mr. MURPHY. Mr. President, today a distinguished group of California educators were in Washington to testify on the impacted-aid program, a critical program if California school districts are to provide the educational programs essential for our students. I ask unanimous consent that my statement before the Subcommittee on Education, strongly supporting the impacted-aid program, and an insertion, be printed in full in the RECORD.

There being no objection, the statement and insertion were ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR GEORGE MURPHY

Senator MURPHY. Mr. Chairman, first, I want to welcome to Washington, Assistant Superintendent Charles Briscoe of the Alameda Unified School District, Dr. Gordon E. Harrison, Superintendent, Moreno Valley Schools; Dr. John Nicoll, Superintendent, Vallejo School District; Dr. James Cowan, Assistant Superintendent, San Juan School District and Dr. Francis Laufenberg, Assistant Superintendent, Long Beach School District, and Dr. Bluford F. Minor, Asst. Superintendent, San Diego who have come to testify on a program which is so critical to many school districts in my state.

Superintendent Briscoe and his associates have been so helpful in supplying me with supporting data to enable us to defeat efforts to cripple or destroy the impacted-aid program.

The impacted-aid program is a badly needed and most popular educational program in California. Four hundred forty-six applicant districts receive financial assistance under the impacted-aid program in forty-seven of California's fifty-eight counties. One hundred twenty-nine of these four hundred forty-six applicant districts received over $100,000 in impacted aid. Over 3.6 million pupil educational programs are affected by these funds. Without this federal assistance, the education programs in the various schools would have to be reduced or eliminated or taxes would have to be increased, and in many cases, prohibitively increased. According to information furnished to me, a discontinuance of P.L. 874 funds for these 61 applicant districts for whom P.L. 874 represents over ten per cent of their total current expenditures, which would mean that 29 would have to increase their tax rate from 21¢ to $1.00, 17 between $1.00 and $2.00, and 13 over $2.00.

The impacted-aid program was enacted by the Federal Government in recognition of its responsibilities to assist school districts where federal tax-exempt property and federal activity have placed educational burdens on the local school system.

Since coming to the Senate, I have been a strong supporter of the impacted-aid program, and I have resisted repeated efforts to harm it.

In 1966, I opposed the Administration's effort to cut Public Law 874 by $34 million.

Also in that same year, it was my amendment that deleted Administration language which would have eliminated junior college eligibility under the impacted-aid program.

In 1967, I secured from the Administration a ruling that California junior colleges would remain eligible for impacted-aid assistance despite a restructuring of our junior college system.

Last year, in the Second Supplementary Appropriations Act, Congress appropriated funds for the impacted-aid program, but the Johnson Administration refused to fund it.

To spotlight this issue and to point out that the Administration was allowing the appropriation authority to expire, an amendment of mine was added to the foreign aid bill prohibiting the carrying over of certain foreign aid funds until the President funded the impacted-aid program. This passed the Senate by a vote of 37 to 36. This once again indicated the strong support and the clear intent of the Congress that the impacted-aid program should be funded.

Later, I co-authored an amendment to the Labor-HEW Appropriations bill with Senator Mundt reappropiating $91 million for the FY 68 impacted-aid program and further exempted the impacted-aid program from the Revenue Control and Expenditure Act. This passed the Senate 59 to 5. As a result, we were finally able to get these needed funds to the impacted districts.

Mr. Chairman, for the year 1967–1968, California's entitlement was $74,092,122. It has been estimated that California's entitlement for 1968–1969 is over $80 million.

For one district in my state, the Travis Unified District in Solano County, impacted-aid assistance represents 49.13% of the total current expenses. In many other districts, although not as large, impacted-aid funds are significant. As the China Lake School District indicated to me last year: "The School District at this Naval Station is a slave of Federal and State legislation because it has no way to make up losses thru local taxation. Funds must be made available thru PL 874 if China Lake School District is to survive."

Thus, Mr. Chairman, the issue for many school districts, if the impacted-aid program is not funded, is survival. I intend to do everything I can to see that the impacted-aid program is not only continued but also that it is funded to allow all school districts to receive their entitlements. I ask unanimous consent that a statement of the impacted-aid program in California prepared by the State Department of Education be printed in the RECORD.

STATEMENT OF PUBLIC LAW 874

The California State Department of Education and the California school districts that receive federal financial assistance under the provisions of Title I of Public Law 81–874 have a sincere and critical interest in the continuance by Congress of that law. The purpose of this statement is to demonstrate that interest and to present data showing the extent of the federal obligation in California and the critical need of California school districts for continuing financial assistance under the act.

I. EXTENT OF PARTICIPATION IN PUBLIC LAW 874

Since the enactment of Public Law 874, applicant school districts in California have received assistance under the act varying from 25 per cent of the total national payments under Section 3 in 1950–51 to 17 per cent in 1966–67, the last year from which data are available. With this aid California also has shown average daily attendance of eligible pupils under the act ranging from 21 per cent in 1950–51 to 16 per cent in 1966–67.

Table 1 shows the average daily attendance of federally connected pupils and net entitlements under Section 3 of Public Law 874 for the applicant districts in the State of California compared with the national totals for the same fiscal years.

TABLE 1.—AVERAGE DAILY ATTENDANCE OF FEDERALLY CONNECTED PUPILS AND NET ENTITLEMENTS UNDER SEC. 3 FOR THE STATE OF CALIFORNIA COMPARED WITH THE NATIONAL TOTAL FOR THE FISCAL YEARS 1960–61 THROUGH 1967–68

Fiscal year	Average daily attendance			Net entitlements		
	National	California	Percent	National	California	Percent
1967–68 [1]		403,166			$74,092,122	
1966–67	2,298,160	375,887	16.36	$388,145,667	66,337,584	17.09
1965–66	2,114,273	354,063	16.75	349,947,872	61,999,788	17.72
1964–65	2,014,100	329,523	16.36	311,300,948	52,768,626	16.95
1963–64	1,903,355	320,441	16.84	284,262,603	49,638,925	17.46
1962–63	1,841,017	316,992	17.22	259,317,010	46,386,434	17.89
1961–62	1,754,269	303,328	17.29	232,889,656	42,439,009	18.22
1960–61	1,621,560	280,796	17.32	203,154,222	36,085,002	17.76

[1] National totals are not available at this time.

II. NUMBER OF APPLICANT DISTRICTS AND THE AVERAGE DAILY ATTENDANCE OF ELIGIBLE PUPILS

Under the provisions of Section 3 of Public Law 874 there are 446 applicant districts that have received entitlements (in 1967–68) located in 47 of the state's 58 counties. In these applicant districts there are 403,166 units of average daily attendance of pupils enrolled who are eligible under the act; 59,492 units of average daily attendance are pupils of parents who reside on federal property with a parent employed on federal property; 343,674 are pupils whose parents reside on federal property or whose parents work on federal property. In these applicant districts there are a total of 3,646,736 units of average daily attendance of pupils whose educational program is affected by the financial assistance received under Public Law 874. Thirty Eight per cent of all the districts in the state are applicant districts. The total average daily attendance of these applicant districts constituted 74 per cent of the total average daily attendance of the state for the 1967–1968 school year.

Table 2 is a summary by counties of the average daily attendance reported by 446 applicant districts under Section 3 of Public Law 874 for the fiscal year 1967–68. The data were taken from the financial reports of the districts on U.S. Office of Education Form RSF–3. See page 4 for Table 2.

III. DEPENDENCE OF CALIFORNIA SCHOOL DISTRICTS UPON PUBLIC LAW 874

Table 3 shows a comparison of assistance under Public Law 874 and the total current expense in selected California school districts for the fiscal year 1967–68. The table shows the per cent of current expense that was provided from 3(a) entitlements, 3(b) entitlements, and total entitlements. Examination of the table will show that South Bay Elementary school district had 20.02 per cent of its current expense from 3(b) entitlements alone, and 20.08 per cent of its current expense from the total entitlement. The other districts had percentages of 3(b) entitlement ranging downward. It should be pointed out that these per cents are for selected districts having a high ratio of 3(b) entitlement to current expense, or receiving a great deal of P.L. 874 money. This does not fully demonstrate the criticalness of this federal assistance because other districts which might not meet the criteria of the selected districts in the table, nevertheless receive enough entitlement to significantly increase the district income on a per pupil basis.

Table 4 also exhibits the criticalness of aid under Public Law 874 to California school districts. The table lists 129 districts that each received in 1967–68 in excess of $100,000 under the provisions of Public Law 874. The largest amount ($5,923,194) was received by the San Diego Unified School District. See page 8 for Table 4.

IV. EFFECT OF DISCONTINUANCE OF PUBLIC LAW 874

Table 5 exhibits the local district tax rate increase required to replace federal financial assistance under Public Law 874. The table assumes that the present level of educational services would be provided and that a local tax would be levied to replace the federal assistance. The table includes districts which received assistance in excess of 10 per cent of their total current expenditures during 1967–68 from Public Law 874. See page 13.

The following tabulation indicates the increases in tax rates required to replace such support:

INCREASE IN LOCAL TAX RATE REQUIRED TO REPLACE FINANCIAL ASSISTANCE UNDER PUBLIC LAW 874

Increase in tax rate required	Number of districts— To replace all entitlements	To replace 3(b) entitlements
0 to $0.20	2	21
$0.21 to $0.40	7	7
$0.41 to $0.60	12	6
$0.61 to $0.80	6	6
$0.81 to $1.00	4	5
$1.01 to $1.20	6	6
$1.21 to $1.40	4	2
$1.41 to $1.60	4	5
$1.61 to $1.80	2	
$1.81 to $2.00	1	1
$2.01 to $2.20		
$2.20 to $2.40		
Over $2.40	13	2
Total	61	61

Tax rate increases based on 95 percent of actual assessed valuation.

Any curtailment at all in federal financial assistance to other applicant districts would have a lesser effect than shown in Table 5, but the effect would still be critical because educational services in the district would suffer.

We hope that this information will be helpful to you in considering the extention of Public Law 874. We believe that the data speak for themselves and will demonstrate the fact that California school districts are critically in need of this federal financial assistance, and that the discontinuance of even the 3(b) entitlements will jeopardize the educational program in these districts, affecting a large percentage of the total number of pupils in California.

We sincerely believe that the federal government has an obligation in respect to the federal activities being carried on in California and are wholeheartedly in support of the obligation accepted by the federal government to provide support under Public Law 874. We desire to see the principles therein embodied continued.

CONCLUSION OF MORNING BUSINESS

Mr. MANSFIELD. Mr. President, has morning business been concluded?

The VICE PRESIDENT. Morning business has not been concluded. Is there further morning business? If not, morning business is concluded.

AUTHORIZATION OF APPROPRIATIONS FOR THE ATOMIC ENERGY COMMISSION

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the Senate proceed to the consideration of Calendar No. 267, H.R. 12167.

The VICE PRESIDENT. The bill will be stated by title.

The LEGISLATIVE CLERK. A bill (H.R. 12167) to authorize appropriations to the Atomic Energy Commission in accordance with section 261 of the Atomic Energy Act of 1954, as amended, and for other purposes.

The VICE PRESIDENT. Is there objection to the present consideration of the bill?

There being no objection, the Senate proceeded to consider the bill.

Mr. MANSFIELD. Mr. President, if the distinguished Senator from Rhode Island will yield, with the understanding that he may do so without losing his right to the floor, I should like to suggest the absence of a quorum.

Mr. PASTORE. Mr. President, I yield to the Senator for that purpose, without losing my right to the floor.

Mr. MANSFIELD. I suggest the absence of a quorum.

The VICE PRESIDENT. The clerk will call the roll.

The bill clerk proceeded to call the roll.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The VICE PRESIDENT. Without objection, it is so ordered.

Mr. PASTORE. Mr. President, the Atomic Energy Commission's authorization request for fiscal year 1970, as initially submitted to the Congress on January 15, 1969, by President Johnson, called for authorizations of $2,037,500,000 for "Operating expenses" and $481,102,000 for "Plant and capital equipment," making a total requested authorization of $2,518,602,000.

Concurrent with the submission of a revised budget request by the new administration, the Atomic Energy Commission on April 15, 1969, submitted a revised authorization request which included $1,963,800,000 for "Operating expenses" and $484,252,000 for "Plant and capital equipment," for a total revised authorization request of $2,448,052,000.

While the submission of a revised budget reflecting the views of the new administration delayed the Joint Committee somewhat in reporting the AEC fiscal 1970 authorization bill, the additional time period provided the committee with an opportunity to conduct an exceedingly thorough review of the budget.

The bill before us is the product of our efforts. I believe it is a sound and prudent measure. It is also a stringent measure. The bill would authorize appropriations to the AEC in the total amount of $2,454,284,000 for fiscal 1970, including an increase in a prior year authorization. In the last 6 fiscal years only one other AEC authorization bill included a smaller sum than contained in the pending bill. In other words, except for the authorization bill reported by the Joint Committee for fiscal 1967, the recommended authorization for fiscal 1970 is the most austere of all the AEC authorization measures reported by the committee in the years since fiscal year 1965.

In comparison to the AEC's fiscal 1969

authorization, the proposed fiscal 1970 budget represents a $164 million—or 6 percent—reduction; in relation to the fiscal 1968 authorization, the bill before us represents a nearly $180 million cutback. Of course, in terms of actual level of effort the decrease is even greater than this considering that we have been experiencing an annual cost of living increase in this country of at least 3 percent due to inflation in recent years.

Generally, the Commission's recommended authorization reflects estimated costs in two broad categories of effort, namely, military and civilian applications. Military applications primarily include the nuclear weapons and naval propulsion reactors programs, and portions of several other programs such as special nuclear materials and security investigations. Approximately 53 percent of the recommended authorization is attributable to military applications. The civilian applications of atomic energy comprise about 47 percent of the total budget. Included in the civilian category is $121 million for the operational costs and $234 million for plant and capital equipment for the Nation's high energy physics program, for which the AEC acts as executive agent on behalf of the entire Federal establishment. This amount represents about 14 percent of the Commission's total recommended authorization.

As will be noted in the table on pages 3 and 4 of the report, the committee has recommended both increases and decreases in the funds to be authorized for many of AEC's programs.

Mr. President, I ask unanimous consent to have printed at this point in the RECORD the tabulations on pages 3 and 4 of the report showing in thousands of dollars the authorization of operating expenses and plant and capital equipment.

There being no objection, the tabulations were ordered to be printed in the RECORD, as follows:

OPERATING EXPENSES

The following table summarizes the AEC's requests for operating fund authorizations under its major programs and the committee's action thereon:

AUTHORIZATION OF OPERATING EXPENSES [1]

[In thousands of dollars]

Program	AEC authorization request	Committee recommendations	Change	Page No.
Raw materials	57,100	56,600	−500	7
Special nuclear materials	324,860	323,860	−1,000	6

[1] A table showing the Atomic Energy Commission's appropriations request for operating expenses for fiscal year 1970 and the effects of the authorization recommendations of the Joint Committee on this appropriations request, is set forth as an appendix to this report on p. 67.

PLANT AND CAPITAL EQUIPMENT

The following table summarizes the AEC's request for authorization for "Plant and capital equipment" under its major programs, and the committee's action thereon. More detailed information on the specific construction projects proposed, together with the committee's comments and recommendations thereon, is presented in section XXI of this report entitled "Plant and capital equipment," beginning at page 57.

PLANT AND CAPITAL EQUIPMENT AUTHORIZATIONS [1]

[In thousands of dollars]

	AEC request	Committee recommendations	Change
New construction projects	92,660	90,810	−1,850
Capital equipment not related to construction	173,925	172,525	−1,400
Increases in prior years authorizations: Project 68-4-f, 200 Bev accelerator, National Accelerator Laboratory, Weston, Ill	217,667	217,667	
Total, plant and capital equipment authorization	484,252	481,002	−3,250

[1] A table showing the Atomic Energy Commission's appropriations request for plant and capital equipment for fiscal year 1970 and the effects of the authorization recommendations of the Joint Committee on this appropriation request, is set forth as an appendix to this report on p. 68.

The following table presents a capsule summary of the authorization requested by the Commission for fiscal year 1970 and the effect of the committee's recommendation thereon:

Program	AEC request	Committee recommendations	Change
Operating expenses	$1,963,800,000	$1,973,282,000	+$9,482,000
Plant and capital equipment	484,252,000	481,002,000	−3,250,000
Total	2,448,052,000	2,454,284,000	+6,232,000

Mr. PASTORE. Mr. President, in so doing the committee has realined AEC's request to some extent to provide for a higher level of effort on several of the Commission's high-priority programs. The net effect is a recommended authorization of $2,454,284,000 for fiscal year 1970, a sum about two-tenths of 1 percent more than the amount requested in the Nixon budget.

I point out at this point that the largest increase, as I have already pointed out, falls in the category under the tabulation that I have asked to have printed in the RECORD under civilian applications of nuclear explosions. This is the Plowshare program, which, of course, is the zenith of our peaceful atom program.

On the other hand, the amount we are asking for is approximately $64 million less than the amount requested in the budget submitted on January 15 by President Johnson.

Mr. President, as far as my own investigation and study have revealed, I am not aware of any controversy over the bill. I understand that the Senator from Wisconsin (Mr. PROXMIRE) has some points to raise. The pending bill was reported by the Senate members of the Joint Committee without any dissent. It was passed by the other body on June 24 by a landslide margin—406 to 3. The 68-page committee report spells out in considerable detail the AEC's proposed fiscal year 1970 program as approved by the Joint Committee. Therefore, unless my colleagues have any questions about the bill or the committee report thereon, I shall dispense with further explanation of the bill's provisions. I ask unanimous consent to have printed at this point in the RECORD an excerpt from the committee report—No. 91–244—showing a section-by-section analysis of the bill.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

SECTION-BY-SECTION ANALYSIS

SECTION 101

Section 101 of the bill authorizes appropriations to the Atomic Energy Commission, in accordance with the provisions of section 261 of the Atomic Energy Act of 1954, as amended, for "Operating expenses" and "Plant and capital equipment."

Section 101(a) of the bill deals with the authorization of appropriations for "Operating expenses." The Commission's authorization request under this heading was presented to the committee in terms of costs to be incurred during fiscal year 1970, adjusted in total to the obligations to be incurred during the fiscal year.

The committee is authorizing a total of $1,973,282,000 for "Operating expenses," not to exceed $121 million in operating costs for the high-energy physics program category. It is the committee's intent that the amount specified for any program or category shall be exceeded only in accordance with specific arrangements which have been developed between the Commission and the committee. These arrangements include provision for periodic reporting to the committee of changes in estimates of authorized programs. These informal procedures, embodied in an exchange of correspondence between the Atomic Energy Commission and the committee, have operated efficiently. It is the committee's belief that legislative measures or other formal devices that would impose legal limitations upon the reprograming of Commission funds are not necessary at this time. It is the committee's intent that the procedures specified in this exchange of correspondence shall remain in effect during fiscal year 1970.

It is intended that costs incurred pursuant to the authorization contained in this act shall be generally in accordance with the analysis of the proposed bills submitted by the AEC and other background and explanatory materials furnished by the Commission in justification of the AEC's fiscal year 1970 authorization bill.

Plant and capital equipment obligations are provided in two sections of the bill. Under section 101(b), an authorization is provided for new construction projects and capital equipment not related to construction. This authorization, together with the change in a prior-year project authorization provided for in section 105, discussed below, comprise the total authorization for plant and capital equipment provided for in this bill. The AEC's request for authorization for these purposes was presented on the basis of new obligational authority required. New construction projects authorized under subsections (1) through (8) of section 101(b) of the bill total $90,810,000.

It is intended that the projects under this authorization be related, as in previous years, to the analysis of the proposed bills submitted by the AEC and other background and explanatory materials furnished by the Commission in justification of the AEC authorization bill. It is not intended to prevent technical and engineering changes which are considered necessary or desirable by the Commission consistent with the scope and purpose of the project concerned.

Pursuant to section 101(b)(9), appropriations are authorized for capital equipment not related to construction in the amount of $172,525,000. This equipment is necessary to replace obsolete or wornout equipment at AEC installations. Additional equipment is required to meet the needs of expanding programs and changing technology. Examples of typical equipment include machine tools, computers, and office equipment. The committee expects to receive a report from the Commission at least semiannually on obligations incurred pursuant to this authorization.

SECTION 102

Section 102 of the bill provides limitations similar to those in prior authorization acts.

Subsection (a) provides that the Commission is authorized to start projects set forth in certain subsections of section 101 only if the current estimated cost of the project does not exceed by more than 25 percent the estimated cost for that project set forth in the bill.

Subsection (b) provides similar limitations for the project in other subsections of section 101, except that the increase may not exceed 10 percent of the estimated cost shown in the bill.

Subsection (c) provides limitations on general plant projects authorized by subsection 101(b)(8), whereby the Commission may start such projects only if the currently estimated cost of such project does not exceed $500,000 and the maximum currently estimated cost of any building included in such project does not exceed $100,000; provided that the building cost limitation may be exceeded if the Commission determines that it is necessary in the interest of efficiency and economy. Additionally, section 102(c) provides that the total cost of all general plant projects shall not exceed the estimated cost set forth in subsection 101(b)(8) by more than 10 percent.

Under arrangements previously agreed to by the Commission and the committee, the Commission shall report to the Joint Committee and the Appropriations Committees after the close of each fiscal year concerning the use of general plant project funds, and such report shall identify each project for which the proposed new authority has been utilized.

SECTION 103

Section 103 of the bill authorizes the Commission to undertake engineering design (titles I and II) on construction projects which have been included in a proposed authorization bill transmitted to the Congress by the Commission. It is understood that this work would be undertaken on projects which the Commission deems are of such urgency that physical construction should be initiated as soon as appropriations for the project have been approved.

SECTION 104

Section 104 of the bill provides authorization for the transfer of amounts between the "Operating expenses" and the "Plant and capital equipment" appropriation as provided in the appropriation acts. The AEC appropriation acts have, in past years, provided that not to exceed 5 percent of the appropriations for "Operating expenses" and "Plant and capital equipment" could be transferred between such appropriations, provided, however, that neither appropriation could be increased by more than 5 percent by any such transfer. It is understood that any such transfer shall be reported promptly to the Joint Committee on Atomic Energy.

SECTION 105

Section 105 of the bill amends subsection 101(b)(4) of Public Law 90–56, the AEC's authorization act for fiscal year 1968, by increasing by $217,667,000 the authorization for project 68–4–f, 200 Bev accelerator.

SECTION 106

Section 106 of the bill authorizes the Commission to conduct the project definition phase of the liquid metal fast breeder reactor demonstration program in accordance with criteria formerly submitted to the committee. The program is to be conducted under cooperative arrangements with reactor manufacturers and others without regard to the provisions of section 169 of the Atomic Energy Act of 1954, as amended. Authorization of $7 million in appropriations for the project definition phase is included in section 101.

SECTION 107

Section 107 of the bill permits the Atomic Energy Commission to appoint persons as employees without regard to the provisions of section 201 of Public Law 90–364. Such positions are not to be taken into account when determining the number of employees under subsection (a) or vacancies under subsection (b) of that section.

Mr. AIKEN. Mr. President, I want to compliment the distinguished vice chairman of the Joint Committee on his very effective summary analysis of the Atomic Energy Commission's fiscal year 1970 authorization bill as reported by the Joint Committee.

I can assure my colleagues that this measure has received a very searching examination by the Joint Committee. Every effort has been made to assure the maximum national benefit for each dollar included in the authorization. As a result this bill calls for approximately $164 million less than last year's authorization—this notwithstanding the inclusion in this year's bill of $217 million to completely authorize construction of the 200 Bev national accelerator at Weston, Ill. Thus the total fiscal year 1970 authorization bill reflects an overall decrease of about 6.2 percent from the fiscal year 1969 authorization despite the obvious increase in the cost of doing business.

Reference to the tables on pages 3 and 4 of the committee report will reveal several places where the committee has made recommended adjustments to the requests of the AEC. There have been some increases and some decreases. The largest recommended increase—$10.5 million—is for the Plowshare program to develop the peaceful uses of nuclear explosives. The committee believes that the state of development of domestic applications and the national commitment under article V of the Nonproliferation Treaty require that we proceed more diligently with development of this technology.

Another major addition is the $4,000,000 increase for the naval propulsion program to restore the administration's reduction of funds for development work on improved nuclear submarine propulsion plants. Soviet advances in submarine technology, as set forth on page 12 of the committee report, indicate the urgent need to proceed with this work.

Mr. President, we ought to pay specific attention to the maintenance and improvement of our submarine fleet because, in my opinion, that has been a major deterrent to war, considering almost any factor of our defense.

I take particular pleasure in noting two other increases by the committee. I refer to the restoration of $750,000 for the food irradiation program mentioned on page 40, and the addition of $800,000 for development of an implantable radioisotope heat source power converter to drive a heart pump. The latter action is discussed on page 41. These two projects exemplify the remarkable benefits that can be realized from peaceful applications of atomic energy.

As noted by the distinguished vice chairman, the net effect of these and other recommended changes in the budget is that the reported bill exceeds by $6.2 million—or two-tenths of 1 percent—the amount requested for authorization in the budget submitted by President Nixon.

The committee's action on one other AEC program deserves particular mention. The committee has recommended authorization of the full amount requested—$828,300,000—for the weapons program. As the committee report points out at page 10, this portion of the authorization includes $135 million for research, development and testing of ABM components. Let me emphasize that no part of this budget is to provide for deployment of an ABM system. Accordingly, the moneys to be authorized through this legislation will be utilized and are required regardless of the decision made in this fiscal year as to deployment schedule for the Safeguard system. The bill simply provides for research only, nothing for the deployment or installation of Safeguard weapons.

Mr. President, let me say in closing that this bill was voted out by the Senate members of the Joint Committee without any dissent, and was passed by the other body by an overwhelming margin on June 24.

Mr. President, while I want to give the Atomic Energy Commission full credit for the remarkable work it has done in the field of control of radiation—in fact over the years there has been no fatality or serious injury from any licensed reactor in this country—I would not want the Commission to think that I approve of absolutely everything it does or fails to do.

I should like to suggest that the Commission consider some improvement in its public relations system. It is true that it has done a commendable job of circulating and distributing information among the members of the scientific community. Still, many of the 200 million Americans are restive about the construction of atomic powerplants and should be better informed than they are today. I hope the Atomic Energy Commission will make an effort to see to it that not only the members of the scientific community but also the rest of the 200 million Americans receive accurate, complete information about the work being done by the Commission, particularly that part of it which relates to the construction of atomic powerplants.

Mr. PROXMIRE. Mr. President, I offer an amendment to delete $35,585,000 from S. 2416, the bill authorizing appropriations for the Atomic Energy Commission for the fiscal year 1970. I ask unanimous consent that the reading of the amendment be dispensed with but that it be printed in the RECORD.

The PRESIDING OFFICER. Without objection, it is so ordered.

The amendment is as follows:

On page 1, line 7, it is proposed to delete "$1,973,282,000" and insert in lieu thereof "$1,937,397,000."

Mr. PROXMIRE. Mr. President, in essence my amendment would delete funds that were included in the bill above and beyond the amount requested by the administration in certain categories. However, it would not force specific cuts in this or that item. If the Atomic Energy Commission wished to spend more than they had originally requested on a particular item my amendment would not prevent them from reprograming the funds. My amendment would merely make a cut in the overall appropriation for operating expenses—a cut equivalent to the amount of the Joint Committee on Atomic Energy's increases above the administration's budget request in nine areas.

I introduce this amendment because I feel very, very strongly that we must exercise stringent budget controls at a time when inflationary pressures fueled by excessive Federal spending are clearly getting out of hand. It is true that the amount that would be deleted by my amendment is relatively small, but the principle involved is very large. Just 1 week ago today we passed a supplemental appropriations bill that placed a ceiling on Federal expenditures for fiscal 1970—a ceiling that would force a cut in controllable expenditures of $1.9 billion under the administration's budget request. Yet here today we are proposing to increase spending on atomic energy above and beyond what the administration has asked for and apparently is planning to spend. In my estimation that is not responsible decisionmaking.

It is true that, because cuts in some operating categories offset a substantial proportion of the increases made by the committee, overall spending on operating expenses under this authorization bill would exceed the administration's budget request by only $9,482,000.

As the able chairman of the Joint Committee has stated, this is a small percentage of the total amount. I think he said it was one-tenth of 1 percent. But at a time when we can reduce the administration's request by $26,403,000 simply by holding specific items at the budget level, it seems foolish to give President Nixon more than he asked for in these specific items.

At this point let me discuss some of the specific areas in which the Senate is being asked to provide amounts above and beyond what the administration has asked for.

First, the committee would provide $4 million over the amount included in the President's budget request for naval nuclear propulsion. These funds would be used by the Atomic Energy Commission for its advanced development program for nuclear propulsion reactors. In making this increase, the committee charges the administration with an "apparent lack of recognition of the significant progress the Soviets are making in submarine development and construction."

Mr. President, the Nixon administration has been accused of many wrongs by its detractors but it is rare indeed to hear that they are not sufficiently concerned about our defense posture vis-a-vis the Russians. In fact, the criticism I have read seems to lean in the other direction—that Secretary of Defense Laird and others are overstating Soviet capabilities and plans in order to gain congressional approval of certain programs.

I want to emphasize to those who are sincerely concerned about the Soviet nuclear submarine fleet and our ability to meet its threat that nothing in my amendment would prevent reprograming some of the funds provided for—say, nuclear propulsion in outer space or additional work in nuclear submarine propulsion—if, indeed, the administration has underestimated the needs in this area.

I now move on to the next item, which happens to be the space nuclear propulsion program I just mentioned. The committee admits that planners are "having a seemingly difficult time determining what the post-Apollo program in space should be." Yet they do not hesitate to provide $2 million above the budget request for nuclear rocket development that can be utilized only in a post-Apollo program that, by the committee's admission, has not been determined. At a time when we are scraping the bottom of the budget barrel in programs meant to bring education, health, and social services to our citizens this Senator believes it is a mistake to spend more money on outer space than the administration thinks we should spend. Let us keep an eye on our overall priorities. Our problems here on earth are more immediate.

The committee would provide the AEC with $7,300,000 over the budget request

for civilian power reactors and $3 million in additional funding for cooperatve power. This is a very technical area—one in which I would not presume to match my expertise with that of the committee. It seems to me, however, that at a time of budget aches and pains we could ask the private sector to do a little more and the Government to do a little less. After all, this very private sector has a great deal to gain from cooperating with the Federal Government in exploring nuclear power. The reactor development they are now pursuing with Federal help should bring substantial monetary rewards when sufficient progress is made to permit private industry to sell nuclear power to the public.

The next major item is $1,550,000 for isotopes development. Part of this increase would restore the program on low dose radiation preservation of food. The remainder would be to initiate a program on the development of a heart pump heat source power converter.

Apparently the administration was not as concerned as the committee is about the Food and Drug Administration's rejection of the Army's ham petition and its subsequent revocation of the irradiated bacon regulation. Although this subject cannot be called distasteful I would far rather see these funds for radiation preservation of food diverted into programs to feed the hungry rather than spent on the studies on finfish, bananas, strawberries, and papayas recommended by the committee.

I would hope that the American Heart Association or the National Heart Institute could fund research on a radioisotope powered heart if the development of such a device has the high urgency suggested by the committee's report.

Again I would stress to those who feel this work simply must be done under AEC sponsorship in fiscal 1970—the Budget Bureau's position to the contrary notwithstanding—that these funds could be reprogramed regardless of my amendment.

The committee would add $10,500,000 to the amount requested by the administration for the civilian applications of nuclear explosives—Plowshare. This is almost twice the amount requested by President Nixon. These funds would be used to further nuclear excavation programs, including the interoceanic canal study and an underground engineering device test at the Nevada test site. I would hope that we can proceed very cautiously in this program. A number of my constituents have expressed concern over the possible effects of this program on earthquake activity. These fears certainly have not been answered to my complete satisfaction. In fact I believe that a number of reputable scientists have expressed knowledgeable concern regarding this problem.

The final large increase of $6,735,000 apparently reflects committee recommendations for increases I have already discussed which will require prefinancing for fiscal 1971. The argument against this increase would, consequently be quite similar to the points I have made regarding these other increases earlier in my statement.

In conclusion, Mr. President, I want to make it crystal clear that my amendment would not force abandonment of all the increases I have discussed on this floor today. But by cutting the overall funding for operating expenses it would hold Federal spending in this area at levels that were consistent with our action of last week when we put a ceiling on controllable expenditures for fiscal 1970.

Mr. WILLIAMS of Delaware. Mr. President, will the Senator yield?

Mr. PROXMIRE. I am delighted to yield to the Senator from Delaware.

Mr. WILLIAMS of Delaware. Mr. President, I wish to join the Senator from Wisconsin in urging that we hold down authorizations in this bill at least to the budget ceiling.

Last week I pointed out that the so-called expenditure ceiling approved by Congress was chock-full of loopholes, and I stated then that we would have to be very careful or we would end up with even more expenditures than are set out in the budget.

If we approve this increased spending it automatically raises that ceiling by whatever increase is approved here today. This was an automatic process of raising the budget and the expenditures of the Government. I think Congress must discipline its own actions, at least to the extent of holding down these expenditures to the budget level.

I shall support the amendment of the Senator from Wisconsin.

Mr. GORE. Mr. President, the distinguished Senator from Wisconsin acknowledged in his address that the subject matter here is of a technical nature in which and with which he does not lay claim to knowledge equal to that of the members of the joint committee. Yet the Senator proceeds to question the judgment of the committee in four very important, although technical, areas.

The judgment of the Joint Committee on Atomic Energy over the years has pointed the way to nuclear development, both for peacetime uses and for the development of the nuclear submarine fleet. Indeed, except for the insistence and persistence of Congress, the United States would not today occupy the preeminent role it enjoys in naval nuclear development, medicinal uses of nuclear energy, of industrial uses of atomic energy. I suggest to my distinguished friend from Wisconsin that the record of the Joint Committee on Atomic Energy is one in which the members of that committee take pride, and I believe justifiably.

Mr. President, I wish to make some impromptu remarks about the fields to which the Senator addresses his remarks and which his amendment would affect. I would like to take them in the order in which the Senator dealt with them.

He refers to the recommendation of the committee with respect to nuclear reactors for naval uses as "foolish." There were those who so characterized the recommendation of the joint committee when it insisted upon the development of a nuclear submarine, and when it, indeed, recommended increases over the budget in previous years and insisted upon vigorous development of a nuclear submarine fleet.

The able Senator raises some question, and an interesting one, about the sufficiency of our nuclear submarine fleet and the proficiency of our nuclear submarine fleet now. Without wishing to get into a collateral controversial issue, I respectfull suggest, incidentally, that it is the existence of our nuclear fleet with the Polaris missiles that constitutes our most credible deterrent, our greatest deterrent influence against a nuclear war. I shall not have time to go into detail on this, as the Senator did not, but I respectfully suggest that further development of nuclear reactors for use in surface vessels may hold high promise for U.S. commerce on a U.S. merchant marine fleet, as well as the most economic means to maintain the credibility of our nuclear deterent.

The strategic defense of the United States in nuclear war has been postulated on the theory and tactic that the best way to avoid a nuclear war is to have the power to retaliate with unexceptable damage upon any potential enemy who might consider attacking the United States. This, in my opinion, is not a field which can be dismissed as "foolish."

Mr. PROXMIRE. Mr. President, will the Senator from Tennessee yield?

Mr. GORE. I am happy to yield to the Senator from Wisconsin.

Mr. PROXMIRE. This Senator did not, at any time, call this appropriation foolish. As a matter of fact, I specifically indicated that I think there is a great merit in this particular item in the appropriation and that it would be perfectly possible to reprogram still further some of the areas in the budget to cover the item, if the Atomic Energy Commission felt that it was appropriate and desirable to do so.

I think that the Senator is making a very reasoned and sensible reply, but I want to say that I did not in any way categorize that particular action by the committee as being foolish. I think it was not foolish. It is quite understandable, there is great merit behind it, but I would disagree with the contention it is foolish. I would stand with the Budget Bureau and the administration on this particular variant, but again, I want to say, I did not call it foolish.

Mr. GORE. Mr. President, I accept the Senator's amending his remarks. If I misunderstood him, I am very pleased to make the correction. I happened to be presiding at the time and was struck by the Senator's use of the word, or I thought he used that word. If I have interpreted it as in some inapplicable way, I apologize and accept the Senator's explanation of it. I am glad that the Senator does not think it is foolish.

Mr. President, on the second point raised by the distinguished senior Senator from Wisconsin, I am more tempted to agree. I refer to the comparatively small increase which the committee has recommended for the development of a nuclear rocket for possible use in space exploration and development programs. I have had serious question, as the Senator has had for some time, about the magnitude of expenditures in our space program. Needless to say, it deals with a potential which none of us can accu-

rately measure. I am not even sure that we can dream with very much prescience in this field. Like the Senator, I am inclined more toward the solution of problems on earth than upon exploration of Mars. Yet, if our country is to persist in this program, it surely should do so taking into consideration the potentialities of nuclear energy.

I have long felt, as a layman who has done perhaps a little more than the average amount of reading and study in this field, that if our country is really to possess space with maneuverability, it will need to do so with fuel other than chemical.

This leads one into a field that is beyond my competence. Yet I have had the opportunity to visit with, study, and listen to men whose competence in this field I respect, and they have convinced me that there is great promise in the development of a small nuclear engine for rocket propulsion whose energy could be contained, released, degraded, restrained, controlled, stepped up, stepped down, with greater efficiency and greater economy and greater safety than is the case with the burning of chemical fuels.

Mr. President, if our Government is to persist in an expansive and expensive, ambitious program of exploration and development of space techonology, surely a nuclear rocket propulsion engine or reactor should be explored.

Therefore, though tempted to agree with the overall sentiment of the Senator in this regard, I feel that, on balance, since neither he nor others have been able materially to dent the volume of expenditure in the space program, perhaps it is wise to proceed with more rapid development of a nuclear reactor for this purpose.

I come now to the third point, civilian reactor development. In this field I think perhaps I do have some more knowledge—at least some more—than in the field I have just discussed. The able Senator refers to the desire of greater expenditure on the part of private industry in the development of nuclear power technology. Mr. President, this is a subject that has been discussed for a long, long time. It was the subject of a very long and historic legislative battle in 1954, when the Congress passed the Gore-Holifield bill, which laid down the pattern and charted the course for the development of nuclear reactors for the generation of electric power.

It was the decision of the Congress then—and I think history has borne out the wisdom of the decision—that this program should be developed in partnership between the Government and the private power industry; that the Government's part should be primarily in the development of nuclear reactor technology. This is an enormously costly area, so costly as to be beyond the economic and business grasp of a private power company. It involves such enormous expenditure in research and development, in controlling error, and in the building of one phase of a reactor, to be followed by the second, third, fourth phase, before it becomes economic to generate electricity by that technology.

Because of the proficiency of the United States in this field, led, as it has been, by the competency of the Atomic Energy Commission and its staff, the United States stands preeminent in the world in the development, use, and sale of nuclear power reactors.

Mr. President, it would be difficult to overemphasize the importance of this program. I say that because, as we look into the future, we see that the overwhelming proportion of new power generation facilities are to be nuclear. Electricity is the lifeblood of modern industry. It is the key not only to efficient, economic, industrial production, but also to the comforts and conveniences of American home life. It is imperative that we maintain our lead and improve our technology in the field of generation of electricity by nuclear reactors.

There is a very promising concept under development called the molten salt reactor. No guarantee can be given that it will result in the more economic generation of electricity, but the promise is high, and for the second year the Atomic Energy Commission has asked for more funds than either the Budget Bureau or the Joint Committee has recommended.

The Senator refers to the Budget Bureau estimate. I suggest that the Atomic Energy Commission itself, the technicians, the directors of the national nuclear laboratories, have far greater competence in this field than either the Budget Bureau or the Joint Committee; and the Atomic Energy Commission requested far more than the committee has approved or recommended. Indeed, it did so last year. It feels that it is urgent to develop further and keep on schedule technology and research and development in this very promising concept.

I will not go further, because one can speak all afternoon on the importance of nuclear power and the relative role of Government and private enterprise.

We have had a partnership that has worked well. Like the Senator, I would like to see the private sector enter into it more vigorously. But our experience has been that the private companies have only utilized, and indications are that they can only, with due regard for the economy of their operations, utilize reactor technology that has been developed by the Government programs. This is a proper role for the Government, and I suggest that we have not made an inordinate recommendation; it is a very moderate recommendation.

The Senator next refers to the development of isotopes, the heart pump program, food irradiation, and the Operation Plowshare activities. These, too, Mr. President, represent domestic uses, peacetime uses, of nuclear energy.

It is the high promise of peacetime uses of nuclear energy that has sustained the hopes of many people for an improvement of our way of life, our technology, and our industry, and the hope of being able to feed the masses of people of the future. With starvation in the world at the intolerable level we hear about daily, we must but look with alarm at the amount of food that daily and hourly goes to waste through plain deterioration and lack of preservation. Irradiation holds high promise for preservation of food economically, efficiently, and safely. It surely ought to be developed.

It is easier, perhaps, to justify $1 billion for military uses than $1 million for domestic uses; yet I think, Mr. President, in the long run the development of the peacetime uses, the civilian uses, of nuclear energy may hold the greater hope and promise. I trust that the Senate will, as has the House of Representatives, approve the recommendation of the committee.

What is sacrosanct about the recommendation of the Bureau of the Budget? I dare say that the Joint Committee has more experience with and more knowledge of this field of activity than the entire Bureau of the Budget.

Mr. PASTORE. Mr. President, will the Senator yield?

Mr. GORE. I yield.

The PRESIDING OFFICER. The Senate will be in order. The Senator from Rhode Island is recognized.

Mr. PASTORE. Mr. President, I associate myself with everything the Senator from Tennessee has stated. He is a longtime and faithful member of the committee, and has been a conscientious and studious member.

I daresay, Mr. President, that of all the committees of the Senate, the Joint Committee on Atomic Energy, while it may be matched by other committees in efficiency and conscientiousness, and in the studious way that it arrives at its conclusions, will not be surpassed in those respects by any committee.

If Senators will look at this analysis on pages 3 and 4, they can perceive at a glance the meticulous care that was taken by the committee in analyzing each and every line item, in order to reach a conclusion.

One objection I have to the amendment originally offered by my friend from Wisconsin is the fact that he accepts all the cuts that were made by the committee, and then lumps together all the increases or realinements that were made by the committee, and adds the two figures to arrive at the amount of the deletion that he would make from this authorization bill.

I think that is most unfair to the committee, because, after all, when a committee works day in and day out on a bill, as this committee has worked on this bill, and a Senator, in proposing an amendment, says:

> We will take advantage of everything you cut, but where you add a little bit, after you had made severe cuts, we will take advantage of that also, and offer an amendment to delete that amount as well.

In the long run the result will be that no committee is ever going to cut anything. If that is to be the system around here, no committee will ever be careful about cutting out anything, because after all, if the cuts are to be accepted and the increases deleted, the best thing to do is start these bills on the floor of the Senate, and not hold any hearings, not do any committee work, and not spend that time, day in and day out on it. Committees will say:

Let us just wait until we get on the floor, and have somebody get up and say, "This is what the amount should be."

The only substantial argument I have heard on the floor today, and it was a good argument, was that of the Senator from Tennessee. Realizing how he feels about the matter, I hope the Senator will go along with what I am about to propose.

I have discussed this matter with the Senator from Wisconsin, the Senator from Delaware, the Senator from Vermont (Mr. AIKEN), who is a member of our committee, and also the Senator from Utah (Mr. BENNETT), who is a member of our committee. I made this suggestion to them: In view of the argument that has been made here that only the other day we did pass a supplemental bill that established a ceiling, under the Senate amendment, that any time you add anything to any budget estimate, the President perforce has to take that amount out of some other program, which at the same time will be hurt to that extent, in view of the fact that this bill, in the aggregate, goes only $6,232,000 over and above the budget estimate, so that we may preserve the principle that we have established a ceiling, and we do not want to set the example, today, of going through that ceiling, even by a miniscule amount when compared with the authorization bill—only 0.2 percent—I wonder whether the Senator from Tennessee, if the Senator from Wisconsin will amend his amendment to make the amount $6,232,000 instead of $35 million, and we would take that figure to conference, would approve the Senator's amendment, under the circumstances.

Mr. GORE. Mr. President, how would we know what items would be affected?

Mr. PASTORE. We would have to work that out in conference, and also with the Joint Committee on Atomic Energy.

As a matter of fact, under date of April 13, 1964, I wrote a letter to Mr. Seaborg, who is the Chairman of the Atomic Energy Commission, whereby we agreed that any time we make these adjustments, they cannot change them except by consultation with us. After they send their proposed change up to us, if within 15 days we do not accept it, they cannot make the change. I assure the Senator that those programs in which he is very much interested—and I know his enthusiasm, his interest, and his devotion—will be done no irreparable harm.

Mr. GORE. Mr. President, though one with trepidation pits his judgment against the collective judgment of his colleagues, I think it would be a mistake so to do, and that, in yielding in this regard, the committee would be yielding its collective judgment to what is really a fetish concerning the sanctimonious character of a budget estimate.

To me, a budget estimate does not have any such character. I do not concede that the Bureau of the Budget has a competence in this field even approaching that of the Joint Committee on Atomic Energy and its staff.

Yet this would be but a modest cut, and, with the assurances of the chairman of the Joint Committee that this is his judgment and the judgment of—is this the judgment of the Senator from Vermont also?

Mr. AIKEN. Yes, I think that ways could be found to save $600 million out of the total appropriation without injuring the work of the Commission in any respect.

Mr. PASTORE. Mr. President, I yield to the Senator from Wisconsin.

Mr. PROXMIRE. Mr. President, I send to the desk a modified amendment which removes precisely what the distinguished Senator from Rhode Island has suggested. That is, it simply cuts back the total authorization to the level that the Budget Bureau specifies.

The PRESIDING OFFICER. The amendment will be stated.

The assistant legislative clerk read as follows:

On page 1, line 7, delete "$1,973,282,000" and insert in lieu thereof "$1,967,050,000."

Mr. PROXMIRE. Mr. President, I specify that the amendment is being offered on behalf of myself and the distinguished Senator from Delaware (Mr. WILLIAMS).

Mr. PASTORE. And the further understanding that turning back to the original figure does not turn back to the same alinement by the AEC. It will have to be adjusted to the ideas of the committee as well.

Mr. PROXMIRE. The Senator is correct.

Mr. President, I accept the amendment.

The PRESIDING OFFICER. The question is on agreeing to the modified amendment.

The amendment was agreed to.

The PRESIDING OFFICER. The bill is open to further amendment. If there be no further amendment to be proposed, the question is on the engrossment of the amendments and third reading of the bill.

The amendments were ordered to be engrossed and the bill to be read a third time.

The bill (H.R. 12167) was read the third time and passed.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that further consideration of S. 2416 be postponed indefinitely.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. MANSFIELD. Mr. President, it is always a pleasure to be present in the Chamber when the senior Senator from Rhode Island (Mr. PASTORE) is in charge of a bill. That was the case today. The Senate disposed of the Atomic Energy Commission authorization with the greatest efficiency and expedition. Its expert handling by Senator PASTORE was in keeping with the magnificent record he has compiled. Senator PASTORE expressed his usual thoughtful views with compelling persuasiveness and led this measure through to overwhelming success.

And it was achieved with the excellent support of the ranking minority member of the committee, the senior Senator from Vermont (Mr. AIKEN). Senator AIKEN's equally persuasive capacity, in fact, assured this outstanding success.

Also to be commended for his contribution to the discussion on this measure is the Senator from Wisconsin (Mr. PROXMIRE). He urged his amendment skillfully and with proficient advocacy. Its acceptance was assured. Finally, the Senator from Tennessee (Mr. GORE) is to be thanked for adding his thoughtful views to the discussion. His contributions are always wise, always welcome.

I am grateful to the Senate as a whole for joining to dispose of this measure today.

RETENTION OF ADMIRAL RICKOVER

Mr. JACKSON. Mr. President, at this place in the RECORD I would like to call attention to the fact that the Joint Committee report on the "Naval Nuclear Propulsion Program—1969" released last week makes a pointed reference to the important and continuing contribution being made by Adm. H. G. Rickover to our Nation's nuclear submarine program. Today more than ever it is vital that Admiral Rickover's services to our country be continued. In this connection, let me quote from the foreward to the Joint Committee hearing on nuclear propulsion dated June 17, 1969:

The Committee hopes that the new leadership of the Department of Defense and the Navy will act swiftly to announce their intention to reappoint Admiral Rickover when his present term expires in January 1970 so as to avoid any conjecture to the contrary that might arise again this year based on the poor record of their predecessors in this matter for the past 16 years.

I strongly urge that Admiral Rickover's reappointment be announced as soon as possible.

FEDERAL LANDS FOR PARKS AND RECREATION ACT OF 1969

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the Senate turn to the consideration of Calendar No. 216, S. 1708.

The PRESIDING OFFICER. The bill will be stated by title.

The ASSISTANT LEGISLATIVE CLERK. A bill (S. 1708) to amend title I of the Land and Water Conservation Fund Act of 1965 (78 Stat. 897), and for other purposes.

The PRESIDING OFFICER. Is there objection to the request of the Senator from Montana?

There being no objection, the Senate proceeded to consider the bill, which had been reported from the Committee on Interior and Insular Affairs, with an amendment, to strike out all after the enacting clause and insert:

That this Act may be cited as the "Federal Lands for Parks and Recreation Act of 1969".

SEC. 2. Section 2(b) of the Land and Water Conservation Fund Act of 1965 (78 Stat. 897), as amended (effective March 31, 1970, section 2(b) becomes section 2(a) pursuant to the provisions of Public Law 90-401, July 15, 1968), is further amended by deleting the last sentence and adding the following new paragraphs.

"*Provided, however,* That, notwithstanding the provisions of the Surplus Property Act of 1944, as amended, and the Federal Property and Administrative Services Act of 1949, as amended, States and their political subdivi-

sions may acquire until June 30, 1973, from the United States for public park and recreation purposes surplus Federal real property together with such improvements, equipment, and related personal property that the Secretary of the Interior has recommended to the Administrator of the General Services Administration for such acquisition based upon the suitability of the property for park and recreational uses; the accessibility of the property to major population centers; the need for park and recreation facilities in the immediate geographical area, as identified in the comprehensive statewide outdoor recreation plan required under section 5(d) of this Act; and the highest and best use of the property taking into consideration the need of future generations for parks, open spaces, and recreational opportunities. Conveyances of such property for park or recreation purposes shall be in accordance with one of the following methods as determined by the State or political subdivision thereof:

"(1) Where the State or its political subdivision originally donated the property to the United States, the surplus Federal property may be reacquired without the payment of any consideration; or

"(2) Where a State or its political subdivisions so elects, the surplus Federal property may be acquired at zero to 50 per centum of the fair market value, as determined by the Administrator of the General Services Administration in accordance with the recommendations of the Secretary of the Interior; or

"(3) Where the United States paid valuable consideration for the property to the State, its political subdivisions, or to any person, the State or its political subdivision may acquire the surplus Federal property upon the payment of the cost to the United States at the time of such acquisition.

"Deeds conveying any surplus real property disposed of under this authority shall be issued by the General Services Administration and shall provide that the property shall be used and maintained for the purpose for which it was conveyed, and, in the event that such property ceases to be used or maintained for such purposes, such property shall at the option of the Secretary revert to the United States. The deeds may also contain such additional terms, reservations, restrictions, and conditions as may be determined by the Administrator to be necessary to safeguard the interest of the United States. The Secretary of the Interior may exercise all of his existing authorities under section 203(k) of the Federal Property and Administrative Services Act of 1949, as amended, as to property transferred under this Act. The State and their political subdivisions shall compensate the United States for the administrative costs of surplus property transfers made pursuant to this Act."

"The Secretary of the Interior is directed to prepare and publish guidelines and regulations for implementing the provisions of this Act.

"Except as provided in this section, nothing in this Act shall affect existing laws or regulations concerning disposal of real or personal surplus Federal property to schools, hospitals, States, and their political subdivisions."

ADDRESS BY MR. HALABY TO GREATER MIAMI CHAMBER OF COMMERCE

Mr. HOLLAND. Mr. President, the tremendous *forward strides* made by the State of Florida, that I have the honor to represent, in the last three decades can be credited in part to a complex of air routes and to air service instituted into the State from the rest of the Nation and from abroad.

One of the first air services conceived within Florida occurred in October of 1927 when a small trimotor aircraft, bearing the insignia of Pan American World Airways, flew 90 miles from Key West to Havana to inaugurate international air service between the United States and our then friendly neighbor to the south.

Since that time, Mr. President, Pan American World Airways has become one of the largest private enterprise employers in the State of Florida and its roaring jets provide service not only to Miami International Airport but to Tampa as well.

Pan American has even more elaborate plans for the future for Florida which are also beneficial to the Nation. Some of these plans were outlined recently by Mr. Najeeb E. Halaby, president of Pan American World Airways, before the Greater Miami Chamber of Commerce. I ask unanimous consent that Mr. Halaby's remarks be printed in the RECORD.

There being no objection, the remarks were ordered to be printed in the RECORD, as follows:

REMARKS BY MR. HALABY

First, I'd like to say that I'm very impressed with what I've learned about your leadership training program. It's generally acknowledged now that the answers to most of the problems plaguing our cities must come from concerned citizens. What is not so widely accepted, it seems to me, is that an understanding of these problems and an imaginative search for solutions demands a lot of homework.

I can think of no better approach to this necessity for informed community leadership than a cadre of young business and professional people who have participated in an organized study of their city's problems and potentials. I am sure that Miami's future will be brighter for your efforts.

What sort of a future does Miami face in the next 10 or 15 years. I am going to limit myself to one phase of this future—your transportation needs. I believe I can qualify as a knowledgeable commentator on air transportation and I have, for whatever they are worth, a few thoughts on urban transportation in general.

Let's make two assumptions about Miami, 1985. And, by Miami, I mean the Greater Miami area which you serve as a major transportation hub.

The first assumption is that Miami will continue to experience a good measure of the phenomenal population growth which has characterized the last two decades. Dade and Broward counties more than doubled their population during the fifties. During the first nine years of this decade, the growth rate has been better than 40 per cent. By 1985, your Dade Development Board projects a population of a little better than three million for the area, which represents another increase of about 55 per cent. Even with allowances for error and sunshine optimism, this adds up to a busy, busy future.

The second assumption is that tourism will continue to be one of the area's principal industries. This, it seems to me, is a less tenable assumption—for while I am sure that your tourism will continue to flourish I would expect that, as transportation links to your developing neighbors to the south continue to improve, foreign trade will become more and more a factor in the economy of the Miami area.

But whether it is tourism or foreign trade, the combined necessity of moving things and people, of your own population growth and of Miami's unique geographical position, all point to one dominant factor which will control your future—transportation. The character and the prosperity of Miami, 1985, will depend upon the transportation facilities it offers to both the outside world and to the three million citizens of what will then be a megalopolis south.

Now let's drop the assumptions for predictable fact. The measure of Miami's progress will be air transportation. This, I know, is one of the most air-minded cities in the world, but just in case there are any doubters here today I would like to give them a few probabilities to think about.

1. It is estimated that air travel in general will triple by 1980 and perhaps quadruple by 1985. Now, we know that our population won't increase that rapidly, so this simply means that we are tapping a new market for air travel. We are phasing out a primarily earthbound generation for one which is space-oriented. And we have today, in many of the more developed areas of the world, a mass of people who have more means and more opportunity—but no more time—to travel. The answer is air transportation.

2. Air freight is growing even more rapidly than air passenger travel. For Miami, which will probably always deal more in manufactured and fabricated products than in bulk cargo, this presents a massive opportunity for commerce to the south.

3. The air transportation industry is preparing for this expected expansion of the market for both passengers and freight with a new generation of aircraft and all the related facilities.

4. The airlines in general and Pan Am in particular are aware that getting there is but one spoke in the travel wheel. We realize that the average traveler, and particularly the vacation traveler, must be assured of the right sort of bed and board and a measure of mobility when he reaches his destination. We must begin to sell him total transportation.

In Miami, he probably won't have to worry about accommodations (at least, he won't, if you take my statistical predictions to heart), but if he's staying on the beach and wants to take his family to see Everglades National Park, he may face a problem.

In the years just ahead I think the airlines may solve this problem by adding optional local travel facilities to the air travel part of the trip.

Have I convinced you that the airplane is here to stay? I mentioned a new generation of aircraft a moment ago. Let me, very briefly, tell you what's on the shelves.

The Boeing 747 will be introduced to commercial air transportation by Pan Am some time late in December. This great, new advanced technology airplane is going to change the whole perspective of commercial aviation. For it will not only be the biggest, it will be the best commercial airliner ever produced—best in terms of passenger comfort, operational reliability, aerodynamic efficiency, flight safety, economics and general airworthiness.

To the public, understandably, the 747 is still just one big airplane. To the industry it is a qualitative achievement, the compendium of everything we have learned in 40 years of designing, building and operating all sorts of aircraft. When you have a chance to ride it, I think you will agree with me.

The aeronautical spin-off of the 747—the new, wide-bodied airbuses now building—will offer many of the same advantages as the 747 with a smaller payload, a shorter range and less commodious accommodations.

The supersonics are coming—as surely as tomorrow. You will be flying one version or another by 1980 and be trying to remember what the great debate was all about. Who was it who said that if man was meant to fly, he'd have been born with wings? An antecedent of the same man who now says that man should fly just so fast and no faster.

About all we can say of the supersonics now is that they *will* be faster. Of interest

to Miamians, I think, is the fact that the projected 1,800-mile-an-hour American SST will make the trip from London, Paris or Rome to Miami just 30 to 40 minutes longer than the trip from these European capitals to New York. That's just about time enough to wash up and collect your belongings.

The last item on our inventory of things to come is a whole family of VSTOL aircraft—vertical life and short takeoff and landing machines. They will revolutionize short haul transportation—trips from 10 to 200 or 300 miles—during the next decade. I urge you to watch the development of these vehicles in the form of helibuses and metroplanes closely, for they will provide a happy answer to many of your airport access, interurban and intrastate transportation problems.

Planes and people. Travel and tourism. The thrust of the future. What part will they play in the Miami story? Does the recent past give us a hint?

Five years ago your Miami International Airport handled about four and a half million passengers over a 12-month period. Last year it served 10 million. If we average the growth rate over a number of years and project it, we find that Miami's facilities will be serving 32 million air passengers by 1985. If we use the 20 percent annual growth rate of the last few years and project *that*, we find you'll have to be prepared to handle about 50 million air travelers by 1985. And if your air freight activity continues its present rate of doubling every five years, 1985 will see Miami airports handling two and a half million tons of airborne cargo annually.

Is Miami preparing for this sort of an air transportation future? In many large American cities the prospect is discouraging. Here in Miami, I think you have a handle on the future.

The handle, of course, is your proposed 39-square-mile airport west of the city. As one who is convinced of the need for conservation I believe it should be planned into every such development along with other needs of the community. Miami needs to carefully examine these questions: Does it need the new airport to survive and thrive as a resort city and major transportation hub in a world of constantly multiplying travel bargains? If so, how can it be done with the least disturbance to the beauty and refuge of the Everglades?

When the environmental studies now being conducted are concluded, both sides should be able to find that they are not far apart and that solutions exist for an effective and even amicable resolution of problem. In other words, the conservationist, the urban planner and the airman cannot only live together, they can profit from each other to the benefit of the community as a whole.

One of the future pluses of your proposed "air-spaceport" is that it will provide Miami with some of the finest supersonic transportation facilities in the world. Even if the sonic boom problem is not solved, you will be able to offer the SSTs straight line, overwater approaches from three directions. The final few miles of over-land approach in the landing and takeoff patterns would be subsonic in any case.

I hope you insist on the best airport-access transportation. Any transit link with the airport should be a handsome parkway—rapid, reasonably-priced with mass transportation capabilities and without the squalor of old-style highways and railways. It should provide a loop linking various passenger collection points throughout the Miami area, including the beach and extending up the Gold Coast and into the Gulf Coast area. Our developing technology will be able to provide you with a rail or ground effects system which will cover the 40 miles from airport to city center in half an hour. Within a decade, you will have metroplanes which could provide 15-minute service to the new airport from any place on the Homestead/Miami/Ft. Lauderdale axis on the Atlantic Coast and on the Sarasota/Naples/Ft. Myers axis on the Gulf Coast.

With such transportation, plus an expressway link, your two airports should be able to accommodate that flood of 30 to 50 million passengers. Furthermore, with the proper access system you will eliminate the need of a service city on or near the new airport. The work force will be absorbed within your urban limits.

All this, while it must be planned now, is for the future. Meanwhile, you're going to be faced with some problems the day after tomorrow.

The 747, on order by many of the large airlines serving Miami, will begin moving concentrations of up to 362 passengers plus a flight crew in and out of your Miami International terminal early next year. Three or four such scheduled arrivals and departures, plus the 250-passenger airbus schedules, plus the regular traffic you now receive, could build up a monumental traffic jam both inside and outside your present terminal if you have not planned for it.

The Port Authority's plans for expanding the terminal and improving the access-road and parking facilities are realistic and Miami is to be congratulated for its perceptive forward planning.

Miami is going to grow up as well as out during the coming growth period. Rising land costs encourage high rise construction and this in turn exerts a tremendous pressure upon conventional highway transportation. It seems to me that the Miami area has a great opportunity, while it is planning the access facilities to its new airport, to program an extension of these facilities into an area-wide rapid transit system. At the same time you should set aside sites for stolport and heliport facilities. You'll need both these short haul travel systems long before you reach the three million mark.

I'd like to conclude with a word about Pan Am and Miami. As most of you know, we identify here. Pan Am flew its first schedules here and for many years Miami was our only major base. The planes and the crews which opened up the Pacific and intercontinental services to South America and the Caribbean and established the first commercial services across the Atlantic were all at one time a part of our Miami operation. A great deal of aviation history took off from Dinner Key or from the prototype of your present international airport and most of it was Pan Am.

Over the years, though Pan Am has grown worldwide, those Miami bonds have remained intact. We serve Miami with by far the largest international schedule, our main airframe overhaul base is here, we train many of our pilots here and we are about to expand our airport operations with an enlarged flight service training school complex which will be one of the largest in the industry. As one of this area's largest employers, we feel we are very much a part of Miami and hope to play a helpful role in its future. We have grown with Miami and we hope to expand with Miami's future growth.

It is for this reason that we are gratified by the recent hearing examiner's decision to recommend Pan Am as the American carrier to compete with BOAC on the Miami/London route, beginning next January first. We hope and expect that the C.A.B. will endorse this decision, for we feel that Pan Am can do the most for Miami over this route.

The main consideration here is that we can provide the Miami/London route with open-ended service. Our route structure will enable us to create a bridge between Latin America and Europe and allow passengers in both directions to stop over in Miami. And, unlike a domestic carrier which would deadend in London, we will tap all the European markets, including the northern European areas such as Scandinavia and Germany, which are natural markets for Florida's warm weather tourist attractions. Additionally, Miami will benefit even more directly from Pan Am's visit U.S.A. program—we spent about $25 million last year in advertising, sales and public relations to encourage foreign tourism to this country.

I hope that the new year will see Miami a new and vital link on Pan Am's round-the-world service and that both your metropolitan area and our airline will continue the profitable and friendly collaboration which has opened up so many new horizons for both of us during the past 40 years.

I realize, in closing, that many of you young people were not around 40 years ago. But, I'm delighted to see you here today—training for future leadership and concerned with vital urban problems. It reaffirms my continuing faith in the under-30 generation and the under-40 generation. I come away with a great faith in the future of Miami and pledge you our support in building that future.

LEGISLATIVE PROGRAM—ORDER FOR ADJOURNMENT TO MONDAY

Mr. BAKER. Mr. President, I inquire of the distinguished majority leader if he might tell us the probable outlook for next week.

Mr. MANSFIELD. Mr. President, first let me say we are rather hopeful that the pending business—S. 1708—may be disposed of this afternoon. It is the understanding of the leadership that two amendments will be offered. One will be accepted and the other will be debated.

Mr. JACKSON. Mr. President, we have reached agreement on both amendments as modified. It should not take long.

Mr. MANSFIELD. That is good news. There is then the possibility that we may take up H.R. 4152 and H.R. 4153, and I see the Senator from Delaware in the Chamber whom, I know, has an interest in those matters. However, that is only a possibility.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that when the Senate completes its business today, it stand in adjournment until 12 noon Monday next.

The PRESIDING OFFICER. Is there objection? The Chair hears none, and it is so ordered.

Mr. MANSFIELD. Mr. President, it is the intention of the leadership to lay before the Senate this afternoon, if all things go as planned, H.R. 11582, an appropriation bill for the Treasury and Post Office Departments to be considered Monday.

It is hopeful that on Monday we can lay before the Senate H.R. 11612, an appropriation bill for the Department of Agriculture.

It is anticipated that S. 1613, the Eisenhower Dam bill, S. 1689, the Hazardous Substance Act, S. 853, the Saw Tooth National Recreation Area Act, and H.R. 4153, the Coast Guard authorization; H.R. 4152, an authorization bill for certain maritime programs of the Department of Commerce will all be considered next week. The latter two, the Coast Guard and maritime bills, are in

this category, if they are not considered and disposed of this afternoon.

I hope that the Senate will keep all of these factors in mind. We will have a busy week next week. We will have before us two very important and rather large appropriation bills, and it is hoped that Senators will be in attendance assiduously as always and be prepared to take just the 1-day holiday for the Fourth of July.

TRIBUTE TO WILLIAM J. HILLARD II

Mr. JAVITS. Mr. President, too few of the brave young Americans who have been killed in the Vietnam war have had a chance to make a lasting impact outside the sphere of close friends and relatives. But one young man, William J. Hillard II of Randolph, N.Y., did make an impact during his civilian service with the Peace Corps in India before entering military service in Vietnam.

Mr. Hillard's mother has written to the Peace Corps forwarding copies of letters she has received from India concerning her son's personal impact upon the people he met there. The tributes he has received posthumously are all the more poignant in light of Mrs. Hillard's notation that her son had felt that he "accomplished very little" in his Peace Corps work in India.

I ask unanimous consent that Mrs. Hillard's letter, together with the enclosed letters from the Patil family and S. S. Salunkhe, be printed in the RECORD.

There being no objection, the letters were ordered to be printed in the RECORD, as follows:

MAY 21, 1969.

PEACE CORPS,
Washington, D.C.

GENTLEMEN: I thought perhaps you might be interested in the enclosed copies of two letters we have received from India in regard to my son, William J. Hillard II, who served as a Peace Corps volunteer in Kohlapur, State of Maharashtra, India. He was killed in Vietnam on March 15 of this year while on a combat mission. He entered the Peace Corps at 18 and was sent to India in February, 1967.

I send these because Bill felt that he had accomplished very little in his Peace Corps work and there was nothing of any real importance for him to do.

Perhaps if Peace Corps volunteers understood better just how much a part of their mission this kind of goodwill is, they might accept more easily a situation in which the work to be done is not always what they expected. Bill was, of course, very young to feel that anything except a specific accomplishment was doing his job. To make friends was something he did everywhere.

Sincerely,

MRS. DOROTHY S. HILLARD.

DEAR MOTHER: We were shocked by the sad news of Bill's death which we learnt from Ram. I cannot believe on this news.

In the short time we knew him he had so endeared himself to all of us by his frank and aimiable nature that we will never be able to forget him. He was the first foreigner that we knew but by his engaging and lovable nature he made us forget that he belonged to a different country and we came to regard him as one of us.

We can imagine what a blow this sudden loss of a young son who had such a zest for life must have been to you.

We greatly grieve for his death. May he rest in peace.

Yours in sorrow,

PATIL FAMILY (GOLDWALLAH).

DEAR MRS. HILLARD: I was greatly shocked by the news of the death of your Son Bill. Which I learned from Ram. I knew Bill for a very short time. I liked his personality and wanted to do his portrait. So I asked Ram to introduce me and was glad when Bill accepted to pose. While the portrait was being done we got to know each other. The water color portrait of his done by me may be with you.

In this brief acquaintance Bill with his frank and engaging manner made me give up my shyness and diffidence. He is the first foreign I have known. He made me realize that people are the same all over the world.

I greatly grieve the loss of my only American friend. It must be a great shock to lose your only Son in his prime of life.

Please remember that your Son was a very good and honest young man who made many friends even in his short stay in India. All these friends like me grieve for his loss.

Yours in sorrow,

S. S. SALUNKHE,
Artist.

ADELA INVESTMENT CORPORATION PROGRESS REPORT

Mr. JAVITS. Mr. President, I wish to again call the attention of the Senate to the progress of the ADELA Investment Co. which was launched in 1962 under the auspices of the Economic Committee of the NATO Parliamentarians' Conference of which I was then chairman. The progress of ADELA and the lessons it has learned are an essential counterpart in the field of private investment to the presentation on public investment—U.S. Alliance for Progress—and other matters made to President Nixon on behalf of the Latin American countries by Chilean Foreign Minister Gabriel Valdez as a result of the ministerial level conference of the principal countries of Latin America at Vina del Mar in Chile in late May of this year.

Private foreign investment continues to be welcomed in almost all Latin American countries. The growth of ADELA over the past year is testimony to the fact. The most significant area of growth is represented in the fact that ADELA has become truly a joint venture with Latin American capital, and it is my strong belief that this is the trend of the future that all private enterprise companies operating in Latin America must take cognizance of. Latin American governments, on the other hand, must recognize that uncertainties about the treatment foreign capital is to receive seriously inhibit needed private capital flows and that better definitions of the fields open to investors and of the rights and obligations that investors and foreign governments must observe on a multinational basis is becoming an increasingly urgent problem.

Over the past year ending March 31, 1969, the total assets of the ADELA increased to $117,682,435, an increase of more than $50 million, or 72 percent, over the March 1968 figure. The return on paid-in capital has risen to 5.9 percent—on an annual basis—for the first 9 months of the current fiscal year, compared to 4.2 percent for the full fiscal year ended June 30, 1968—computed on paid-in capital at the beginning of the fiscal year.

These figures indicate that the ADELA has not only made a meaningful economic impact and contribution to development through private-enterprise efforts but also proved its feasibility by producing a reasonable return for its shareholders.

ADELA's board of directors is recommending to the shareholders to further increase the authorized capital from $50 to $60 million. In the last 6 months, ADELA has become a truly joint venture with Latin American capital, inasmuch as approximately $5 million—in U.S. dollars—in this latest increase of capital was subscribed by over 40 Latin American companies from Argentina, Brazil, Colombia, Mexico, and Venezuela.

The operations of ADELA in Latin America since 1962 in the sensitive area of private foreign capital investment has led to certain conclusions which provide possible useful general concepts and guidelines for international public financing institutions, for foreign investors in developing countries, and for governments of developing nations.

These include:

First. One of the greatest assets of the foreign corporation is its ability to innovate and to introduce new technology. Therefore, a foreign corporation should be looked to both as a source of risk capital unavailable from local capital markets or international leading institutions as well, and particularly, as a provider of the indispensable know-how and of technology. Therefore, the return on technology is most likely to be higher to the international corporation than the return on capital.

Second. The role of the foreign corporation in existing or new Latin American enterprise should be in the form of a joint venture without absolute control. Foreign corporations should not take over businesses or established businesses that are already managed efficiently or could be run efficiently by Latin American businessmen. Effective control also is better exercised by providing excellence of technology and management than by controlling 51 percent of a company's stock.

Third. The multinational investment company operating in Latin America performs the role of a bridge between the capital markets of the industrialized world and Latin America. One of the principal contributions of the foreign investment company is to break Latin America's semi-isolation from private international capital markets by placing Latin American securities privately and publicly and by building up greater familiarity with Latin American borrowers and investments within the international capital markets.

Fourth. An investment company should be more than a provider of money; its primary objective must be to provide entrepreneurial thinking, assistance and thrust, and to see projects through all stages from an idea or opportunity to a productive and profitable enterprise.

Fifth. Multinational investment companies should promote local, subregional, and regional capital markets in Latin America and actively promote, create, and finance multinational corporations.

Sixth. The ADELA experience has indicated that the absence of meaningful protection for minority interests, is perhaps one of the most important factors hindering the development of capital markets in Latin America.

Seventh. Modification or complete redrafting of commercial codes is one of the most needed and most urgent tasks before the legislatures of Latin America.

LIMITATION ON PAYMENTS UNDER AGRICULTURE PROGRAM

Mr. WILLIAMS of Delaware. Mr. President, the House of Representatives included an amendment to H.R. 11612, the agriculture appropriations for fiscal 1970, the purpose of which was to place a limitation of $20,000 on the amount of payments to be made to any one individual or company under the agriculture program. This bill is now pending before the Senate, but I understand that the committee has approved the deletion of this section.

I regret that this negative action was taken since, in my opinion, this is a very important amendment, and when this bill is before the Senate for our consideration an effort will be made to restore the House amendment.

These payments should be limited for two very important reasons:

First. It represents an unnecessary drain on the Federal Treasury, and certainly these unwarranted expenditures for the large corporate-type operations cannot be justified at a time when the Federal Government is already operating at a deficit averaging $500 million per month and at a time when the American citizens are being asked to bear additional tax burdens.

Second. Under the present system these large payments to the corporate-type operations place the small farmers at a decided disadvantage. A large operator with several thousand acres can idle a substantial portion of his acreage under the various programs and discharge some of his employees, with the result that his payments to a large extent represent net income, whereas a small family type farm cannot afford to idle a portion of his acreage under these programs, since to do so would reduce the efficiency of his operation in that his machinery and his personal labor would be only partially utilized.

The effect is that as a result of these large payments the Federal Government is in a position of actually subsidizing the expansion of the corporate type of operators at the expense of the small farmers.

The limitation on these payments of $20,000 to any one company or individual in a year would reverse this picture and give the advantage of the program to the small operators.

As an example of some of these payments I cite the following:

The list which I shall incorporate in the RECORD at the conclusion of my remarks shows that five corporate type operations each collected over $1 million in cash payments under the various agriculture programs, with the largest of these payments being $3,027,384 to the J. G. Boswell Co., Corcoran, Calif.

Ten large farming operations received cash payments ranging between $500,000 and $800,000, and at the top of this list we find two large land companies, Salyer Land Co., Corcoran, Calif., and Kern County Land Co., Bakersfield, Calif., collecting $786,459 and $780,073, respectively. The Delta and Pine Land Co., Scott, Miss., received $605,796. This latter company was a wholly owned British corporation, yet it is being classified as an American farmer and is being paid over $600,000 not to cultivate its American soil. The State of Montana is classified as a "farmer" and collected $560,443 not to cultivate some of its farmland.

The next group includes 43 farming operations, each receiving cash payments ranging between $250,000 and a half-million dollars.

Included in this group of farmers we find the Texas Department of Corrections, Sugarland, Tex., being classified as a "farmer" and receiving two payments of $294,301 and $75,619.

The Arkansas State Penitentiary, Grady, Ark., is classified as a "farmer" and received $154,412, while the State of Washington, another "farmer," collected $146,764 under these programs.

The Louisiana State Penitentiary, Angola, La., qualified as a "farmer" and collected $114,363.

By no stretch of the imagination can these States and political subdivisions qualify under the classification of legitimate farming operations.

An interesting point arises: just suppose the Texas Department of Corrections, the Arkansas State Penitentiary, or the Louisiana State Penitentiary violated the laws relating to proper compliance of the agriculture programs and that the Government decided to prosecute and they were convicted. Just how could a penitentiary be punished?

To emphasize the extent of these large payments I am incorporating in the RECORD today a list of the 1968 recipients of payments totaling $60,000 and over that were made under the ASCS program—excluding price support loans. I have in my office a report showing these payments in excess of $25,000, which is available to anyone wishing to inspect it, but to conserve space I am incorporating in the RECORD only those payments of $60,000 and over.

I ASK unanimous consent that this list be printed in the RECORD.

There being no objection, the list was ordered to be printed in the RECORD, as follows:

1968 TOTAL PAYMENTS OF $60,000 AND OVER UNDER ASCS PROGRAMS (EXCLUDING PRICE SUPPORT LOANS)
